A. D. 1610-1614.—Possession taken by the Dutch.—Named New Netherland.—The Dutch had just emerged from their long contest for freedom (see NETHERLANDS: A. D. 1562-1566, and after) when Hudson's discovery invited them to establish a footing in America and obtain a share of the profitable trade in furs. The first venture, made by Amsterdam merchants, in 1610, had success enough to stimulate more, and in 1613 a settlement of four houses had been made on the island of Manhattan; some small forts had been built on the river, and Hendrick Corstiaensen, its superintendent, was busy exploring the region and making acquaintance with the Indian tribes. In the course of the year, Captain Argal, of Virginia, returning from his expedition to Acadia (see CANADA: A. D. 1610-1613), ran in to the mouth of the River, called the Dutch to account as intruders on English territory, and forced Corstiaensen to promise tribute to the English crown; but the promise did not hold. "Active steps were taken, early in the next year, to obtain an exclusive right to the trade of those distant countries," and in March, 1614, the States General passed an ordinance conferring on those who should discover new lands the exclusive privilege of making four voyages thither before others could have admission to the traffic. This ordinance "excited considerable animation and activity among adventurers. A number of merchants belonging to Amsterdam and Hoorn fitted out and dispatched five ships: namely, the Little Fox, the Nightingale, the Tiger, and the Fortune, the two last under the command of Adriaen Block and Hendrick Corstiaensen, of Amsterdam. The fifth vessel was called the Fortune also; she belonged to Hoorn, and was commanded by Captain Cornelis Jacobsen Mey. The three last-named and now well-known navigators proceeded immediately on an exploring expedition to the mouth of the Great River of the Manhattans, but Block had the misfortune, soon after his arrival there, of losing his vessel, which was accidentally burnt. . . . He forthwith set about constructing a yacht, 38 feet keel, 44½ feet long, and 11½ feet wide, which, when completed, he called the 'Restless,' significant of his own untiring industry. . . . In this craft, the first specimen of European naval architecture in these waters, Skipper Block proceeded to explore the coast east of Manhattan Island. He sailed along the East River, to which he gave the name of 'The Hellegat,' after a branch of the river Scheld, in East Flanders; and leaving Long Island, then called Metoac, or Sewan-hacky, 'the land of shells,' on the south, he discovered the Housatonick, or river of the Red Mountain." Proceeding eastwardly, Block found the Connecticut River, which he named Fresh River, and ascended it to an Indian village at 41° 48′. Passing out of the Sound, and ascertaining the insular character of Long Island, he gave his own name to one of the two islands off its eastern extremity. After exploring Narragansett Bay, he went on to Cape Cod, and there fell in with Hendrick Corstiaensen's ship. "While these navigators were thus engaged at the east, Captain Cornelis Mey was actively employed in exploring the Atlantic coast farther south. . . . He reached the great Delaware Bay, . . . two capes of which still commemorate his visit; one, the most northward, being called after him, Cape Mey; another, Cape Cornelis; while the great south cape was called Hindlopen, after one of the towns in the province of Friesland. . . . Intelligence of the discoveries made by Block and his associates having been transmitted to Holland, was received there early in the autumn of this year [1614]. The united company by whom they had been employed lost no time in taking the steps necessary to secure to themselves the exclusive trade of the countries thus explored, which was guaranteed to them by the ordinance of the 27th of March. They sent deputies immediately to the Hague, who laid before the States General a report of their discoveries, as required by law, with a figurative map of the newly explored countries, which now, for the first time, obtained the name of New Netherland. A special grant in favor of the interested parties was forthwith accorded."—E. B. O'Callaghan, *Hist. of New Netherland, bk.* 1, *ch.* 4 (*v.* 1).

A. D. 1614-1621.—The first trading monopoly succeeded by the Dutch West India Company.—"It was perceived that, to secure the largest return from the peltry trade, a factor should reside permanently on the Mauritius River [North, or Hudson, as it has been successively called], among the Maquaas or Mohawks, and the Mahicans, at the head of tide-water. Hendrick Christiaensen, who, after his first experiment in company with Adriaen Block, is stated to have made 'ten voyages' to Manhattan, accordingly constructed [1614] a trading house on 'Castle Island,' at the west side of the river, a little below the present city of Albany. . . . To compliment the family of the stadtholder, the little post was immediately named Fort Nassau. . . . It has been confidently affirmed that the year after the erection of Fort Nassau, at Castle Island, a redoubt was also thrown up and fortified 'on an elevated spot' near the southern point of Manhattan Island. But the assertion does not appear to be confirmed by sufficient authority. . . . The Holland merchants, who had obtained from the States General the exclusive right of trading for three years to New Netherland, though united together in one company to secure the grant of their charter, were not strictly a corporation, but rather 'participants' in a

specific, limited, and temporary monopoly, which they were to enjoy in common. . . . On the 1st of January, 1618, the exclusive charter of the Directors of New Netherland expired by its own limitation. Year by year the value of the returns from the North River had been increasing; and the hope of larger gains incited the factors of the company to push their explorations further into the interior. . . . No systematic agricultural colonization of the country had yet been undertaken. The scattered agents of the Amsterdam Company still looked merely to peaceful traffic, and the cultivation of those friendly relations which had been covenanted with their savage allies on the banks of the Tawasentha [where they had negotiated a treaty of friendship and alliance with the Five Nations of the Iroquois, in 1617]. Upon the expiration of their special charter, the merchants who had formed the United New Netherland Company applied to the government at the Hague for a renewal of their privileges, the value of which they found was daily increasing. But the States General, who were now contemplating the grant of a comprehensive charter for a West India Company avoided a compliance with the petition." In June, 1621, "the long-pending question of a grand commercial organization was finally settled; and an ample charter gave the West India Company almost unlimited powers to colonize, govern, and defend New Netherland."—J. R. Brodhead, *Hist. of the State of N. Y.*, *v.* 1, *ch.* 2–3.

A. D. 1621-1646.—Early operations of the Dutch West India Company.—The purchase of Manhattan Island.—The Patroons and their colonies.—"When it became evident that the war [of the United Provinces] with Spain would be renewed, the way was opened for the charter of a company, so often asked and denied. Just before the expiration of the twelve years' truce, April, 1621, the great West India Company was formed, and incorporated by the States General. It was clothed with extraordinary powers and privileges. It could make alliances and treaties, declare war and make peace. Although its field of operations was limited to Africa, the West India Islands, and the continent of America, it could in case of war fight the Spaniards wherever found on land or sea. And finally, it was permitted to colonize unoccupied or subjugated countries. To it especially were committed the care and the colonization of New Netherland. The West India Company, after completing its organization in 1623, began its work in New Netherland by erecting a fort on Manhattan Island [called Fort Amsterdam], and another on the Delaware, and by reconstructing the one at Albany. It sent over to be distributed in these places 30 families, not strictly as colonists, to settle and cultivate the land, but rather as servants of the Company, in charge of their factories, engaged in the purchase and preparation of furs and peltries for shipment. Some of them returned home at the expiration of their term of service, and no other colonists were brought out for several years. The Company found more profitable employment for its capital in fitting out fleets of ships of war, which captured the Spanish treasure-ships, and thus enabled the Company to pay large dividends to its stockholders. In 1626 its agents bought all Manhattan Island of the Indian owners for sixty guilders in goods on which an enormous profit was made; and about the same time they purchased other tracts of land in the vicinity, including Governor's and Staten Islands, on similar terms. The Company was now possessed of lands enough for the accommodation of a large population. They were fertile, and only needed farmers to develop their richness. But these did not come. . . . Accordingly, in 1629, the managers took up a new line of action. They enacted a statute, termed 'Freedoms and Exemptions,' which authorized the establishment of colonies within their territory by individuals, who were to be known as Patroons, or Patrons. An individual might purchase of the Indian owners a tract of land, on which to plant a colony of fifty souls within four years from the date of purchase. He who established such a colony might associate with himself other persons to assist him in his work, and share the profits, but he should be considered the Patroon, or chief, in whom were centred all the rights pertaining to the position, such as the administration of justice, the appointment of civil and military officers, the settlement of clergymen, and the like. He was a kind of feudal lord, owing allegiance to the West India Company, and to the States General, but independent of control within the limits of his own territory. The system was a modified relic of feudalism. The colonists were not serfs, but tenants for a specified term of years, rendering service to the Patroon for a consideration. When their term of service expired, they were free to renew the contract, make a new one, or leave the colony altogether. The privileges of a Patroon at first were restricted to the members of the company, but in about ten years were extended to others. The directors of the company were the first to improve the opportunity now offered of becoming 'princes and potentates' in the western hemisphere. . . . In 1630, the agents of Director Killian Van Rensselaer bought a large tract of land on the west side of the Hudson River below Albany, and in July following other tracts on both sides of the river, including the present site of Albany. In July, 1630, Director Michael Paauw bought lands on the west side of the Hudson opposite Manhattan Island, and named his territory Pavonia. A few months later Staten Island was transferred to him, and became a part of his domain. . . . Killian Van Rensselaer also formed a partnership with several of his brother directors, among whom was the historian De Laet, for the purpose of planting a colony on his lands on the upper Hudson, to be known as the colony of Rensselaerwyck. He seems to have had a clearer perception of what was required for such a work than the other Patroons. The colony was organized in accordance with the charter, and on business principles. Before the colonists left Holland they were assigned to specific places and duties. Civil and military officers were appointed, superintendents and overseers of the various departments were selected, and all were instructed in their duties. The number of the first colonists was respectable.

They were chiefly farmers and mechanics, with their families. On their arrival, May, 1630, farms situated on either side the river were allotted to them, utensils and stock distributed, houses built, and arrangements made for their safety in case the natives should become hostile. Order was maintained, and individual rights respected. They were not long in settling down, each to his allotted work. Year by year new colonists arrived, and more lands were bought for the proprietors. In 1646, when Killian Van Rensselaer, the first Patroon, died, over two hundred colonists had been sent from Holland, and a territory forty-eight by twenty-four miles, besides another tract of 62,000 acres, had been acquired. The West India Company had changed its policy under the direction of new men, and no longer favored the Patroons. The Van Rensselaers were much annoyed, and even persecuted, but they held firmly to their rights under the charter. Their colony was prosperous, and their estate in time became enormous. . . . Of all the Patroon colonies Rensselaerwyck alone survived. It owed its existence mainly to its management, but largely to its situation, remote from the seat of government, and convenient for the Indian trade."—G. W. Schuyler, *Colonial New York, introd., sect.* 1.

A. D. 1634.—The city named New Amsterdam.—Soon after the appointment of Wouter Van Twiller, who became governor of New Netherland in 1633, "the little town on Manhattan Island received the name of New Amsterdam . . . and was invested with the prerogative of 'staple right,' by virtue of which all the merchandise passing up and down the river was subject to certain duties. This right gave the post the commercial monopoly of the whole province."—Mrs. Lamb, *Hist. of the City of N. Y., v.* 1, *p.* 73.

A. D. 1638-1647.—The colony thrown open to free immigration and free trade.—Kieft's administration, and the ruinous Indian wars.—"The colony did not thrive. The patroon system kept settlers away, and the paternal government of a trading corporation checked all vigorous and independent growth, while Van Twiller [Wouter Van Twiller, appointed governor in 1633] went steadily from bad to worse. He engaged in childish quarrels with every one, from the minister down. . . . This utter misgovernment led at last to Van Twiller's removal. He retired in possession of large tracts of land, which he had succeeded in acquiring, and was replaced [1638] by William Kieft, a bankrupt merchant of bad reputation. Kieft practically abolished the Council, and got all power into his own hands; but he had some sense of order. . . . Despite his improvements, the place remained a mere trading-post, and would not develope into a colony. The patroons were the curse of the scheme, and too powerful to be overthrown; so they proposed, as a remedy for the existing evils, that their powers and privileges should be greatly enlarged. The Company had bought back some of the lands; but they were still helpless, and the State would do nothing for them. In this crisis they had a return of good sense, and solved the problem by destroying their stifling monopoly. They threw the trade to New Netherlands open to all comers, and promised the absolute ownership of land on the payment of a small quit-rent. The gates were open at last, and the tide of emigration swept in. De Vries who had bought land on Staten Island, came out with a company; while ship followed ship filled with colonists, and English came from Virginia, and still more from New England. Men of property and standing began to turn their attention to the New Netherlands; fine well-stocked farms rapidly covered Manhattan, and healthy progress had at last begun. Thus strengthened, the Company [1640] restricted the patroons to a water-front of one mile and a depth of two, but left them their feudal privileges, benefits which practically accrued to Van Rensselaer, whose colony at Beverwyck had alone, among the manors, thriven and grown at the expense of the Company. The opening of trade proved in one respect a disaster. The cautious policy of the Company was abandoned, and greedy traders who had already begun the business, and were now wholly unrestrained, hastened to make their fortunes by selling arms to the Indians in return for almost unlimited quantities of furs. Thus the Mohawks obtained guns enough to threaten both the Dutch and all the surrounding tribes, and this perilous condition was made infinitely worse by the mad policy of Kieft. He first tried to exact tribute from the Indians near Manhattan, then offered a price for the head of any of the Raritans who had destroyed the settlement of De Vries; and, when a young man was murdered by a Weckquaesgeek, the Governor planned immediate war." Public opinion among the colonists condemned the measures of Kieft, and forced him to accept a council of twelve select-men, chosen at a public meeting; but "the twelve," as they were called, failed to control their governor. Acting on the advice of two or three among them, whose support he had secured, he ordered a cowardly attack upon some fugitive Indians from the River tribes, who had been driven into the settlements by the onslaught of the Mohawks, and whom De Vries and others were trying to protect. "The wretched fugitives, surprised by their supposed protectors, were butchered in the dead of a winter's night [1643], without mercy, and the bloody soldiers returned in the morning to Manhattan, where they were warmly welcomed by Kieft. This massacre lighted up at once the flames of war among all the neighboring tribes of Algonquins. All the outlying farms were laid waste, and their owners murdered, while the smaller settlements were destroyed. Vriesendael alone was spared. A peace, patched up by De Vries, gave a respite until summer, and

the war raged more fiercely than before, the Indians burning and destroying in every direction, while trade was broken up and the crews of the vessels slaughtered." Kieft's life was now in danger from the rage of his own people, and eight men, appointed by public meeting, took control of public affairs, as far as it was possible to do so. Under the command of John Underhill, the Connecticut Indian fighter, who had lately migrated to Manhattan, the war was prosecuted with great vigor and success on Long Island and against the Connecticut Indians who had joined in it; but little headway was made against the tribes on the Hudson, who harassed and ruined the colony. Thus matters went badly for a long period, until, in 1647, the Company in Holland sent out Peter Stuyvesant to take the place of Kieft. "In the interval, the Indian tribes, weary at last of war, came in and made peace. Kieft continued his quarrels; but his power was gone, and he was hated as the principal cause of all the misfortunes of the colony. The results of his miserable administration were certainly disastrous enough. Sixteen hundred Indians had perished in the war; but all the outlying Dutch settlements and farms had been destroyed, and the prosperity of the colony had received a check from which it recovered very slowly. In Connecticut, the English had left the Dutch merely a nominal hold, and had really destroyed their power in the East. On the South river [the Delaware] the Swedes had settled, and, disregarding Kieft's blustering proclamations, had founded strong and growing colonies. . . . The interests of Holland were at a low ebb."—H. C. Lodge, *Short Hist. of the Eng. Colonies, ch.* 16.—A more favorable view of Kieft and his administration is taken by Mr. Gerard, who says: "Few proconsuls had a more arduous task in the administration of the government of a province than had Director Kieft. The Roman official had legions at command to sustain his power and to repel attack; and in case of disaster the whole empire was at hand for his support. Kieft, in a far distant province, with a handful of soldiers crowded in a dilapidated fort and a few citizens turbulent and unreliable, surrounded on all sides by savages ever on the alert for rapine and murder, receiving little support from the home government, and having a large territory to defend and two civilized races to contend with, passed the eight years of his administration amid turmoil and dissension within, and such hostile attack from without as to keep the province in continuous peril. The New England colonies were always in a state of antagonism and threatening war. . . . The Swedes and independent settlers on the South and Schuylkill rivers were constantly making encroachments and threatening the Company's occupancy there, while pretenders under patents and independent settlers, knowing the weakness of the government, kept it disturbed and agitated. What wonder that mistakes were made, that policy failed, that misfortunes came, and that Kieft's rule brought no prosperity to the land? The radical trouble with his administration was that he was under a divided rule — a political governor with allegiance to the States-General, and a commercial Director, as the representative of a great company of traders. The States-General was too busily occupied in establishing its independence and watching the balance of European power to give supervision to the affairs of a province of small political importance — while the Company, looking upon its colony merely as a medium of commercial gain, drew all the profit it could gather from it, disregarded its true interests, and gave it only occasional and grudging support. . . . Towards the Indians Kieft's dealings were characterized by a rigid regard for their possessory rights; no title was deemed vested and no right was absolutely claimed until satisfaction was made to the native owner. Historians of the period have been almost universal in their condemnation of him for the various contests and wars engaged in with the Indians, and have put on him all responsibility for the revolts. But this is an ex post facto criticism, which, with a false judgment, condemns a man for the results of his actions rather than for the actions themselves. Indeed, without the energy displayed by the Director towards the aborigines, the colony would probably have been annihilated. . . . Imprudence, rashness, arbitrary action, want of political sagacity may be imputed to Director Kieft, but not excessive inhumanity, nor want of effort, nor unfaithfulness to his employers or to his province. He has been generally condemned, but without sufficient consideration of the trials which he experienced, the anxiety to which he was subject, and the perplexities incident to a government over discontented, ignorant and mutinous subjects, and to the continued apprehension of outside attack. Left mostly to his own resources, and receiving no sympathy and little aid, his motives the subject of attack from both tavern and pulpit, and twice the object of attempted assassination, his rule as a whole, though disastrous, was not dishonorable."—J. W. Gerard, *The Administration of William Kieft* (*Memorial History of the City of N. Y., v.* 1, *ch.* 6).

Also in: Mrs. Lamb, *Hist. of the City of N. Y., v.* 1, *ch.* 6–8.—E. B. O'Callaghan, *Hist. of New Netherland, bk.* 2, *ch.* 7, *and bk.* 3, *ch.* 1–9 (*v.* 1).

A. D. 1640-1643.—Expulsion of New Haven colonists from the Delaware. See New Jersey: A. D. 1640–1655.

A. D. 1647-1664.—Peter Stuyvesant and his administration.— Peter Stuyvesant, the director or governor who succeeded Kieft, "took possession of the government on the 11th of May, 1647. On his arrival he was greeted with a hearty and cordial reception by the citizens, to which he responded by reciprocal professions of interest and regard. He had for several years been in the Company's service as Director of their colony at Curaçoa, and was distinguished for his energy and bravery. Having lost a leg in an attack on the Portuguese settlement at St. Martin's, he had been obliged to return to Europe for surgical aid, whence, still retaining his former commission, he was sent to the charge of the Province of New Netherlands. Immediately on his accession he organized a representative Council of nine members from a list of eighteen presented to him by the inhabitants of the province, and gave his assent to various important provisions for the regulation of trade and commerce. By a conciliatory and just treatment of the Indians so recently in revolt he speedily gained their affection and goodwill, and by his judicious measures for their mutual protection restored peace and harmony among all classes."—S. S. Randall, *Hist. of the State of N. Y., period* 2, *ch.*

5.—"The powers of government—executive, legislative, and judicial—which he [Stuyvesant] assumed, were quite extensive, and often arbitrary. Directly or indirectly, he appointed and commissioned all public officers, framed all laws, and decided all important controversies. . . . He directed churches to be built, installed ministers, and even ordered them when and where to preach. Assuming the sole control of the public lands, he extinguished the Indian title thereto, and allowed no purchase to be made from the natives without his sanction; and granted at pleasure, to individuals and companies, parcels of land, subject to such conditions as he saw fit to impose. In the management of these complicated affairs the Director developed a certain imperiousness of manner and impatience of restraint, due, perhaps, as much to his previous military life as to his personal character. . . . During the whole of his predecessor's unquiet rule a constant struggle had been going on between the personal prerogative of the Executive and the inherent sentiment of popular freedom which prevailed among the commonalty, leading the latter constantly to seek for themselves the franchises and freedoms of the Fatherland, to which, as loyal subjects, they deemed themselves entitled in New Netherland. The contest was reopened soon after Stuyvesant's installation, and the firmness of both Director and people, in the maintenance of what each jealously considered their rights, gave indication of serious disturbance to the public weal." The governor, at length, in 1647, conceded "a popular representation in the affairs of government. An election was therefore held, at which the inhabitants of Amsterdam, Breuckelen, Amersfoort and Pavonia chose eighteen of 'the most notable, reasonable, honest, and respectable' among them, from whom, according to the custom of the Fatherland, the Director and Council selected 'Nine Men' as an advisory Council; and although their powers and duties were jealously limited and guarded by the Director's Proclamation, yet the appointment of the Nine Men was a considerable gain to the cause of popular rights. . . . The subsequent history of Stuyvesant's government is a record of quarrels with colonial patroons, with the English in New England, the Swedes on the South River, and last—not least—with his own people. In fact, the government was by no means well adapted to the people or adequate to protect them. The laws were very imperfect, and the Director and Council either incompetent or indisposed to remedy the serious defects which existed in the administration of civil and criminal justice."—H. R. Stiles, *Hist. of the City of Brooklyn, v.* 1, *ch.* 3.—"Director Stuyvesant was recalled to Europe soon after the surrender [to the English—see below], to vindicate his conduct . . . and . . . found himself the object of serious charges and most virulent attacks. He returned to this country in 1668, and died on his bouwerie in 1672. . . . Throughout his chequered life he exhibited a character of high morality, and in his dealings with the Indians an energetic and dignified deportment, which contributed, no doubt, considerably to the success of his arms and policy. Alike creditable to his talents are his negotiations with the neighboring English colonies. His vindications of the rights of his country, on these occasions, betoken a firmness of manner, a sharpness of perception, a clearness of argument and a soundness of judgment, combined with an extent of reading, which few of his contemporaries could equal, and none surpass. . . . It would afford pleasure were we justified in pronouncing a like panegyric on other parts of his administration; but none can review [his arbitrary resistance to just popular demands] . . . and his persecution of the Lutherans and other Nonconformists, without reprobating his tyranny, and regretting that a character, so faultless in other respects, should be stained by traits so repulsive as these, and that the powers of a mind so strong should be exerted in opposing rather than promoting civil and religious freedom. The hostility this part of his public conduct evoked redounds most creditably to the character of the settlers, whose struggles for freer institutions cannot fail to win for them our sympathy and regard."—E. B. O'Callaghan, *Hist. of New Netherland, bk.* 6, *ch.* 8 (*v.* 2).

Also in: *Remonstrance of New Netherlands* (*Docs. Relative to Col. Hist. of N. Y., v.* 1, *pp.* 275-317); *also v.* 13.—G. P. Fisher, *The Colonial Era, ch.* 9.—B. Fernow, *Peter Stuyvesant* (*Memorial Hist. of the City of N. Y., v.* 1, *ch.* 7).

A. D. 1650.—The adjustment of boundaries with Connecticut.—To settle the long pending controversy between Dutch and English respecting the territory claimed by each on Long Island and at the mouth of the Connecticut River, Governor Stuyvesant went in person to Hartford, September, 1650, and opened negotiations. His hands were tied from the beginning by instructions from his company to press no claim to the extremity of a quarrel, because the English were too strong in America to be fought with. He assented, therefore, to the appointment of two arbitrators on each side, and he named Englishmen as his arbitrators. "The four agreed upon a settlement of the boundary matter, ignoring all other points in dispute as having occurred under the administration of Kieft. It was agreed that the Dutch were to retain their lands, in Hartford [the post of 'Good Hope,' established in 1633, and which they had continued to hold, in the midst of the spreading English settlement]; that the boundary line between the two peoples on the mainland was not to come within ten miles of the Hudson River, but was to be left undecided for the present, except the first 20 miles from the Sound, which was to begin on the west side of Greenwich Bay, between Stamford and Manhattan, running thence 20 miles north; and that Long Island should be divided by a corresponding line across it, 'from the westernmost part of Oyster Bay,' to the sea. The English thus got the greater part of Long Island, a recognition of the rightfulness of their presence in the Connecticut territory, and at least the initial 20 miles of a boundary line which must, in the nature of things, be prolonged in much the same direction, and which in fact has pretty closely governed subsequent boundary lines on that side of Connecticut. If these seem hard terms for the Dutch, and indicative of treachery on the part of their two English agents, it must be borne in mind that, by the terms of his instructions from his principals, Stuyvesant had to take the best terms he could get. The treaty of Hartford was dated September 19, 1650."—A. Johnston, *Connecticut* (*Am. Commonwealths*), *ch.* 10.

A. D. 1653.—The grant of municipal government to New Amsterdam.—"An interesting moment arrived. A new city appeared in the annals of the world. Its birth was announced on the evening of February 2, 1653, at the feast of Candlemas. A proclamation of the governor defined its exceedingly limited powers and named its first officers. It was called New Amsterdam. There was nothing in the significant scene which inspired enthusiasm. It came like a favor grudgingly granted. Its privileges were few, and even those were subsequently hampered by the most illiberal interpretations which could be devised. Stuyvesant made a speech on the occasion, in which he took care to reveal his intention of making all future municipal appointments, instead of submitting the matter to the votes of the citizens, as was the custom in the Fatherland; and he gave the officers distinctly to understand, from the first, that their existence did not in any way diminish his authority, but that he should often preside at their meetings, and at all times counsel them in matters of importance. . . . A pew was set apart in the church for the City Fathers; and on Sunday mornings these worthies left their homes and families early to meet in the City Hall, from which, preceded by the bell-ringer, carrying their cushions of state, they marched in solemn procession to the sanctuary in the fort. On all occasions of ceremony, secular or religious, they were treated with distinguished attention. Their position was eminently respectable, but it had as yet no emoluments. . . . There were two burgomasters, Arent van Hattam and Martin Cregier. . . . There were five schepens,—Paulus Van der Grist, Maximilian Van Gheel, Allard Anthony, Peter Van Couwenhoven, and William Beekman."—Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 1, *ch.* 10.

A. D. 1664.—The English conquest.—New Amsterdam becomes New York.—The Navigation Act of Cromwell, maintained by the English after the Stuart Restoration, was continually evaded, almost openly, in the British American colonies; and it was with the Dutch at New Amsterdam that the illicit trade of the New Englanders, the Virginians and the Marylanders was principally carried on. "In 1663 the losses to the revenue were so extensive that the farmers of the customs . . . complained of the great abuses which, they claimed, defrauded the revenue of £10,000 a year. The interest of the kingdom was at stake, and the conquest of the New Netherland was resolved upon. . . . The next concern of the Chancellor [Clarendon] was to secure to the Crown the full benefit of the proposed conquest. He was as little satisfied with the self-rule of the New England colonies as with the presence of Dutch sovereignty on American soil; and in the conquest of the foreigner he found the means to bring the English subject into closer dependence on the King. James Duke of York, Grand Admiral, was the heir to the Crown. . . . A patent to James as presumptive heir to the crown, from the King his brother, would merge in the crown; and a central authority strongly established over the territory covered by it might well, under favorable circumstances, be extended over the colonies on either side which were governed under limitations and with privileges directly secured by charter from the King. . . . The first step taken by Clarendon was the purchase of the title conveyed to the Earl of Stirling in 1635 by the grantees of the New England patent. This covered the territory of Pemaquid, between the Saint Croix and the Kennebec, in Maine, and the island of Matowack, or Long Island. . . . A title being thus acquired by the adroitness of Clarendon, a patent was, on the 12th of March, 1664, issued by Charles II. to the Duke of York, granting him the Maine territory of Pemaquid, all the islands between Cape Cod and the Narrows, the Hudson River, and all the lands from the west side of the Connecticut to the east side of Delaware Bay, together with the islands of Martha's Vineyard and Nantucket. The inland boundary was 'a line from the head of Connecticut River to the source of Hudson River, thence to the head of the Mohawk branch of Hudson River, and thence to the east side of Delaware Bay.' The patent gave to the Duke of York, his heirs, deputies, and assigns, 'absolute power to govern within this domain according to his own rules and discretions consistent with the statutes of England.' In this patent the charter granted by the King to the younger John Winthrop in 1662 for Connecticut, in which it was stipulated that commissioners should be sent to New England to settle the boundaries of each colony, was entirely disregarded. The idea of commissioners for boundaries now developed with larger scope, and the King established a royal commission, consisting of four persons recommended by the Duke of York, whose private instructions were to reduce the Dutch to submission and to increase the prerogatives of the Crown in the New England colonies, which Clarendon considered to be 'already well-nigh ripened to a commonwealth.' Three of these commissioners were officers in the royal army,—Colonel Richard Nicolls, Sir Robert Carr, Colonel George Cartwright. The fourth was Samuel Maverick. . . . To Colonel Nicolls the Duke of York entrusted the charge of taking possession of and governing the vast territory covered by the King's patent. To one more capable and worthy the delicate trust could not have been confided. . . . His title under the new commission was that of Deputy-Governor; the tenure of his office, the Duke's pleasure. . . . When the news of the gathering of the fleet reached the Hague, and explanation was demanded of Downing [the English ambassador] as to the truth of the reports that it was intended for the reduction of the New Netherland, he boldly insisted on the English right to the territory by first possession. To a claim so flimsy and impudent only one response was possible,—a declaration of war. But the Dutch people at large had little interest in the remote settlement, which was held to be a trading-post rather than a colony, and not a profitable post at best. The

West India Company saw the danger of the situation, but its appeals for assistance were disregarded. Its own resources and credit were unequal to the task of defence. Meanwhile the English fleet, composed of one ship of 36, one of 30, a third of 16, and a transport of 10 guns, with three full companies of the King's veterans, — in all 450 men, commanded by Colonels Nicolls, Carr, and Cartwright, — sailed from Portsmouth for Gardiner's Bay on the 15th of May. On the 23d of July Nicolls and Cartwright reached Boston, where they demanded military aid from the Governor and Council of the Colony. Calling upon Winthrop for the assistance of Connecticut, and appointing a rendezvous at the west end of Long Island, Nicolls set sail with his ships and anchored in New Utrecht Bay, just outside of Coney Island, a spot since historical as the landing-place of Lord Howe's troops in 1776. Here Nicolls was joined by militia from New Haven and Long Island. The city of New Amsterdam . . . was defenceless. The Director, Stuyvesant, heard of the approach of the English at Fort Orange (Albany), whither he had gone to quell disturbances with the Indians. Returning in haste, he summoned his council together. The folly of resistance was apparent to all, and after delays, by which the Director-General sought to save something of his dignity, a commission for a surrender was agreed upon between the Dutch authorities and Colonel Nicolls. The capitulation confirmed the inhabitants in the possession of their property, the exercise of their religion, and their freedom as citizens. The municipal officers were continued in their rule. On the 29th of August, 1664, the articles were ratified . . . and the city passed under English rule. The first act of Nicolls on taking possession of the fort, in which he was welcomed by the civic authorities, was to order that the city of New Amsterdam be thereafter known as New York, and the fort as Fort James, in honor of the title and name of his lord and patron. At the time of the surrender the city gave small promise of its magnificent future. Its entire population, which did not exceed 1,500 souls, was housed within the triangle at the point of the island. . . . Nicolls now established a new government for the province. A force was sent up the Hudson under Captain Cartwright, which took possession of Fort Orange, the name of which was changed to Albany, in honor of a title of the Duke of York."— J. A. Stevens, *The English in N. Y.* (*Narrative and Critical Hist. of Am., v.* 3, *ch.* 10).

A. D. 1664-1674.—The province as the English received it.—Dutch institutions, their influence and survival.—"In the year 1664, when the government passed to the English, New Netherland is said by the Chevalier Lambrechtsen to have consisted of three cities and thirty villages. Its population was then about ten thousand souls, exclusive of the Indians, who were important auxiliaries for trade and peltries. The inhabitants enjoyed a fair measure of freedom and protection. High roads already existed, and there were numerous owners of flourishing farms, or bouweries, and other real property, while urban life was well policed by proper laws. The treatment by the Dutch of the many English and other aliens who already dwelt within the Dutch territory was rather in advance of the age, while the jurisprudence established here by the Dutch, being largely borrowed from the high civilization of Rome, was certainly superior in refinement to the contemporary feudal and folk law introduced by the English in 1664. Theoretically, the administration of justice conformed to a high standard, and both Dutch and aliens were protected by adequate constitutional guaranties. We cannot for an instant presume that the institutions which half a century had reared were swept into oblivion by a single stroke of the English conquerors in 1664. It would be more rational to suppose that the subsidence of the Dutch institutions was as gradual as the facts demonstrate it to have been. Negro slavery was introduced by the Dutch, but it existed here only under its least objectionable conditions. A large measure of religious liberty was tolerated, although the Dutch Reformed Church was the only one publicly sanctioned. On several occasions delegates of the commonalty were brought into consultation with the Director-General and Council, and thus, to some extent, a principle of representative government was at least recognized, although it was somewhat at variance with the company's standard of colonial government, and savored too much of the English idea and encroachment to be palatable. It must not be forgotten that at home the Dutch were a self-governing people and accustomed to that most important principle of free government — self-assessment in taxation. In common with all commercial peoples, they possessed a sturdy independence of mind and demeanor. There is no proof that these excellent qualities were diminished by transplantation to the still freer air of the new country. New Netherland was not altogether fortunate in its type of government, experience demonstrating that the selfish spirit of a mercantile monopoly is not the fit repository of governmental powers. Yet, on the whole, it must be conceded that the company's government introduced here much that was good and accomplished little that was pernicious. In 1664 it certainly surrendered to the English one of the finest and most flourishing colonies of America, possessing a hardy, vigorous, and thrifty people, well adapted to all the principles of civil and religious freedom. History shows that this people speedily coalesced with all that was good in the system introduced by the English, and sturdily opposed all that was undesirable. . . . It is certain . . . that after the overthrow of the Dutch political authority the English proceeded gradually to introduce into New York, by express command, their own laws and customs. Yet it requires a very much more extended examination of original sources than has ever been made to determine absolutely just how much of the English laws and institutions was in force at a particular epoch of colonial history. The subject perplexed the colonial courts, and it is still perplexing."—R. L. Fowler, *Constitutional and Legal Hist. of N. Y. in the* 17*th*

Century (*Memorial History of the City of New York, v.* 1, *ch.* 14).—"Although the New Netherland became a permanent English colony under the Treaty of Westminster in 1674 [see below], its population remained largely Dutch until nearly the middle of the next century. The prosperity of New York, growing steadily with the progress of trade and the exportation of grains, attracted emigrants from Holland notwithstanding the change of flag. Many families now living on Manhattan Island are descended from Dutchmen who came out after the English occupation. The old names with which we have become familiar in the early annals of New Amsterdam continue in positions of honour and prominence through the English colonial records. In 1673, we find among the city magistrates Johannes van Bruggh, Johannes de Peyster, Ægidius Luyck, Jacob Kip, Laurans van der Spiegel, Wilhelm Beeckman, Guleyn Verplanck, Stephen van Courtlandt. In 1677, Stephanus van Courtlandt is mayor, and Johannes de Peyster deputy mayor. In 1682, Cornelis Steenwyck is mayor; in 1685, the office is filled by Nicholas Bayard; in 1686, by Van Courtlandt again. Abraham de Peyster was mayor from 1691 to 1695; and in his time the following Dutchmen were aldermen: W. Beeckman, Johannes Kip, Brandt Schuyler, Garrett Douw, Arent van Scoyck, Gerard Douw, Rip van Dam, Jacobus van Courtlandt, Samuel Bayard, Jacobus van Nostrandt, Jan Hendricks Brevoort, Jan van Horne, Petrus Bayard, Abraham Wendell, John Brevoort. These names recur down to 1717. In 1718, John Roosevelt, Philip van Courtlandt, and Cornelius de Peyster are aldermen. In 1719, Jacobus van Courtlandt is mayor, and among the aldermen are Philip van Courtlandt, Harmanus van Gilder, Jacobus Kip, Frederic Philipse, John Roosevelt, Philip Schuyler. In 1745, Stephen Bayard is mayor. During the last half of the eighteenth century the Dutch names are more and more crowded out by the English. . . . By the beginning of the nineteenth century, the Dutch names occur only occasionally. These Dutchmen not only preserved their leadership in public affairs, but carried on a large proportion of the city's trade. New York was an English colony, but its greatness was largely built on Dutch foundations. It is often said that the city became flourishing only after the English occupation. This is true, with the qualification that the Dutch trader and the Dutch farmer after that event had greater opportunities for successful activity. . . . Dutch continued to be the language of New York until the end of the seventeenth century, after which time English contended for the mastery with steady success. In the outlying towns of Long Island and New Jersey and along the Hudson River, Dutch was generally used for a century later. . . . In New York city the large English immigration, the requirements of commerce, and the frequent intermarriages of Dutch and English families had given to English the predominance by the year 1750. . . . In New York city the high-stoop house, and the peculiar observance of New Year's Day which continued until 1870, are two familiar relics of Holland. The valuable custom of registering transfers of real estate has been received from the same source."—B. Tuckerman, *Peter Stuyvesant, ch.* 4.

A. D. 1665.—The Duke's Laws.—"At a general meeting held at Hempstead, on Long Island [March 1, 1665], attended by deputies from all the towns, Governor Nichols presently published, on his own and the duke's authority, a body of laws for the government of the new province, alphabetically arranged, collated, and digested, 'out of the several laws now in force in his majesty's American colonies and plantations,' exhibiting indeed, many traces of Connecticut and Massachusetts legislation. . . . The code [was] known as the 'Duke's Laws,' which Nichols imagined 'could not but be satisfactory even to the most factious Republicans.' A considerable number of immigrants seem to have come in on the strength of it from the neighboring colonies of New England."—R. Hildreth, *Hist. of the U. S., ch.* 17 (*v.* 2).

A. D. 1673.—The reconquest of the city and province by the Dutch.—The seizure of New Netherland by the English in 1664 was one of several acts of hostility which preceded an actual declaration of war between England and Holland. The war became formal, however, in the following year, and ended in 1666, ingloriously for England — see Netherlands (Holland): A. D. 1665–1666 — although she retained her American conquests. Then followed a period of hypocritical alliance on the part of Charles II. with the Dutch, which gave him an opportunity to betray them in 1672, when he joined Louis XIV. of France in a perfidious attack upon the sturdy republic — see Netherlands (Holland): A. D. 1672–1674. During the second year of this last mentioned war, Cornelis Evertsen, worthy son of a famous Dutch admiral, made an unexpected reconquest of the lost province. Evertsen "had been sent out from Zealand with fifteen ships to harass the enemy in the West Indies, which was effectually done. At Martinico he fell in with four ships dispatched from Amsterdam, under the command of Jacob Binckes. Joining their forces, the two commodores followed Krynssen's track to the Chesapeake, where they took eight and burned five Virginia tobacco ships, in spite of the gallantry of the frigates which were to convoy them to England. As they were going out of the James River, the Dutch commodores met a sloop from New York," and received information from one of its passengers which satisfied them that they might easily take possession of the town. "In a few days [August 7, 1673] the Dutch fleet, which, with three ships of war from Amsterdam, and four from Zealand, was now swelled by prizes to 23 vessels, carrying 1,600 men, arrived off Sandy Hook. The next morning they anchored under Staten Island." On the following day the city, which could make no defense, and all the Dutch inhabitants of which were eager to welcome their countrymen, was unconditionally surrendered. "The recovery of New York by the Dutch was an absolute conquest by an open enemy in time of war. . . . 'Not the smallest' article of capitulation, except military honors to the garrison, was granted by the victors. . . . Their reconquest annihilated British sovereignty over ancient New Netherland, and extinguished the duke's proprietary

government in New York, with that of his grantees in New Jersey. Evertsen and Binckes for the time represented the Dutch Republic, under the dominion of which its recovered American provinces instantly passed, by right of successful war. The effete West India Company was in no way connected with the transaction. . . . The name of 'New Netherland' was of course restored to the reconquered territory, which was held to embrace not only all that the Dutch possessed according to the Hartford agreement of 1650, but also the whole of Long Island east of Oyster Bay, which originally belonged to the province and which the king had granted to the Duke of York. . . . It was, first of all, necessary to extemporize a provisional government. No orders had been given to Evertsen or Binckes about New Netherland. Its recovery was a lucky accident, wholly due to the enterprise of the two commodores; upon whom fell the responsibility of governing their conquest until directions should come from the Hague." They appointed Captain Anthony Colve to be Governor General of the Province. "Colve's commission described his government as extending from 15 miles south of Cape Henlopen to the east end of Long Island and Shelter Island, thence through the middle of the Sound to Greenwich, and so northerly, according to the boundary made in 1650, including Delaware Bay and all the intermediate territory, as possessed by the English under the Duke of York. . . . The name of the city of New York was . . . changed to 'New Orange,' in compliment to the prince stadtholder. . . . The metropolis being secured, 200 men were sent up the river, in several vessels, to reduce Esopus and Albany. No opposition was shown." Albany was ordered to be called Willemstadt.—J. R. Brodhead, *Hist. of the State of N. Y., v.* 2, *ch.* 4–5.

Also in: Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 1, *ch.* 14–15.—*Docs. relating to Col. Hist. of N. Y., v.* 2.—*Memorial Hist. of the City of New York, v.* 1, *ch.* 9.

A. D. 1674.—Restored to England by the Treaty of Westminster. See Netherlands (Holland): A. D. 1674.

A. D. 1674-1675.—Long Island annexed, with attempts against half of Connecticut. See Connecticut: A. D. 1674–1675.

A. D. 1684.—Doubtful origin of English claims to the sovereignty of the Iroquois country.—"Colonel Dongan [governor of New York] was instrumental in procuring a convention of the Five Nations, at Albany, in 1684, to meet Lord Howard of Effingham, Governor of Virginia, at which he (Dongan) was likewise present. This meeting, or council, was attended by the happiest results. . . . Colonel Dongan succeeded in completely gaining the affections of the Indians, who conceived for him the warmest esteem. They even asked that the arms of the Duke of York might be put upon their castles; —a request which it need not be said was most readily complied with, since, should it afterwards become necessary, the governor might find it convenient to construe it into an act of at least partial submission to English authority, although it has been asserted that the Indians themselves looked upon the ducal insignia as a sort of charm, that might protect them against the French."—W. L. Stone, *Life and Times of Sir W. Johnson, v.* 1, *p.* 15.

A. D. 1684-1687.—French invasions of the Iroquois country under De La Barre and De Nonville. See Canada: A. D. 1640–1700.

A. D. 1686.—The Dongan Charter.—"The year 1686 was distinguished by the granting of the 'Dongan Charter' to the city of New York. It was drafted by Mayor Nicholas Bayard and Recorder James Graham, and was one of the most liberal ever bestowed upon a colonial city. By it, sources of immediate income became vested in the corporation. Subsequent charters added nothing to the city property, save in the matter of ferry rights, in immediate reference to which the charters of 1708 and 1730 were obtained. . . . The instrument was the basis of a plan of government for a great city."—Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 1, *p.* 317.

Also in: M. Benjamin, *Thos. Dongan and the Granting of the N. Y. Charter* (*Memorial Hist. of the City of N. Y., v.* 1, *ch.* 11).

A. D. 1688.—Joined with New England under the governorship of Andros.—In April, 1688, Sir Edmund Andros, who had been made Governor-general of all New England in 1686, received a new commission from the King which "constituted him Governor of all the English possessions on the mainland of America, except Pennsylvania, Delaware, Maryland, and Virginia. The 'Territory and Dominion' of New England was now to embrace the country between the 40th degree of latitude and the River St. Croix, thus including New York and the Jerseys. The seat of government was to be at Boston; and a Deputy-Governor, to reside at New York, was to be the immediate head of the administration of that colony and of the Jerseys. The Governor was to be assisted by a Council consisting of 42 members, of whom five were to constitute a quorum. . . . The Governor in Council might impose and collect taxes for the support of the government, and might pass laws, which however were, within three months of their enactment, to be sent over to the Privy Council for approval or repeal. . . . The seal of New York was to be broken, and the seal of New England to be used for the whole jurisdiction. Liberty of conscience was to be allowed, agreeably to the Declaration of Indulgence."—J. G. Palfrey, *Compendious Hist. of New Eng., bk.* 3, *ch.* 14 (*v.* 2).

Also in: Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 1, *ch.* 18.—J. R. Brodhead, ed. *Docs. relative to Col. Hist. of N. Y., v.* 3, *pp.* 537–554.

A. D. 1689-1691.—The Revolution.—Jacob Leisler and his fate.—News of the revolution in England which drove James II. from the throne, giving it to his daughter, Mary, and her husband, William of Orange, reached New York, from Virginia, in February, 1689, but was concealed as long as possible from the public by Lieutenant-Governor Nicholson. No disturbance of the authority of the latter occurred until after the people of Boston had risen, in April, and seized the Governor-General, Sir Edmund Andros, stripping his authority from him and casting him into prison. This spirited movement was followed a little later by like action in New York. Two parties had quickly taken form, "one composed of the adherents of James, the other of the friends of William and Mary. The former embraced the aristocratic citizens, including Nicholas Bayard, the commander of the city militia, the members of the council, and the municipal authorities. The friends of the

new monarchs formed a large majority of the citizens. They maintained that the entire fabric of the imperial government, including that of the colonies, had been overthrown by the revolution, and that, as no person was invested with authority in the province, it reverted to the legitimate source of all authority — the people — who might delegate their powers to whomsoever they would. Among the principal supporters of this view was Jacob Leisler, a German by birth, a merchant, the senior captain of one of the five train-bands of the city commanded by Colonel Bayard, and one of the oldest and wealthiest inhabitants. . . . He was a zealous opponent of the Roman Catholics, and a man of great energy and determination. . . . Rumors of terrible things contemplated by the adherents of James spread over the town, and produced great excitement. The five companies of militia and a crowd of citizens gathered at the house of Leisler, and induced him to become their leader and guide in this emergency. Colonel Bayard attempted to disperse them, but he was compelled to fly for his life. A distinct line was now drawn between the 'aristocrats,' led by Bayard, Van Cortlandt, Robert Livingston, and others, and the 'democrats'— the majority of the people — who regarded Leisler as their leader and champion. At his suggestion a 'Committee of Safety' was formed, composed of ten members — Dutch, Huguenot, and English. They constituted Leisler 'Captain of the Fort,' and invested him with the powers of commander-in-chief — really chief magistrate — until orders should come from the new monarch. This was the first really republican ruler that ever attained to power in America. He took possession of Fort James and the public funds that were in it, and, in June, 1689, he proclaimed, with the sound of trumpets, William and Mary sovereigns of Great Britain and the colonies. Then he sent a letter to the king, giving him an account of what he had done." Lieutenant-Governor Nicholson made little attempt to assert his authority in the face of these demonstrations, but departed presently for England, "after formally giving authority to his councillors to preserve the peace during his absence, and until their Majesties' pleasure should be made known. . . . Nicholson's desertion of his post gave Leisler and the Republicans great advantages. He ordered the several counties of the province to elect their civil and military officers. Some counties obeyed, and others did not. The counter influence of Nicholson's councillors was continually and persistently felt, and Leisler and his party became greatly incensed against them, especially against Bayard, who was the chief instigator of the opposition to the 'usurper,' as he called the Republican leader. So hot became the indignation of Leisler and his friends that Bayard was compelled to fly for his life to Albany. The other councillors, alarmed, soon followed him. At Albany they acknowledged allegiance to William and Mary. They set up an independent government, and claimed to be the true and only rulers of the province. In this position they were sustained by the civil authorities at Albany." Leisler's son-in-law, Jacob Milborne, was sent with a force to take possession of their seat of government, but failed to accomplish his mission. "Soon after this event a letter arrived at New York by a special messenger from the British Privy Council, directed to 'Francis Nicholson, Esq., or, in his absence, to such as, for the time being, take care for preserving the peace and administering the laws in His Majesty's province of New York.'" This letter was delivered by the messenger to Leisler. Bayard, who had come to the city in disguise, and attempted to secure the missive, was arrested and imprisoned. "From this time the opposition to Leisler's government assumed an organized shape, and was sleepless and relentless. Leisler justly regarding himself as invested with supreme power by the people and the spirit of the letter from the Privy Council, at once assumed the title of lieutenant-governor; appointed councillors; made a new provincial seal; established courts, and called an assembly to provide means for carrying on war with Canada. . . . Colonel Henry Sloughter was appointed Governor of New York, but did not arrive until the spring of 1691. Richard Ingoldsby, a captain of foot, arrived early in the year, with a company of regular soldiers, to take possession of and hold the government until the arrival of the governor. He was urged by Leisler's enemies to assume supreme power at once, as he was the highest royal officer in the province. He haughtily demanded of Leisler the surrender of the fort, without deigning to show the governor his credentials. Leisler, of course, refused, and ordered the troops to be quartered in the city. Ingoldsby attempted to take the fort by force, but failed. For several weeks the city was fearfully excited by rival factions — 'Leislerians' and 'anti-Leislerians.' On the arrival of Governor Sloughter, in March (1691), Leisler at once loyally tendered to him the fort and the province. Under the influence of the enemies of Leisler, the royal governor responded to this meritorious action by ordering the arrest of the lieutenant-governor; also Milborne, and six other 'inferior insurgents' . . . , on a charge of high treason." The accused were tried, convicted and sentenced to be hanged; but all except Leisler and Milborne received pardon. These two appealed to the king; but the governor's councillors succeeded in suppressing the appeal. As Sloughter hesitated to sign the death-warrant, they intoxicated him at a dinner party and obtained his signature to the fatal document while his judgment was overcome. Before the drunken governor recovered his senses Jacob Leisler and Jacob Milborne had been hanged. "When the governor became sober, he was appalled at what he had done. He was so keenly stung by remorse and afflicted by delirium tremens that he died a few weeks afterward. Calm and impartial judgment, enlightened by truth, now assigns to Jacob Leisler the high position in history of a patriot and martyr."—B. J. Lossing, *The Empire State, ch.* 8.—"Leisler lacked judgment and wisdom in administrative affairs, but his aims were comprehensive and patriotic. His words are imbued with a reverent spirit, and were evidently the utterances of an honest man. It was his lot to encounter an opposition led by persons who held office under King James. They pursued him with a relentless spirit. . . . It is the office of history to bear witness to Jacob Leisler's integrity as a man, his loyalty as a subject, and his purity as a patriot."—R. Frothingham, *The Rise of the Republic, ch.* 3.—"The founder of the Democracy of New York was Jacob Leisler. . . . And Jacob Leisler was truly an honest man, who, though a martyr to

the cause of liberty, and sacrificed by injustice, aristocracy, and party malignity, ought to be considered as one in whom New York should take pride — although the ancestors of many of her best men denounced him as a rebel and a traitor."—W. Dunlap, *Hist. of the New Netherlands, v.* 1, *ch.* 12.

A. D. 1720-1734.—Conflicts of royal governors with the people.—Zenger's trial.—Vindication of the freedom of the press.—"In September 1720, William Burnet, the son of Bishop Burnet and godson of William III., entered upon the government of New York, burdened by instructions from England to keep alive the assembly which had been chosen several years before. This he did, to the great discontent of the people, until it had lasted more than eleven years. . . . But he was intelligent, and free from avarice. It was he who took possession of Oswego, and he 'left no stone unturned to defeat the French designs at Niagara.' Nevertheless, for all his merit, in 1728, he was transferred to Massachusetts to make way for the groom of the chamber of George II. while he was prince of Wales. At the time when the ministry was warned that 'the American assemblies aimed at nothing less than being independent of Great Britain as fast as they could,' Newcastle sent as governor to New York and New Jersey the dull and ignorant John Montgomerie. Sluggish, yet humane, the pauper chief magistrate had no object in America but to get money; and he escaped contests with the legislatures by giving way to them in all things. . . . He died in office in 1731. His successor, in 1732, was William Cosby, a brother-in-law of the earl of Halifax, and connected with Newcastle. A boisterous and irritable man, broken in his fortunes, having little understanding and no sense of decorum or of virtue, he had been sent over to clutch at gain. Few men did more to hasten colonial emancipation. . . . To gain very great perquisites, he followed the precedent of Andros in Massachusetts in the days of the Stuarts, and insisted on new surveys of lands and new grants, in lieu of the old. To the objection of acting against law, he answered: 'Do you think I mind that? I have a great interest in England.' The courts of law were not pliable; and Cosby displaced and appointed judges, without soliciting the consent of the council or waiting for the approbation of the sovereign. Complaint could be heard only through the press. A newspaper was established to defend the popular cause; and, in November 1734, about a year after its establishment, its printer, John Peter Zenger, a German by birth, who had been an apprentice to the famous printer, William Bradford, and afterward his partner, was imprisoned, by an order of the council, on the charge of publishing false and seditious libels. The grand jury would find no bill against him, and the attorney-general filed an information. The counsel of Zenger took exceptions to the commissions of the judges, because they ran during pleasure, and because they had been granted without the consent of council. The angry judge met the objection by disbarring James Alexander who offered it, though he stood at the head of his profession in New York for sagacity, penetration, and application to business. All the central colonies regarded the controversy as their own. At the trial the publishing was confessed; but the aged and venerable Andrew Hamilton, who came from Philadelphia to plead for Zenger, justified the publication by asserting its truth. 'You cannot be admitted,' interrupted the chief justice, 'to give the truth of a libel in evidence.' 'Then,' said Hamilton to the jury, 'we appeal to you for witnesses of the facts. The jury have a right to determine both the law and the fact, and they ought to do so.' 'The question before you,' he added, 'is not the cause of a poor printer, nor of New York alone; it is the cause of liberty.' . . . The jury gave their verdict, 'Not guilty.' Hamilton received of the common council of New York the franchises of the city for 'his learned and generous defence of the rights of mankind and the liberty of the press.'"—G. Bancroft, *Hist. of the U. S.* (*Author's last rev.*), *pt.* 3, *ch.* 15 (*v.* 2).

A. D. 1726.—How the Iroquois placed themselves under the protection of England.—"Governour Burnet . . . assembled the chiefs of the Iroquois at Albany [1726]; he reminded them of all the benefits they had received from England, and all the injuries that had been inflicted by France. He pointed out the evils that would flow to them from a French fort at Niagara, on their territory. The Indians declared their unwillingness to suffer this intrusion of the French, but said they now had not power to prevent it. They called upon the Governour of New York to write to the King of England for help to regain their country from the French of Canada. Burnet seized this opportunity to gain a surrender of their country to England, to be protected for their use. Such a surrender would be used by Europeans for their own purposes; but (in the sense they viewed and represented it), was

altogether incomprehensible by the Indian chiefs; and the deputies had no power from the Iroquois confederacy to make any such surrender. . . . By the treaty of Utrecht . . . France had acknowledged the Iroquois and their territory to be subject to Great Britain."—W. Dunlap, *Hist. of New York, v.* 1, *p.* 289.

A. D. 1741.—The pretended Negro Plot.—Panic and merciless frenzy of the people.—In 1741, "the city of New York became the scene of a cruel and bloody delusion, less notorious, but not less lamentable than the Salem witchcraft. That city now contained some 7,000 or 8,000 inhabitants, of whom 1,200 or 1,500 were slaves. Nine fires in rapid succession, most of them, however, merely the burning of chimneys, produced a perfect insanity of terror. An indented servant woman purchased her liberty and secured a reward of £100 by pretending to give information of a plot formed by a low tavern-keeper, her master, and three negroes, to burn the city and murder the whites. This story was confirmed and amplified by an Irish prostitute, convicted of a robbery, who, to recommend herself to mercy, reluctantly turned informer. Numerous arrests had been already made among the slaves and free blacks. Many others followed. The eight lawyers who then composed the bar of New York all assisted by turns on behalf of the prosecution. The prisoners, who had no counsel, were tried and convicted upon most insufficient evidence. The lawyers vied with each other in heaping all sorts of abuse on their heads, and Chief-justice Delancey, in passing sentence, vied with the lawyers. Many confessed to save their lives, and then accused others. Thirteen unhappy convicts were burned at the stake, eighteen were hanged, and seventy-one transported. The war and the religious excitement then prevailing tended to inflame the yet hot prejudices against Catholics. A non-juring schoolmaster, accused of being a Catholic priest in disguise, and of stimulating the negroes to burn the city by promises of absolution, was condemned and executed."—R. Hildreth, *Hist. of the U. S., ch.* 25 (*v.* 2).

A. D. 1773-1774.—The Revolutionary spirit abroad.—The conflict of parties.—The Vigilance Committee, the Committee of Fifty-One, and the Committee of Sixty.—"In 1773 the tax on tea was imposed. On October 25th the Mohawks of New York, a band of the Sons of Liberty, were ordered by their old leaders to be on the watch for the tea ships; and it was merely the chances of time and tide that gave the opportunity of fame first to the Mohawks of Boston. . . . An 'association' was now circulated for signatures, engaging to boycott, 'not deal with, or employ, or have any connection with' any persons who should aid in landing, or 'selling, or buying tea, so long as it is subject to a duty by Parliament'; and December 17th a meeting of the subscribers was held and a committee of fifteen chosen as a Committee of Correspondence that was soon known as the Vigilance Committee. Letters also were exchanged between the speakers of many of the houses of assembly in the different provinces; and January 20, 1774, the New York Assembly, which had been out of touch with the people ever since the Stamp Act was passed in the year after its election, appointed their Speaker, with twelve others, a standing Committee of Correspondence and Enquiry, a proof that the interest of all classes was now excited. April 15th, the 'Nancy' with a cargo of tea arrived off Sandy Hook, followed shortly by the 'London.' The Committee of Vigilance assembled, and, as soon as Captain Lockyier, of the 'Nancy' landed in spite of their warning, escorted him to a pilot boat and set him on board again. . . . April 23d, the 'Nancy' stood out to sea without landing her cargo, and with her carried Captain Chambers of the 'London,' from which the evening before eighteen chests of tea had been emptied into the sea by the Liberty Boys. The bill closing the port of Boston was enacted March 31st, and a copy of the act reached New York by the ship Samson

on the 12th. Two days later the Committee of Vigilance wrote to the Boston Committee recommending vigorous measures as the most effectual, and assuring them that their course would be heartily supported by their brethren in New York. So rapid had been the march of events that not till now did the merchants and responsible citizens of New York take alarm. Without their concurrence or even knowledge they were being rapidly compromised by the unauthorized action of an irresponsible committee, composed of men who for the most part were noted more for enthusiasm than for judgment, and many of whom had been not unconcerned in petty riots and demonstrations condemned by the better part of the community. . . . 'The men who at that time called themselves the Committee,' wrote Lieutenant Governor Colden the next month, 'who dictated and acted in the name of the people, were many of them of the lower ranks, and all the warmest zealots of those called the Sons of Liberty. The more considerable merchants and citizens seldom or never appeared among them. . . . The principal inhabitants, being now afraid that these hot-headed men might run the city into dangerous measures, appeared in a considerable body at the first meeting of the people after the Boston Port Act was published here.' This meeting, convoked by advertisement, was held May 16th, at the house of Samuel Francis, 'to consult on the measures proper to be pursued.' . . . A committee of fifty, Jay among them, instead of one of twenty-five, as at first suggested, was nominated 'for the approbation of the public,' 'to correspond with our sister colonies on all matters of moment.' Three days later these nominations were confirmed by a public meeting held at the Coffee House, but not until a fifty-first member was added, Francis Lewis, as a representative of the radical party which had been as much as possible ignored. . . . At the Coffee House again, on May 23d, the Committee of Fifty-one met and organized; they repudiated the letter to Boston from the Committee of Vigilance as unofficial," and prepared a response to another communication just received from Boston, by the famous messenger, Paul Revere. In this reply it was "urged that 'a Congress of Deputies from the Colonies in General is of the utmost moment,' to form 'some unanimous resolutions . . . not only respecting your [Boston's] deplorable circumstances, but for the security of our common rights;' and that the advisability of a non-importation agreement should be left to the Congress. . . . The importance of this letter can hardly be exaggerated, for it was the first serious authoritative suggestion of a General Congress to consider 'the common rights' of the colonies in general. . . . The advice of New York was followed gradually by the other colonies, but even before a Continental Congress was a certainty, the Committee of Fifty-one, with singular confidence, resolved that delegates to it should be chosen, and called a meeting for that purpose for July 19th. . . . Philip Livingston, John Alsop, James Duane, and John Jay were nominated as delegates to be submitted to the public meeting, July 19th. The people met accordingly at the Coffee House, and after a stormy debate elected the committee's candidates in spite of a strong effort to substitute for Jay, McDougall, the hero of the Liberty Boys." This election, however, was not thought to be an adequate expression of the popular will, and polls were subsequently opened in each ward, on the 28th of July. The result was a unanimous vote for Jay and his colleagues. "Thus, fortunately, at the very inception of the Revolution, before the faintest clatter of arms, the popular movement was placed in charge of the 'Patricians' as they were called, rather than of the 'Tribunes,' as respectively represented by Jay and McDougall."—G. Pellew, *John Jay, ch.* 2.—"The New York Committee of Fifty-One, having accomplished its object, appointed a day for the choice, by the freeholders of the city, of a 'Committee of Observation,' numbering sixty, to enforce in New York the Non-Importation Act of the late Congress; and when this new committee was duly elected and organized, with Isaac Low as chairman, the Fifty-One was dissolved."—Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 1, *p.* 768.

A. D. 1774.—The Boston Port Bill, the Massachusetts Act, and the Quebec Act.—The First Continental Congress. See United States of Am.: A. D. 1774.

A. D. 1775 (April).—Disadvantages experienced by the patriots.—The first provincial Convention held.—"The republicans of the province of New York, composing by far the greater portion of the inhabitants, labored under severe disabilities. Acting Governor Colden was a Loyalist, and his council held office by the King's will. The assembly, though chosen by the people, continued in existence only by the King's prerogative. They might be dissolved by the representative of the crown (the acting governor) at any moment. There was no legally constituted body to form a rallying point for the patriots, as in Massachusetts, where there was an elective council and an annually elected assembly. In all the other colonies there was some nucleus of power around which the people might assemble and claim to be heard with respect. But in New York they were thrown back upon their own resources, and nobly did they preserve their integrity and maintain their cause, in spite of every obstacle. The whole continent was now moving in the direction of rebellion. . . . The excitement in New York was equally intense. Toward the close of the preceding December, the Liberty Boys were called to action by the seizure of arms and ammunition, which some of them had imported, and had consigned to Walter Franklin, a well known merchant. These were seized by order of the collector, because, as he alleged, of the want of cockets, or custom-house warrants, they having been in store several days without them. While they were on their way to the custom-house, some of the Sons of Liberty rallied and seized them, but before they could be concealed they were retaken by government officials and sent on board a man-of-war in the harbor. . . . The republicans failed in their efforts, in the New York Assembly, to procure the appointment of delegates to the second Continental Congress, to be convened at Philadelphia in May. Nothing was left for them to do but to appeal to the people. The General Committee of sixty members, many of them of the loyal majority in the assembly, yielding to

the pressure of popular sentiment, called a meeting of the freeholders and freemen of the city at the Exchange, to take into consideration the election of delegates to a convention of representatives from such of the counties of the province as should adopt the measure, the sole object of such convention being the choice of proper persons to represent the colony in the Continental Congress. This movement was opposed by the loyalists. . . . At first there was confusion. This soon subsided, and the meeting proceeded with calmness and dignity to nominate eleven persons to represent the city in a provincial convention to be held in New York on the 20th [April], who were to be instructed to choose delegates to the Continental Congress. On the following day the chairman of the Committee of Sixty gave notice of the proposed convention on the 20th to the chairmen of the committees of correspondence in the different counties, advising them to choose delegates to the same. There was a prompt response. . . . The convention assembled at the Exchange, in New York, on the 20th, and consisted of 42 members [representing seven counties outside of New York city]. Colonel Schuyler was at the head of the delegation from Albany, and took a leading part in the convention. Philip Livingston was chosen president of the convention, and John M'Kesson, secretary. This was the first provincial convention in New York — the first positive expression of the doctrine of popular sovereignty in that province. They remained in session three days, and chose for delegates to the Continental Congress Philip Livingston, James Duane, John Alsop, John Jay, Simon Boerum, William Floyd, Henry Wisner, Philip Schuyler, George Clinton, Lewis Morris, Francis Lewis, and Robert R. Livingston, to whom were given full power, 'or any five of them, to meet the delegates from other colonies, and to concert and determine upon such measures as shall be judged most effectual for the preservation and reëstablishment of American rights and privileges, and for the restoration of harmony between Great Britain and her colonies.' While this convention was in session intelligence of the bloodshed at Lexington was on its way, but it did not reach New York until the day after the adjournment."— B. J. Lossing, *Life and Times of Philip Schuyler, v.* 1, *ch.* 17–18.

A. D. 1775 (April—May).— The Beginning of the War of the American Revolution.— Lexington. — Concord. — Action upon the news.—Ethan Allen at Ticonderoga.—Siege of Boston.—Bunker Hill.—The Second Continental Congress. See United States of Am.: A. D. 1775.

A. D. 1775 (April—September).—The Sons of Liberty take control of the city.—The end of royal government. — Flight of Governor Tryon.—"On Sunday, the 24th of April, 1775, the news of the battle of Lexington reached the city. This was the signal for open hostilities. Business was at once suspended; the Sons of Liberty assembled in large numbers, and, taking possession of the City Hall, distributed the arms that were stored in it, together with a quantity which had been deposited in the arsenal for safe keeping, among the citizens, a party of whom formed themselves into a voluntary corps under the command of Samuel Broome, and assumed the temporary government of the city. This done, they demanded and obtained the keys of the custom house, closed the building and laid an embargo upon the vessels in port destined for the eastern colonies. . . . It now became necessary to organize some provisional government for the city, and for this purpose, on the 5th of May, a meeting of the citizens was called at the Coffee-House, at which a Committee of One Hundred was chosen and invested with the charge of municipal affairs, the people pledging themselves to obey its orders until different arrangements should be made by the Continental Congress. This committee was composed in part of men inclined to the royalist cause, yet, such was the popular excitement at the time, that they were carried away by the current and forced to acquiesce in the measures of their more zealous colleagues. . . . The committee at once assumed the command of the city, and, retaining the corps of Broome as their executive power, prohibited the sale of weapons to any persons suspected of being hostile to the patriotic party. . . . The moderate men of the committee succeeded in prevailing on their colleagues to present a placable address to Lieutenant-Governor Colden, explanatory of their appointment, and assuring him that they should use every effort to preserve the public peace; yet ominous precautions were taken to put the arms of the city in a serviceable condition, and to survey the neighboring grounds with a view to erecting fortifications. . . . On the 25th of June, Washington entered New York on his way from Mount Vernon to Cambridge to take command of the army assembled there. The Provincial Congress received him with a cautious address. Despite their patriotism, they still clung to the shadow of loyalty; fearing to go too far, they acted constantly under protest that they desired nothing more than to secure to themselves the rights of true-born British subjects. The next morning Washington quitted the city, escorted on his way by the provincial militia. Tryon [Governor Tryon, who had been absent in England since the spring of 1774, leaving the government in the hands of Lieutenant-Governor Colden, and who now returned to resume it] had entered it the night before, and thus had been brought almost face to face with the rebel who was destined to work such a transformation in his majesty's colonies of America. The mayor and corporation received the returning governor with expressions of joy, and even the patriot party were glad of the change which relieved them from the government of Colden. . . . Meanwhile, the colony of New York had been ordered by the Continental Congress to contribute her quota of 3,000 men to the general defence, and four regiments were accordingly raised. . . . The city now presented a curious spectacle, as the seat of two governments, each issuing its own edicts, and denouncing those of the other as illegal authority. It was not long before the two powers came into collision." This was brought about by an order from the Provincial Congress, directing the removal of guns from the Battery. Shots were exchanged between the party executing this order and a boat from the ship of war "Asia"; whereupon the "Asia" cannonaded the town, riddling houses and wounding three citizens. "Hitherto, the governor had remained firm at his post; but finding his position daily growing more perilous,

despite the pledges of the corporation for his personal safety, he determined to abandon the city, and took refuge on board the 'Asia.'"—Mary L. Booth, *Hist. of the City of New York, ch.* 16.

A. D. 1777.—Adoption of a Constitution and organization of a State government.—Religious freedom established.—"After the Declaration of Independence, the several colonies proceeded to form State governments, by adopting constitutions. In that business New York moved early. On the 1st of August, 1776, a committee of the 'Convention of the Representatives of New York,' as the provisional government was called, sitting at White Plains, in Westchester County, were appointed to draw up and report a constitution. The committee consisted of the following named gentlemen: John Jay, John Sloss Hobart, William Smith, William Duer, Gouverneur Morris, Robert R. Livingston, John Broome, John Morin Scott, Abraham Yates, Jr., Henry Wisner, Sen., Samuel Townsend, Charles De Witt and Robert Yates. John Jay was the chairman, and to him was assigned the duty of drafting the Constitution. The Convention was made migratory by the stirring events of the war during the ensuing autumn and winter. First they held their sessions at Harlem Heights; then at White Plains; afterward at Fishkill, in Dutchess County, and finally at Kingston, in Ulster County, where they continued from February till May, 1777. There undisturbed the committee on the Constitution pursued their labors, and on the 12th of March, 1777, reported a draft of that instrument. It was under consideration in the Convention for more than a month after that, and was finally adopted on the 20th of April. Under it a State government was established by an ordinance of the Convention, passed in May, and the first session of the Legislature was appointed to meet at Kingston in July." The election of State officers was held in June. Jay and others issued a circular recommending General Schuyler for Governor and General George Clinton for Lieutenant Governor. But Schuyler "declined the honor, because he considered the situation of affairs in his Department too critical to be neglected by dividing his duties. The elections were held in all the Counties excepting New York, Kings, Queens, and Suffolk, then occupied by the British, and Brigadier General George Clinton was elected Governor, which office he held, by successive elections, for eighteen years, and afterward for three years. Pierre Van Courtlandt, the President of the Senate, became Lieutenant Governor. Robert R. Livingston was appointed Chancellor; John Jay Chief Justice; Robert Yates and John Sloss Hobart judges of the Supreme Court, and Egbert Benson attorney-general. So it was that the great State of New York was organized and put into operation at a time when it was disturbed by formidable invasions on its northern, southern, and western frontiers."—B. J. Lossing, *Life and Times of Philip Schuyler, v.* 2, *ch.* 9.—The framers of this first constitution of the State of New York "proceeded at the outset to do away with the established church, repealing all such parts of the common law and all such statutes of the province 'as may be construed to establish or maintain any particular denomination of Christians or their ministers.' Then followed a section . . . which, it is believed, entitles New York to the honor of being the first organized government of the world to assert by constitutional provision the principle of perfect religious freedom. It reads as follows: 'And whereas, we are required by the benevolent principles of rational liberty, not only to expel civil tyranny, but also to guard against that spiritual oppression and intolerance wherewith the bigotry and ambition of weak and wicked priests and princes have scourged mankind, this convention doth further, in the name and by the authority of the good people of this state, ordain, determine, and declare that the free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever hereafter be allowed within this state to all mankind.' Thomas Jefferson, to whom Virginia is chiefly indebted for her religious liberty [embodied in her Declaration of Rights, in 1776] derived his religious as well as his political ideas from the philosophers of France. But the men who framed this constitutional provision for New York, which has since spread over most of the United States, and lies at the base of American religious liberty, were not freethinkers, although they believed in freedom of thought. Their Dutch ancestors had practised religious toleration, they expanded toleration into liberty, and in this form transmitted to posterity the heritage which Holland had sent across the sea a century and a half before."—D. Campbell, *The Puritan in Holland, Eng. and Am., v.* 2, *pp.* 251–252.

A. D. 1786-1799.—Land-fee of Western New York ceded to Massachusetts.—The Phelps and Gorham Purchase.—The Holland Purchase.—The founding of Buffalo.—The conflicting territorial claims of New York and Massachusetts, caused by the overlapping grants of the English crown, were not all settled by the cession of western claims to the United States which New York made in 1781 and Massachusetts in 1785 (see UNITED STATES OF AM.: A. D. 1781-1786). "Although the nominal amount in controversy, by these acts, was much diminished, it still left some 19,000 square miles of territory in dispute, but this controversy was finally settled by a convention of Commissioners appointed by the parties, held at Hartford, Conn., on the 16th day of December, 1786. According to the stipulations entered into by the convention, Massachusetts ceded to the state of New York all her claim to the government, sovereignty, and jurisdiction of all the territory lying west of the present east line of the state of New York; and New York ceded to Massachusetts the pre-emption right or fee of the land subject to the title of the natives, of all that part of the state of New York lying west of a line beginning at a point in the north line of Pennsylvania, 82 miles west of the north-east corner of said state, and running from thence due north through Seneca lake to lake Ontario; excepting and reserving to the state of New York a strip of land east of and adjoining the eastern bank of Niagara river, one mile wide and extending its whole length. The land, the pre-emption right of which was thus ceded, amounted to about 6,000,000 of acres. In April, 1788, Massachusetts contracted to sell to Nathaniel Gorham of Charlestown, Middlesex county, and Oliver Phelps of Granville, Hampshire county, of said state, their pre-emption right to all the lands in Western New York, amounting to about 6,000,000 acres, for the sum of $1,000,000, to be paid in three annual instalments, for which a kind of scrip Massachusetts had issued, called consolidated securities, was to be received, which was then in market much below par. In July, 1788, Messrs. Gorham and Phelps purchased of the Indians by treaty, at a convention held at Buffalo, the Indian title to about 2,600,000 acres of the eastern part of their purchase from Massachusetts. This purchase of the Indians being bounded west by a line beginning at a point in the north line of the state of Pennsylvania, due south of the corner or point of land made by the confluence of the Kanahasgwaicon (Cannaseraga) creek with the waters of Genesee river; thence north on said meridian line to the corner or point at the confluence aforesaid; thence northwardly along the waters of said Genesee river to a point two miles north of Kanawageras (Cannewagus) village; thence running due west 12 miles; thence running northwardly, so as to be 12 miles distant from the westward bounds of said river, to the shore of lake Ontario. On the 21st day of November, 1788, the state of Massachusetts conveyed and forever quitclaimed to N. Gorham and O. Phelps, their heirs and assigns forever, all the right and title of said state to all that tract of country of which Messrs. Phelps and Gorham had extinguished the Indian title. This tract, and this only, has since been designated as the Phelps and Gorham Purchase. . . . So rapid were the sales of the proprietors that before the 18th day of November, 1790, they had disposed of about 50 townships [each six miles square], which were mostly sold by whole townships or large portions of townships, to sundry individuals and companies of farmers and others, formed for that purpose. On the 18th day of November, 1790, they sold the residue of their tract (reserving two townships only), amounting to upwards of a million and a quarter acres of land, to Robert Morris of Philadelphia, who soon sold the same to Sir William Pultney, an English gentleman. . . . This property, or such part of it as was unsold at the time of the decease of Sir William, together with other property which he purchased in his lifetime in its vicinity, is now [1849] called the Pultney Estate. . . . Messrs. Phelps and Gorham, who had paid about one third of the purchase money of the whole tract purchased of Massachusetts, in consequence of the rise of the value of Massachusetts consolidated stock (in which the payments for the land were to be received) from 20 per cent. to par, were unable further to comply with their engagements." After long negotiations they were permitted to relinquish to the state of Massachusetts all that western section of their purchase of which they had not acquired the Indian title, and this was resold in March, 1791, by Massachusetts, to Samuel Ogden, acting for Robert Morris. Morris made several sales from the eastern portion of his purchase, to the state of Connecticut (investing its school fund) and to others, in large blocks known subsequently as the Ogden Tract, the Cragie Tract, the Connecticut Tract, etc. The remainder or most of it, covering the greater part of western New York, was disposed of to certain gentlemen in Holland, and came to be generally known as the Holland Purchase.—O. Turner, *Pioneer Hist. of the Holland Purchase, pp.* 325 *and* 396-424.—"Much has been written and more has been said about the 'Holland Company.' When people wished to be especially precise, they called it the 'Holland Land Company.'. . . Yet there never was any

such thing as the Holland Company or the Holland Land Company. Certain merchants and others of the city of Amsterdam placed funds in the hands of friends who were citizens of America to purchase several tracts of land in the United States, which, being aliens, the Hollanders could not hold in their own name at that time. One of these tracts, comprising what was afterwards known as the Holland Purchase, was bought from Robert Morris. . . . In the forepart of 1798 the legislature of New York authorized those aliens to hold land within the State, and in the latter part of that year the American trustees conveyed the Holland Purchase to the real owners." The great territory covered by the Purchase surrounded several Indian "Reservations"—large blocks of land, that is, which the aboriginal Seneca proprietors reserved for their own occupancy when they parted with their title to the rest, which they did at a council held in 1797. One of these Reservations embraced the site now occupied by the city of Buffalo. Joseph Ellicott, the agent of the Holland proprietors, quickly discerned its prospective importance, and made an arrangement with his Indian neighbors by which he secured possession of the ground at the foot of Lake Erie and the head of Niagara River, in exchange for another piece of land six miles away. Here, in 1799, Ellicott began the founding of a town which he called New Amsterdam, but which subsequently took the name of the small stream, Buffalo Creek, on which it grew up, and which, by deepening and enlargement, became its harbor.—C. Johnson, *Centennial Hist. of Erie Co., N. Y., ch.* 13.

A. D. 1799.—Gradual emancipation of Slaves enacted.—During the session of the legislature in April, 1799, "emancipation was at last enacted. It was provided that all children born of slave parents after the ensuing 4th of July should be free, subject to apprenticeship, in the case of males till the age of 28, in the case of females till the age of 25, and the exportation of slaves was forbidden. By this process of gradual emancipation there was avoided that question of compensation which had been the secret of the failure of earlier bills. At that time the number of slaves was only 22,000, small in proportion to the total population of nearly a million. So the change was effected peacefully and without excitement."—G. Pellew, *John Jay, p.* 328.

A. D. 1817-1819.—The Clintonians and Bucktails.—During the first term of De Witt Clinton as governor of the State, the feud in the Democratic Republican party, between his supporters and his opponents, which began in 1812 when he audaciously sought to attain the Presidency, against Madison, assumed a fixed and definite form. "Clinton's Republican adversaries were dubbed 'Bucktails,' from the ornaments worn on ceremonial occasions by the Tammany men, who had long been Clinton's enemies. The Bucktails and their successors were the 'regular' Republicans, or the Democrats as they were later called; and they kept their regularity until, long afterwards, the younger and greater Bucktail leader [Martin Van Buren], when venerable and laden with honors, became the titular head of the Barnburner defection. The merits of the feud between Bucktails and Clintonians it is now difficult to find. Each accused the other of coquetting with the Federalists; and the accusation of one of them was nearly always true."—E. M. Shepard, *Martin Van Buren, p.* 56.

A. D. 1817-1825.—Construction of the Erie Canal.—"History will assign to Gouverneur Morris the merit of first suggesting a direct and continuous communication from Lake Erie to the Hudson. In 1800, he announced this idea from the shore of the Niagara river to a friend in Europe. . . . The praise awarded to Gouverneur Morris must be qualified by the fact, that the scheme he conceived was that of a canal with a uniform declination, and without locks, from Lake Erie to the Hudson. Morris communicated his project to Simeon De Witt in 1803, by whom it was made known to James Geddes in 1804. It afterward became the subject of conversation between Mr. Geddes and Jesse Hawley, and this communication is supposed to have given rise to the series of essays written by Mr. Hawley, under the signature of 'Hercules,' in the 'Genesee Messenger,' continued from October, 1807, until March, 1808, which first brought the public mind into familiarity with the subject. These essays, written in a jail, were the grateful return, by a patriot, to a country which punished him with imprisonment for being unable to pay debts owed to another citizen, and displayed deep research, with singular vigor and comprehensiveness of thought, and traced with prophetic accuracy a large portion of the outline of the Erie canal. In 1807, Albert Gallatin, then secretary of the treasury, in pursuance of a recommendation made by Thomas Jefferson, president of the United States, reported a plan for appropriating all the surplus revenues of the general government to the construction of canals and turnpike roads; and it embraced in one grand and comprehensive view, nearly without exception, all the works which have since been executed or attempted by the several states in

the Union. . . . In 1808, Joshua Forman, a representative in the assembly from Onondaga county, submitted his memorable resolution," referring to the recommendation made by President Jefferson to the federal congress, and directing that "'a joint committee be appointed to take into consideration the propriety of exploring and causing an accurate survey to be made of the most eligible and direct route for a canal, to open a communication between the tide waters of the Hudson river and Lake Erie, to the end that Congress may be enabled to appropriate such sums as may be necessary to the accomplishment of that great national object.'" The committee was appointed, its report was favorable, and the survey was directed to be made. "There was then no civil engineer in the state. James Geddes, a land surveyor, who afterward became one of our most distinguished engineers, by the force of native genius and application in mature years, levelled and surveyed, under instructions from the surveyor-general," several routes to Lake Ontario and to Lake Erie. "Mr. Geddes' report showed that a canal from Lake Erie to the Hudson was practicable, and could be made without serious difficulty. In 1810, on motion of Jonas Platt, of the senate, who was distinguished throughout a pure and well-spent life by his zealous efforts to promote this great undertaking, Gouverneur Morris, De Witt Clinton, Stephen Van Rensselaer, Simeon De Witt, William North, Thomas Eddy, and Peter B. Porter, were appointed commissioners 'to explore the whole route for inland navigation from the Hudson river to Lake Ontario and to Lake Erie.' Cadwallader D. Colden, a contemporary historian, himself one of the earliest and ablest advocates of the canals, awards to Thomas Eddy the merit of having suggested this motion to Mr. Platt, and to both these gentlemen that of engaging De Witt Clinton's support, he being at that time a member of the senate. . . . The commissioners in March, 1811, submitted their report written by Gouverneur Morris, in which they showed the practicability and advantages of a continuous canal from Lake Erie to the Hudson, and stated their estimate of the cost at $5,000,000. . . . On the presentation of this report, De Witt Clinton introduced a bill, which became a law on the 8th of April, 1811, under the title of 'An act to provide for the improvement of the internal navigation of this state.'. . . The act added Robert R. Livingston and Robert Fulton to the board of commissioners, and authorized them to consider all matters relating to such inland navigation, with powers to make application in behalf of the state to Congress, or to any state or territory, to cooperate and aid in the undertaking. . . . Two of the commissioners, Mr. Morris and Mr. Clinton, repaired to the federal capital, and submitted the subject to the consideration of the President (Mr. Madison) and of Congress. In 1812, the commissioners reported that, although it was uncertain whether the national government would do anything, it certainly would do nothing which would afford immediate aid to the enterprise. . . . The commissioners then submitted that, having offered the canal to the national government, and that offer having virtually been declined, the state was now at liberty to consult and pursue the maxims of policy, and these seemed to demand imperatively that the canal should be made by herself, and for her own account, as soon as the circumstances would permit. . . . On the 19th of June, 1812, a law was enacted, reappointing the commissioners and authorizing them to borrow money and deposite it in the treasury, and to take cessions of land, but prohibiting any measures to construct the canals. . . . From 1812 to 1815, the country suffered the calamities of war, and projects of internal improvement necessarily gave place to the patriotic efforts required to maintain the national security and honor." But after peace had returned, the advocates of the enterprise prevailed with considerable difficulty over its opponents, and "ground was broken for the construction of the Erie canal on the 4th day of July, 1817, at Rome, with ceremonies marking the public estimation of that great event. De Witt Clinton, having just before been elected to the chief magistracy of the state, and being president of the board of canal commissioners, enjoyed the high satisfaction of attending, with his associates, on the auspicious occasion. . . . On the 26th of October, 1825, the Erie canal was in a navigable condition throughout its entire length, affording an uninterrupted passage from Lake Erie to tidewater in the Hudson. . . . This auspicious consummation was celebrated by a telegraphic discharge of cannon, commencing at Lake Erie [at Buffalo], and continued along the banks of the canal and of the Hudson, announcing to the city of New York the entrance on the bosom of the canal of the first barge [bearing Governor Clinton and his coadjutors] that was to arrive at the commercial emporium from the American Mediterraneans." —W. H. Seward, *Notes on New York* (*Works, v.* 2), *pp.* 88–117.

A. D. 1821.—Revision of the Constitution. —"The Constitution did not meet the expectations of its framers. The cumbrous machinery by which it was sought to insure the control of the People, through the supremacy of the Assembly, had only resulted in fortifying power practically beyond their reach. The Council of Revision was objected to because it had exercised the veto power contrary to the spirit of the Constitution, which was in harmony with the traditions of the Colony from the earliest conflict with the executive power; and because the officers who thus interposed their objections to the will of the Legislature, holding office for good behavior (except the Governor), were beyond the reach of the People. It was seen that this power was a dangerous one, in a Council so constituted; but it was thought that it could be safely intrusted to the Governor alone, as he was directly responsible to the People. The Council of Appointment, although not vested with any judicial authority, and in fact disclaiming it, nevertheless at an early day summoned its appointees before it, for the purpose of hearing accusations against them, and proving their truth or falsity. At a later day, more summary proceedings were resorted to. The office thus became very unpopular. Nearly every civil, military, and judicial officer of the commonwealth was appointed by this Council. In 1821,

8,287 military and 6,663 civil officers held their commissions from it, and this vast system of centralized power was naturally very obnoxious. The Legislature, in 1820, passed 'an act recommending a Convention of the People of this State,' which came up for action in the Council of Revision, on November 20th of the same year; present, Governor Clinton, Chancellor Kent, Chief Justice Spencer, and Justices Yates and Woodworth, on which day the Council, by the casting vote of the Governor, adopted two objections to it; first, because it did not provide for taking the sense of the People on the question; and second, because it submitted the new Constitution to the People in toto, instead of by sections. These objections were referred to a select committee, Michael Ulshoeffer, chairman, who submitted their report January 9, 1821, in opposition to the opinion of the Council, which was adopted by the Assembly. The bill, however, failed to pass, not receiving a two-third vote. Immediately thereupon a committee was appointed to draft a new bill. The committee subsequently introduced a bill for submitting the question to the people, which passed both Houses; received the sanction of the Council of Revision on the 13th of March, and was subsequently amended, the amendments receiving the sanction of the Council on the third of April. The popular vote on holding the Convention was had in April, and resulted as follows: 'For Convention' 109,346. 'For No Convention' 34,901. The Convention assembled in Albany, August 28, and adjourned November 10, 1821. The Council of Revision was abolished, and its powers transferred to the Governor. The Council of Appointment was abolished without a dissenting voice. The principal department officers were directed to be appointed on an open separate nomination by the two Houses, and subsequent joint ballot. Of the remaining officers not made elective, the power of appointment was conferred upon the Governor, by and with the advice and consent of the Senate. In 1846, two hundred and eighty-nine offices were thus filled. The elective franchise was extended. The Constitution was adopted at an election held in February, 1822, by the following vote: Constitution—For, 74,732: Against, 41,402. . . . The People took to themselves a large portion of the power they had felt it necessary, in the exercise of a natural conservatism, to intrust to the Assembly. They had learned that an elective Governor and an elective Senate are equally their agents, and interests which they thought ought to be conserved, they intrusted to them, subject to their responsibility to the People. The entire Senate were substituted in the place of the members who chanced to be the favorites with a majority in the Assembly, as a Council to the Governor, and thus the People of all the State were given a voice in appointments. The Supreme Judicial Tribunal remained the same. The direct sovereignty of the People was thus rendered far more effective, and popular government took the place of parliamentary administration."—E. A. Werner, *Civil List and Const. Hist. of N. Y.*, 1887, *pp.* 126–128.

A. D. 1823.—The rise of the Albany Regency.—"The adoption of the new constitution in 1822 placed the political power of the State in the hands of Mr. Van Buren, the recognized representative leader of the Democratic party. Governor Clinton, as the end of his term of service approached, became as powerless as he was in 1816. . . . William L. Marcy was then State Comptroller, Samuel L. Talcott, Attorney-General; Benjamin Knower, Treasurer; and Edwin Crosswell, editor of the 'Argus' and state printer. These gentlemen, with Mr. Van Buren as their chief, constituted the neucleus of what became the Albany Regency. After adding Silas Wright, Azariah C. Flagg, John A. Dix, James Porter, Thomas W. Olcott, and Charles E. Dudley to their number, I do not believe that a stronger political combination ever existed at any state capital. . . . Their influence and power for nearly twenty years was almost as potential in national as in state politics."—T. Weed, *Autobiography, v.* 1, *ch.* 11.—"Even to our own day, the Albany Regency has been a strong and generally a sagacious influence in its party. John A. Dix, Horatio Seymour, Dean Richmond and Samuel J. Tilden long directed its policy, and from the chief seat in its councils the late secretary of the treasury, Daniel Manning, was chosen in 1885."—E. M. Shepard, *Martin Van Buren, p.* 96.

A. D. 1826-1832.—Anti-Masonic excitement.—The abduction of Morgan.—"The society of free-masons included a large number of the foremost citizens in all walks of life, and the belief existed that they used their secret ties to advance their ambitions. . . . This belief was used to create prejudice among those who were not members, and it added fuel to the fires of faction. At this juncture, September 11, 1826, William Morgan, of Batavia, a free-mason, who had announced his intention to print a pamphlet exposing the secrets of masonry, was arrested on a charge of larceny, made by the master of a masonic lodge, but found not guilty, and then arrested for debt, and imprisoned in jail at Canandaigua. He was taken secretly from that jail and conveyed to Fort Niagara, where he was kept until September, when he disappeared. The masons were charged with his abduction, and a body found in the Niagara River was produced as proof that he was drowned to put him out of the way. Thurlow Weed, then an editor in Rochester, was aggressive in charging that Morgan was murdered by the masons, and as late as 1882 he published an affidavit rehearsing a confession made to him by John Whitney, that the drowning was in fact perpetrated by himself and four other persons whom he named, after a conference in a masonic lodge. In 1827, Weed, who was active in identifying the drowned body, was charged with mutilating it, to make it resemble Morgan, and the imputation was often repeated; and the abduction and murder were in turn laid at the door of the anti-masons. The disappearance became the chief topic of partisan discussion. De Witt Clinton was one of the highest officers in the masonic order, and it was alleged that he commanded that Morgan's book should be 'suppressed at all hazards,' thus instigating the murder; but the slander was soon exposed. The state was flooded with volumes portraying masonry as a monstrous conspiracy, and the literature of the period was as harrowing as a series of sensational novels."—E. H. Roberts, *New York, v.* 2, *ch.* 33.—"A party soon grew up in Western New York pledged to oppose the election of any Free Mason to public office. The Anti-Masonic Party acquired influence

in other States, and began to claim rank as a national political party. On most points its principles were those of the National Republicans. But Clay, as well as Jackson, was a Free Mason, and consequently to be opposed by this party. . . . In 1832 it even nominated a Presidential ticket of its own, but, having no national principle of controlling importance, it soon after declined."—A. Johnston, *Hist. of Am. Politics, ch.* 12, *sect.* 3, *with foot-note.*

Also in: T. Weed, *Autobiography, ch.* 20–30, 36, *and* 40.

A. D. 1827.—The last of Slavery in the state.—"On the 28th of January, 1817, the governor sent a message to the legislature recommending the entire abolition of slavery in the State of New York, to take place on the fourth day of July, 1827. By an act passed some years before, all persons born of parents who were slaves after July 1799, were to be free; males at twenty-eight and females at twenty-five years of age. The present legislature adopted the recommendation of the governor. This great measure in behalf of human rights, which was to obliterate forever the black and foul stain of slavery from the escutcheon of our own favored state, was produced by the energetic action of Cadwallader D. Colden, Peter A. Jay, William Jay, Daniel D. Tompkins and other distinguished philanthropists, chiefly residing in the city of New York. The Society of Friends, who never slumber when the principles of benevolence and a just regard to equal rights call for their action, were zealously engaged in this great enterprise." —J. D. Hammond, *Hist. of Political Parties in the State of N. Y., v.* 1, *ch.* 22.

Also in: E. H. Roberts, *New York, v.* 2, *p.* 565.

A. D. 1835-1837.—The Loco-focos.—"The Van Buren party began to be called the Loco-focos, in derision of the fancied extravagance of their financial doctrines. The Loco-foco or Equal Rights party proper was originally a division of the Democrats, strongly anti-monopolist in their opinions, and especially hostile to banks,—not only government banks but all banks,—which enjoyed the privileges then long conferred by special and exclusive charters. In the fall of 1835 some of the Democratic candidates in New York were especially obnoxious to the anti-monopolists of the party. When the meeting to regularly confirm the nominations made in committee was called at Tammany Hall, the anti-monopolist Democrats sought to capture the meeting by a rush up the main stairs. The regulars, however, showed themselves worthy of their regularity by reaching the room up the back stairs. In a general scrimmage the gas was put out. The anti-monopolists, perhaps used to the devices to prevent meetings which might be hostile, were ready with candles and loco-foco matches. The hall was quickly illuminated; and the anti-monopolists claimed that they had defeated the nominations. The regulars were successful, however, at the election; and they and the Whigs dubbed the anti-monopolists the Loco-foco men. . . . The hatred which Van Buren after his message of September, 1837, received from the banks commended him to the Loco-focos; and in October, 1837, Tammany Hall witnessed their reconciliation with the regular Democrats upon a moderate declaration for equal rights."—E. M. Shepard, *Martin Van Buren, pp.* 293–295.

A. D. 1846.—Constitutional revision.—During the twenty-five years of the existence of the constitution of 1821, "ten different proposals for amendments were submitted to the electors, who decided against choosing presidential electors by districts, but in favor of extending the franchise, in favor of electing mayors by the people, and in 1846 for no license except in the city of New York. The commonwealth grew not only in population, but in all the elements of progress and prosperity and power, and by the census of 1845 was shown to contain 2,604,495 inhabitants. Legislation had tended to the substitution of rights for privileges granted as favors. The tenure of land, especially under the claims of the patroons, had caused difficulties for which remedies were sought; and the large expenditures for internal improvements, involving heavy indebtedness, prompted demands for safe-guards for the creditor and the taxpayer. The judiciary system had confessedly become independent, and required radical reformation. When, therefore, in 1845, the electors were called upon to decide whether a convention should be held to amend the State constitution, 213,257 voted in the affirmative, against 33,860 in the negative. The convention met June 1, 1846, but soon adjourned until October 9, when it proceeded with its task. John Tracy of Chenango presided; and among the members were Ira Harris of Albany, George W. Patterson of Chautauqua, Michael Hoffman and Arphaxed Loomis of Herkimer, Samuel J. Tilden of New York, Samuel Nelson of Otsego, and others eminent at home and in State affairs. The convention dealt radically with the principles of government. The new constitution gave to the people the election of many officers before appointed at Albany. It provided for the election of members of both houses of the legislature by separate districts. Instead of the cumbrous court for the correction of errors, it established an independent court of appeals. It abolished the court of chancery and the circuit courts, and merged both into the supreme court, and defined the jurisdiction of county courts. All judges were to be elected by the people. Feudal tenures were abolished, and no leases on agricultural lands for a longer period than twelve years were to be valid, if any rent or service were reserved. The financial articles established sinking funds for both the canal and general fund debt, forbade the loan of the credit of the State, and limited rigidly the power of the legislature to create debts, except to repel invasion or suppress insurrection, and declared the school and literature funds inviolate. Provision was made for general laws for the formation of corporations. The constitution required the submission to the people once every twenty years of the question whether a convention shall be called or not."—E. H. Roberts, *New York, v.* 2, *pp.* 567–569.

A. D. 1863.—The Draft Riots in New York City.—"A new levy of 300,000 men was called for in April, 1863, with the alternative of a draft, if the quotas were not filled by volunteering. The quota of the city of New York was not filled, and a draft was begun there on Saturday, the 11th of July. There had been premonitions of trouble when it was attempted to take the names and addresses of those subject to call, and in the tenement-house districts some of the marshals had narrowly escaped with their lives. On the morning when the draft was to begin, several of the most widely read Democratic journals contained editorials that appeared to be written for the very purpose of inciting a riot. They asserted that any draft at all was unconstitutional and despotic, and that in this case the quota demanded from the city was excessive, and denounced the war as a 'mere abolition crusade.' It is doubtful if there was any well-formed conspiracy, including any large number of persons, to get up a riot; but the excited state of the public mind, especially among the laboring population, inflammatory handbills displayed in the grog-shops, the presence of the dangerous classes, whose best opportunity for plunder was in time of riot, and the absence of the militia that had been called away to meet the invasion of Pennsylvania, all favored an outbreak. It was unfortunate that the draft was begun on Saturday, and the Sunday papers published long lists of the names that were drawn — an instance of the occasional mischievous results of journalistic enterprise. . . . When the draft was resumed on Monday, the serious work began. One provost-marshal's office was at the corner of Third Avenue and Forty-Sixth street. It was guarded by sixty policemen, and the wheel was set in motion at ten o'clock. The building was surrounded by a dense, angry crowd, who were freely cursing the draft, the police, the National Government, and 'the nigger.' The drawing had been in progress but a few minutes when there was a shout of 'stop the cars!' and at once the cars were stopped, the horses released, the conductors and passengers driven out, and a tumult created. Then a great human wave was set in motion, which bore down everything before it and rolled into the marshal's office, driving out at the back windows the officials and the policemen, whose clubs, though plied rapidly and knocking down a rioter at every blow, could not dispose of them as fast as they came on. The mob destroyed everything in the office, and then set the building on fire. The firemen came promptly, but were not permitted to throw any water upon the flames. At this moment Superintendent John A. Kennedy, of the police, approaching incautiously and unarmed, was recognized and set upon by the crowd, who gave him half a hundred blows with clubs and stones, and finally threw him face downward into a mud-puddle, with the intention of drowning him. When rescued, he was bruised beyond recognition, and was lifted into a wagon and carried to the police headquarters. The command of the force now devolved upon Commissioner Thomas C. Acton and Inspector Daniel Carpenter, whose management during three fearful days was worthy of the highest praise. Another marshal's office, where the draft was in progress, was at Broadway and Twenty-Ninth street, and here the mob burned the whole block of stores on Broadway between Twenty-Eighth and Twenty-Ninth streets. . . . In the afternoon a small police force held possession of a gun-factory in Second Avenue for four hours, and was then compelled to retire before the persistent attacks of the rioters, who hurled stones through the windows and beat in the doors. Toward evening a riotous procession passed down Broadway, with drums, banners, muskets, pistols, pitchforks, clubs, and boards inscribed 'No Draft!' Inspector Carpenter, at the head of two hundred policemen, marched up to meet it. His orders were, 'Take no prisoners, but strike quick and hard.' The mob was met at the corner of Amity (or West Third) street. The police charged at once in a compact body, Carpenter knocking down the foremost rioter with a blow that cracked his skull, and in a few moments the mob scattered and fled, leaving Broadway strewn with their wounded and dying. From this time, the police were victorious in every encounter. During the next two days there was almost constant rioting, mobs appearing at various points, both up-town and down-town. The rioters set upon every negro that appeared — whether man, woman, or child — and succeeded in murdering eleven of them. . . . This phase of the outbreak found its worst expression in the sacking and burning of the Colored Orphan Asylum, at Fifth Avenue and Forty-Fourth street. The two hundred helpless children were with great difficulty taken away by the rear doors while the mob were battering at the front. . . . One of the saddest incidents of the riot was the murder of Colonel Henry J. O'Brien of the 11th N. Y. Volunteers, whose men had dispersed one mob with a deadly volley. An hour or two later the Colonel returned to the spot alone, when he was set upon and beaten and mangled and tortured horribly for several hours, being at last killed by some frenzied women. . . . Three days of this vigorous work by the police and the soldiers brought the disturbance to an end. About fifty policemen had been injured, three of whom died; and the whole number of lives destroyed by the rioters was eighteen. The exact number of rioters killed is unknown, but it was more than 1,200. The mobs burned about 50 buildings, destroying altogether between $2,000,000 and $3,000,000 worth of property. Governor Seymour incurred odium by a speech to the rioters, in which he addressed them as his friends, and promised to have the draft stopped; and by his communications to the President, in which he complained of the draft, and asked to have it suspended till the question of its constitutionality could be tested in the courts."—R. Johnson, *Short Hist. of the War of Secession, ch.* 18.

A. D. 1863-1871.—The Tweed Ring.—Between 1863 and 1871 the city of New York, and, to a considerable extent, the state at large, fell under the control and into the power of a combination of corrupt politicians commonly known as the Tweed Ring. Its chief was one William Marcy Tweed, of Scotch parentage, who first appeared in public life as an alderman of the city, in 1850. Working himself upward, in the Democratic party, to which he adhered, he attained in 1863 the powerful dignity of Grand Sachem of the Tammany Society and chairman or "Boss" of the general committee of Tammany Hall. "At this time, however, the Tammany 'Ring,' as it afterwards was called, was not completely formed, and Tammany Hall, though by far the most important political organization in the city, was not absolute even in the Democratic party. It had a bitter enemy in Mozart Hall, a political organization led by Fernando Wood, a former mayor of the city. The claims of Mozart Hall were satisfied in this same year, 1863, by granting to its leader the Democratic nomination to Congress. . . . Soon afterwards Tweed was appointed deputy-commissioner of streets. The 'Ring' was now fast consolidating. The enormous patronage possessed by its members enabled them to control almost all the nominations of the Democratic party to positions in the city. They provided their adherents with places in the city government, and when the supply of places became inadequate, they enlarged the city pay-roll to create new places. By means of the political influence they exerted over the Democratic party in the State, they packed the State legislature with their followers, and placed upon the bench judges on whom they could rely. . . . In 1865 the Ring obtained control of the mayoralty. Its candidate, John T. Hoffman, was a man of much higher character than his supporters and associates. He was personally honest, but his ambition blinded him to the acts of his political friends. . . . In 1868 . . . Hoffman was nominated for governor and was elected. His election was secured by the grossest and most extensive frauds ever perpetrated in the city, e. g. illegal naturalization of foreigners, false registration, repeating of votes, and unfair counting. The mayoralty, left vacant by the promotion of Hoffman, was filled by the election of Hall [A. Oakey Hall], who took his seat on the 1st day of January 1869. As Samuel J. Tilden said, by this election 'the Ring became completely organized and matured.' It controlled the common council of the city and the legislature of the State, and its nominee sat in the gubernatorial chair. Hall was mayor; Sweeny [Peter B. Sweeny, 'the great schemer of the Ring'] was city chamberlain or treasurer of both city and county; Tweed was practically supreme in the street department; Connolly [Richard B.] was city comptroller, and thus had charge of the city finances; the city judiciary was in sympathy with these men." But great as were the power and the opportunities of the Ring, it obtained still more of both through its well-paid creatures in the State legislature, by amendments of the city charter and by acts which gave Tweed and his partners free swing in debt-making for the city. In 1871, the last year of the existence of the Ring, it had more than $48,000,000 of money at its disposal. Its methods of fraud were varied and numerous. "But all the other enterprises of the Ring dwindle into insignificance when compared with the colossal frauds that were committed in the building of the new court-house for the county. When this undertaking was begun, it was stipulated that its total cost should not exceed $250,000; but before the Ring was broken up, upwards of $8,000,000 had been expended, and the work was not completed. . . . Whenever a bill was brought in by one of the contractors, he was directed to increase largely the total of his charge. . . . A warrant was then drawn for the amount of the bill as raised; the contractor was paid, perhaps the amount of his original bill, perhaps a little more; and the difference between the original and the raised bills was divided between the members of the Ring. It is said that about 65 per cent. of the bills actually paid by the county represented fraudulent addition of this sort." The beginning of the end of the reign of the Ring came in July, 1871, when copies of some of the fraudulent accounts, made by a clerk in the auditor's office, came into the possession of the New York Times and were published. "The result of these exposures was a meeting of citizens early in September. . . . It was followed by the formation of a sort of peaceable vigilance committee, under the imposing title of the 'Committee of Seventy.' This committee, together with Samuel J. Tilden (long a leading Democratic politician, and afterwards candidate for the presidency of the United States), went to work at once, and with great energy, to obtain actual proof of the frauds described by the 'Times.' It was owing mainly to the tireless endeavours of Mr. Tilden . . . that this work was successful, and that prosecutions were brought against several members of the Ring." The Tammany leaders attempted to make a scapegoat of Connolly; but the latter came to terms with Mr. Tilden, and virtually turned over his office to Mr. Andrew H. Green, of the Committee of Seventy, appointing him deputy-comptroller, with full powers. "This move was a tremendous step forward for the prosecution. The possession of the comptroller's office gave access to papers which furnished almost all the evidence afterwards used in the crusade against the Ring." At the autumn election of 1871 there was a splendid rally of the better citizens, in the city and throughout the state, and the political power of the Ring was broken. "None of the leading actors in the disgraceful drama failed to pay in some measure the penalty of his deeds. Tweed, after a chequered experience in eluding the grasp of justice, died in jail. Connolly passed the remainder of his life in exile. Sweeny left the country and long remained abroad. . . . Hall was tried and obtained a favourable verdict, but he has chosen to live out of America. Of the judges whose corrupt decisions so greatly aided the Ring, Barnard and M'Cunn were impeached and removed from the bench, while Cardozo resigned his position in time to avoid impeachment. The following figures will give an approximate idea of the amount the Ring cost the city of New York. In 1860, before Tweed came into power, the debt of the city was reported as

amounting only to $20,000,000 while the tax rate was about 1.60 per cent. on the assessed valuation of the property in the city liable to taxation. In the middle of the year 1871, the total debt of the city and the county — which were coterminous, and for all practical purposes the same — amounted to $100,955,333.33, and the tax rate had risen to over 2 per cent. During the last two years and a half of the government of the Ring the debt increased at the rate of $28,652,000 a year."—F. J. Goodnow, *The Tweed Ring in New York City* (*ch.* 88 *of Bryce's "American Commonwealth," v.* 2).

A. D. 1867-1882.—Amendments of the Constitution.—The constitution of 1846 having provided for its own revision at the end of twenty years, if so willed by the people, the calling of a constitutional convention was approved by popular vote in 1866, and the convention of elected delegates assembled June 4, in the following year. Its final adjournment was not reached until February 28, 1868. The constitution proposed by the convention was submitted to the people in 1869, and rejected, with the exception of the judiciary article, which reorganized the Court of Appeals, and provided for a temporary Commission of Appeals, to determine the cases pending in the Court, where business in arrears had accumulated to a serious extent. The rejection of the constitution framed in 1867 led, in 1872, to the creation by the governor and legislature of a Commission for the revision of the constitution, which met at Albany, December 4, 1872, and adjourned March 15, 1873. Several amendments proposed by the Commission were submitted to popular vote in 1874 and 1876, and were adopted. By the more important of these amendments, colored citizens were admitted to the franchise without property qualifications; a strong, specific enactment for the prevention and punishment of bribery and corruption at elections was embodied in the constitution itself; some changes were made in the provisions for districting the state, after each census, and the pay of members of the legislature was increased to $1,500 per annum; the power of the legislature to pass private bills was limited; the term of the governor was extended from two years to three; the governor was empowered to veto specific items in bills which appropriate money, approving the remainder; the governor was allowed thirty days for the consideration of bills left in his hands at the adjournment of the legislature, which bills become law only upon his approval within that time; a superintendent of public works was created to take the place of the Canal Commissioners previously existing, and a superintendent of state prisons to take the place of the three inspectors of state prisons; a selection of judges from the bench of the Supreme Court of the state to act as Associate Judges of the Court of Appeals was authorized; the loaning or granting of the credit or money of the state, or that of any county, city, town, or village to any association, corporation, or private undertaking was forbidden; corrupt conduct in office was declared to be felony. By an amendment of the constitution submitted by the legislature to the people in 1882, the canals of the state were made entirely free of tolls.

A. D. 1869.—Black Friday.—"During the war gold had swollen in value to 285, when the promise of the nation to pay a dollar on demand was only worth thirty-five cents. Thence it had gradually sunk. . . . All our purchases from foreign nations, all duties on those purchases, and all sales of domestic produce to other nations are payable in gold. There is therefore a large and legitimate business in the purchase and sale of gold, especially in New York, the financial centre of the nation. But a much larger business of a gambling nature had gradually grown up around that which was legitimate. . . . These gambling operations were based on the rise and fall of gold, and these in turn depended on successful or unsuccessful battles, or on events in foreign nations that could be neither foreseen nor guarded against. The transactions were therefore essentially gambling. . . . So large was the amount of this speculative business, gathering up all the gold-betting of the nation in a single room, that it more than equalled the legitimate purchase and sale of gold. There were large and wealthy firms who made this their chief business; and prominent among them was the firm of Smith, Gould, Martin & Co., four gentlemen under one partnership name, all wealthy and all accustomed to this business for years. Their joint wealth and business skill made them a power in Wall street. The leading mind of the firm, though not the first named, was Mr. Jay Gould, President of the Erie Railway, joint owner with Colonel James Fisk Jr., of two lines of steamboats, and largely interested in a number of railroads and other valuable properties. Mr. Gould looked upon gold, railroads, and steamboats as the gilded dice wherewith to gamble. . . . During the spring of 1869 he was a buyer of gold. There was perhaps fifteen millions of that rare currency in New York outside the Sub-Treasury; and he had bought half that amount, paying therefor a bonus of a little more than two millions of dollars. As fast as he had purchased the precious metal he had loaned it out to those who needed it for the payment of duties, and who hoped to repurchase it at a lower rate. And so, though the owner of seven millions, he had none of it in hand; he merely possessed the written acknowledgment of certain leading merchants and brokers that they owed him that amount of specie, which they would repay with interest on demand. Having this amount obtainable at any moment, Mr. Gould had the mercantile community at his mercy. But there was some hundred millions of gold in the Treasury, more or less, and the President of the United States or the Secretary of the Treasury might at any time throw it on the market. On this point it was very desirable to ascertain the opinion of President Grant; more desirable to have constant access to his private ear." In various ways, argumentative influences were brought to bear on President Grant and the Secretary of the Treasury, Mr. Boutwell, to persuade them that it was desirable for the country, while the crops were being moved, to hold up the price of gold. One important channel for such influences was supplied by the President's brother-in-law, a retired New York

merchant, named Corbin, who was drawn into the speculation and given a share in Gould's gold purchases. By strenuous exertions, Gould and his associates pushed up the price till "in May it stood at 144⅞; but as soon as they ceased to buy, the price began to recede until in the latter part of June it again stood at 136. The others were then frightened and sold out. 'All these other fellows deserted me like rats from a ship,' said Gould. But for him to sell out then would involve a heavy loss, and he preferred a gain. He therefore called upon his friend and partner Fisk to enter the financial arena. It is but justice to Mr. Fisk to say that for some time he declined; he clearly saw that the whole tendency of gold was downward. But when Gould made the proposition more palatable by suggesting corruption, Fisk immediately swallowed the bait. . . . He . . . entered the market and purchased twelve millions. There is an old adage that there is honor among thieves. This appears not to be true on the Gold Exchange. All Mr. Gould's statements to his own partner were false, except those relating to Corbin and Butterfield. And Mr. Corbin did his best. He not only talked and wrote to the President himself; not only wrote for the New York 'Times,' but when General Grant visited him in New York, he sent Gould to see him so often that the President, unaware of the financial trap set for him, rebuked the door servant for giving Mr. Gould such ready access. But it is worthy of note that neither Corbin, Gould, nor Fisk ever spoke to the President of their personal interest in the matter. They were only patriots urging a certain course of conduct for the good of the country. These speculations as to the advantage to the country of a higher price of gold seem to have had some effect on the Presidential mind; for early in September he wrote to Mr. Boutwell, then at his Massachusetts home, giving his opinion of the financial condition of the country, and suggesting that it would not be wise to lower the price of gold by sales from the Treasury while the crops were moving to the seaboard. Mr. Boutwell therefore telegraphed to the Assistant Secretary at Washington only to sell gold sufficient to buy bonds for the sinking fund. Through Mr. Corbin or in some other way this letter came to the knowledge of the conspirators; for they at once began to purchase and the price began to rise. . . . On the 13th of September, gold, swelling and falling like the tide, stood at 135¼. The clique then commenced their largest purchases, and within nine days had bought enough to hold sixty-six millions — nearly every cent of it fictitious, and only included in promises to pay. On the evening of Wednesday, September 22, the price was 140½; but it had taken the purchase of thirty or forty millions to put it up that five cents. Could it be forced five cents higher, and all sold, the profits would be over ten millions of dollars! It was a stake worth playing for. But the whole mercantile community was opposed to them; bountiful harvests were strong arguments against them; and more than all else, there stood the Sub-Treasury of the United States, with its hundred millions of dollars in its vaults, ready at any time to cast its plethora of wealth on their unfortunate heads. . . . Corbin, while assuring Gould that there was no danger of any Government sale, and yet himself greatly in trepidation, addressed a letter to General Grant urging him not to interfere with the warfare then raging between the bulls and the bears, nor to allow the Secretary of the Treasury to do so. . . . The letter would probably have had some effect, but unfortunately the ring overdid their business in the way in which they sent it." The letter was conveyed by a private messenger. The messenger, "Mr. Chapin, delivered his letter, asked General Grant if there was any reply, and being told there was none, started for his home, first telegraphing to his employer, 'Letter delivered all right.' It was a most unfortunate telegraphic message he sent back. He swears that his meaning was that the letter was delivered all right; and so the despatch reads. But the gold gamblers, blinded by the greatness of the stake at risk, interpreted the 'all right' of the message as an answer to the contents of Mr. Corbin's letter — that the President thought the letter all right; and on the strength of that reading Fisk rushed into the market and made numerous purchases of gold. But that very letter, which was intended to be their governmental safeguard, led to their ruin. Carried by special messenger for a day and a half, its urgency that the Administration should sell no gold, coupled with frequent assertions in the newspapers that Mr. Corbin was a great bull in gold, excited General Grant's suspicions. He feared that Corbin was not actuated by patriotic motives alone in this secret correspondence. At the President's suggestion, therefore, Mrs. Grant wrote to her sister, Mrs. Corbin, telling her that rumors had reached them that Mr. Corbin was connected with speculators in New York, and that she hoped if this was so he would at once disengage himself from them; that the President was much distressed at such rumors. On the receipt of this letter, Mr. Corbin was greatly excited." Corbin showed the letter to Gould, and got himself let out of the game, so that he might be able to say to President Grant that he had no interest in gold; but Fisk was not told of the President's suspicions. "On the evening of Wednesday, September 21, it was determined to close the corner within two days." A desperate attack on the market began next morning. Gold opened that day at 39½; it closed at 44. The next day was "Friday, September 24, commonly called Black Friday, either from the black mark it caused on the characters of dealers in gold, or, as is more probable, from the ruin it brought to both sides. The Gold Room was crowded for two hours before the time of business. . . . Fisk was there, gloating over the prospect of great gains from others' ruin. His brokers were there, noisy and betting on the rapid rise of gold and the success of the corner. All alike were greatly excited, palpitating between hope and fear, and not knowing what an hour might bring forth. . . . Gold closed on Thursday at 144; Speyers [principal broker of the conspirators] commenced his work on Friday by offering 145, one per cent. higher than the last purchase. Receiving no response, he offered to buy at 146, 147, 148, and 149 respectively, but without takers. Then 150 was offered, and half a million was sold him by Mr. James Brown, who had quietly organized a band of prominent merchants who were determined to meet the gold gamblers on their own ground. . . . Amid the most tremendous confusion the voices of the excited brokers could be heard slowly bidding up the value of

their artificial metal. Higher and higher rose the tide of speculation; from 156 to 159 there was no offer whatever; amid deep silence Speyers called out, 'Any part of five millions for 160.' 'One million taken at 160,' was the quiet response of James Brown. Further offers were made by the brokers of the clique all the way from 160 to 163¼. But Mr. Brown preferred to grapple the enemy by the throat, and he sold Speyers five millions more, making seven millions of gold sold that hour for which Speyers agreed to pay eleven millions in currency. Such figures almost stagger one to read of them! But Speyers continued to buy till before noon he had purchased nearly sixty millions. . . . As the price rose cent by cent, men's hearts were moved within them as the trees are shaken by the swelling of the wind. But when the first million was taken at 160 a great load was removed, and when the second million was sold there was such a burst of gladness, such a roar of multitudinous voices as that room, tumultuous as it had always been, never heard before. Everybody instantly began to sell, desiring to get rid of all their gold before it had tumbled too deep. And just as the precious metal was beginning to flow over the precipice, the news was flashed into the room that Government had telegraphed to sell four millions. Instantly the end was reached; gold fell to 140, and then down, down, down, to 133. There were no purchasers at any price. . . . The gold ring had that day bought sixty millions of gold, paying or rather agreeing to pay therefor ninety-six millions of dollars in currency!" But Gould, Fisk & Co., who owned several venal New York judges, placed injunctions and other legal obstacles in the way of a settlement of claims against themselves. "Of course these judicious and judicial orders put an end to all business except that which was favorable to Fisk and Gould. They continued to settle with all parties who owed them money; they were judicially enjoined from settling with those to whom, if their own brokers may be believed, they were indebted, and they have not yet settled with them. . . . As the settlements between the brokers employed by the ring and their victims were all made in private, there is no means of knowing the total result. But it is the opinion of Mr. James B. Hodskin, Chairman of the Arbitration Committee of the Exchange, and therefore better acquainted with its business than any one else, that the two days' profits of the clique from the operations they acknowledged and settled for were not less than twelve millions of dollars; and that the losses on those transactions which they refused to acknowledge were not less than twenty millions. The New York 'Tribune' a day or two afterward put the gains of the clique at eleven million dollars. Some months after 'Black Friday' had passed away, Congress ordered an investigation into its causes. . . . For two or three days the whole business of New York stood still awaiting the result of the corner. . . . In good-will with all the world, with grand harvests, with full markets on both sides the Atlantic, came a panic that affected all business. Foreign trade came to a stand-still. The East would not send to Europe; the West could not ship to New York. Young men saw millions of dollars made in a few days by dishonesty; they beheld larger profits result from fraud than from long lives of honesty. Old men saw their best-laid plans frustrated by the operations of gamblers. Our national credit was affected by it. Europe was told that our principal places of business were nests of gamblers, and that it was possible for a small clique, aided by our banking institutions, to get possession of all the gold there was in the land; and that when one firm had gone through business transactions to the amount of over one hundred millions of dollars, the courts of the United States would compel the completion of those bargains which resulted in a profit, while those that ended in a loss were forbidden. For two or three months the sale of bonds in Europe was affected by the transactions of that day; and not until the present generation of business men has passed away will the evil influence of Black Friday be entirely lost."—W. R. Hooper, *Black Friday* (*The Galaxy, Dec.*, 1871).

A. D. 1875-1881. — Stalwarts and Half-breeds. See STALWARTS.

A. D. 1892.— Restored Tammany government in the City.—The Tammany organization was greatly discredited and crippled for a time by the exposure and overthrow of Tweed and his "ring," in 1871; but after a few years, under the chieftainship of John Kelly and Richard Croker, successive "grand sachems," it recovered its control of the city government so completely that, in 1892, Dr. Albert Shaw was justified in describing the latter as follows: "There is in New York no official body that corresponds with the London Council. The New York Board of Aldermen, plus the Mayor, plus the Commissioners who are the appointive heads of a number of the working departments such as the Excise, Park, Health and Police departments, plus the District Attorney, the Sheriff, the Coroners, and other officials pertaining to the county of New York as distinct from the city of New York, plus a few of the head Tammany bosses and the local Tammany bosses of the twenty-four Assembly Districts — all these men and a few other officials and bosses, taken together, would make up a body of men of about the same numerical strength as the London Council; and these are the men who now dominate the official life of the great community of nearly eighteen hundred thousand souls. In London the 137 councillors fight out every municipal question in perfectly open session upon its actual merits before the eyes of all London, and of the whole British empire. In New York, the governing group discusses nothing openly. The Board of Aldermen is an obscure body of twenty-five members, with limited power except for mischief, its members being almost to a man high Tammany politicians who are either engaged directly in the liquor business or are in one way or another connected with that interest. So far as there is any meeting in which the rulers of New York discuss the public affairs of the community, such meetings are held in the Tammany wigwam in Fourteenth Street. But Tammany is not an organization which really concerns itself with any aspects of public questions, either local or general, excepting the 'spoils' aspect. It is organized upon what is a military rather than a political basis, and its machinery extends through all the assembly districts and voting precincts

of New York, controlling enough votes to hold and wield the balance of power, and thus to keep Tammany in the possession of the offices. Its local hold is maintained by the dispensing of a vast amount of patronage. The laborers on public works, the members of the police force and the fire brigades, the employees of the Sanitary Department, of the Excise Department, of the Street Cleaning and Repair Department and of the Water and Dock and Park Departments, the teachers in the public schools and the nurses in the public hospitals, all are made to feel that their livelihood depends on the favor of the Tammany bosses; and they must not only be faithful to Tammany themselves, but all their friends and relatives to the remotest collateral degree must also be kept subservient to the Tammany domination. The following characterization of Tammany leadership and method is from the New York Evening Post. . . . 'None of the members occupy themselves with any legislation, except such as creates salaried offices and contracts in this city, to be got hold of either by capture at the polls or "deals" with the Republican politicians here or in Albany. When such legislation has been successful, the only thing in connection with it which Tammany leaders consider is how the salaries shall be divided and what "assessments" the places or contracts can stand. If any decent outsider could make his way into the inner conferences at which these questions are settled, he would hear not the grave discussion of the public interests, how to keep streets clean, or how to repave them, or how to light them or police them, or how to supply the city with water, but stories of drunken or amorous adventure, larded freely with curious and original oaths, ridicule of reformers and "silk-stockinged" people generally, abuse of "kickers," and examination of the claims of gamblers, liquor-dealers, and pugilists to more money out of the public treasury. In fact, as we have had of late frequent occasion to observe, the society is simply an organization of clever adventurers, most of them in some degree criminal, for the control of the ignorant and vicious vote of the city in an attack on the property of the tax-payers. There is not a particle of politics in the concern any more than in any combination of Western brigands to "hold up" a railroad train and get at the express packages. Its sole object is plunder in any form which will not attract the immediate notice of the police.'" —A. Shaw, *Municipal Problems of New York and London* (*Review of Reviews, April* 1892).

A. D. 1894.—Constitutional Convention.— A bill passed by the legislature of 1892, calling a convention to revise the constitution of the State, provided for the election of 128 delegates by Assembly districts, and 32 at large, but added 9 more whom the Governor should appoint, 3 to represent labor interests, 3 woman-suffrage claims, and 3 the advocates of prohibition. By the legislature of 1893 this act was set aside and a new enactment adopted, making the total number of delegates to the Constitutional Convention 165, all elective, and apportioning five to each senatorial district. The convention assembled at Albany, May 9, 1894. Its labors are unfinished at the time this volume goes to press. Questions of reform in municipal government have claimed the greatest attention.

NEW ZEALAND: The aborigines.— "The traditions of these people [the Maoris] lead to the conclusion that they first came to New Zealand about 600 years ago, from some of the islands between Samoa and Tahiti; but some ethnologists put the migration as far back as 3,000 years. Their language is a dialect of the Polynesian, most resembling that of Rarotonga, but their physical characters vary greatly. Some are fair, with straight hair, and with the best type of Polynesian features; others are dusky brown, with curly or almost frizzly hair, and with the long and broad arched nose of the Papuan; while others have the coarse thick features of the lower Melanesian races. Now these variations of type cannot be explained unless we suppose the Maoris to have found in the islands an indigenous Melanesian people, of whom they exterminated the men, but took the better-looking of the women for wives; and as their traditions decidedly state that they did find such a race when they first arrived at New Zealand, there seems no reason whatever for rejecting these traditions, which accord with actual physical facts, just as the tradition of a migration from 'Hawaiki,' a Polynesian island, accords with linguistic facts."—Hellwald-Wallace, *Australasia* (*Stanford's Compendium, new issue,* 1893), *ch.* 14, *sect.* 9 (*v.* 1).

A. D. 1642-1856.—Discovery.—Colonization. — Early dealings with Natives. — Constitutional organization.—"The honour of the actual discovery of New Zealand must be accorded to the Dutch Navigator, Tasman, who visited it in 1642, discovering Van Dieman's Land during the same voyage. As, however, he does not appear to have landed, the knowledge of the country derived by Europeans from his account of it must have been of very limited extent. . . . It was our own countryman, Captain Cook, to whom we are so largely indebted for what we now know of the geography of the Pacific, who made us acquainted with the nature of the country and the character of its inhabitants. The aborigines were evidently of a much higher type than those of the Australian continent. They are a branch of the Polynesian race, and according to their own traditions came about 600 years ago from 'Hawaiki,' which ethnologists interpret to mean either Hawaii (the Sandwich Islands), or Savaii in the Samoa group. They are divided into some twenty clans, analogous to those of the Scottish Highlands. Cook's first visit was paid in 1769, but he touched at the islands on several occasions during his subsequent voyages, and succeeded in making, before his final departure, a more or less complete exploration of its coasts. The aborigines were divided into numerous tribes, which were engaged in almost constant wars one with another. . . . As has been the case in so many distant lands, the first true pioneers of civilization were the missionaries. In 1814, thirty-seven years after

Captain Cook's last visit to New Zealand, a few representatives of the English Church Missionary Society landed in the North Island, less with the intention of colonising than with the hope of converting the natives to Christianity. The first practical steps in the direction of settlement were taken by the New Zealand Land Company, composed of a very strong and influential body of gentlemen headed by Lord Durham, and having much the same ideas as those which actuated the South Australian Colonisation Society. The proposal to found a new Colony was at first bitterly opposed by the Government of the day, but in consequence of the energetic action of the Company, who sent out agents with large funds to purchase land of the natives, the Government ultimately gave way, and despatched as Consul Captain Hobson, who arrived in January 1840. One of his first steps on assuming office was to call a meeting of the natives and explain to them the object of his mission, with the view of entering into a treaty for placing the sovereignty of their island in Her Majesty the Queen. He was not at first successful, the natives fearing that if they acceded to the proposal, their land would be taken from them; but being reassured on this point, the majority of the chiefs ultimately signed the treaty in February of the same year. By the terms of this treaty, called the Treaty of Waitangi, the chiefs, in return for their acknowledgment of the supremacy of the Queen of England, were guaranteed for themselves and their people the exclusive possession of their lands so long as they wished to retain them, and they, on their side, accorded to the Crown the exclusive right of pre-emption over such lands as might, from time to time, come into the market. It will thus be seen that the acquisition of land in New Zealand by European settlers was effected in a manner entirely different from that which obtained in other colonies; for, although the right of pre-emption by the Crown was subsequently waived, no land could be obtained from natives unless they were perfectly willing to part with it. It is true that lands have in some instances been confiscated as a punishment for native insurrections, but, with this exception, all lands have passed from natives to Europeans by the ordinary processes of bargain and sale. Captain Hobson's next action was to place himself in communication with the New Zealand Company's agents, and ascertain what they were doing in the way of colonisation. He found that besides acquiring various blocks of land in the North and South Islands, they had formed a permanent settlement at Wellington, at which they were organising a system of government incompatible with the Queen's authority, which he therefore promptly suppressed. . . . In June of 1840 the settlement was made a colony by Charter under the Great Seal, Captain Hobson naturally becoming the first Governor. This eminent public servant died at his post in September 1842, being succeeded by Captain R. Fitzroy, who, however, did not reach the Colony till a year afterwards. In the interval occurred that lamentable incident, the massacre of white settlers by the natives at Wairu, in the South Island. Shortly after this the Company made strenuous efforts to obtain a share in the Executive Government, but this was twice disallowed by the Home authorities. Captain Fitzroy's term of office was in all respects a stormy one, the native chiefs rising in rebellion, open and covert, against the terms of the Waitangi treaty. With only 150 soldiers, and destitute of any military facilities, this governor deemed it prudent to come to a compromise with the rebels, fearing the effect upon the minds of the natives generally of the certain defeat which he must sustain in active warfare. Receiving, however, reinforcements from Sidney, Captain Fitzroy took the field, sustaining in his first expedition a decided defeat. Two other expeditions followed this, and at length the success of the British arms was assured, Captain Fitzroy suffering from the irony of fate, since, having been neglected in his peril, he was recalled in the moment of victory. Captain (afterwards Sir George) Grey succeeded to the Governorship in November 1845; having the good fortune to be surrounded by ministers of exceptional ability, and arriving in the Colony at a fortunate turn in its affairs, he takes his place among the successful Governors of New Zealand. Colonel Gore Browne — after an interregnum of nearly two years — succeeded to power, and during his viceroyalty in 1853, responsible government, which, however, did not provide for ministerial responsibility, was inaugurated. . . . The Home Government shortly afterwards (May 1856) . . . established responsible government in its fullest form, but unfortunately without any special provisions for the representation of the native races. . . . Up to 1847 New Zealand remained a Crown Colony, the Government being administered by a Governor appointed by the Crown, an Executive Council, and a Legislative Council. Under this system, the Governor had very large powers, since the only control over him was that exercised by the Home Government. The Executive Council consisted of the Governor and three official members, while the Legislative Council was made up of the Executive Council and three non-official members nominated by the Governor. At that time Auckland was the seat of Government, which has since been moved to Wellington. In 1852, before the expiration of the period over which the provisional charter granted in 1847 was to extend, the Imperial Parliament granted a new constitution to New Zealand (15 & 16 Vic. cap. 72), and in the following year it came into force and is still [1886] operative. The Legislature, under this Constitution, consists of a Governor, a Legislative Council, composed of life members nominated by the Crown, and a House of Representatives elected by the people, under a franchise which practically amounts to household suffrage." — *Her Majesty's Colonies* (*Colonial and Ind. Exhibition*, 1886), *pp.* 245–248.

A. D. 1853-1883.—Land questions with the Natives.—The King movement.—The Maori War.—"In the course of years, as it was evident to the natives that the Europeans were the coming power in the land, suspicion and distrust were excited, and at last the tocsin sounded. . . . It was considered that a head was needed to initiate a form of Government among the tribes to resist the encroachments daily made by the Europeans, and which seemed to threaten the national extinction of the native race. The first to endeavour to bring about a new order of things was a native chief named Matene Te Whiwi, of Otaki. In 1853 he marched to Taupo and Rotorua, accompanied by a number of

followers, to obtain the consent of the different tribes to the election of a king over the central parts of the island, which were still exclusively Maori territory, and to organize a form of government to protect the interests of the native race. Matene . . . met with little success. . . . The agitation, however, did not stop, the fire once kindled rapidly spread, ardent followers of the new idea sprang up, and their numbers soon increased, until finally, in 1854, a tribal gathering was convened at Manawapou. . . . After many points had been discussed, a resolution was come to among the assembled tribes that no more land should be sold to Europeans. A solemn league was entered into by all present for the preservation of the native territory, and a tomahawk was passed round as a pledge that all would agree to put the individual to death who should break it. In 1854 another bold stand was made, and Te Heuheu, who exercised a powerful sway over the tribes of the interior, summoned a native council at Taupo, when the King movement began in earnest. It was there decided that the sacred mountain of Tongariro should be the centre of a district in which no land was to be sold to the government, and that the districts of Hauraki, Waikato, Kawhia, Mokau, Taranaki, Whanganui, Rangitikei, and Titiokura, should form the outlying portions of the boundary; that no roads should be made by the Europeans within the area, and that a king should be elected to reign over the Maoris. In 1857 Kingite meetings were held, . . . at which it was agreed that Potatau Te Wherowhero, the most powerful chief of Waikato, should be elected king, under the title of Potatau the First, and finally, in June, 1858, his flag was formally hoisted at Ngaruawahia. Potatau, who was far advanced in life when raised to this high office, soon departed from the scene, and was succeeded by his son Matutaera Te Wherowhero, under the title of Potatau the Second. The events of the New Zealand war need not here be recited, but it may be easily imagined that during the continuance of the fighting the extensive area of country ruled over by the Maori monarch was kept clear of Europeans. But in 1863 and 1864 General Cameron, at the head of about 20,000 troops, composed of Imperial and Colonial forces, invaded the Waikato district, and drove the natives southward and westward, till his advanced corps were at Alexandra and Cambridge. Then followed the Waikato confiscation of Maori lands and the military settlements. The King territory was further broken into by the confiscations at Taranaki and the East Coast. . . . Since the termination of the lamentable war between the two races, the King natives have, on all occasions, jealously preserved their hostile spirit to Europeans. . . . The New Zealand war concluded, or rather died out, in 1865, when the confiscated line was drawn, the military settlements formed, and the King natives isolated themselves from the Europeans. For ten years it may be said that no attempt was made to negotiate with them. They were not in a humour to be dealt with. About 1874 and 1875, however, it became evident that something would have to be done. The colony had greatly advanced in population, and a system of public works had been inaugurated, which made it intolerable that large centres of population should be cut off from each other by vast spaces of country which Europeans were not allowed even to traverse." Then began a series of negotiations, which, up to 1883, had borne no fruit.—J. H. Kerry-Nicholls, *The King Country, introd.*

A. D. 1501-1578.—The Portuguese, Norman, Breton and Basque fisheries.—"It is a very curious circumstance, that the country in which the Cabots started their idea for a navigation to the north-west, and in which they at first proclaimed their discovery of the rich fishing banks near their New-found-Isles, did not at once profit by it so much as their neighbors, the French and the Portuguese. . . . During the first half of the 16th century we hear little of

English fishing and commercial expeditions to the great banks; although they had a branch of commerce and fishery with Iceland. . . . 'It was not until the year 1548 that the English government passed the first act for the encouragement of the fisheries on the banks of Newfoundland, after which they became active competitors in this profitable occupation.'" In Portugal, Cortereal's discovery had revealed "the wealth to be derived from the fish, particularly cod-fish, which abounded on that coast. The fishermen of Portugal and of the Western Islands, when this news was spread among them, made preparations for profiting by it, and soon extended their fishing excursions to the other side of the ocean. According to the statement of a Portuguese author, very soon after the discoveries by the Cortereals, a Portuguese Fishing Company was formed in the harbors of Vianna, Aveiro and Terceira, for the purpose of colonizing Newfoundland and making establishments upon it. Nay, already, in 1506, three years after the return of the last searching expedition for the Cortereals, Emanuel gave order, 'that the fishermen of Portugal, at their return from Newfoundland, should pay a tenth part of their profits at his custom-houses.' It is certain, therefore, that the Portuguese fishermen must, previous to that time, have been engaged in a profitable business. And this is confirmed by the circumstance that they originated the name of 'tierra de Bacalhas' [or Bacalhao] (the Stock-fish-country) and gave currency to it; though the word, like the cod-fishery itself, appears to be of Germanic origin. . . . The nations who followed them in the fishing business imitated their example, and adopted the name 'country of the Bacalhas' (or, in the Spanish form, Baccallaos), though sometimes interchanging it with names of their own invention, as the 'Newfoundland,' 'Terre neuve,' etc. . . . They [the Portuguese] continued their expeditions to Newfoundland and its neighborhood for a long time. They were often seen there by later English and other visitors during the course of the 16th century; for instance, according to Herrera, in 1519; again by the English in 1527; and again by Sir Humphrey Gilbert in 1583. . . . The Portuguese engaged in this fishery as early as 1501, according to good authorities, and perhaps under the charter of Henry VII. In 1578, they had 50 ships employed in that trade, and England as many more, and France 150. . . . The inhabitants of the little harbors of Normandy and Brittany, the great peninsulas of France, . . . were also among the first who profited by the discoveries of the Cabots and Cortereals, and who followed in the wake of the Portuguese fishermen toward the north-west cod-fish country. . . . The first voyages of the Bretons of St. Malo and the Normans of Dieppe to Newfoundland, are said to have occurred as early as 1504. . . . They probably visited places of which the Portuguese had not taken possession; and we therefore find them at the south of Newfoundland, and especially at the island of Cape Breton, to which they gave the name, still retained,—the oldest French name on the American north-east coast. . . . The Spaniards, and more particularly the mariners and fishermen of Biscay, have pretended, like those of Brittany and Normandy, that they and their ancestors, from time immemorial, had sailed to Newfoundland; and, even before Columbus, had established their fisheries there. But the Spanish historian Navarette, in more modern times, does not sustain this pretension of his countrymen. . . . We may come to the conclusion that, if the fisheries of the Spanish Basques on the Banks of Newfoundland and in the vicinity, did not begin with the voyage of Gomez [in 1525], they received from it a new impulse. . . . From this time, for more than a century, they [the Basques] appeared in these waters every year with a large fleet, and took their place upon the banks as equals by the side of the Bretons, Normans, and Basques of France, until the middle of the 17th century, when rival nations dispossessed them of their privileges."—J. A. D. 1610-1655.—Early English attempts at colonization.—The grants to Lord Baltimore and Sir David Kirke.—"For 27 years after the failure of the Gilbert expedition no fresh attempt was made to establish a colony in the island. During this interval fishermen of various nationalities continued to frequent its shores. . . . The French were actively engaged in the prosecution of the fisheries in the neighboring seas. Their success in this direction strengthened their desire to gain possession of Newfoundland. Hence it is that in the history of the country France has always been an important factor. Having from time to time held possession of various points of the land, England's persistent rival in these latitudes has given names to many towns, villages, creeks, and harbors. To this day Newfoundland has not completely shaken off French influence. . . . In 1610 another attempt was made to plant a colony of Englishmen in Newfoundland. John Guy, a merchant, and afterwards mayor of Bristol, published in 1609 a pamphlet on the advantages which would result to England from the establishment of a colony in the island. This publication made such a deep impression on the public mind that a company was formed to carry out the enterprise it suggested. The most illustrious name on the roll was that of Lord Bacon. . . . The importance of Newfoundland as a site for an English colony did not escape the wide-ranging eye of Bacon. He pronounced its fisheries 'more valuable than all the mines of Peru,' a judgment which time has amply verified. . . . To this company James I., by letters patent dated April, 1610, made a grant of all the part of Newfoundland which lies between Cape Bonavista in the north and Cape St. Mary. Mr. Guy was appointed governor, and with a number of colonists he landed at Mosquito Harbor, on the north side of Conception Bay, where he proceeded to erect huts. . . . We have no authentic account of the progress of this settlement, begun under such favourable auspices, but it proved unsuccessful from some unexplained cause. Guy and a number of the settlers returned to England, the rest remaining to settle

elsewhere in the New World. Five years afterwards, in 1615, Captain Richard Whitbourne, mariner, of Exmouth, Devonshire, received a commission from the Admiralty of England to proceed to Newfoundland for the purpose of establishing order among the fishing population and remedying certain abuses which had grown up. . . . It was shown that there were upwards of 250 English vessels, having a tonnage of 1,500 tons, engaged in the fisheries along the coast. Fixed habitations extended at intervals along the shore from St. John's to Cape Race. . . . Having done what he could during the active part of his life to promote its interests, on his return to England, in his advanced years, he [Whitbourne] wrote an account of the country, entitled 'A Discourse and Discovery of Newfoundland.' . . . His book made a great impression at the time. . . . So highly did King James think of the volume that he ordered a copy to be sent to every parish in the kingdom. The Archbishops of Canterbury and York issued a letter recommending it, with the view of encouraging emigration to Newfoundland. . . . A year after the departure of Whitbourne, in 1623, by far the most skilfully-organized effort to carry out the settlement of Newfoundland was made, under the guidance of Sir George Calvert, afterwards Lord Baltimore. . . . When Secretary of State he obtained a patent conveying to him the lordship of the whole southern peninsula of Newfoundland, together with all the islands lying within ten leagues of the eastern shores, as well as the right of fishing in the surrounding waters, all English subjects having, as before, free liberty of fishing. Being a Roman Catholic, Lord Baltimore had in view to provide an asylum for his co-religionists who were sufferers from the intolerant spirit of the times. The immense tract thus granted to him extended from Trinity Bay to Placentia, and was named by him Avalon, from the ancient name of Glastonbury, where, it is believed, Christianity was first preached in Britain. . . . Lord Baltimore called his Newfoundland province Avalon and his first settlement Verulam. The latter name, in course of time, became corrupted into Ferulam, and then into the modern Ferryland. At this spot, on the eastern coast of Newfoundland, about 40 miles north of Cape Race, Lord Baltimore planted his colony, and built a noble mansion, in which he resided with his family during many years." But after expending some £30,000 upon the establishment of his colony, Lord Baltimore abandoned it, on account of the poor quality of the soil and its exposure to the attacks of the French. Not long afterwards he obtained his Maryland grant [see MARYLAND: A. D. 1632] and resumed the enterprise under more favorable conditions. "Soon after the departure of Lord Baltimore, Viscount Falkland, Lord-Lieutenant of Ireland, hoping to permanently increase the scanty population of Newfoundland, sent out a number of emigrants from that country. At a later date, these were so largely reinforced by settlers from Ireland that the Celtic part of the population at this day is not far short of equality in numbers with the Saxon portion. In 1638, Sir David Kirke, one of Britain's bravest sea-captains, arrived in Newfoundland and took up his abode at Ferryland, where Lord Baltimore had lived. Sir David was armed with the powers of a Count Palatine over the island, having obtained from Charles I. a grant of the whole." This was by way of reward for his exploit in taking Quebec — see CANADA: A. D. 1628–1635. Kirke "governed wisely and used every effort to promote the colonization of the country. His settlement prospered greatly. The Civil War, however, broke out in England, and, Kirke being a staunch loyalist, all his possessions in Newfoundland were confiscated by the victorious Commonwealth. By the aid of Claypole, Cromwell's son-in-law, Kirke eventually got the sequestration removed, and, returning to Ferryland, died there in 1655, at the age of 56. At this time Newfoundland contained a population of 350 families, or nearly 2,000 inhabitants, distributed in 15 small settlements along the eastern coast."—J. Hatton and M. Harvey, *Newfoundland, ch.* 2.

ALSO IN: H. Kirke, *The First English Conquest of Canada, ch.* 3-4.

A. D. 1660-1688.—The French gain their footing.—"With the possession of Cape Breton, Acadia, and the vast regions stretching from the gulf of the River St. Lawrence, and the mighty lakes, Newfoundland obtained a new value in the estimation of the government of France, as it formed one side of the narrow entrance to its transatlantic dependencies: consequently the pursuit of the fishery by its seamen was encouraged, and every opportunity was improved to gain a footing in the country itself. This encroaching tendency could not, however, be manifested without a protest on the part of the somewhat sluggish English, both by private individuals and by the government. Charles I. . . . imposed a tribute of five per cent. on the produce taken by foreigners in this fishery, to which exaction the French, as well as others, were forced to submit. During the distracted time of the Commonwealth, it does not appear that the struggling government at home found leisure to attend to these distant affairs, though the tribute continued to be levied. The Restoration brought to England a sovereign who owed much to the monarch of France, to whom he was therefore attached by the ties of gratitude, and by the desire to find a counterpoise to the refractory disposition of which he was in continual apprehension among his own subjects. It was not until 1675 that Louis XIV. prevailed on Charles to give up the duty of five per cent., and by that time the French had obtained a solid footing on the southern coast of Newfoundland, so that, with Cape Breton in their possession, they commanded both sides of the Gulf of St. Lawrence. Over a territory of some 200 miles in extent, belonging to the British sovereignty, they had built up imperceptibly an almost undisputed dominion. At Placentia, situated in the bay of that name, a strong fort was erected, sustained by other forts standing at intervals along the shore, and at the same place a royal government was established. How real was the authority assumed, and how completely was the English sovereignty ignored, needs no better proof than is furnished in an ordinance issued by Louis in the year 1681, concerning the marine of France. In this state paper, Newfoundland is reckoned as situate in those seas which are free and common to all French subjects, provided that they take a license from the admiral for every voyage. . . . Thus that period which is regarded as among the most humiliating in the annals of our nation,— when the king was a pen-

sioner of France, and his ministers received bribes from the same quarter, witnessed the partial sliding under this alien power of the most ancient of the colonial possessions of the Crown. Not less than half of the inhabited coast of Newfoundland was thus taken under that despotic rule, which, while swaying the councils of England to the furtherance of its ambitious designs, was labouring for the subjugation of the European continent. The revolution of 1688 broke the spell of this encroaching autocracy."—C. Pedley, *Hist. of Newfoundland, ch.* 2.

A. D. 1694-1697.—French success in the war with England.—The Treaty of Ryswick and its unsatisfactory terms.—"On the accession of William III. to the throne of England hostilities broke out between the rival nations. In William's declaration of war against the French, Newfoundland holds a prominent place among the alleged causes which led to the rupture of pacific relations. The grievance was tersely set forth in the royal manifesto: 'It was not long since the French took license from the Governor of Newfoundland to fish upon that coast, and paid a tribute for such licenses as an acknowledgement of the sole right of the Crown of England to that island; but of late the encroachments of the French, and His Majesty's subjects trading and fishing there, had been more like the invasions of an enemy than becoming friends, who enjoyed the advantages of that trade only by permission.' Newfoundland now became the scene of military skirmishes, naval battles, and sieges by land and water." In 1692 the English made an unsuccessful attack on Placentia. In 1694, a French fleet, under the Chevalier Nesmond, intended for an attack upon Boston and New York, stopped at Newfoundland on the way and made a descent on the harbor and town of St. John's. Nesmond "was repulsed, and instead of going on to Boston he returned to France. A more determined effort at conquest was made later in the same year. The new expedition was under the command of Iberville and Brouillan, the former being at the head of a Canadian force. The garrison of St. John's was weak in numbers, and, in want of military stores, could only make a feeble resistance; capitulating on easy terms, the troops were shipped to England. The fort and town were burned to the ground, and the victors next proceeded to destroy all the other adjacent English settlements; Carbonear and Bonavista alone proved too strong for them. The English Government at once commenced dispositions for dislodging the invaders; but before anything was attempted the treaty of Ryswick was signed, in 1697. This treaty proved most unfortunate for Newfoundland. It revived in the island the same state of division between France and England which had existed at the beginning of the war. The enemy retired from St. John's and the other settlements which they had forcibly occupied. Their claims upon Placentia and all the other positions on the south-west coast were, however, confirmed. The British inhabitants of Newfoundland were, therefore, once more left open to French attacks, should hostilities be again renewed between the rival powers."—J. Hatton and M. Harvey, *Newfoundland, pt.* 1, *ch.* 2.

A. D. 1713.—Relinquished to Great Britain by the Treaty of Utrecht.—French fishing rights reserved.—In the 12th and 13th articles of the Treaty signed at Utrecht, April 11, 1713, which terminated the War of the Spanish Succession (commonly known in American history as Queen Anne's War) it was stipulated that "All Nova Scotia or Acadié, with its ancient boundaries, as also the city of Port Royal, now called Annapolis Royal, . . . the island of Newfoundland, with the adjacent islands, . . . the town and fortress of Placentia, and whatever other places in the island are in possession of the French, shall from this time forward belong of right wholly to Great Britain. . . . That the subjects of France should be allowed to catch fish and dry them on that part of the island of Newfoundland which stretches from Cape Bonavista to the northern point of the island, and from thence down the western side as far as Point Riché; but that no fortifications or any buildings should be erected there, besides Stages made of Boards, and Huts necessary and usual for drying fish. . . . But the island of Cape Breton, as also all others, both in the mouth of the river of St. Lawrence and in the gulf of the same name, shall hereafter belong of Right to the King of France, who shall have liberty to fortify any place or places there."—R. Brown, *Hist. of the Island of Cape Breton, letter* 9.

NIAGARA: The name and its original applications.—"Colden wrote it [the name] 'O-ni-ag-a-ra,' in 1741, and he must have received it from the Mohawks or Oneidas. It was the name of a Seneca village at the mouth of the Niagara river; located as early as 1650, near the site of Youngstown. It was also the place where the Marquis de Nonville constructed a fort in 1687, the building of which brought this locality under the particular notice of the English. The name of this Indian village in the dialect of the Senecas was 'Ne-ah-gä,' in Tuscarora 'O-ne-ä-kars,' in Onondaga 'O-ne-ah-gä,' in Oneida 'O-ne-ah-gäle,' and in Mohawk 'O-ne-ä-gä-rä.' These names are but the same word under dialectical changes. It is clear that Niagara was derived from some one of them, and thus came direct from the Iroquois language. The signification of the word is lost, unless it is derived, as some of the present Iroquois suppose, from the word which signifies 'neck,' in Seneca 'O-ne-ah-ä,' in Onondaga 'O-ne-yä-ä,' and in Oneida 'O-ne-arle.' The name of this Indian village was bestowed by the Iroquois upon Youngstown; upon the river Niagara, from the falls to the Lake; and upon Lake Ontario." —L. H. Morgan, *League of the Iroquois, bk.* 3, *ch.* 3.—"It [the name Niagara] is the oldest of all the local geographical terms which have come down to us from the aborigines. It was not at first thus written by the English, for with them it passed through almost every possible alphabetical variation before its present orthography was established. We find its germ in the 'On-gui-aah-ra' of the Neutral Nation, as given by Father L'Allemant in a letter dated in 1641, at the mission station of Sainte Marie, on Lake Huron. . . . The name of the river next occurs on Sanson's map of Canada, published in Paris in 1656, where it is spelled 'Ongiara.' Its first appearance as Niagara is on Coronelli's map, published in Paris in 1688. From that time to the present, the French have been consistent in their orthography, the numerous variations alluded to occurring only among English writers. The word was probably derived from the Mohawks, through whom the French had their first intercourse with the Iroquois. The Mohawks pronounced it Nyah-ga-rah', with the primary accent on the first syllable, and the secondary on the last. . . . The corresponding Seneca name, Nyah-gaah, was always confined by the Iroquois to the section of the river below the Falls, and to Lake Ontario. That portion of the river above the Falls being sometimes called Gai-gwăăh-gĕh,—one of their names for Lake Erie." —O. H. Marshall, *The Niagara Frontier* (*Historical Writings, p.* 283).

A. D. 1687–1688.—Fort constructed by De Nonville and destroyed a year later.—"We arrived there [at Niagara] on the morning of the 30th [of July, 1687]. We immediately set about choosing a place, and collecting stakes for the construction of the Fort which I had resolved to build at the extremity of a tongue of land, between the river Niagara and Lake Ontario, on the Iroquois side. On the 31st of July and 1st of August we continued this work, which was the more difficult from there being no wood on the place suitable for making palisades, and from its being necessary to draw them up the height. We performed this labor so diligently that the fort was in a state of defence on the last mentioned day. . . . The 2d day of August, the militia having performed their allotted task, and the fort being in a condition of defence in case of assault, they set out at noon, in order to reach the end of the lake on their return to their own country. On the morning of the 3d, being the next day, I embarked for the purpose of joining the militia, leaving the regular troops under the direction of M. de Vaudreuil to finish what was the most essential, and to render the fort not only capable of defence, but also of being occupied by a detachment of 100 soldiers, which are to winter there under the command of M. Troyes."—Marquis de Nonville, *Journal of Expedition against the Senecas* (*tr. in Hist. Writings of O. H. Marshall, p.* 173).—"De Nonville's journal removes the doubt which has been entertained as to the location of this fortress, some having supposed it to have been first built at Lewiston. . . . It occupied the site of the present fort on the angle formed by the junction of the Niagara with Lake Ontario. . . . De Nonville left De Troyes with provisions and munitions for eight months. A sickness soon after broke out in the garrison, by which they nearly all perished, including their commander. . . . They were so closely besieged by the Iroquois that they were unable to supply themselves with fresh provisions. The fortress was soon after abandoned and destroyed [1688], much to the regret of De Nonville."—*Foot-notes to the above.*

A. D. 1725–1726.—The stone fort built.—How the French gained their footing.—Joncaire's wigwam.—Captain Joncaire "had been taken prisoner when quite young by the Iroquois, and adopted into one of their tribes. This was the making of his fortune. He had grown up among them, acquired their language, adapted himself to their habits, and was considered by them as one of themselves. On returning to civilized life he became a prime instrument in the hands of the Canadian government, for managing and cajoling the Indians. . . . When the French wanted to get a commanding site for a post on the Iroquois lands, near Niagara, Joncaire was the man to manage it. He craved a situation where he might put up a wigwam, and

dwell among his Iroquois brethren. It was granted, of course, 'for was he not a son of the tribe — was he not one of themselves?' By degrees his wigwam grew into an important trading post; ultimately it became Fort Niagara."— W. Irving, *Life of Washington, v.* 1, *ch.* 5.—"In 1725 the Fort of Niagara was commenced by Chaussegross de Léry, on the spot where the wooden structure of de Denonville formerly stood; it was built of stone and completed in 1726."— W. Kingsford, *Hist. of Canada, v.* 2, *p.* 516.

NIBELUNGEN LIED, The.—"Of the bequests made to us of the [German] Popular Poetry of the time of the Hohenstauffen, by far the most important, in fact the most important literary memorial of any kind, is the epic of between nine and ten thousand lines known as the Nibelungen Lied. The manuscripts which have preserved for us the poem come from about the year 1200. For full a thousand years before that, however, many of the lays from which it was composed had been in existence; some indeed proceed from a still remoter antiquity, sung by primitive minstrels when the Germans were at their wildest, untouched by Christianity or civilization. These lays had been handed down orally, until at length a poet of genius elaborated them and intrusted them to parchment."—J. K. Hosmer, *Short History of German Literature, pt.* 1, *ch.* 1. —"In the year 1757, the Swiss Professor Bodmer printed an ancient poetical manuscript, under the title of Chriemhilden Rache und die Klage (Chriemhilde's Revenge, and the Lament); which may be considered as the first of a series, or stream of publications and speculations still rolling on, with increased current, to the present day. . . . Some fifteen years after Bodmer's publication, which, for the rest, is not celebrated as an editorial feat, one C. H. Müller undertook a Collection of German Poems from the Twelfth, Thirteenth and Fourteenth Centuries; wherein, among other articles, he reprinted Bodmer's Chriemhilde and Klage, with a highly remarkable addition prefixed to the former, essential indeed to the right understanding of it; and the whole now stood before the world as one Poem, under the name of the Nibelungen Lied, or Lay of the Nibelungen. It has since been ascertained that the Klage is a foreign inferior appendage; at best related only as epilogue to the main work: meanwhile out of this Nibelungen, such as it was, there soon proceeded new inquiries and kindred enterprises. For much as the Poem, in the shape it here bore, was defaced and marred, it failed not to attract observation: to all open-minded lovers of poetry, especially where a strong patriotic feeling existed, the singular antique Nibelungen was an interesting appearance. Johannes Müller, in his famous Swiss History, spoke of it in warm terms: subsequently, August Wilhelm Schlegel, through the medium of the Deutsche Museum, succeeded in awakening something like a universal popular feeling on the subject; and, as a natural consequence, a whole host of Editors and Critics, of deep and of shallow endeavour, whose labours we yet see in progress. The Nibelungen has now been investigated, translated, collated, commented upon, with more or less result, to almost boundless lengths. . . . Apart from its antiquarian value, and not only as by far the finest monument of old German art; but intrinsically, and as a mere detached composition, this Nibelungen has an excellence that cannot but surprise us. With little preparation, any reader of poetry, even in these days, might find it interesting. It is not without a certain Unity of interest and purport, an internal coherence and completeness; it is a Whole, and some spirit of Music informs it: these are the highest characteristics of a true Poem. Considering farther what intellectual environment we now find it in, it is doubly to be prized and wondered at; for it differs from those Hero-books, as molten or carved metal does from rude agglomerated ore; almost as some Shakspeare from his fellow Dramatist, whose Tamburlaines and Island Princesses, themselves not destitute of merit, first show us clearly in what pure loftiness and loneliness the Hamlets and Tempests reign. The unknown Singer of the Nibelungen, though no Shakspeare, must have had a deep poetic soul; wherein things discontinuous and inanimate shaped themselves together into life, and the Universe with its wondrous purport stood significantly imaged; overarching, as with heavenly firmaments and eternal harmonies, the little scene where men strut and fret their hour. His Poem, unlike so many old and new pretenders to that name, has a basis and organic structure, a beginning, middle and end; there is one great principle and idea set forth in it, round which all its multifarious parts combine in living union. . . . With an instinctive art, far different from acquired artifice, this Poet of the Nibelungen, working in the same province with his contemporaries of the Heldenbuch [Hero-book] on the same material of tradition, has, in a wonderful degree, possessed himself of what

these could only strive after; and with his 'clear feeling of fictitious truth,' avoid as false the errors and monstrous perplexities in which they vainly struggled. He is of another species than they; in language, in purity and depth of feeling, in fineness of invention, stands quite apart from them. The language of the Heldenbuch . . . was a feeble half-articulate child's-speech, the metre nothing better than a miserable doggerel; whereas here in the old Frankish (Oberdeutsch) dialect of the Nibelungen, we have a clear decisive utterance, and in a real system of verse not without essential regularity, great liveliness, and now and then even harmony of rhythm. . . . No less striking than the verse and language is the quality of the invention manifested here. Of the Fable, or narrative material of the Nibelungen we should say that it had high, almost the highest merit; so daintily yet firmly is it put together; with such felicitous selection of the beautiful, the essential, and no less felicitous rejection of whatever was unbeautiful or even extraneous. The reader is no longer afflicted with that chaotic brood of Fire-drakes, Giants, and malicious turbaned Turks, so fatally rife in the Heldenbuch: all this is swept away, or only hovers in faint shadows afar off; and free field is open for legitimate perennial interests. Yet neither is the Nibelungen without its wonders; for it is poetry and not prose; here too, a supernatural world encompasses the natural, and, though at rare intervals and in calm manner, reveals itself there. . . . The whole story of the Nibelungen is fateful, mysterious, guided on by unseen influences; yet the actual marvels are few, and done in the far distance; those Dwarfs, and Cloaks of Darkness, and charmed Treasure-caves, are heard of rather than beheld, the tidings of them seem to issue from unknown space. Vain were it to inquire where that Nibelungen-land specially is: its very name is Nebel-land or Nift-land, the land of Darkness, of Invisibility. The 'Nibelungen Heroes' that muster in thousands and tens of thousands, though they march to the Rhine or Danube, and we see their strong limbs and shining armour, we could almost fancy to be children of the air."—T. Carlyle, *The Nibelungen Lied* (*Critical and Miscellaneous Essays, v.* 3).

—"The traditions of German heroic poetry extend over more than 300 years, and are drawn from various German tribes. King Ostrogotha reigned over the Goths about the year 250, and was the contemporary of the emperors Philip and Decius. Ermanaric governed the Ostrogoths about 100 years later, and was a very warlike king, ruling over a large extent of territory. The invasion of the Huns drove him to despair, and he fell by his own hand before the year 374. Soon after the year 400 the Burgundians founded a mighty empire in the most fertile part of the Upper Rhine, where Cæsar had already fought with the Germans, near Spiers, Worms, and Mayence. The Roman Aëtius, who ruled Gaul with the aid of his Hun allies, defeated the Burgundians by means of these barbarians in a terrible battle about the year 437; 20,000 men fell, amongst them their king Gundicarius (Gunther). The Burgundians seemed to be annihilated, and soon after retreated to Savoy. About the same time Attila was king of the Huns and Ostrogoths to the terror of the world. His name is Gothic, the arrangements of his court were Gothic, and he reckoned among his knights Theodomer, the king of the Ostrogoths. The West had just learnt all the terror of this 'Scourge of God,' when news came of his sudden death (453), and in the following year his followers succumbed to the attacks of the Germans (454). Twenty-two years later, Odoacer deposed the last shadow of a Roman emperor; and again, twelve years later, Theodoric led the Ostrogoths into Italy and Odoacer fell by his hand. About the same period the Merovingian Clovis founded the kingdom of the Franks; about the year 530 his sons destroyed the Thuringian empire; and his grandson Theodebert extended his kingdom so far, that, starting from Hungary, he planned an attack on the Byzantine emperor. The Merovingians also offered a successful resistance to the Vikings, who were the terror of the North Sea, and who appeared even at the mouths of the Rhine. From another quarter the Longobards in little more than a century reached Italy, having started from Lüneburg, in the neighbourhood of Brunswick, and their King Alboin took possession of the crown of Italy in 568. These wonderful transferences of power, and this rapid founding of new empires, furnished the historical background of the German hero-legends. The fact that the movement was originally against Rome was forgotten; the migration was treated as a mere incident in the internal history of the German nation. There is no trace of chronology. . . . Legend adheres to the fact of the enmity between Odoacer and Theodoric, but it really confuses Theodoric with his father Theodomer, transplants him accordingly to Attila's court, and supposes that he was an exile there in hiding from the wrath of Odoacer. Attila becomes the representative of everything connected with the Huns. He is regarded as Ermanaric's and Gunther's enemy, and as having destroyed the Burgundians. These again are confused with a mythical race, the Nibelungen, Siegfried's enemies, and thus arose the great and complicated scheme of the Nibelungen legend. . . . This Middle High-German Epic is like an old church, in the building of which many architects have successively taken part. . . . Karl Lachmann attempted the work of restoring the Nibelungenlied and analysing its various elements, and accomplished the task, not indeed faultlessly, yet on the whole correctly. He has pointed out later interpolations, which hide the original sequence of the story, and has divided the narrative which remains after the removal of these accretions into twenty songs, some of which are connected, while others embody isolated incidents of the legend. Some of them, but certainly only a few, may be by the same author. . . . We recognise in most of these songs such differences in conception, treatment, and style, as point to separate authorship. The whole may have been finished in about twenty years, from 1190–1210. Lachmann's theory has indeed been contested. Many students still believe that the poem, as we have it, was the work of one hand; but on this hypothesis no one has succeeded in explaining the strange contradictions which pervade the work, parts of which show the highest art, while the rest is valueless."—W. Scherer, *History of German Literature, ch.* 2 *and* 5 (*v.* 1).

Also in: B. Taylor, *Studies in German Literature, ch.* 4.

NICÆA OR NICE: The founding of the city.—Nicæa, or Nice, in Bithynia, was founded by Antigonus, one of the successors of Alexander the Great, and received originally the name Antigonea. Lysimachus changed the name to Nicæa, in honor of his wife.

Capture by the Goths. See GOTHS: A. D. 258–267.

A. D. 325.—The First Council.—"Constantine . . . determined to lay the question of Arianism [see ARIANISM] before an Œcumenical council. . . . The council met [A. D. 325] at Nicæa — the 'City of Victory'— in Bithynia, close to the Ascanian Lake, and about twenty miles from Nicomedia. . . . It was an Eastern council, and, like the Eastern councils, was held within a measurable distance from the seat of government. . . . Of the 318 bishops . . . who subscribed its decrees, only eight came from the West, and the language in which the Creed was composed was Greek, which scarcely admitted of a Latin rendering. The words of the Creed are even now recited by the Russian Emperor at his coronation. Its character, then, is strictly Oriental. . . . Of the 318 members of the Council, we are told by Philostorgius, the Arian historian, that 22 espoused the cause of Arius, though other writers regard the minority as still less, some fixing it at 17, others at 15, others as low as 13. But of those 318 the first place in rank, though not the first in mental power and energy of character, was accorded to the aged bishop of Alexandria. He was the representative of the most intellectual diocese in the Eastern Church. He alone, of all the bishops, was named 'Papa,' or 'Pope.' The 'Pope of Rome' was a phrase which had not yet emerged in history; but 'Pope of Alexandria' was a well-known title of dignity."—R. W. Bush, *St. Athanasius, ch.* 6.

A. D. 1850.—The Clayton-Bulwer Treaty.—Joint protectorate of the United States and Great Britain over the proposed inter-oceanic canal.—"The acquisition of California in May, 1848, by the treaty of Guadalupe-Hidalgo, and the vast rush of population, which followed almost immediately on the development of the gold mines, to that portion of the Pacific coast, made the opening of interoceanic communication a matter of paramount importance to the United States. In December, 1846, had been ratified a treaty with New Granada (which in 1862 assumed the name of Colombia) by which a right of transit over the isthmus of Panama was given to the United States, and the free transit over the isthmus 'from the one to the other sea' guaranteed by both of the contracting powers. Under the shelter of this treaty the Panama Railroad Company, composed of citizens of the United States, and supplied by capital from the United States, was organized in 1850 and put in operation in 1855. In 1849, before, therefore, this company had taken shape, the United States entered into a treaty with Nicaragua for the opening of a ship-canal from Greytown (San Juan), on the Atlantic coast, to the Pacific coast, by way of the Lake of Nicaragua. Greytown, however, was then virtually occupied by British settlers, mostly from Jamaica, and the whole eastern coast of Nicaragua, so far at least as the eastern terminus of such a canal was concerned, was held, so it was maintained by Great Britain, by the Mosquito Indians, over whom Great Britain claimed to exercise a protectorate. That the Mosquito Indians had no such settled territorial site; that, if they had, Great Britain had no such protectorate or sovereignty over them as authorized her to exercise dominion over their soil, even if they had any, are positions which . . . the United States has repeatedly affirmed. But the fact that the pretension was set up by Great Britain, and that, though it were baseless, any attempt to force a canal through the Mosquito country might precipitate a war, induced Mr. Clayton, Secretary of State in the administration of General Taylor, to ask through Sir H. L. Bulwer, British minister at Washington, the administration of Lord John Russell (Lord Palmerston being then foreign secretary) to withdraw the British pretensions to the coast so as to permit the construction of the canal under the joint auspices of the United States and of Nicaragua. This the British Government declined to do, but agreed to enter into a treaty for a joint protectorate over the proposed canal." This treaty, which was signed at Washington April 19, 1850, and of which the ratifications were exchanged on the 4th of July following, is commonly referred to as the Clayton-Bulwer Treaty. Its language in the first article is that "the Governments of the United States and of Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship-canal; agreeing that neither will ever erect or maintain any fortifications commanding the same, or in the vicinity thereof, or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America; nor will either make use of any protection which either affords, or may afford, or any alliance which either has or may have to or with any state or people, for the purpose of erecting or maintaining any such fortifications, or of occu-

pying, fortifying, or colonizing Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America, or of assuming or exercising dominion over the same; nor will the United States or Great Britain take advantage of any intimacy, or use any alliance, connection, or influence that either may possess, with any State or Government through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for the citizens or subjects of the one, any rights or advantages in regard to commerce or navigation through the said canal which shall not be offered on the same terms to the citizens or subjects of the other." Since the execution of this treaty there have been repeated controversies between the two governments respecting the interpretation of its principal clauses. Great Britain having maintained her dominion over the Belize, or British Honduras, it has been claimed by the United States that the treaty is void, or has become voidable at the option of the United States, on the grounds (in the language of a dispatch from Mr. Frelinghuysen, Secretary of State, dated July 19, 1884) "first, that the consideration of the treaty having failed, its object never having been accomplished, the United States did not receive that for which they covenanted; and, second, that Great Britain has persistently violated her agreement not to colonize the Central American coast." —F. Wharton, *Digest of the International Law of the U. S., ch. 6, sect. 150 f. (v. 2).*

A. D. 1855-1860.—The invasion of Walker and his Filibusters.—"Its geographical situation gave . . . importance to Nicaragua. It contains a great lake, which is approached from the Atlantic by the river San Juan; and from the west end of the lake there are only 20 miles to the coast of the Pacific. Ever since the time of Cortes there have been projects for connecting the two oceans through the lake of Nicaragua. . . . Hence Nicaragua has always been thought of great importance to the United States. The political struggles of the state, ever since the failure of the confederation, had sunk into a petty rivalry between the two towns of Leon and Granada. Leon enjoys the distinction of being the first important town in Central America to raise the cry of independence in 1815, and it had always maintained the liberal character which this disclosed. Castellon, the leader of the Radical party, of which Leon was the seat, called in to help him an American named William Walker. Walker, who was born in 1824, was a young roving American who had gone during the gold rush of 1850 to California, and become editor of a newspaper in San Francisco. In those days it was supposed in the United States that the time for engulfing the whole of Spanish America had come. Lopez had already made his descent on Cuba; and Walker, in July, 1853, had organized a band of filibusters for the conquest of Sonora, and the peninsula of California, which had been left to Mexico by the treaty of Guadalupe Hidalgo. This wild expedition . . . was a total failure; but when Walker came back to his newspapers after an absence of seven months, he found himself a hero. His fame, as we see, had reached Central America; and he at once accepted Castellon's offer. In 1855, having collected a band of 70 adventurers in California, he landed in the country, captured the town of Granada, and, aided by the intrigues of the American consul, procured his own appointment as General-in-Chief of the Nicaraguan army. Walker was now master of the place: and his own provisional President, Rivas, having turned against him, he displaced him, and in 1856 became President himself. He remained master of Nicaragua for nearly two years, levying arbitrary customs on the traffic of the lake, and forming plans for a great military state to be erected on the ruins of Spanish America. One of Walker's first objects was to seize the famous gold-mines of Chontales, and the sudden discovery that the entire sierra of America is a gold-bearing region had a good deal to do with his extraordinary enterprise. Having assured himself of the wealth of the country, he now resolved to keep it for himself, and this proved in the end to be his ruin. The statesmen of the United States, who had at first supposed that he would cede them the territory, now withdrew their support from him: the people of the neighbouring states rose in arms against him, and Walker was obliged to capitulate, with the remains of his filibustering party, at Rivas in 1857. Walker, still claiming to be President of Nicaragua, went to New Orleans, where he collected a second band of filibusters, at the head of whom he again landed near the San Juan river towards the end of the year: this time he was arrested and sent back home by the American commodore. His third and last expedition, in 1860, was directed against Honduras, where he hoped to meet with a good reception at the hands of the Liberal party. Instead of this he fell into the hands of the soldiers of Guardiola, by whom he was tried as a pirate and shot, September 12, 1860."—E. J. Payne, *Hist. of European Colonies, ch. 21, sect. 8.*—"Though he never evinced much military or other capacity, Walker, so long as he acted under color of authority from the chiefs of the faction he patronized, was generally successful against the pitiful rabble styled soldiers by whom his progress was resisted. . . . But his very successes proved the ruin of the faction to which he had attached himself, by exciting the natural jealousy and alarm of the natives who mainly composed it; and his assumption . . . of the title of President of Nicaragua, speedily followed by a decree reëstablishing Slavery in that country, exposed his purpose and insured his downfall. As if madly bent on ruin, he proceeded to confiscate the steamboats and other property of the Nicaragua Transit Company, thereby . . . cutting himself off from all hope of further recruiting his forces from the throngs of sanguine or of baffled gold-seekers. . . . Yet he maintained the unequal contest for about two years."—H. Greeley, *The American Conflict, v. 1, ch. 19.*

NIHILISM.—NIHILISTS.—"In Tikomirov's work on Russia seven or eight pages are devoted to the severe condemnation of the use of the expressions 'nihilism' and 'nihilist.' Nevertheless . . . they are employed universally, and all the world understands what is meant by them in an approximate and relative way. . . . It was a novelist who first baptized the party who called themselves at that time 'new men.' It was Ivan Turguenief, who by the mouth of one of the characters in his celebrated novel, 'Fathers and Sons,' gave the young generation the name of nihilists. But it was not of his coinage; Royer-Collard first stamped it; Victor Hugo had already said that the negation of the infinite led directly to nihilism, and Joseph Lemaistre had spoken of the nihilism, more or less sincere, of the contemporary generations; but it was reserved for the author of 'Virgin Soil' to bring to light and make famous this word, which after making a great stir in his own country attracted the attention of the whole world. The reign of Nicholas I. was an epoch of hard oppression. When he ascended the throne, the conspiracy of the Decembrists broke out, and this sudden revelation of the revolutionary spirit steeled the already inflexible soul of the Czar. Nicholas, although fond of letters and an assiduous reader of Homer, was disposed to throttle his enemies, and would not have hesitated to pluck out the brains of Russia; he was very near suppressing all the universities and schools, and inaugurating a voluntary retrocession to Asiatic barbarism. He did mutilate and reduce the instruction, he suppressed the chair of European political laws, and after the events of 1848 in France he seriously considered the idea of closing his frontiers with a cordon of troops to beat back foreign liberalism like the cholera or the plague. . . . However, it was under his sceptre, under his systematic oppression, that, by confession of the great revolutionary statesman Herzen, Russian thought developed as never before; that the emancipation of the intelligence, which this very statesman calls a tragic event, was accomplished, and a national literature was brought to light and began to flourish. When Alexander II. succeeded to the throne, when the bonds of despotism were loosened and the blockade with which Nicholas vainly tried to isolate his empire was raised, the field was ready for the intellectual and political strife. . . . Before explaining how nihilism is the outcome of intelligence, we must understand what is meant by intelligence in Russia. It means a class composed of all those, of whatever profession or estate, who have at heart the advancement of intellectual life, and contribute in every way toward it. It may be said, indeed, that such a class is to be found in every country; but there is this difference,—in other countries the class is not a unit; there are factions, or a large number of its members shun political and social discussion in order to enjoy the serene atmosphere of the world of art, while in Russia the intelligence means a common cause, a homogeneous spirit, subversive and revolutionary withal. . . . Whence came the revolutionary element in Russia? From the Occident, from France, from the negative,

materialist, sensualist philosophy of the Encyclopædia, imported into Russia by Catherine II.; and later from Germany, from Kantism and Hegelianism, imbibed by Russian youth at the German universities, and which they diffused throughout their own country with characteristic Sclav impetuosity. By 'Pure Reason' and transcendental idealism, Herzen and Bakunine, the first apostles of nihilism, were inspired. But the ideas brought from Europe to Russia soon allied themselves with an indigenous or possibly an Oriental element; namely, a sort of quietist fatalism, which leads to the darkest and most despairing pessimism. On the whole, nihilism is rather a philosophical conception of the sum of life than a purely democratic and revolutionary movement. . . . Nihilism had no political color about it at the beginning. During the decade between 1860 and 1870 the youth of Russia was seized with a sort of fever for negation, a fierce antipathy toward everything that was,—authorities, institutions, customary ideas, and old-fashioned dogmas. In Turguenief's novel, 'Fathers and Sons,' we meet with Bazarof, a froward, ill-mannered, intolerable fellow, who represents this type. After 1871 the echo of the Paris Commune and emissaries of the Internationals crossed the frontier, and the nihilists began to bestir themselves, to meet together clandestinely, and to send out propaganda. Seven years later they organized an era of terror, assassination, and explosions. Thus three phases have followed upon one another,—thought, word, and deed,—along that road which is never so long as it looks, the road that leads from the word to the act, from Utopia to crime. And yet nihilism never became a political party as we understand the term. It has no defined creed or official programme. The fulness of its despair embraces all negatives and all acute revolutionary forms. Anarchists, federalists, cantonalists, covenanters, terrorists, all who are unanimous in a desire to sweep away the present order, are grouped under the ensign of nihil."—E. P. Bazan, *Russia, its People and its Literature, bk.* 2, *ch.* 1-2.—"Out of Russia, an already extended list of revolutionary spirits in this land has attracted the attention and kept curiosity on the alert. We call them Nihilists,—of which the Russian pronunciation is neegilist, which, however, is now obsolete. Confined to the terrorist group in Europe, the number of these persons is certainly very small. Perhaps, as is thought in Russia, there are 500 in all, who busy themselves, even if reluctantly, with thoughts of resorting to bombs and murderous weapons to inspire terror. But it is not exactly this group that is meant when we speak of that nihilistic force in society which extends everywhere, into all circles, and finds support and strongholds at widely spread points. It is indeed not very different from what elsewhere in Europe is regarded as culture, advanced culture: the profound scepticism in regard to our existing institutions in their present form, what we call royal prerogative, church, marriage, property."—Georg Brandes, *Impressions of Russia, ch.* 4.—"The genuine Nihilism was a philosophical and literary movement, which flourished in the first decade after the Emancipation of the Serfs, that is to say, between 1860 and 1870. It is now [1883] absolutely extinct, and only a few traces are left of it, which are rapidly disappearing. . . . Nihilism was a struggle for the emancipation of intelligence from every kind of dependence, and it advanced side by side with that for the emancipation of the labouring classes from serfdom. The fundamental principle of Nihilism, properly so-called, was absolute individualism. It was the negation, in the name of individual liberty, of all the obligations imposed upon the individual by society, by family life, and by religion. Nihilism was a passionate and powerful reaction, not against political despotism, but against the moral despotism that weighs upon the private and inner life of the individual. But it must be confessed that our predecessors, at least in the earlier days, introduced into this highly pacific struggle the same spirit of rebellion and almost the same fanaticism that characterises the present movement."—Stepniak, *Underground Russia.*

NIMEGUEN, The Peace of (1678-1679).—The war which Louis XIV. began in 1672 by attacking Holland, with the co-operation of his English pensioner, Charles II., and which roused against him a defensive coalition of Spain, Germany and Denmark with the Dutch (see Netherlands: A. D. 1672-1674, and 1674-1678), was ended by a series of treaties negotiated at Nimeguen in 1678 and 1679. The first of these treaties, signed August 10, 1678, was between France and Holland. "France and Holland kept what was in their possession, except Maestricht and its dependencies which were restored to Holland. France therefore kept her conquests in Senegal and Guiana. This was all the territory lost by Holland in the terrible war which had almost annihilated her. The United Provinces pledged themselves to neutrality in the war which might continue between France and the other powers, and guaranteed the neutrality of Spain, after the latter should have signed the peace. France included Sweden in the treaty; Holland included in it Spain and the other allies who should make peace within six weeks after the exchange of ratifications. To the treaty of peace was annexed a treaty of commerce, concluded for twenty-five years."—H. Martin, *Hist. of France: Age of Louis XIV.* (*trans. by M. L. Booth*), *v.* 1, *ch.* 6.—The peace between France and Spain was signed September 17. France gave back, in the Spanish Netherlands and elsewhere, "Charleroi, Binch, Ath, Oudenarde, and Courtrai, which she had gained by the Peace of Aix-la-Chapelle; the town and duchy of Limburg, all the country beyond the Meuse, Ghent, Rodenhus, and the district of the Waes, Leuze, and St. Ghislain, with Puycerda in Catalonia, these having been taken since that peace. But she retained Franche

Comté, with the towns of Valenciènnes, Bouchain, Condé, Cambrai and the Cambrésis, Aire, St. Omer, Ypres, Werwick, Warneton, Poperinge, Bailleul, Cassel, Bavai, and Maubeuge. . . . On February 2, 1679, peace was declared between Louis, the Emperor, and the Empire. Louis gave back Philippsburg, retaining Freiburg with the desired liberty of passage across the Rhine to Breisach; in all other respects the Treaty of Munster, of October 24, 1648, was re-established. . . . The treaty then dealt with the Duke of Lorraine. To his restitution Louis annexed conditions which rendered Lorraine little more than a French province. Not only was Nancy to become French, but, in conformity with the treaty of 1661, Louis was to have possession of four large roads traversing the country, with half a league's breadth of territory throughout their length, and the places contained therein. . . . To these conditions the Duke refused to subscribe, preferring continual exile until the Peace of Ryswick in 1697, when at length his son regained the ancestral estates." Treaties between the Emperor and Sweden, between Brandenburg and France and Sweden, between Denmark and the same, and between Sweden, Spain and Holland, were successively concluded during the year 1679. "The effect of the Peace of Nimwegen was, . . . speaking generally, to reaffirm the Peace of Westphalia. But . . . it did not, like the Peace of Westphalia, close for any length of time the sources of strife."—O. Airy, *The English Restoration and Louis XIV., ch.* 22.

NINEVEH.—"In or about the year before Christ 606, Nineveh, the great city, was destroyed. For many hundred years had she stood in arrogant splendor, her palaces towering above the Tigris and mirrored in its swift waters; army after army had gone forth from her gates and returned laden with the spoils of conquered countries; her monarchs had ridden to the high place of sacrifice in chariots drawn by captive kings. But her time came at last. The nations assembled and encompassed her around [the Medes and the Babylonians, with their lesser allies]. Popular tradition tells how over two years lasted the siege; how the very river rose and battered her walls; till one day a vast flame rose up to heaven; how the last of a mighty line of kings, too proud to surrender, thus saved himself, his treasures and his capital from the shame of bondage. Never was city to rise again where Nineveh had been." The very knowledge of the existence of Nineveh was lost so soon that, two centuries later, when Xenophon passed the ruins, with his Ten Thousand retreating Greeks, he reported them to be the ruins of a deserted city of the Medes and called it Larissa. Twenty-four centuries went by, and the winds and the rains, in their slow fashion, covered the bricks and stones of the desolated Assyrian capital with a shapeless mound of earth. Then came the searching modern scholar and explorer, and began to excavate the mound, to see what lay beneath it. First the French Consul, Botta, in 1842; then the Englishman Layard, in 1845; then the later English scholar, George Smith, and others; until buried Nineveh has been in great part brought to light. Not only the imperishable monuments of its splendid art have been exposed, but a veritable library of its literature, written on tablets and cylinders of clay, has been found and read. The discoveries of the past half-century, on the site of Nineveh, under the mound called Koyunjik, and elsewhere in other similarly-buried cities of ancient Babylonia and Assyria, may reasonably be called the most extraordinary additions to human knowledge which our age has acquired. — Z. A. Ragozin, *Story of Chaldea, introd., ch.* 1–4.

NO MAN'S LAND, England.—In the open or common field system which prevailed in early England, the fields were divided into long, narrow strips, wherever practicable. In some cases, "little odds and ends of unused land remained, which from time immemorial were called 'no man's land,' or 'any one's land,' or 'Jack's land,' as the case might be."—F. Seebohm, *Eng. Village Community, ch.* 1.

NO POPERY RIOTS, The. See ENGLAND: A. D. 1778–1780.

NOBLES, Roman: Origin of the term.—"When Livy in his first six books writes of the disputes between the Patres or Patricians and the Plebs about the Public Land, he sometimes designates the Patricians by the name Nobiles, which we have in the form Nobles. A Nobilis is a man who is known. A man who is not known is Ignobilis, a nobody. In the later Republic a Plebeian who attained to a curule office elevated his family to a rank of honour, to a nobility, not acknowledged by any law, but by usage. . . . The Patricians were a nobility of antient date. . . . The Patrician nobility was therefore independent of all office, but the new Nobility and their Jus Imaginum originated in some Plebeian who first of his family attained a curule office. . . . The true conclusion is that Livy in his first six books uses the word Nobiles improperly, for there is no evidence that this name was given to the Patres before the consulship of L. Sextius."—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 11.—See, also, ROME: B. C. 146.

NOËTIANS AND SABELLIANS.—"At the head of those in this century [the 3d] who explained the scriptural doctrine of the Father, Son, and holy Spirit, by the precepts of reason, stands Noëtus of Smyrna; a man little known, but who is reported by the ancients to have been cast out of the church by presbyters (of whom no account is given), to have opened a school, and to have formed a sect. It is stated that, being wholly unable to comprehend how that God, who is so often in Scripture declared to be one and undivided, can, at the same time, be manifold, Noëtus concluded that the undivided Father of all things united himself with the man Christ, was born in him, and in him suffered and died. On account of this doctrine his followers were called Patripassians. . . . After the middle of this century, Sabellius, an African bishop, or presbyter, of Ptolemais, the capital of the Pentapolitan province of Libya Cyrenaica, attempted to reconcile, in a manner somewhat different from that of Noëtus, the scriptural doctrine of Father, Son, and holy Spirit, with the doctrine of the unity of the divine nature." Sabellius assumed "that only an energy or virtue, emitted from the Father of all, or, if you choose, a particle of the person or nature of the Father, became united with the man Christ. And such a virtue or particle of the Father, he also supposed, constituted the holy Spirit."—J. L. von Mosheim, *Historical Commentaries, 3d century, sects.* 32–33.

NORMANDY: A. D. 876-911.—Rollo's conquest and occupation. See NORMANS.—NORTHMEN: A. D. 876–911.

A. D. 911-1000.—The solidifying of Rollo's duchy.—The Normans become French.—The first century which passed after the settlement of the Northmen along the Seine saw "the steady growth of the duchy in extent and power. Much of this was due to the ability of its rulers, to the vigour and wisdom with which Hrolf forced order and justice on the new community, as well as to the political tact with which both Hrolf and William Longsword [son and successor of Duke Rollo or Hrolf, A. D. 927-943] clung to the Karolings in their strife with the dukes of Paris. But still more was owing to the steadiness with which both these rulers remained faithful to the Christianity which had been imposed on the northmen as a condition of their settlement, and to the firm resolve with which they trampled down the temper and traditions which their people had brought from their Scandinavian homeland, and welcomed the language and civilization which came in the wake of their neighbours' religion. The difficulties that met the dukes were indeed enormous. . . . They were girt in by hostile states, they were threatened at sea by England, under Æthelstan a network of alliances menaced them with ruin. Once a French army occupied Rouen, and a French king held the pirates' land at his will; once the German lances were seen from the walls of their capital. Nor were their difficulties within less than those without. The subject population which had been trodden under foot by the northern settlers were seething with discontent. The policy of Christianization and civilization broke the Normans themselves into two parties. . . . The very conquests of Hrolf and his successor, the Bessin, the Cotentin, had to be settled and held by the new comers, who made them strongholds of heathendom. . . . But amidst difficulties from within and from without the dukes held firm to their course, and their stubborn will had its reward. . . . By the end of William Longsword's days all Normandy, save the newly settled districts of the west, was Christian, and spoke French. . . . The work of the statesman at last completed the work of the sword. As the connexion of the dukes with the Karoling kings had given them the land, and helped them for fifty years to hold it against the House of Paris, so in the downfall of the Karolings the sudden and adroit change of front which bound the Norman rulers to the House of Paris in its successful struggle for the Crown secured the land for ever to the northmen. The close connexion which France was forced to maintain with the state whose support held the new royal line on its throne told both on kingdom and duchy. The French dread of the 'pirates' died gradually away, while French influence spread yet more rapidly over a people which clung so closely to the French crown."—J. R. Green, *The Conquest of England, ch.* 8.

A. D. 1035-1063.—Duke William establishes his authority.—Duke Robert, of Normandy, who died in 1035, was succeeded by his young son William, who bore in youth the opprobrious name of "the Bastard," but who extinguished it in later life under the proud appellation of "the Conqueror." By reason of his bastardy he was not an acceptable successor, and, being yet a boy, it seemed little likely that he would maintain himself on the ducal throne. Normandy, for a dozen years, was given up to lawless strife among its nobles. In 1047 a large part of the duchy rose in revolt, against its objectionable young lord. "It will be remembered that the western part of Normandy, the lands of Bayeux and Coutances, were won by the Norman dukes after the eastern part, the lands of Rouen and Evreux. And it will be remembered that these western lands, won more lately, and fed by new colonies from the North, were still heathen and Danish some while after eastern Normandy had become Christian and French-speaking. Now we may be sure that, long before William's day, all Normandy was Christian, but it is quite possible that the old tongue may have lingered on in the western lands. At any rate there was a wide difference in spirit and feeling between the more French and the more Danish districts, to say nothing of Bayeux, where, before the Normans came, there had been a Saxon settlement. One part of the duchy in short was altogether Romance in speech and manners, while more or less of Teutonic character still clave to the other. So now Teutonic Normandy rose against Duke William, and Romance Normandy was faithful to him. The nobles of the Bessin and Côtentin made league with William's cousin Guy of Burgundy, meaning, as far as one can see, to make Guy Duke of Rouen and Evreux, and to have no lord at all for themselves. . . . When the rebellion broke out, William was among them at Valognes, and they tried to seize him. But his fool warned him in the night; he rode for his life, and got safe to his own Falaise. All eastern Normandy was loyal; but William doubted whether he could by himself overcome so strong an array of rebels. So he went to Poissy, between Rouen and Paris, and asked his lord King Henry [of France] to help him. So King Henry came with a French army; and the French and those whom we may call the French Normans met the Teutonic Normans in battle at Val-ès-dunes, not far from Caen. It was William's first pitched battle," and he won a decisive victory. "He was now fully master of his own duchy; and the battle of Val-ès-dunes finally fixed that Normandy should take its character from Romance Rouen and not from Teutonic Bayeux. William had in short overcome Saxons and Danes in Gaul before he came to overcome them in Britain. He had to conquer his own Normandy before he could conquer England. . . . But before long King Henry got jealous of William's power, and he was now always ready to give help to any Norman rebels. . . . And the other neighbouring princes were jealous of him as well as the King. His neighbours in Britanny, Anjou, Chartres, and Ponthieu, were all against him. But the great Duke was able to hold his own against them all, and before long to make a great addition to his dominions." Between 1053 and 1058 the French King invaded Normandy three times and suffered defeat on every occasion. In 1063 Duke William invaded the county of Maine, and reduced it to entire submission. "From this time he ruled over Maine as well as over Normandy," although its people were often in revolt. "The conquest of Maine raised William's power and fame to a higher pitch than it reached at any other time before his conquest of England."—E. A. Freeman, *Short Hist. of the Norman Conquest, ch.* 4.

NORMANS.—NORTHMEN: Name and Origin.—"The northern pirates, variously called Danes or Normans, according as they came from the islands of the Baltic Sea or the coast of Norway, . . . descended from the same primitive race with the Anglo-Saxons and the Franks; their language had roots identical with the idioms of these two nations: but this token of an ancient fraternity did not preserve from their hostile incursions either Saxon Britain or Frankish Gaul, nor even the territory beyond the Rhine, then exclusively inhabited by Germanic tribes. The conversion of the southern Teutons to the Christian faith had broken all bond of fraternity between them and the Teutons of the north. In the 9th century the man of the north still gloried in the title of son of Odin, and treated as bastards and apostates the Germans who had become children of the church. . . . A sort of religious and patriotic fanaticism was thus combined in the Scandinavian with the fiery impulsiveness of their character, and an insatiable thirst for gain. They shed with joy the blood of the priests, were especially delighted at pillaging the churches, and stabled their horses in the chapels of the palaces. . . . In three days, with an east wind, the fleets of Denmark and Norway, two-sailed vessels, reached the south of Britain. The soldiers of each fleet obeyed in general one chief, whose vessel was distinguished from the rest by some particular ornament. . . . All equal under such a chief, bearing lightly their voluntary submission and the weight of their mailed armour, which they promised themselves soon to exchange for an equal weight of gold, the Danish pirates pursued the 'road of the swans,' as their ancient national poetry expressed it. Sometimes they coasted along the shore, and laid wait for the enemy in the straits, the bays, and smaller anchorages, which procured them the surname of Vikings, or 'children of the creeks'; sometimes they dashed in pursuit of their prey across the ocean."—A. Thierry, *Conquest of England by the Normans, bk.* 2 (*v.* 1).

ALSO IN: T. Carlyle, *The Early Kings of Norway.*

8-9th Centuries.—The Vikings and what sent them to sea.—"No race of the ancient or modern world have ever taken to the sea with such heartiness as the Northmen. The great cause which filled the waters of Western Europe with their barks was that consolidation and centralization of the kingly power all over Europe which followed after the days of Charlemagne, and which put a stop to those great invasions and migrations by land which had lasted for centuries. Before that time the north and east of Europe, pressed from behind by other nationalities, and growing straitened within their own bounds, threw off from time to time bands of emigrants which gathered force as they slowly marched along, until they appeared in the west as a fresh wave of the barbarian flood. As soon as the west, recruited from the very source whence the invaders came, had gained strength enough to set them at defiance, which happened in the time of Charlemagne, these invasions by land ceased after a series of bloody defeats, and the north had to look for another outlet for the force which it was unable to support at home. Nor was the north itself slow to follow Charlemagne's example. Harold Fairhair, no inapt disciple of the great emperor, subdued the petty kings in Norway one after another, and made himself supreme king. At the same time he invaded the rights of the old freeman, and by taxes and tolls laid on his allodial holding drove him into exile. We have thus the old outlet cut off and a new cause for emigration added. No doubt the Northmen even then had long been used to struggle with the sea, and sea-roving was the calling of the brave, but the two causes we have named gave it a great impulse just at the beginning of the tenth century, and many a freeman who would have joined the host of some famous leader by land, or have lived on a little king at home, now sought the waves as a birthright of which no king could rob him. Either alone, or as the follower of some sea-king, whose realm was the sea's wide wastes, he went out year after year, and thus won fame and wealth. The name given to this pursuit was Viking, a word which is in no way akin to king. It is derived from 'Vik,' a bay or creek, because these sea-rovers lay moored in bays and creeks on the look-out for merchant ships; the 'ing' is a well known ending, meaning, in this case, occupation or calling. Such a sea-rover was called 'Vikingr,' and at one time or another in his life almost every man of note in the North had taken to the sea and lived a Viking life."—G. W. Dasent, *Story of Burnt Njal, v.* 2, *app.*—"Western viking expeditions have hitherto been ascribed to Danes and Norwegians exclusively. Renewed investigations reveal, however, that Swedes shared widely in these achievements, notably in the acquisition of England, and that, among other famous conquerors, Rolf, the founder of the Anglo-Norman dynasty, issued from their country. . . . Norwegians, like Swedes, were, in truth, merged in the terms Northmen and Danes, both of which were general to all Scandinavians abroad. . . . The earlier conversion of the Danes to Christianity and their more immediate contact with Germany account for the frequent application of their name to all Scandinavians."—W. Roos, *The Swedish Part in the Viking Expeditions* (*Eng. Hist. Rev., April*, 1892).

8-9th Centuries.—The island empire of the Vikings.—"We have hitherto treated the Norwegians, Swedes, and Danes under the common

appellation of Northmen; and this is in many ways the most convenient, for it is often impossible to decide the nationality of the individual settlement. Indeed, it would appear probable that the devastating bands were often composed indiscriminately of the several nationalities. Still, in tracing the history of their conquests, we may lay it down as a general rule that England was the exclusive prey of the Danes; that Scotland and the islands to the north as far as Iceland, and to the south as far as Anglesea and Ireland, fell to the Norwegians, and Russia to the Swedes; while Gaul and Germany were equally the spoil of the Norwegians and the Danes. . . . While England had been overcome by the Danes, the Norwegians had turned their attention chiefly to the north of the British Isles and the islands of the West. Their settlements naturally fell into three divisions, which tally with their geographical position. 1. The Orkneys and Shetlands, lying to the N. E. of Scotland. 2. The isles to the west as far south as Ireland. 3. Iceland and the Faroë Isles. The Orkneys and Shetlands: Here the Northmen first appear as early as the end of the 8th century, and a few peaceful settlements were made by those who were anxious to escape from the noisy scenes which distracted their northern country. In the reign of Harald Harfagr [the Fairhaired] they assumed new importance, and their character is changed. Many of those driven out by Harald sought a refuge here, and betaking themselves to piracy periodically infested the Norwegian coast in revenge for their defeat and expulsion. These ravages seriously disturbing the peace of his newly acquired kingdom, Harald fitted out an expedition and devoted a whole summer to conquering the Vikings and extirpating the brood of pirates. The country being gained, he offered it to his chief adviser, Rögnwald, Jarl of Möri in Norway, father of Rollo of Normandy, who, though refusing to go himself, held it during his life as a family possession, and sent Sigurd, his brother, there. . . . Rögnwald next sent his son Einar, and from his time [A. D. 875] we may date the final establishment of the Jarls of Orkney, who henceforth owe a nominal allegiance to the King of Norway. . . . The close of the 8th century also saw the commencement of the incursions of the Northmen in the west of Scotland, and the Western Isles soon became a favourite resort of the Vikings. In the Keltic annals these unwelcome visitors had gained the name of Fingall, 'the white strangers,' from the fairness of their complexion; and Dugall, the black strangers, probably from the iron coats of mail worn by their chiefs. . . . By the end of the 9th century a sort of naval empire had arisen, consisting of the Hebrides, parts of the western coasts of Scotland, especially the modern Argyllshire, Man, Anglesea, and the eastern shores of Ireland. This empire was under a line of sovereigns who called themselves the Hy-Ivar (grandsons of Ivar), and lived now in Man, now in Dublin. Thence they often joined their kinsmen in their attacks on England, and at times aspired to the position of Jarls of the Danish Northumbria."—A. H. Johnson, *The Normans in Europe, ch.* 2.—"Under the government of these Norwegian princes [the Hy Ivar] the Isles appear to have been very flourishing. They were crowded with people; the arts were cultivated, and manufactures were carried to a degree of perfection which was then thought excellence. This comparatively advanced state of society in these remote isles may be ascribed partly to the influence and instructions of the Irish clergy, who were established all over the island before the arrival of the Norwegians, and possessed as much learning as was in those ages to be found in any part of Europe, except Constantinople and Rome; and partly to the arrival of great numbers of the provincial Britons flying to them as an asylum when their country was ravaged by the Saxons, and carrying with them the remains of the science, manufactures, and wealth introduced among them by their Roman masters. Neither were the Norwegians themselves in those ages destitute of a considerable portion of learning and of skill in the useful arts, in navigation, fisheries, and manufactures; nor were they in any respect such barbarians as those who know them only by the declamations of the early English writers may be apt to suppose them. The principal source of their wealth was piracy, then esteemed an honourable profession, in the exercise of which these islanders laid all the maritime countries of the west part of Europe under heavy contributions."—D. Macpherson, *Geog. Illustrations of Scottish Hist.* (Quoted by J. H. Burton, *Hist. of Scotland, ch.* 15, *v.* 2, *foot-note*).—See, also, IRELAND: 9–10TH CENTURIES.

A. D. 787-880.—The so-called Danish invasions and settlements in England.—"In our own English chronicles, 'Dena' or Dane is used as the common term for all the Scandinavian invaders of Britain, though not including the Swedes, who took no part in the attack, while Northman generally means 'man of Norway.' Asser however uses the words as synonymous, 'Nordmanni sive Dani.' Across the channel 'Northman' was the general name for the pirates, and 'Dane' would usually mean a pirate from Denmark. The distinction however is partly a chronological one; as, owing to the late appearance of the Danes in the middle of the ninth century, and the prominent part they then took in the general Wiking movement, their name tended from that time to narrow the area of the earlier term of 'Nordmanni.'"—J. R. Green, *The Conq. of Eng., p.* 68, *foot-note.*—Prof. Freeman divides the Danish invasions of England into three periods: 1. The period of merely plundering incursions, which began A. D. 787. 2. The period of actual occupation and settlement, from 866 to the Peace of Wedmore, 880. 3. The later period of conquest, within which England was governed by Danish kings, A. D. 980–1042.—See ENGLAND: A. D. 855–880.

ALSO IN: C. F. Keary, *The Vikings in Western Christendom, ch.* 6 *and* 12.

A. D. 841.—First expedition up the Seine.—In May, A. D. 841, the Seine was entered for the first time by a fleet of Norse pirates, whose depredations in France had been previously confined to the coasts. The expedition was commanded by a chief named Osker, whose plans appear to have been well laid. He led his pirates straight to the rich city of Rouen, never suffering them to slacken oar or sail, or to touch the tempting country through which they passed, until the great prize was struck. "The city was fired and plundered. Defence was wholly impracticable, and great slaughter ensued. . . . Osker's three days' occupation of Rouen was

remuneratingly successful. Their vessels loaded with spoil and captives, gentle and simple, clerks, merchants, citizens, soldiers, peasants, nuns, dames, damsels, the Danes dropped down the Seine, to complete their devastation on the shores. . . . The Danes then quitted the Seine, having formed their plans for renewing the encouraging enterprize,—another time they would do more. Normandy dates from Osker's three days' occupation of Rouen."—Sir F. Palgrave, *Hist. of Normandy and England, bk.* 1, *ch.* 2 (*v.* 1).

Also in: C. F. Keary, *The Vikings in Western Christendom, ch.* 9.

A. D. 845-861.—Repeated ravages in the Seine.—Paris thrice sacked. See Paris: A. D. 845; and 857–861.

A. D. 849-860.—The career of Hasting.—"About the year of Alfred's birth [849] they laid siege to Tours, from which they were repulsed by the gallantry of the citizens, assisted by the miraculous aid of Saint Martin. It is at this siege that Hasting first appears as a leader. His birth is uncertain. In some accounts he is said to have been the son of a peasant of Troyes, the capital of Champagne, and to have forsworn his faith, and joined the Danes in his early youth, from an inherent lust of battle and plunder. In others he is called the son of the jarl Atte. But, whatever his origin, by the middle of the century he had established his title to lead the Northern hordes in those fierce forays which helped to shatter the Carlovingian Empire to fragments. . . . When the land was bare, leaving the despoiled provinces he again put to sea, and, sailing southwards still, pushed up the Tagus and Guadalquiver, and ravaged the neighbourhoods of Lisbon and Seville. But no settlement in Spain was possible at this time. The Peninsula had lately had for Caliph Abdalrahman the Second, called El Mouzaffer, 'The Victorious,' and the vigour of his rule had made the Arabian kingdom in Spain the most efficient power for defence in Europe. Hasting soon recoiled from the Spanish coasts, and returned to his old haunts. The leaders of the Danes in England, the Sidrocs and Hinguar and Hubba, had, as we have seen, a special delight in the destruction of churches and monasteries, mingling a fierce religious fanaticism with their thirst for battle and plunder. This exceeding bitterness of the Northmen may be fairly laid in great measure to the account of the thirty years of proselytising warfare, which Charlemagne had waged in Saxony, and along all the northern frontier of his empire. . . . Hasting seems to have been filled with a double portion of this spirit, which he had indulged throughout his career in the most inveterate hatred to priests and holy places. It was probably this, coupled with a certain weariness—commonplace murder and sacrilege having grown tame, and lost their charm—which incited him to the most daring of all his exploits, a direct attack on the head of Christendom, and the sacred city. Hasting then, about the year 860, planned an attack on Rome, and the proposal was well received by his followers. Sailing again round Spain, and pillaging on their way both on the Spanish and Moorish coasts, they entered the Mediterranean, and, steering for Italy, landed in the bay of Spezzia, near the town of Luna. Luna was the place where the great quarries of the Carrara marble had been worked ever since the times of the Cæsars. The city itself was, it is said, in great part built of white marble, and the 'candentia mœnia Lunæ' deceived Hasting into the belief that he was actually before Rome: so he sat down before the town which he had failed to surprise. The hope of taking it by assault was soon abandoned, but Hasting obtained his end by guile. . . . The priests were massacred, the gates thrown open, and the city taken and spoiled. Luna never recovered its old prosperity after the raid of the Northmen, and in Dante's time had fallen into utter decay. But Hasting's career in Italy ended with the sack of Luna; and, giving up all hope of attacking Rome, he re-embarked with the spoil of the town, the most beautiful of the women, and all the youths who could be used as soldiers or rowers. His fleet was wrecked on the south coasts of France on its return westward, and all the spoil lost; but the devil had work yet for Hasting and his men, who got ashore in sufficient numbers to recompense themselves for their losses by the plunder of Provence."—T. Hughes, *Alfred the Great, ch.* 20.

A. D. 860-1100.—The discovery and settlement of Iceland.—Development of the Saga literature.—The discovery of Iceland is attributed to a famous Norse Viking named Naddodd, and dated in 860, at the beginning of the reign, in Norway, of Harald Haarfager, who drove out so many adventurers, to seek fortune on the seas. He is said to have called it Snowland; but others who came to the cold island in 870 gave it the harsher name which it still bears. "Within sixty years after the first settlement by the Northmen the whole was inhabited; and, writes Uno Von Troil (p. 64), 'King Harold, who did not contribute a little towards it by his tyrannical treatment of the petty kings and lords in Norway, was obliged at last to issue an order, that no one should sail to Iceland without paying four ounces of fine silver to the Crown, in order to stop those continual emigrations which weakened his kingdom.'. . . Before the tenth century had reached its half-way period, the Norwegians had fully peopled the island with not less, perhaps, than 50,000 souls. A census taken about A. D. 1100 numbered the franklins who had to pay Thing-tax at 4,500, without including cotters and proletarians."—R. F. Burton, *Ultima Thule, introd., sect.* 3 (*v.* 1).—"About sixty years after the first settlement of the island, a step was taken towards turning Iceland into a commonwealth, and giving the whole island a legal constitution; and though we are ignorant of the immediate cause which led to this, we know enough of the state of things in the island to feel sure, that it could only have been with the common consent of the great chiefs, who, as Priests, presided over the various local Things [see Thing]. The first want was a man who could make a code of laws." The man was found in one Ulfljót, who came from a Norwegian family long famous for knowledge of the customary law, and who was sent to the mother country to consult the wisest of his kin. "Three years he stayed abroad; and when he returned, the chiefs, who, no doubt, day by day felt more strongly the need of a common centre of action as well as of a common code, lost no time in carrying out their scheme. . . . The time of the annual meeting was fixed at first for the middle of the month of June, but

in the year 999 it was agreed to meet a week later, and the Althing then met when ten full weeks of summer had passed. It lasted fourteen days. . . . In its legal capacity it [the Althing] was both a deliberative and executive assembly; both Parliament and High Court of Justice in one. . . . With the establishment of the Althing we have for the first time a Commonwealth in Iceland."—G. W. Dasent, *The Story of Burnt Njal, introd.* (*v.* 1).—"The reason why Iceland, which was destitute of inhabitants at the time of its discovery, about the middle of the 9th century, became so rapidly settled and secured so eminent a position in the world's history and literature, must be sought in the events which took place in Norway at the time when Harald Hárfragi (Fairhair), after a long and obstinate resistance, succeeded in usurping the monarchical power. . . . The people who emigrated to Iceland were for the most part the flower of the nation. They went especially from the west coast of Norway, where the peculiar Norse spirit had been most perfectly developed. Men of the noblest birth in Norway set out with their families and followers to find a home where they might be as free and independent as their fathers had been before them. No wonder then that they took with them the cream of the ancient culture of the fatherland. . . . Toward the end of the 11th century it is expressly stated that many of the chiefs were so learned that they with perfect propriety might have been ordained to the priesthood [Christianity having been formally adopted by the Althing in the year 1000], and in the 12th century there were, in addition to those to be found in the cloisters, several private libraries in the island. On the other hand, secular culture, knowledge of law and history, and of the skaldic art, were, so to speak, common property. And thus, when the means for committing a literature to writing were at hand, the highly developed popular taste for history gave the literature the direction which it afterward maintained. The fact is, there really existed a whole literature which was merely waiting to be put in writing. . . . Many causes contributed toward making the Icelanders preëminently a historical people. The settlers were men of noble birth, who were proud to trace their descent from kings and heroes of antiquity, nay, even from the gods themselves, and we do not therefore wonder that they assiduously preserved the memory of the deeds of their forefathers. But in their minds was developed not only a taste for the sagas of the past; the present also received its full share of attention. . . . Nor did they interest themselves for and remember the events that took place in Iceland only. Reports from foreign lands also found a most hearty welcome, and the Icelanders had abundant opportunity of satisfying their thirst for knowledge in this direction. As vikings, as merchants, as courtiers and especially as skalds accompanying kings and other distinguished persons, and also as varangians in Constantinople, many of them found splendid opportunities of visiting foreign countries. . . . Such were then the conditions and circumstances which produced that remarkable development of the historical taste with which the people were endowed, and made Iceland the home of the saga."—F. W. Horn, *Hist. of the Literature of the Scandinavian North, pt.* 1, *ch.* 1.

—"The Icelanders, in their long winter, had a great habit of writing, and were, and still are, excellent in penmanship, says Dahlmann. It is to this fact that any little history there is of the Norse Kings and their old tragedies, crimes, and heroisms, is almost all due. The Icelanders, it seems, not only made beautiful letters on their paper or parchment, but were laudably observant and desirous of accuracy; and have left us such a collection of narratives (Sagas, literally 'Says') as, for quantity and quality, is unexampled among rude nations."—T. Carlyle, *Early Kings of Norway, Preface.*—See, also, THINGS.—THINGVALLA.

A. D. 876-911.—Rollo's acquisition of Normandy.—"One alone among the Scandinavian settlements in Gaul was destined to play a real part in history. This was the settlement of Rolf or Rollo at Rouen. [The genuine name is Hrolfr, Rolf, in various spellings. The French form is Rou, sometimes Rous . . . ; the Latin is Rollo. —Foot-note.] This settlement, the kernel of the great Norman Duchy, had, I need hardly say, results of its own and an importance of its own, which distinguish it from every other Danish colony in Gaul. But it is well to bear in mind that it was only one colony among several, and that, when the cession was made, it was probably not expected to be more lasting or more important than the others. But, while the others soon lost any distinctive character, the Rouen settlement lasted, it grew, it became a power in Europe, and in Gaul it became even a determining power. . . . The lasting character of his work at once proves that the founder of the Rouen colony was a great man, but he is a great man who must be content to be judged in the main by the results of his actions. The authentic history of Rolf, Rollo, or Rou, may be summed up in a very short space. We have no really contemporary narrative of his actions, unless a few meagre and uncertain entries in some of the Frankish annals may be thought to deserve that name. . . . I therefore do not feel myself at all called upon to narrate in detail the exploits which are attributed to Rolf in the time before his final settlement. He is described as having been engaged in the calling of a Wiking both in Gaul and in Britain for nearly forty years before his final occupation of Rouen. . . . The exploits attributed to Rolf are spread over so many years, that we cannot help suspecting that the deeds of other chieftains have been attributed to him, perhaps that two leaders of the same name have been confounded. Among countless expeditions in Gaul, England, and Germany, we find Rolf charged with an earlier visit to Rouen [A. D. 876], with a share in the great siege of Paris [A. D. 885], and with an occupation or destruction of Bayeux. But it is not till we have got some way into the reign of Charles the Simple, not till we have passed several years of the tenth century, that Rolf begins clearly to stand out as a personal historic reality. He now appears in possession of Rouen, or of whatever vestiges of the city had survived his former ravages, and from that starting-point he assaulted Chartres. Beneath the walls of that city he underwent a defeat [A. D. 911] at the hands of the Dukes Rudolf of Burgundy and Robert of Paris, which was attributed to the miraculous powers of the great local relic, the under-garment of the Virgin. But this victory, like most victories over the

Northmen, had no lasting effect. Rolf was not dislodged from Rouen, nor was his career of devastation and conquest at all seriously checked. But, precisely as in the case of Guthrum in England, his evident disposition to settle in the country suggested an attempt to change him from a devastating enemy into a peaceable neighbour. The Peace of Clair-on-Epte [A. D. 911] was the duplicate of the Peace of Wedmore, and King Charles and Duke Robert of Paris most likely had the Peace of Wedmore before their eyes. A definite district was ceded to Rolf, for which he became the King's vassal; he was admitted to baptism and received the king's natural daughter in marriage. And, just as in the English case, the territory ceded was not part of the King's immediate dominions. . . . The grant to Rolf was made at the cost not of the Frankish King at Laôn but of the French Duke at Paris. The district ceded to Rolf was part of the great Neustrian March or Duchy which had been granted to Odo [or Eudes] of Paris and which was now held by his brother Duke Robert. . . . It must not be thought that the district now ceded to Rolf took in the whole of the later Duchy of Normandy. Rouen was the heart of the new state, which took in lands on both sides of the Seine. From the Epte to the sea was its undoubted extent from the south-east to the north. But the western frontier is much less clearly defined. On the one hand, the Normans always claimed a certain not very well defined superiority over Britanny as part of the original grant. On the other hand, it is quite certain that Rolf did not obtain immediate possession of what was afterwards the noblest portion of the heritage of his descendants. The Bessin, the district of Bayeux, was not won till several years later, and the Côtentin, the peninsula of Coutances, was not won till after the death of Rolf. The district granted to Rolf . . . had — sharing therein the fate of Germany and France — no recognized geographical name. Its inhabitants were the Northmen, the Northmen of the Seine, the Northmen of Rouen. The land itself was, till near the end of the century, simply the Land of the Northmen"— the Terra Northmannorum.—E. A. Freeman, *Hist. Norman Conquest of Eng., ch.* 4 (*v.* 1).

A. D. 876-984.— Discovery and settlement of Greenland. — "The discovery of Greenland was a natural consequence of the settlement of Iceland, just as the discovery of America afterward was a natural consequence of the settlement of Greenland. Between the western part of Iceland and the eastern part of Greenland there is a distance of only 45 geographical miles. Hence, some of the ships that sailed to Iceland, at the time of the settlement of this island and later, could in case of a violent east wind, which is no rare occurrence in those regions, scarcely avoid approaching the coast of Greenland sufficiently to catch a glimpse of its jokuls,— nay, even to land on its islands and promontories. Thus it is said that Gunnbjorn, Ulf Krage's son, saw land lying in the ocean at the west of Iceland, when, in the year 876, he was driven out to the sea by a storm. Similar reports were heard, from time to time, by other mariners. About a century later a certain man, by name Erik the Red, . . . resolved to go in search of the land in the west that Gunnbjorn and others had seen. He set sail in the year 984, and found the land as he had expected, and remained there exploring the country for two years. At the end of this period he returned to Iceland, giving the newly-discovered country the name of Greenland, in order, as he said, to attract settlers, who would be favorably impressed with so pleasing a name. The result was that many Icelanders and Norsemen emigrated to Greenland, and a flourishing colony was established, with Gardar for its capital city, which, in the year 1261, became subject to the crown of Norway. The Greenland colony maintained its connection with the mother countries for a period of no less than 400 years; yet it finally disappeared, and was almost forgotten. Torfæus gives a list of seventeen bishops who ruled in Greenland."— R. B. Anderson, *America not Discovered by Columbus, ch.* 7.

9-10th Centuries.—The ravages of the Vikings on the Continent.—"Take the map and colour with vermilion the provinces, districts and shores which the Northmen visited. The colouring will have to be repeated more than ninety times successively before you arrive at the conclusion of the Carlovingian dynasty. Furthermore, mark by the usual symbol of war, two crossed swords, the localities where battles were fought by or against the pirates: where they were defeated or triumphant, or where they pillaged, burned or destroyed; and the valleys and banks of Elbe, Rhine and Moselle, Scheldt, Meuse, Somme and Seine, Loire, Garonne and Adour, the inland Allier, and all the coasts and coast-lands between estuary and estuary and the countries between the river-streams, will appear bristling as with chevaux-de-frise. The strongly-fenced Roman cities, the venerated Abbeys and their dependent bourgades, often more flourishing and extensive than the ancient seats of government, the opulent seaports and trading towns, were all equally exposed to the Danish attacks, stunned by the Northmen's approach, subjugated by their fury. . . . They constitute three principal schemes of naval and military operations, respectively governed and guided by the great rivers and the intervening sea-shores. . . . The first scheme of operations includes the territories between Rhine and Scheldt, and Scheldt and Elbe: the furthest southern point reached by the Northmen in this direction was somewhere between the Rhine and the Neckar. Eastward, the Scandinavians scattered as far as Russia; but we must not follow them there. The second scheme of operations affected the countries between Seine and Loire, and again from the Seine eastward towards the Somme and Oise. These operations were connected with those of the Rhine Northmen. The third scheme of operations was prosecuted in the countries between Loire and Garonne, and Garonne and Adour, frequently flashing towards Spain, and expanding inland as far as the Allier and central France, nay, to the very centre, to Bourges."— Sir F. Palgrave, *Hist. of Normandy and Eng., bk.* 1, *ch.* 3 (*v.* 1).

10-13th Centuries.—The breaking up of the Norse island empire.—"At the close of the 10th and beginning of the 11th century the battles of Tara and Clontarf overthrew the power of these Norsemen (or Ostmen as they were called) in Ireland, and restored the authority of the native Irish sovereign. About this time they [the 'Hy-Ivar,' or sovereigns of the island-empire of the Northmen — see above: 8–9TH CENTURIES] became Christians, and in the year 1066 we find one of their princes joining Harald Hardrada of Norway in his invasion of England, which ended so disastrously in the battle of Stamford Bridge. Magnus of Norway, thirty-two years later, after subduing the independent Jarls of Shetland and the Orkneys, attempted to reassert his supremacy along the western coast. But after conquering Anglesea, whence he drove out the Normans [from England] who had just made a settlement there, he crossed to Ireland to meet his death in battle. The sovereignty of the Isles was then restored to its original owners, but soon after split into two parts — the Suderies and Norderies (whence the term Sodor and Man), north and south of Ardnamurchan Point. The next glimpse we have of these dominions is at the close of the 12th century, when we find them under a chief named Somarled, who exercised authority in the islands and Argyleshire, and from him the clans of the Highlands and the Western Isles love to trace their ancestry. After his death, according to the Highland traditions, the islands and Argyleshire were divided amongst his three sons. Thus the old Norse empire was finally broken up, and in the 13th century, after another unsuccessful attempt by Haco, King of Norway, to re-establish the authority of the mother kingdom over their distant possessions, an attempt which ended in his defeat at the battle of Largs by the Scottish king, Alexander III., they were ceded to the Scottish kings by Magnus IV., his son, and an alliance was cemented between the two kingdoms by the marriage of Alexander's daughter, Margaret, to Eric of Norway." At the north of Scotland the Jarls of Orkney, in the 11th century, "conquered Caithness and Sutherland, and wrested a recognition of their claim from Malcolm II. of Scotland. Their influence was continually felt in the dynastic and other quarrels of Scotland; the defeat of Duncan, in 1040, by the Jarl of Orkney, contributing not a little to Duncan's subsequent overthrow by Macbeth. They fostered the independence of the north of Scotland against the southern king, and held their kingdom until, in 1355, it passed by the female line to the house of Sinclair. The Sinclairs now transferred their allegiance to their natural master, the King of Scotland; and finally the kingdom of the Orkneys was handed over to James III. as the dowry of his bride, Margaret of Norway."—A. A. D. 1629. — The grant to Sir Robert Heath. See AMERICA: A. D. 1629.

A. D. 1639-1663.—Pioneer and unorganized colonization.—"An abortive attempt at colonization was made in 1639, and a titular governor appeared in Virginia; but this, and a number of conflicting claims originating in this patent [to Sir Robert Heath], and sufficiently troublesome to the proprietaries of a later time, were the only results of the grant of Charles I. This action on the part of the Crown, and the official information received, did not, however, suffice to prevent the Virginia Assembly lending itself to a scheme by which possession might be obtained of the neighboring territory, or at least substantial benefits realized therefrom by their constituents. With this object, they made grants to a trading company, which led, however, only to exploration and traffic. Other grants of a similar nature followed for the next ten years, at the expiration of which a company of Virginians made their way from Nansemond to Albemarle, and established a settlement there. The Virginian Burgesses granted them lands, and promised further grants to all who would extend these settlements to the southward. Emigration from Virginia began. Settlers, singly and in companies, crossed the border, and made scattered and solitary clearings within the wilds of North Carolina. Many of these people were mere adventurers; but some of them were of more substantial stuff, and founded permanent settlements on the Chowan and elsewhere. Other eyes, however, as watchful as those of the Virginians, were also turned to the rich regions of the South. New

England enterprise explored the American coast from one end to the other, in search of lucrative trade and new resting-places. After a long acquaintance with the North Carolina coast, they bought land of the Indians, near the mouth of Cape Fear River, and settled there. For some unexplained cause — possibly on account of the wild and dangerous character of the scattered inhabitants, who had already drifted thither from Virginia, possibly from the reason which they themselves gave — the New England colonists abandoned their settlement and departed, leaving a written opinion of the poor character of the country expressed in very plain language and pinned to a post. Here it was found by some wanderers from Barbadoes, who were of a different opinion from the New Englanders as to the appearance of things; and they accordingly repurchased the land from the Indians and began a settlement. At this date [1663], therefore, there was in North Carolina this infant settlement of the Barbadoes men, on the extreme southeastern point of the present State, and in the north-eastern corner the Virginia settlers scattered about, with here a solitary plantation and there a little group of farms, and always a restless van of adventurers working their way down the coast and into the interior. . . . Whatever rights the North Carolina settlers may have had in the eyes of the Virginians, who had granted them land, or in those of the Indians who had sold it, they had none recognized by the English King, who claimed to own all that vast region. It may be doubted whether anything was known of these early colonists in England; and their existence was certainly not regarded in the least when Charles II. lavished their territory, and much besides, upon a band of his courtiers and ministers."—H. C. Lodge, *Short Hist. of the English Colonies, ch.* 5.

Also in: J. W. Moore, *Hist. of N. C., v.* 1, *ch.* 2.

A. D. 1663-1670.—The grant to Monk, Clarendon, Shaftesbury and others.—The organized colonies.—"On the 24th March, 1663, King Charles II. granted to Edward, Earl of Clarendon; George [Monk], Duke of Albemarle; William, Earl of Craven; John, Lord Berkeley; Anthony, Lord Ashley [Earl of Shaftesbury]; Sir George Carteret, Sir John Colleton, and Sir William Berkeley, all the country between the Pacific and Atlantic Oceans, between 31° and 36° parallels of latitude, called Carolina, in honor of Charles. [The grant embraced the present States of Georgia, Alabama and Mississippi, as well as the two Carolinas.] In 1663, Sir William Berkeley, Governor of the Colony of Virginia, visited the province, and appointed William Drummond Governor of the Colony of Carolina. . . . Drummond, at his death in 1667, was succeeded by Stevens as governor. . . . The first assembly that made laws for Carolina, assembled in the fall of 1669. . . . A form of government, magnificent in design, and labored in detail, called 'The fundamental constitutions of Carolina,' were drawn up by the celebrated author of the Essay on the Human Understanding, John Locke. . . . On the death of Governor Stevens, who died in the colony full of years and wealth, the assembly chose Carteret for their governor, and on his return to England soon after, Eastchurch, who then was in England, was appointed governor, and Miller secretary."—J. H. Wheeler, *Historical Sketches of North Carolina, ch.* 4.—"The earliest grant made to the lords proprietors did not include the whole of the present State of North Carolina. Its northern line fell short of the southern boundary of Virginia by half a degree of latitude. Notwithstanding this, an unwarranted exhibition of authority established virtually the proprietary dominion over this unappropriated territory. . . . Colonel Byrd of Virginia, who was born not long after the charter of 1665 was made, and who lived during the administration of Berkeley, states, and no doubt truly, that 'Sir William Berkeley, who was one of the grantees, and at that time governor of Virginia, finding a territory of 31 miles in breadth between the inhabited part of Virginia and the above-mentioned boundary of Carolina [36°], advised the Lord Clarendon of it. And his lordship had interest enough with the king to obtain a second patent to include it, dated June 30th, 1665.' By this patent very large powers were granted; so large that, as Chalmers has remarked, 'no one prerogative of the crown was preserved, except only the sovereign dominion. . . . The existence of the colony from Barbadoes, under Sir John Yeamans, that settled in the old county of Clarendon, from its inception in 1665 to its abandonment in 1690, forms but an episode in the proprietary history of North Carolina. The colony, like all others similarly situated, sought at first to make provision for the supply of bodily wants, in securing food and shelter only; but having done this it next proceeded to make profitable the gifts of Heaven that were around it. Yeamans had brought with him negro slaves from Barbadoes, and so inviting was the new settlement deemed, that in the second year of its existence it contained 800 inhabitants. . . . But with all this prosperity, the colony on the Cape Fear was not destined to be permanent. The action of the lords proprietors themselves caused its abandonment. . . . In 1670, the lords proprietors, who seem to have been anxious to proceed more and more to the southward, sent out a considerable number of emigrants to form a colony at Port Royal, now Beaufort, in the present State of South Carolina. The individual who led the expedition was William Sayle, 'a man of experience,' says Chalmers, 'who had been appointed governor of that part of the coast lying southwestward of Cape Carteret.' . . . Scarcely however, had Sayle carried out his instructions and made his colonists somewhat comfortable, before his constitution yielded to a new and insalubrious climate, and he died. . . . It was not easy for the proprietors immediately to find a fit successor; and, even had such been at hand, some time must necessarily have elapsed before he could safely reach the scene of his labors. But Sir John Yeamans was near the spot: his long residence had acclimated him, and, as the historian states, he 'had hitherto ruled the plantation around Cape Fear with a prudence which precluded complaint.' He therefore was directed to extend his command from old Clarendon, on the Cape Fear, to the territory which was southwest of Cape Carteret. This was in August, 1671. The shores with the adjacent land, and the streams making into the sea, were by this time very well known to all the dwellers in Carolina, for the proprietors had caused them to be surveyed with accuracy. On the banks of

Ashley River there was good pasturage, and land fit for tillage. The planters of Clarendon, therefore, turned their faces southward, while those from Port Royal travelled northward; and so the colonists from both settlements met on the banks of the Ashley, as on a middle ground, and here in the same year (1671) they laid, 'on the first high land,' the foundations of 'old Charlestown.' In 1679, it was found that 'Oyster Point,' formed by the confluence of Ashley and Cooper rivers, was more convenient for a town than the spot previously selected, and the people, with the encouragement of the lords proprietors, began to remove thither. In the next year (1680) were laid the foundations of the present city of Charleston; thirty houses were built, and it was declared to be the capital of the southern part of the province, and also the port for all commercial traffic. This gradually depopulated old Clarendon. . . . We now return to trace the fortunes of the settlement on Albemarle, under Stephens. As before stated he entered upon his duties as governor in October, 1667. . . . His instructions were very full and explicit. The Assembly was to be composed of the governor, a council of twelve, and twelve delegates chosen by the freeholders. Of the twelve councillors, whose advice, by the way, the governor was required always to take and follow, one half was to be appointed by the Assembly, the other half by himself. To this Assembly belonged not only the power to make laws, but a large share of the executive authority also. . . . In 1669, the first legislature under this constitution assembled. And it is worthy of remark, that at this period, when the province may be said to have had, for the first time, a system of regular government, there was in it a recognition of two great principles which are now part of the political creed of our whole country, without distinction of party. These are, first, that the people are entitled to a voice in the selection of their law-makers; and secondly, that they cannot rightfully be taxed but by their own representatives. . . . The people, we have reason to believe, were contented and happy during the early part of Stephens' administration. . . . But this quiet condition of affairs was not to last. We have now reached a period in our history which illustrates the fact, that whatever wisdom may be apparent in the constitution given to the Albemarle colony by the proprietors, on the accession of Stephens, was less the result of deliberation than of a happy accident. . . . But the time had now come for the proprietors to carry out their magnificent project of founding an empire; and disregarding alike the nature of man, the lessons of experience, and the physical obstacles of an unsubdued wilderness (even not yet entirely reclaimed), they resolved that all should yield to their theories of government, and invoked the aid of philosophy to accomplish an impossibility. Locke was employed to prepare 'the fundamental constitutions.'"—F. L. Hawks, *Hist. of N. Carolina, v. 2, pp.* 441-462.

Also in: W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S., v. 2, ch.* 12.

A. D. 1669-1693.—The Fundamental Constitutions of John Locke, and their failure.—The royal grant of the Carolinas to Monk, Shaftesbury, Clarendon, and their associates invested them with "all the rights, jurisdiction, royalties, privileges, and liberties within the bounds of their province, to hold, use, and enjoy the same, in as ample a manner as the bishop of Durham did in that county-palatine in England. . . . Agreeably to these powers, the proprietors proceeded to frame a system of laws for the colony which they projected. Locke, the well-known philosopher, was summoned to this work, and the largest expectations were entertained in consequence of his co-operation. Locke, though subsequently one of the proprietors, was, at the beginning, simply the secretary of the earl of Shaftesbury. The probability is that, in preparing the constitution for the Carolinas, he rather carried out the notions of that versatile nobleman than his own. . . . The code of laws called the 'Fundamental Constitutions,' which was devised, and which subsequently became unpopular in the colony, is not certainly the work of his hands. It is ascribed by Oldmixon, a contemporary, to the earl of Shaftesbury, one of the proprietors. The most striking feature in this code provided for the creation of a nobility, consisting of landgraves, cassiques, and barons. These were to be graduated by the landed estates which were granted with the dignity; the eldest of the proprietary lords was to be the superior, with the title of Palatine, and the people were to be serfs." The tenants, and the issue of the tenants, "were to be transferred with the soil, and not at liberty to leave it, but with the lord's permission, under hand and seal. The whole system was rejected after a few years' experiment. It has been harshly judged as . . . the crude conception of a mind conversant rather with books than men — with the abstract rather than the practical in government and society. And this judgment is certainly true of the constitutions in the case in which they were employed. They did not suit the absolute conditions of the country, or the class of people which subsequently made their way to it. But contemplating the institution of domestic slavery, as the proprietors had done from the beginning — a large villanage and a wealthy aristocracy, dominating almost without restraint or responsibility over the whole — the scheme was not without its plausibilities. But the feudal tenures were everywhere dying out. The time had passed, even in Europe, for such a system. . . . The great destitution of the first settlers left them generally without the means of procuring slaves; and the equal necessities, to which all are subject who peril life and fortune in a savage forest and on a foreign shore, soon made the titular distinctions of the few a miserable mockery, or something worse."—W. G. Simms, *Hist. of S. Carolina, bk. 2, ch.* 1.—"The constitutions were signed on the 21st of July, 1669;" but subsequently revised by the interpolation of a clause, against the wishes of Locke, establishing the Church of England. "This revised copy of 'the model' was not signed till March, 1670. To a colony of which the majority were likely to be dissenters, the change was vital; it was scarcely noticed in England, where the model became the theme of extravagant applause. . . . As far as depended upon the proprietaries, the government was immediately organized with Monk, duke of Albemarle, as palatine." But, meantime, the colonists in the northern part of the Carolina province had instituted a simple form of government for themselves, with a council of twelve, and an assembly

composed of the governor, the council, and twelve delegates from the freeholders of the incipient settlements. The assembly had already met and had framed some important laws, which remained "valid in North Carolina for more than half a century. Hardly had these laws been established when the new constitution was forwarded to Albemarle. Its promulgation did but favor anarchy by invalidating the existing system, which it could not replace. The proprietaries, contrary to stipulations with the colonists, superseded the existing government, and the colonists resolutely rejected the substitute." Much the same state of things appeared in the South Carolina settlements (not yet separately named), and successive disorders and revolutionary changes made up the history of the pseudo palatinate for many years.—G. Bancroft, *Hist. of the U. S. (Author's last rev.), pt. 2, ch. 7 (v. 1).*—In 1693, "to conciliate the colonists, and to get rid of the dispute which had arisen as to the binding force of the 'Grand Model,' the proprietors voted that, 'as the people have declared they would rather be governed by the powers granted by the charter, without regard to the fundamental constitutions, it will be for their quiet, and the protection of the well-disposed, to grant their request.' This abrogation of the labors of Locke removed one bone of contention; but as the 'Grand Model' had never been actually carried into effect, the government went on much as before. Each of the proprietaries continued to have his special delegate in the colony, or rather two delegates, one for South Carolina, the other for Albemarle, the eight together constituting the council in either province, over which the governor presided as delegate of the palatine, to whom his appointment belonged."—R. Hildreth, *Hist. of the U. S., ch. 21 (v. 2).*—The text of the "fundamental constitutions" is printed in volume 9 of the 12th edition of Locke's complete works, and in volume 10 of several prior editions.

A. D. 1688-1729.—Slow progress and unprosperous state of the colony.—End of the Proprietary Government.—In 1688, Carolina (the northern province) being afflicted with a governor, one Seth Sothel, who is accused of every variety of extortion and rapacity, the colonists rose up against him, tried him before their assembly, deposed him from his office and drove him into exile. "The Proprietors demurred to the form of this procedure, but acquiesced in the substance of it, and thereby did something to confirm that contempt for government which was one of the leading characteristics of the colony. During the years which followed, the efforts of the Proprietors to maintain any authority over their Northern province, or to connect it in any way with their Southern territory, were little more than nominal. For the most part the two settlements were distinguished by the Proprietors as 'our colony north-east of Cape Fear,' and 'our colony south-west of Cape Fear.' As early as 1691 we find the expression North Carolina once used. After that we do not meet with it till 1696. From that time onward both expressions are used with no marked distinction, sometimes even in the same document. At times the Proprietors seem to have aimed at establishing a closer connexion between the two colonies by placing them under a single Governor. But in nearly all these cases provision was made for the appointment of separate Deputy-Governors, nor does there seem to have been any project for uniting the two legislative bodies. . . . In 1720 the first event occurred which throws any clear light from without on the internal life of the colony. In that year boundary disputes arose between Virginia and her southern neighbour and it was found necessary to appoint representatives on each side to settle the boundary line. The chief interest of the matter lies in the notes left to us by one of the Virginia Commissioners [Colonel William Byrd]. . . . After making all . . . deductions and checking Byrd's report by that of graver writers, there remains a picture of poverty, indolence, and thriftlessness which finds no counterpart in any of the other southern colonies. That the chief town contained only some fifty poor cottages is little or nothing more than what we find in Maryland or Virginia. But there the import trade with England made up for the deficiencies of colonial life. North Carolina, lacking the two essentials of trade, harbours and a surplus population, had no commercial dealings with the mother country. . . . The only possessions which abounded were horses and swine, both of which could be reared in droves without any care or attention. . . . The evils of slavery existed without its counterbalancing advantages. There was nothing to teach those habits of administration which the rich planters of Virginia and South Carolina learnt as part of their daily life. At the same time the colony suffered from one of the worst effects of slavery, a want of manual skill. . . . In 1729 the faint and meaningless shadow of proprietary government came to an end. The Crown bought up first the shares of seven Proprietors, then after an interval that of the eighth. In the case of other colonies the process of transfer had been effected by a conflict and by something approaching to revolution. In North Carolina alone it seems to have come about with the peaceful assent of all parties. . . . Without a struggle, North Carolina cast off all traces of its peculiar origin and passed into the ordinary state of a crown colony."—J. A. Doyle, *The English in America: Virginia, Maryland and the Carolinas, ch. 12.*

A. D. 1766-1771.—The insurrection of the Regulators.—Battle of Alamance.—Complaints of official extortion, which were loud in several of the colonies at about the same period, led to serious results in North Carolina. "Complaints were most rife in the middle counties, a

very barren portion of the province, with a population generally poor and ignorant. These people complained, and not without reason — for the poor and ignorant are ever most exposed to oppression — not only that excessive fees were extorted, but that the sheriffs collected taxes of which they rendered no account. They seem also to have held the courts and lawyers — indeed, the whole system for the collection of debts — in great detestation. Presently, under the name of 'Regulators,' borrowed from South Carolina, they formed associations which not only refused the payment of taxes, but assaulted the persons and property of lawyers, judges, sheriffs, and other obnoxious individuals, and even proceeded so far as to break up the sessions of the courts. The common name of Regulators designated, in the two Carolinas, combinations composed of different materials, and having different objects in view. The Assembly of the province took decided ground against them, and even expelled one of their leaders, who had been elected a member. After negotiations and delays, and broken promises to keep the peace, Governor Tryon, at the head of a body of volunteers, marched into the disaffected counties. The Regulators assembled in arms, and an action was fought at Alamance, on the Haw, near the head waters of Cape Fear River, in which some 200 were left dead upon the field. Out of a large number taken prisoners, six were executed for high treason. Though the Regulators submitted, they continued to entertain a deadly hatred against the militia of the lower counties, which had taken part against them. Tryon was presently removed from North Carolina to New York. His successor, Joseph Martin, anxious to strengthen himself against the growing discontents of the province, promised to redress the grievances, and sedulously cultivated the good will of the Regulators, and with such success that they became, in the end, staunch supporters of the royal authority."—R. A. D. 1775 (May).—The Mecklenburg Declaration.—"It has been strenuously claimed and denied that, at a meeting of the people of Mecklenburg County, in North Carolina, on May 20, 1775, resolutions were passed declaring their independence of Great Britain. The facts in the case appear to be these:—On the 31st of May, 1775, the people of this county did pass resolutions quite abreast of the public sentiment of that time, but not venturing on the field of independency further than to say that these resolutions were to remain in force till Great Britain resigned its pretensions. These resolutions were well written, attracted notice, and were copied into the leading newspapers of the colonies, North and South, and can be found in various later works (Lossing's 'Field-Book,' ii, 619, etc.). A copy of the 'S. Carolina Gazette' containing them was sent by Governor Wright, of Georgia, to Lord Dartmouth, and was found by Bancroft in the State Paper Office, while in the Sparks MSS. (no. lvi) is the record of a copy sent to the home government by Governor Martin of North Carolina, with a letter dated June 30, 1775. Of these resolutions there is no doubt (Frothingham's 'Rise of the Republic,' 422). In 1793, or earlier, some of the actors in the proceeding, apparently ignorant that the record of these resolutions had been preserved in the newspapers, endeavored to supply them from memory, unconsciously intermingling some of the phraseology of the Declaration of July 4th, in Congress, which gave them the tone of a pronounced independency. Probably through another dimness of memory they affixed the date of May 20, 1775, to them. These were first printed in the 'Raleigh Register,' April 30, 1819. They are found to resemble in some respects the now known resolves of May 31st, as well as the national Declaration in a few phrases. In 1829 Martin printed them, much altered, in his 'North Carolina' (ii, 272) but it is not known where this copy came from. In 1831 the State printed the text of the 1819 copy, and fortified it with recollections and certificates of persons affirming that they were present when the resolutions were passed on the 20th."—J. Winsor, *Note in Narrative and Critical Hist. of Am., v.* 6, *p.* 256.—"We are inclined to conjecture that there was a popular meeting at Charlottetown on the 19th and 20th of May, where discussion was had on the subject of independence, and probably some more or less explicit understanding arrived at, which became the basis of the committee's action on the 31st. If so, we make no doubt that J. McN. Alexander was secretary of that meeting. He, probably, in that case, recorded the proceedings, and among them some resolution or resolutions in regard to the propriety of throwing off the British yoke. . . . It was in attempting to remember the records of that meeting, destroyed by fire, that John McN. Alexander, then an old man, fell into the errors" which led him, in 1800, to certify, as Secretary, a copy of the document called the Mecklenburg Declaration of Independence.—H. S. Randall, *Life of Jefferson, v.* 3, *app.* 2.

A. D. 1775-1776.—The arming of the loyalist Highlanders and their defeat at Moore's Creek.—The first colony vote for independence.—"North Carolina was the first colony to act as a unit in favor of independence. It was the fourth in importance of the United Colonies. Its Provincial Congress had organized the militia, and vested the public authority in a provincial council for the whole colony, committees of safety for the districts, and county and town committees. A large portion of the people were adherents of the crown,—among them a body of Highland emigrants, and most of the party of regulators. Governor Martin represented, not without grounds, that, if these loyalists were supported by a British force, the colony might be

gained to the royal side. The loyalists were also numerous in Georgia and South Carolina. Hence it was determined by the King to send an expedition to the Southern Colonies in the winter, to restore the royal authority. This was put under the command of Sir Henry Clinton, and ordered to rendezvous at Cape Fear. 'I am clear,' wrote George III., 'the first attempt should be made on North Carolina, as the Highland settlers are said to be well inclined.' Commissions were issued to men of influence among them, one being Allan McDonald, the husband of the chivalrous Flora McDonald, who became famous by romantic devotion to Prince Charles Edward. Donald McDonald was appointed the commander. These officers, under the direction of the governor, after much secret consultation, enrolled about 1,500 men. The popular leaders, however, were informed of their designs. The militia were summoned, and took the field under Colonel James Moore. At length, when Sir Henry Clinton was expected at Cape Fear, General McDonald erected the royal standard at Cross Creek, now Fayetteville, and moved forward to join Clinton. Colonel Moore ordered parties of the militia to take post at Moore's Creek Bridge, over which McDonald would be obliged to pass. Colonel Richard Caswell was at the head of one of these parties: hence the force here was under his command: and this place on the 27th of February [1776] became a famous battle-field. The Provincials were victorious. They captured a great quantity of military supplies, nearly 900 men, and their commander. This was the Lexington and Concord of that region. The newspapers circulated the details of this brilliant result. The spirit of the Whigs run high. . . . A strong force was soon ready and anxious to meet Clinton. Amidst these scenes, the people elected delegates to a Provincial Congress, which met, on the 4th of April [1776], at Halifax. . . . Attempts were made to ascertain the sense of the people on independence. . . . The subject was referred to a committee, of which Cornelius Harnett was the chairman. They reported an elaborate preamble . . . and a resolution to empower the delegates in the General Congress 'to concur with the delegates in the other colonies in declaring independency and forming foreign alliances,—reserving to the colony the sole and exclusive right of forming a constitution and laws for it,' also 'of appointing delegates in a general representation of the colonies for such purposes as might be agreed upon.' This was unanimously adopted on the 12th of April. Thus the popular party carried North Carolina as a unit in favor of independence, when the colonies, from New England to Virginia, were in solid array against it. The example was warmly welcomed by the patriots, and commended for imitation."—R. Frothingham, *The Rise of the Republic, ch.* 11.

A. D. 1861 (January—May).—The difficult dragging of the state into Secession.—"A large majority of the people of North Carolina were opposed to secession. They did not regard it as a constitutional right. They were equally opposed to a separation from the Union in resentment of the election of Mr. Lincoln. But the Governor, John W. Ellis, was in full sympathy with the secessionists. He spared no pains to bring the state into line with South Carolina [which had passed her ordinance of Secession December 20, 1860,—see United States of Am.: A. D. 1860 (November—December)]. The legislature met on the 20th of November. The governor, in his message, recommended that the legislature should invite a conference with the Southern States, or send delegates to them for the purpose of securing their co-operation. He also recommended the reorganization of the militia, and the call of a state convention. Bills were introduced for the purpose of carrying these measures into effect. . . . On the 30th of January, a bill for calling a state convention was passed. It provided that no secession ordinance, nor one connecting the state with the Southern Confederacy, would be valid until it should be ratified by a majority of the qualified voters of the state. The vote of the people was appointed to take place on the 28th of February. The delegates were elected on the day named. A large majority of them were Unionists. But, at the same time, the convention itself was voted down. The vote for a convention was 46,671; against a convention, 47,333. The majority against it was 662. This majority against a convention, however, was no criterion of popular sentiment in regard to secession. The true test was the votes received, respectively, by the Union and secession delegates. The former received a majority of nearly 30,000. But the indefatigable governor was not to be balked by the popular dislike for secession. The legislature was called together in extra session on May 1. On the same day they voted to have another election for delegates to a state convention on the 13th of the month. The election took place accordingly, and the delegates convened on the 20th. On the following day the secession ordinance was adopted, and the Confederate Constitution ratified. To save time, and avoid further

obstructions, the question of popular approval was taken for granted."— S. S. Cox, *Three Decades of Federal Legislation, pp.* 119–120.

NORTHWEST TERRITORIES OF CANADA.—"The North West Territories comprise all lands [of the Dominion of Canada] not within the limits of any province or of the District of Keewatin. The area of the Territories is about 3,000,000 square miles or four times as great as the area of all the provinces together. The Territories were ceded to Canada by an Order in Council dated the 24th June 1870 [see Canada: A. D. 1869–1873]. . . . The southern portion of the territories between Manitoba and British Columbia has been formed into four provisional districts, viz. Assiniboia, Saskatchewan, Alberta and Athabasca. By the Dominion Act 38 Vic. c. 49 executive and legislative powers were conferred on a Lieutenant-Governor and a Council of five members subject to instructions given by Order in Council or by the Canadian Secretary of State."—J. E. C. Munro, *The Const. of Canada, ch.* 2.

NORTHWEST TERRITORY OF THE UNITED STATES OF AMERICA, The Old.—"This northwestern land lay between the Mississippi, the Ohio, and the Great Lakes. It now constitutes five of our large States and part of a sixth [namely, western Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, and Michigan]. But when independence was declared it was quite as much a foreign territory, considered from the standpoint of the old thirteen colonies, as Florida or Canada; the difference was that, whereas during the war we failed in our attempts to conquer Florida and Canada, we succeeded in conquering the Northwest. The Northwest formed no part of our country as it originally stood; it had no portion in the declaration of independence. It did not revolt; it was conquered. . . . We made our first important conquest during the Revolution itself."—T. Roosevelt, *The Winning of the West, v.* 1, *pp.* 32–33.

A. D. 1763.—The king's proclamation excluding settlers, and reserving the whole interior of the continent for the Indians.—"On the 7th of October, 1763, George III. issued a proclamation, providing for four new governments or colonies, namely: Quebec, East Florida, West Florida, and Grenada [the latter embracing 'the island of that name, together with the

Grenadines, and the islands of Dominico, St. Vincent and Tobago'], and defining their boundaries. The limits of Quebec did not vary materially from those of the present province of that name, and those of East and West Florida comprised the present State of Florida and the country north of the Gulf of Mexico to the parallel of 31° latitude. It will be seen that no provision was made for the government of nine tenths of the new territory acquired by the Treaty of Paris, and the omission was not an oversight, but was intentional. The purpose was to reserve as crown lands the Northwest territory, the region north of the great lakes, and the country between the Alleghanies and the Mississippi, and to exclude them from settlement by the American colonies. They were left, for the time being, to the undisputed possession of the savage tribes. The king's 'loving subjects' were forbidden making purchases of land from the Indians, or forming any settlements 'westward of the sources of the rivers which fall into the sea from the West and Northwest,' 'and all persons who have wilfully or inadvertently seated themselves upon any lands' west of this limit were warned 'forthwith to remove themselves from such settlements.' Certain reasons for this policy were assigned in the proclamation, such as, 'preventing irregularities in the future, and that the Indians may be convinced of our justice,' etc.; but the real explanation appears in the Report of the Lords Commissioners for Trade and Plantations, in 1772, on the petition of Thomas Walpole and others for a grant of land on the Ohio. The report was drawn by Lord Hillsborough, the president of the board. The report states: 'We take leave to remind your lordships of that principle which was adopted by this Board, and approved and confirmed by his Majesty, immediately after the Treaty of Paris, viz.: the confining the western extent of settlements to such a distance from the sea-coasts as that those settlements should lie within reach of the trade and commerce of this kingdom, . . . and also of the exercise of that authority and jurisdiction which was conceived to be necessary for the preservation of the colonies in a due subordination to, and dependence upon, the mother country. And these we apprehend to have been the two capital objects of his Majesty's proclamation of the 7th of October, 1763. . . . The great object of colonizing upon the continent of North America has been to improve and extend the commerce, navigation, and manufactures of this kingdom. . . . It does appear to us that the extension of the fur trade depends entirely upon the Indians being undisturbed in the possession of their hunting-grounds, and that all colonizing does in its nature, and must in its consequences, operate to the prejudice of that branch of commerce. . . . Let the Savages enjoy their deserts in quiet. Were they driven from their forests the peltry-trade would decrease.' . . . Such in clear and specific terms was the cold and selfish policy which the British crown and its ministers habitually pursued towards the American colonies; and in a few years it changed loyalty into hate, and brought on the American Revolution."—W. F. Poole, *The West, from* 1763 *to* 1783 (*Narrative and Critical Hist. of Am., v.* 6, *ch.* 9).—"The king's proclamation [of 1763] shows that, in the construction put upon the treaty by the crown authorities, the ceded territory was a new acquisition by conquest. The proclamation was the formal appropriation of it as the king's domain, embracing all the country west of the heads or sources of the rivers falling into the Atlantic."—R. King, *Ohio, ch.* 5.—The text of the Proclamation of 1763 is in Force's *American Archives, series* 4, *v.* 1, *p.* 172.

A. D. 1784.—Jefferson's plan for new States.—"The condition of the northwestern territory had long been under the consideration of the House [the Congress of the Confederation]. Several committees had been appointed, and several schemes listened to, for laying out new States, but it was not till the middle of April [1784], that a resolution was finally reached. One plan was to divide the ceded and purchased lands into seventeen States. Eight of these were to lie between the banks of the Mississippi and a north and south line through the falls of the Ohio. Eight more were to be marked out between this line and a second one parallel to it, and passing through the western bank of the mouth of the Great Kanawha. What remained was to form the seventeenth State. But few supporters were found for the measure, and a committee, over which Jefferson presided, was ordered to place before Congress a new scheme of division. Chase and Howe assisted him, and the three devised a plan whereby the prairie-lands were to be parted out among ten new States. The divisions then marked down have utterly disappeared, and the names given to them become so forgotten that nine tenths of the population which has, in our time, covered the whole region with wealthy cities and prosperous villages, and turned it from a waste to a garden, have never in their lives heard the words pronounced. Some were borrowed from the Latin and some from the Greek; while others were Latinized forms of the names the Indians had given to the rivers. The States were to be, as far as possible, two degrees of latitude in width and arranged in three tiers. The Mississippi and a meridian through the falls of the Ohio included the western tier. The meridian through the falls of the Ohio and a second through the mouth of the Great Kanawha were the boundaries of the middle tier. Between this and the Pennsylvania West Line lay the third tier. That vast tract stretching from the 45th parallel of latitude to the Lake of the Woods, and dense with forests

of pine, of hickory, and of oak, they called Sylvania. It was the northern State of the western tier. To the long tongue of land separating the water of Michigan from the waters of Erie and Huron they gave the name Cherronesus. A narrow strip, not more than two degrees of latitude in width, and stretching from Lake Michigan to the Mississippi, was called Michigania. As marked down on their rude maps, Michigania lay under Sylvania, in the very heart of what is now Wisconsin. South of this to the 41st parallel of latitude was Assenisipia, a name derived from Assenisipi, the Indian title of the river now called the Rock. Eastward, along the shore of Lake Erie, the country was named Metropotamia. It took the name Mother of Rivers from the belief that within its boundary were the fountains of many rivers, the Muskingum, the two Miamis of Ohio, the Wabash, the Illinois, the Sandusky, and the Miami of the Lake. That part of Illinois between the 39th and 41st parallels was called, from the river which waters it, Illinoia. On to the east was Saratoga, and beyond this lay Washington, a broad and level tract shut in by the Ohio river, the waters of the lake, and the boundaries of Pennsylvania. Under Illinoia and Saratoga, and stretching along the Ohio, was the ninth State. Within its confines the waters of the Wabash, the Sawane, the Tanissee, the Illinois, and the Ohio were mingled with the waters of the Mississippi and Missouri. The committee therefore judged that a fitting name would be Polypotamia. Pelisipia was the tenth State. It lay to the east of Polypotamia, and was named from Pelisipi, a term the Cherokees often applied to the river Ohio. At the same time that the boundaries of the new States were defined, a code of laws was drawn up which should serve as a constitution for each State, till 20,000 free inhabitants acquired the right of self-government. The code was in no wise a remarkable performance, yet there were among its articles two which cannot be passed by in silence. One provided for the abolition of slavery after the year 1800. The other announced that no one holding an hereditary title should ever become a citizen of the new States. Each was struck out by the House. Yet each is deserving of notice. The one because it was the first attempt at a national condemnation of slavery, the other because it was a public expression of the dread with which our ancestors beheld the growth of the Society of the Cincinnati."—J. B. McMaster, *Hist. of the People of the U. S., ch.* 2 (*v.* 1).—The report of Jefferson's committee "was recommitted to the same committee on the 17th of March, and a new one was submitted on the 22d of the same month. The second report agreed in substance with the first. The principal difference was the omission of the paragraph giving names to the States to be formed out of the Western Territory." After striking out the clauses prohibiting slavery after the year 1800 and denying citizenship to all persons holding hereditary titles, the Congress adopted the report, April 23, 1784. "Thus the substance of the report of Mr. Jefferson of a plan for the government of the Western Territory (without restrictions as to slavery) became a law, and remained so during 1784 to 1787, when these resolutions were repealed in terms by the passage of the ordinance for the government of the 'Territory of the United States northwest of the river Ohio.'"—T. Donaldson, *The Public Domain: its History, pp.* 148–149.

A. D. 1786-1788.—The Ohio Company, of Revolutionary soldiers and their land purchase.—The settlement at Marietta.—"The Revolutionary War had hardly closed before thousands of the disbanded officers and soldiers were looking anxiously to the Western lands for new homes, or for means of repairing their shattered fortunes. In June, 1783, a strong memorial was sent to Congress asking a grant of the lands between the Ohio and Lake Erie. Those who lived in the South were fortunate in having immediate access to the lands of Kentucky, Tennessee, and the back parts of Georgia. The strife in Congress over the lands of the Northwest delayed the surveys and the bounties so long that the soldiers of the North almost lost hope." Finally, there "was a meeting of officers and soldiers, chiefly of the Massachusetts, Rhode Island and Connecticut lines, at Boston, March 1, 1786, when they formed a new Ohio Company for the purchase and settlement of Western lands, in shares of $1,000. General Putnam [Rufus], General Samuel H. Parsons, and the Rev. Manasseh Cutler, were made the directors, and selected for their purchase the lands on the Ohio River situated on both sides of the Muskingum, and immediately west of the Seven Ranges. The treasury board in those days were the commissioners of public lands, but with no powers to enter into absolute sales unless such were approved by Congress. Weeks and months were lost in waiting for a quorum of that body to assemble. This was effected on the 11th of July, and Dr. Cutler, deputed by his colleagues, was in attendance, but was constantly baffled in pursuing his objects. . . . The members were disposed to insert conditions which were not satisfactory to the Ohio Company. But the doctor carried his point by formally intimating that he should retire, and seek better terms with some of the States, which were offering their lands at half the price Congress was to receive. The grant to the Ohio Company, upon the terms proposed, was voted by Congress, and the contract formally signed October 27, 1787, by the treasury board, and by Dr. Cutler and Winthrop Sargent, as agents of the Ohio Company. Two companies, including surveyors, boat-builders, carpenters, smiths, farmers and laborers, 48 persons in all, with their outfit, were sent forward in the following months of December and January, under General Putnam as leader and superintendent. They united in February on the Youghiogheny River and constructed boats. . . . Embarking with their stores they descended the Ohio, and on the 7th of April, 1788, landed at the Muskingum. On the upper point, opposite Fort Harmar, they founded their town, which at Boston had first been named Adelphia. At the first meeting of the directors, held on the ground July 2d, the name of Marietta was adopted, in honor of the French Queen Marie Antoinette, and compounded of the first and last syllables."—R. King, *Ohio, ch.* 8.

A. D. 1787.—The great Ordinance for its government.—Perpetual Exclusion of Slavery.—"Congress at intervals discussed the future of

this great domain, but for a while little progress was made except to establish that Congress could divide the territory as might seem best. Nathan Dane came forward with a motion for a committee to plan some temporary scheme of government. A committee on this point reported (May 10, 1786) that the number of States should be from two to five, to be admitted as States according to Jefferson's proposition, but the question of slavery in them was left open. Nothing definite was done till a committee—Johnson of Connecticut, Pinckney of South Carolina, Smith of New York, Dane of Massachusetts, and Henry of Maryland—reported on April 26, 1787, 'An ordinance for the government of the Western territory,' and after various amendments it was fairly transcribed for a third reading, May 10th. Further consideration was now delayed until July. It was at this point that Manasseh Cutler appeared in New York, commissioned to buy land for the Ohio Company in the region whose future was to be determined by this ordinance, and it was very likely, in part, by his influence that those features of the perfected ordinance as passed five days later, and which has given it its general fame, were introduced. On July 9th the bill was referred to a new committee, of which a majority were Southern men, Carrington of Virginia taking the chairmanship from Johnson; Dane and Smith were retained, but Richard Henry Lee and Kean of South Carolina supplanted Pinckney and Henry. This change was made to secure the Southern support; on the other hand, acquiescence in the wishes of Northern purchasers of lands was essential in any business outcome of the movement. 'Up to this time,' says Poole, 'there were no articles of compact in the bill, no anti-slavery clause, nothing about liberty of conscience or of the press, the right of habeas corpus, or of trial by jury, or the equal distribution of estates. The clause that, "religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall be forever encouraged," was not there.' These omissions were the New England ideas, which had long before this been engrafted on the Constitution of Massachusetts. This new committee reported the bill, embodying all these provisions except the anti-slavery clause, on the 11th, and the next day this and other amendments were made. On the 13th, but one voice was raised against the bill on its final passage, and that came from Yates of New York. Poole intimates that it was the promise of the governorship of the territory under the ordinance which induced St. Clair, then President of Congress, to lend it his countenance. The promise, if such it was, was fulfilled, and St. Clair became the first governor."—J. Winsor and E. Channing, *Territorial Acquisitions and Divisions* (*Narrative and Crit. Hist. of Am., v. 7, app.*).

The following is the text of the "Ordinance for the Government of the Territory of the United States Northwest of the River Ohio," commonly known as the "Ordinance of 1787": "Be it ordained by the United States in Congress assembled, That the said territory, for the purposes of temporary government, be one district, subject, however, to be divided into two districts, as future circumstances may, in the opinion of Congress, make it expedient. Be it ordained by the authority aforesaid, That the estates, both of resident and non-resident proprietors in the said territory, dying intestate, shall descend to, and be distributed among, their children, and the descendants of a deceased child, in equal parts; the descendants of a deceased child or grandchild to take the share of their deceased parent in equal parts among them: And where there shall be no children or descendants, then in equal parts to the next of kin in equal degree; and, among collaterals, the children of a deceased brother or sister of the intestate shall have, in equal parts among them, their deceased parents' share; and there shall, in no case, be a distinction between kindred of the whole and half-blood; saving, in all cases, to the widow of the intestate her third part of the real estate for life, and one-third part of the personal estate; and this law, relative to descents and dower, shall remain in full force until altered by the legislature of the district. And, until the governor and judges shall adopt laws as hereinafter mentioned, estates in the said territory may be devised or bequeathed by wills in writing, signed and sealed by him or her, in whom the estate may be (being of full age,) and attested by three witnesses; and real estates may be conveyed by lease and release, or bargain and sale, signed, sealed, and delivered by the person, being of full age, in whom the estate may be, and attested by two witnesses, provided such wills be duly proved, and such conveyances be acknowledged, or the execution thereof duly proved, and be recorded within one year after proper magistrates, courts, and registers shall be appointed for that purpose; and personal property may be transferred by delivery; saving, however to the French and Canadian inhabitants, and other settlers of the Kaskaskias, St. Vincents, and the neighboring villages who have heretofore professed themselves citizens of Virginia, their laws and customs now in force among them, relative to the descent and conveyance of property. Be it ordained by the authority aforesaid, That there shall be appointed, from time to time, by Congress, a governor, whose commission shall continue in force for the term of three years, unless sooner revoked by Congress; he shall reside in the district, and have a freehold estate therein in 1,000 acres of land, while in the exercise of his office. There shall be appointed, from time to time, by Congress, a secretary, whose commission shall continue in force for four years unless sooner revoked; he shall reside in the district, and have a freehold estate therein in 500 acres of land, while in the exercise of his office; it shall be his duty to keep and preserve the acts and laws passed by the legislature, and the public records of the district, and the proceedings of the governor in his Executive department; and transmit authentic copies of such acts and proceedings, every six months, to the Secretary of Congress: There

shall also be appointed a court to consist of three judges, any two of whom to form a court, who shall have a common law jurisdiction, and reside in the district, and have each therein a freehold estate in 500 acres of land while in the exercise of their offices; and their commissions shall continue in force during good behavior. The governor and judges, or a majority of them, shall adopt and publish in the district such laws of the original States, criminal and civil, as may be necessary and best suited to the circumstances of the district, and report them to Congress from time to time: which laws shall be in force in the district until the organization of the General Assembly therein, unless disapproved of by Congress; but, afterwards, the legislature shall have authority to alter them as they shall think fit. The governor, for the time being, shall be commander-in-chief of the militia, appoint and commission all officers in the same below the rank of general officers; all general officers shall be appointed and commissioned by Congress. Previous to the organization of the General Assembly, the governor shall appoint such magistrates and other civil officers, in each county or township, as he shall find necessary for the preservation of the peace and good order in the same: After the General Assembly shall be organized, the powers and duties of the magistrates and other civil officers, shall be regulated and defined by the said assembly; but all magistrates and other civil officers, not herein otherwise directed, shall, during the continuance of this temporary government, be appointed by the governor. For the prevention of crimes and injuries, the laws to be adopted or made shall have force in all parts of the district, and for the execution of process, criminal and civil, the governor shall make proper divisions thereof; and he shall proceed, from time to time, as circumstances may require, to lay out the parts of the district in which the Indian titles shall have been extinguished, into counties and townships, subject, however, to such alterations as may thereafter be made by the legislature. So soon as there shall be 5,000 free male inhabitants of full age in the district, upon giving proof thereof to the governor, they shall receive authority, with time and place, to elect representatives from their counties or townships to represent them in the General Assembly: Provided, That, for every 500 free male inhabitants, there shall be one representative, and so on progressively with the number of free male inhabitants, shall the right of representation increase, until the number of representatives shall amount to 25; after which, the number and proportion of representatives shall be regulated by the legislature: Provided, That no person be eligible or qualified to act as a representative unless he shall have been a citizen of one of the United States three years, and be a resident in the district, or unless he shall have resided in the district three years; and, in either case, shall likewise hold in his own right, in fee simple, 200 acres of land within the same: Provided, also, That a freehold in 50 acres of land in the district, having been a citizen of one of the States, and being resident in the district, or the like freehold and two years residence in the district, shall be necessary to qualify a man as an elector of a representative. The representatives thus elected, shall serve for the term of two years; and, in case of the death of a representative, or removal from office, the governor shall issue a writ to the county or township for which he was a member, to elect another in his stead, to serve for the residue of the term. The General Assembly, or Legislature, shall consist of the governor, legislative council, and a house of representatives. The legislative council shall consist of five members, to continue in office five years, unless sooner removed by Congress; any three of whom to be a quorum: and the members of the council shall be nominated and appointed in the following manner, to wit: As soon as representatives shall be elected, the governor shall appoint a time and place for them to meet together; and, when met, they shall nominate ten persons, residents in the district, and each possessed of a freehold in 500 acres of land, and return their names to Congress; five of whom Congress shall appoint and commission to serve as aforesaid; and, whenever a vacancy shall happen in the council, by death or removal from office, the house of representatives shall nominate two persons, qualified as aforesaid, for each vacancy, and return their names to Congress; one of whom Congress shall appoint and commission for the residue of the term. And every five years, four months at least before the expiration of the time of service of the members of council, the said house shall nominate ten persons, qualified as aforesaid, and return their names to Congress; five of whom Congress shall appoint and commission to serve as members of the council five years, unless sooner removed. And the governor, legislative council, and house of representatives, shall have authority to make laws in all cases, for the good government of the district, not repugnant to the principles and articles in this ordinance established and declared. And all bills, having passed by a majority in the house, and by a majority in the council, shall be referred to the governor for his assent; but no bill, or legislative act whatever, shall be of any force without his assent. The governor shall have power to convene, prorogue, and dissolve the General Assembly, when, in his opinion, it shall be expedient. The governor, judges, legislative council, secretary, and such other officers as Congress shall appoint in the district, shall take an oath or affirmation of fidelity and of office; the governor before the President of Congress, and all other officers before the governor. As soon as a legislature shall be formed in the district, the council and house assembled in one room, shall have authority, by joint ballot, to elect a delegate to Congress, who shall have a seat in Congress, with a right of debating but not of voting during this temporary government. And, for extending the fundamental principles of civil and religious liberty, which form the basis whereon these republics, their laws and constitutions are erected; to fix and establish those principles as the basis of all laws, constitutions, and governments, which forever hereafter shall be formed in the said territory: to provide also for the establishment of States, and permanent government therein, and for their admission to a share in the federal councils on an equal footing with the original States, at as early periods as may be consistent with the general interest: It is hereby ordained and declared by the authority aforesaid, That the following articles shall be considered as

articles of compact between the original States and the people and States in the said territory and forever remain unalterable, unless by common consent, to wit: **Art. 1st.** No person, demeaning himself in a peaceable and orderly manner, shall ever be molested on account of his mode of worship or religious sentiments, in the said territory. **Art. 2d.** The inhabitants of the said territory shall always be entitled to the benefits of the writ of habeas corpus, and of the trial by jury; of a proportionate representation of the people in the legislature; and of judicial proceedings according to the course of the common law. All persons shall be bailable, unless for capital offences, where the proof shall be evident or the presumption great. All fines shall be moderate; and no cruel or unusual punishments shall be inflicted. No man shall be deprived of his liberty or property, but by the judgment of his peers or the law of the land; and, should the public exigencies make it necessary, for the common preservation, to take any person's property, or to demand his particular services, full compensation shall be made for the same. And, in the just preservation of rights and property, it is understood and declared, that no law ought ever to be made, or have force in the said territory, that shall, in any manner whatever, interfere with or affect private contracts or engagements, bona fide, and without fraud, previously formed. **Art. 3d.** Religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged. The utmost good faith shall always be observed towards the Indians; their lands and property shall never be taken from them without their consent; and, in their property, rights, and liberty, they shall never be invaded or disturbed, unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity, shall, from time to time, be made for preventing wrongs being done to them, and for preserving peace and friendship with them. **Art. 4th.** The said territory, and the States which may be formed therein, shall forever remain a part of this confederacy of the United States of America, subject to the Articles of Confederation, and to such alterations therein as shall be constitutionally made; and to all the acts and ordinances of the United States in Congress assembled, conformable thereto. The inhabitants and settlers in the said territory shall be subject to pay a part of the federal debts contracted or to be contracted, and a proportional part of the expenses of government, to be apportioned on them by Congress according to the same common rule and measure by which apportionments thereof shall be made on the other States; and the taxes, for paying their proportion, shall be laid and levied by the authority and direction of the legislatures of the district or districts, or new States, as in the original States, within the time agreed upon by the United States in Congress assembled. The legislatures of those districts or new States, shall never interfere with the primary disposal of the soil by the United States in Congress assembled, nor with any regulations Congress may find necessary for securing the title in such soil to the bona fide purchasers. No tax shall be imposed on lands the property of the United States; and, in no case, shall non-resident proprietors be taxed higher than residents. The navigable waters leading into the Mississippi and St. Lawrence, and the carrying places between the same, shall be common highways, and forever free, as well to the inhabitants of the said territory as to the citizens of the United States, and those of any other States that may be admitted into the Confederacy, without any tax, impost, or duty, therefor. **Art. 5th.** There shall be formed in the said territory, not less than three nor more than five States; and the boundaries of the States, as soon as Virginia shall alter her act of cession, and consent to the same, shall become fixed and established as follows, to wit: The Western State in the said territory, shall be bounded by the Mississippi, the Ohio, and Wabash rivers; a direct line drawn from the Wabash and Post St. Vincent's, due North, to the territorial line between the United States and Canada; and, by the said territorial line, to the Lake of the Woods and Mississippi. The middle State shall be bounded by the said direct line, the Wabash from Post Vincent's, to the Ohio; by the Ohio, by a direct line, drawn due North from the mouth of the Great Miami, to the said territorial line, and by the said territorial line. The Eastern State shall be bounded by the last mentioned direct line, the Ohio, Pennsylvania, and the said territorial line: Provided, however, and it is further understood and declared, that the boundaries of these three States shall be subject so far to be altered, that, if Congress shall hereafter find it expedient, they shall have authority to form one or two States in that part of the said territory which lies North of an East and West line drawn through the Southerly bend or extreme of lake Michigan. And, whenever any of the said States shall have 60,000 free inhabitants therein, such State shall be admitted, by its delegates, into the Congress of the United States, on an equal footing with the original States in all respects whatever, and shall be at liberty to form a permanent constitution and State government: Provided, the constitution and government so to be formed, shall be republican, and in conformity to the principles contained in these articles; and, so far as it can be consistent with the general interest of the confederacy, such admission shall be allowed at an earlier period, and when there may be a less number of free inhabitants in the State than 60,000. **Art. 6th.** There shall be neither slavery nor involuntary servitude in the said territory, otherwise than in the punishment of crimes, whereof the party shall have been duly convicted: Provided, always, That any person escaping into the same, from whom labor or service is lawfully claimed in any one of the original States, such fugitive may be lawfully reclaimed and conveyed to the person claiming his or her labor or service as aforesaid. Be it ordained by the authority aforesaid, That the resolutions of the 23d of April, 1784, relative to the subject of this ordinance, be, and the same are hereby, repealed and declared null and void. Done by the United States, in Congress assembled, the 13th day of July, in the year of our Lord 1787, and of their sovereignty and independence the twelfth."

A. D. 1788-1802.—Extinguished by divisions.—Creation of the Territory of Indiana and the State of Ohio.—"Arthur St. Clair was appointed governor by the Congress [of the Confederation] February 1, 1788, and Winthrop Sargent secretary. August 7th, 1789, Congress

[under the federal constitution], in view of the new method of appointment of officers as provided in the Constitution, passed an amendatory act to the Ordinance of 1787, providing for the nomination of officers for the Territory by the President. . . . August 8, 1789, President Washington sent to the Senate the names of Arthur St. Clair for governor, Winthrop Sargent for secretary, and Samuel Holden Parsons, John Cleves Symmes, and William Barton, for judges. . . . They were all confirmed. President Washington in this message designated the country as 'The Western Territory.' The supreme court was established at Cincinnati (. . . named by St. Clair in honor of the Society of the Cincinnati, he having been president of the branch society in Pennsylvania). St. Clair remained governor until November 22, 1802. Winthrop Sargent afterwards, in 1798, went to Mississippi as governor of that Territory. William Henry Harrison became secretary in 1797, representing it in Congress in 1799–1800, and he became governor of the Territory of Indiana in 1800. May 7, 1800, Congress, upon petition, divided this [Northwest] Territory into two separate governments. Indiana Territory was created, with its capital at St. Vincennes, and from that portion of the Northwest Territory west of a line beginning opposite the mouth of the Kentucky River in Kentucky, and running north to the Canada line. The eastern portion now became the 'Territory Northwest of the river Ohio,' with its capital at Chillicothe. This portion, Nov. 29, 1802, was admitted into the Union. . . . The territory northwest of the river Ohio ceased to exist as a political division after the admission of the State of Ohio into the Union, Nov. 29, 1802, although in acts of Congress it was frequently referred to and its forms affixed by legislation to other political divisions."—T. Donaldson, *The Public Domain, pp.* 159–160.

Also in: J. Burnet, *Notes on the Settlement of the N. W. Territory, ch.* 14–20.—C. Atwater, *Hist. of Ohio, period* 2.—J. B. Dillon, *Hist. of Indiana, ch.* 19–31.—W. H. Smith, *The St. Clair Papers, v.* 1, *ch.* 6–9.

A. D. 1790-1795.—Indian war.—The disastrous expeditions of Harmar and St. Clair and Wayne's decisive victory.—The Greenville Treaty.—"The Northwestern Indians, at Washington's installation, numbered, according to varying estimates, from 20,000 to 40,000 souls. Of these the Wabash tribes had for years been the scourge of the new Kentucky settlers. So constant, indeed, was bloodshed and retaliation, that the soil of this earliest of States beyond the mountains acquired the name of 'the dark and bloody ground.' A broad river interposed no sufficient barricade to these deadly encounters. . . . What with their own inadmissable claims to territory, and this continuous war to the knife, all the tribes of the Northwestern country were now so maddened against the United States that the first imperative necessity, unless we chose to abandon the Western settlements altogether, was to chastise the Indians into submission. . . . Brigadier-General Harmar, who commanded the small force of United States regulars in the Territory, was . . . a Revolutionary veteran. Our frontier military stations extended as far as Vincennes, on the Wabash, which Major Hamtranck, a Canadian Frenchman, commanded. The British commandant was at Detroit, whence he communicated constantly with the Governor-General of the provinces, Lord Dorchester, by whose instigation the Northwestern Indians at this period were studiously kept at enmity with the United States. . . . A formidable expedition against the Indians was determined upon by the President and St. Clair [Governor of the Northwest Territory]; and in the fall of the year [1790] General Harmar set out from Fort Washington for the Miami country, with a force numbering somewhat less than 1,500, near three-fourths of whom were militia raised in Western Pennsylvania and Kentucky." Successful at first, the campaign ended in a disastrous defeat on the Maumee.—J. Schouler, *Hist. of the U. S., ch.* 2, *sect.* 1 (*v.* 1).—"The remnant of his army which Harmar led back to Cincinnati [Fort Washington] had the unsubdued savages almost continually at their heels. As a rebuke to the hostile tribes the expedition was an utter failure, a fact which was soon made manifest. Indian attacks on the settlers immediately became bolder. . . . Every block house in the territory was soon almost in a state of siege. . . . Washington was authorized to raise an army of 3,000 men for the protection of the Northwest. The command of this army was given to St. Clair. At the same time a corps of Kentucky volunteers was selected and placed under General Charles Scott. The Kentuckians dashed into the Wabash country, scattered the Indians, burned their villages and returned with a crowd of prisoners. The more pretentious expedition of St. Clair was not to be accomplished with so fine a military flourish. Like Harmar's army, that led by St. Clair was feeble in discipline, and disturbed by jealousies. The agents of the Government equipped the expedition in a shameful manner, delivering useless muskets, supplying powder that would scarcely burn, and neglecting entirely a large number of necessary supplies; so that after St. Clair with his 2,300 regulars and 600 militia had marched from Ludlow's Station, north of Cincinnati, he found himself under the necessity of delaying the march to secure supplies. The militia deserted in great numbers. For the purpose of capturing deserters and bringing up belated supplies, one of the best regiments in the army was sent southward. While waiting on one of the branches of the Wabash for the return of this regiment the main force was on the fourth of November, 1791, surrounded and attacked by the lurking Indians. At the first yell of the savages scores of the terrified militia dropped their guns and bolted. St. Clair, who for some days had been too ill to sit upon a horse, now exerted all his strength in an effort to rally the wavering troops. His horses were all killed, and his hat and clothing were ripped by the bullets. But the lines broke, the men scattered and the artillery was captured. Those who stood their ground fell in their tracks till the fields were covered by 600 dead and dying men. At last a retreat was ordered. . . . For many miles, over a track littered with coats, hats, boots and powder horns, the whooping victors chased the routed survivors of St. Clair's army. It was a ghastly defeat. The face of every settler in Ohio blanched at the news. Kentucky was thrown into excitement and even Western Pennsylvania nervously petitioned for protection. St. Clair was criticised and insulted. A committee of Congress found him without blame. But he had been defeated, and no

amount of reasoning could unlink his name from the tragedy of the dark November morning. Every effort was made to win over the Indians before making another use of force. The Government sent peace messengers into the Northwest. In one manner or another nearly every one of the messengers was murdered. The Indians who listened at all would hear of no terms of peace that did not promise the removal of the whites from the northern side of the Ohio. The British urged the tribes to make this extreme demand. Spain also sent mischief-makers into the camps of the exultant red men. . . . More bloodshed became inevitable; and in execution of this last resort came one of the most popular of the Revolutionary chieftains—'Mad Anthony' Wayne. Wayne led his army from Cincinnati in October of 1793. He advanced carefully in the path taken by St. Clair, found and buried the bones of St. Clair's 600 lost, wintered at Greenville, and in the summer of 1794 moved against the foe with strong reinforcements from Kentucky. After a preliminary skirmish between the Indians and the troops, Wayne, in accordance with his instructions, made a last offer of peace. The offer was evasively met, and Wayne pushed on. On the morning of Wednesday the twentieth of August, 1794, the 'legion' came upon the united tribes of Indians encamped on the north bank of the Maumee and there, near the rapids of the Maumee, the Indians were forced to face the most alert and vigorous enemy they had yet encountered. The same daring tactics that had carried Stony Point and made Anthony Wayne historic were here directed against the Indian's timber coverts. . . . Encouraging and marshaling the Indians were painted Canadian white men bearing British arms. Many of these fell in the heaps of dead and some were captured. When Wayne announced his victory he declared that the Indian loss was greater than that incurred by the entire Federal army in the war with Great Britain. Thus ended the Indian reign of terror. After destroying the Indian crops and possessions, in sight of the British fort, Wayne fell back to Greenville and there made the celebrated treaty by which on August 3, 1795, the red men came to a permanent peace with the Thirteen Fires. From Cincinnati to Campus Martius Wayne's victory sent a thrill of relief. The treaty, ceding to the Union two thirds of the present State, guaranteed the safety of all settlers who respected the Indians' rights, and set in motion once more the machinery of immigration." —A. Black, *The Story of Ohio, ch.* 6.

NORUMBEGA.— "Norembega, or Norumbega, more properly called Arambec (Hakluyt, III. 167), was, in Ramusio's map, the country embraced within Nova Scotia, southern New Brunswick, and a part of Maine. De Laet confines it to a district about the mouth of the Penobscot. Wytfleit and other early writers say that it had a capital city of the same name; and in several old maps this fabulous metropolis is laid down, with towers and churches, on the river Penobscot. The word is of Indian origin." —F. Parkman, *Pioneers of France in the New World: Champlain, ch.* 1, *foot-note.* — On Gastaldi's map, of New France, made in 1550, "the name 'La Nuova Francia' is written in very large letters, indicating probably that this name is meant for the entire country. The name 'Terra de Nurumbega' is written in smaller letters, and appears to be attached only to the peninsula of Nova Scotia. Crignon, however, the author of the discourse which this map is intended to illustrate, gives to this name a far greater extent. He says: 'Going beyond the cape of the Bretons, there is a country contiguous to this cape, the coast of which trends to the west a quarter southwest to the country of Florida, and runs along for a good 500 leagues; which coast was discovered fifteen years ago by Master Giovanni da Verrazano, in the name of the king of France and of Madame la Regente; and this country is called by many 'La Francese,' and even by the Portuguese themselves; and its end is toward Florida under 78° W., and 38° N. . . . The country is named by the inhabitants 'Nurumbega'; and between it and Brazil is a great gulf, in which are the islands of the West Indies, discovered by the Spaniards. From this it would appear that, at the time of the discourse, the entire east coast of the United States, as far as Florida, was designated by the name of Nurumbega. Afterwards, this name was restricted to New England; and, at a later date, it was applied only to Maine, and still later to the region of the Penobscot. . . . The name 'Norumbega,' or 'Arambec,' in Hakluyt's time, was applied to Maine, and sometimes to the whole of New England."—J. G. Kohl, *Hist. of the Discovery of Maine* (*Maine Hist. Soc. Coll., series* 2, *v.* 1), *pp.* 231 *and* 283.—"The story of Norumbega is invested with the charms of fable and romance. The name is found in the map of Hieronimus da Verrazano of 1529, as 'Aranbega,' being restricted to a definite and apparently unimportant locality. Suddenly, in 1539, Norumbega appears in the narrative of the Dieppe Captain as a vast and opulent region, extending from Cape Breton to the Cape of Florida. About three years later Allefonsce described the 'River of Norumbega,' now identified with the Penobscot, and treated the capital of the country as an important market for the trade in fur. Various maps of the period of Allefonsce confine the name of Norumbega to a distinct spot; but Gastaldi's map, published by Ramusio in 1556,—though modelled after Verrazano's, of which indeed it is substantially an extract,—applies the name to the region lying between Cape Breton and the Jersey coast. From this time until the seventeenth century Norumbega was generally regarded as embracing all New England, and sometimes portions of Canada, though occasionally the country was known by other names. Still, in 1582, Lok seems to have thought that the Penobscot formed the

southern boundary of Norumbega, which he shows on his map as an island; while John Smith, in 1620, speaks of Norumbega as including New England and the region as far south as Virginia. On the other hand Champlain, in 1605, treated Norumbega as lying within the present territory of Maine. He searched for its capital on the banks of the Penobscot, and as late as 1669 Heylin was dreaming of the fair city of Norumbega. Grotius, for a time at least, regarded the name as of Old Northern origin and connected with 'Norbergia.' It was also fancied that a people resembling the Mexicans once lived upon the banks of the Penobscot. Those who have labored to find an Indian derivation for the name say that it means 'the place of a fine city.' At one time the houses of the city were supposed to be very splendid, and to be supported upon pillars of crystal and silver."—B. F. De Costa, *Norumbega and its English Explorers* (*Narrative and Critical Hist. of Am.*, *v.* 3, *ch.* 6).

A. D. 1604.—Origin of the name Acadia.—In 1604, after the death of De Chastes, who had sent out Champlain on his first voyage to Canada, Pierre du Guast, Sieur de Monts, took the enterprise in hand and "petitioned the king for leave to colonize La Cadie, or Acadie, a region defined as extending from the 40th to the 46th degree of north latitude, or from Philadelphia to beyond Montreal. . . . De Monts gained his point. He was made Lieutenant-General in Acadia. . . . This name is not found in any earlier public document. It was afterwards restricted to the peninsula of Nova Scotia, but the dispute concerning the limits of Acadia was a proximate cause of the war of 1755. The word is said to be derived from the Indian Aquoddiauke, or Aquoddie, supposed to mean the fish called a pollock. The Bay of Passamaquoddy, 'Great Pollock Water,' if we may accept the same authority, derives its name from the same origin. Potter in 'Historical Magazine,' I. 84. This derivation is doubtful. The Micmac word, 'Quoddy,' 'Kady,' or 'Cadie,' means simply a place or region, and is properly used in conjunction with some other noun; as, for example, 'Katakady,' the Place of Eels. . . . Dawson and Rand, in 'Canadian Antiquarian and Numismatic Journal.'"—F. Parkman, *Pioneers of France in the New World: Champlain, ch.* 2, *and foot-note.*

A. D. 1621-1668.—English grant to Sir William Alexander.—Cession to France.—Quarrels of La Tour and D'Aulnay.—English reconquest and recession to France.—"In 1621, Sir William Alexander, a Scotchman of some literary pretensions, had obtained from King James [through the Council for New England, or Plymouth Company — see NEW ENGLAND: A. D. 1621–1631] a charter, (dated Sept. 10, 1621) for the lordship and barony of New Scotland, comprising the territory now known as the provinces of Nova Scotia and New Brunswick. Under this grant he made several unsuccessful attempts at colonization; and in 1625 he undertook to infuse fresh life into his enterprise by parcelling out the territory into baronetcies. Nothing came of the scheme, and by the treaty of St. Germains, in 1632, Great Britain surrendered to France all the places occupied by the English within these limits. Two years before this, however, Alexander's rights in a part of the territory had been purchased by Claude and Charles de la Tour; and shortly after the peace the Chevalier Razilly was appointed by Louis XIII. governor of the whole of Acadia. He designated as his lieutenants Charles de la Tour for the portion east of the St. Croix, and Charles de Menou, Sieur d'Aulnay-Charnisé, for the portion west of that river. The former established himself on the River St. John, where the city of St. John now stands, and the latter at Castine, on the eastern shore of Penobscot Bay. Shortly after his appointment, La Tour attacked and drove away a small party of Plymouth men who had set up a trading-post at Machias; and in 1635 D'Aulnay treated another party of the Plymouth colonists in a similar way. In retaliation for this attack, Plymouth hired and despatched a vessel commanded by one Girling, in company with their own barque, with 20 men under Miles Standish, to dispossess the French; but the expedition failed to accomplish anything. Subsequently the two French commanders quarrelled, and, engaging in active hostilities, made efforts (not altogether unsuccessful) to enlist Massachusetts in their quarrel. For this purpose La Tour visited Boston in person in the summer of 1643, and was hospitably entertained. He was not able to secure the direct cooperation of Massachusetts; but he was permitted to hire four vessels and a pinnace to aid him in his attack on D'Aulnay. The expedition was so far successful as to destroy a mill and some standing corn belonging to his rival. In the following year La Tour made a second visit to Boston for further help; but he was able only to procure the writing of threatening letters from the Massachusetts authorities to D'Aulnay. Not long after La Tour's departure from Boston, envoys from D'Aulnay arrived here; and after considerable delay a treaty was signed pledging the colonists to neutrality, which was ratified by the Commissioners of the United Colonies in the following year; but it was not until two years later that it

was ratified by new envoys from the crafty Frenchman. In this interval D'Aulnay captured by assault La Tour's fort at St. John, securing booty to a large amount; and a few weeks afterward Madame la Tour, who seems to have been of a not less warlike turn than her husband, and who had bravely defended the fort, died of shame and mortification. La Tour was reduced to the last extremities; but he finally made good his losses, and in 1653 he married the widow of his rival, who had died two or three years before. In 1654, in accordance with secret instructions from Cromwell, the whole of Acadia was subjugated by an English force from Boston under the command of Major Robert Sedgwick, of Charlestown, and Captain John Leverett, of Boston. To the latter the temporary government of the country was intrusted. Ineffectual complaints of this aggression were made to the British government; but by the treaty of Westminster, in the following year, England was left in possession, and the question of title was referred to commissioners. In 1656 it was made a province by Cromwell, who appointed Sir Thomas Temple governor, and granted the whole territory to Temple and to one William Crown and Stephen de la Tour, son of the late governor. The rights of the latter were purchased by the other two proprietors, and Acadia remained in possession of the English until the treaty of Breda, in 1668, when it was ceded to France with undefined limits. Very little was done by the French to settle and improve the country."— C. C. Smith, *Acadia* (*Narrative and Critical Hist. of Am., v. 4, ch. 4*).

A. D. 1713-1730.—Troubles with the French inhabitants—the Acadians.—Their refusal to swear allegiance.—Hostilities with the Indians.—"It was evident from the first that the French intended to interpret the cession of Acadia in as restricted a sense as possible, and that it was their aim to neutralize the power of England in the colony, by confining it within the narrowest limits. The inhabitants numbered some 2,500 at the time of the treaty of Utrecht, divided into three principal settlements at Port Royal, Mines, and Chignecto. The priests at these settlements during the whole period from the treaty of Utrecht to the expulsion of the Acadians were, with scarcely an exception, agents of the French Government, in their pay, and resolute opponents of English rule. The presence of a powerful French establishment at Louisburg, and their constant communications with Canada, gave to the political teachings of those priests a moral influence, which went far towards making the Acadians continue faithful to France. They were taught to believe that they might remain in Acadia, in an attitude of scarcely concealed hostility to the English Government, and hold their lands and possessions as neutrals, on the condition that they should not take up arms either for the French or English. . . . By the 14th article of the treaty of Utrecht, it was stipulated 'that the subjects of the King of France may have liberty to remove themselves within a year to any other place, with all their movable effects. But those who are willing to remain, and to be subject to the King of Great Britain, are to enjoy the free exercise of their religion according to the usages of the church of Rome, as far as the laws of Great Britain do allow the same.' . . . It was never contemplated that the Acadians should establish themselves in the country a colony of enemies of British power, ready at all times to obstruct the authority of the government, and to make the possession of Acadia by England merely nominal. . . . Queen Anne died in August, 1714, and in January, 1715, Messrs. Capoon and Button were commissioned by Governor Nicholson to proceed in the sloop of war Caulfield to Mines, Chignecto, River St. John, Passamaquoddy and Penobscot, to proclaim King George, and to tender and administer the oaths of allegiance to the French inhabitants. The French refused to take the oaths, and some of the people of Mines made the pretence that they intended to withdraw from the colony. . . . A year later the people of Mines notified Caulfield [Lieutenant-Governor] that they intended to remain in the country, and at this period it would seem that most of the few French inhabitants who actually left the Province had returned. Caulfield then summoned the inhabitants of Annapolis, and tendered them the oath of allegiance, but with no better success than his deputies had met at Mines and Chignecto. . . . General Phillips, who became Governor of Nova Scotia in 1717, and who arrived in the Province early in 1720, had no more success than his predecessors in persuading the Acadians to take the oaths. Every refusal on their part only served to make them more bold in defying the British authorities. . . . They held themselves in readiness to take up arms against the English the moment war was declared between the two Crowns, and to restore Acadia to France. But, as there was a peace of thirty years duration between France and England after the treaty of Utrecht, there was no opportunity of carrying this plan into effect. Vaudreuil, Governor of Canada, however, continued to keep the Acadians on the alert by means of his agents, and the Indians were incited to acts of hostility against the English, both in Acadia and Maine. The first difficulty occurred at Canso in 1720, by a party of Indians assailing the English fishermen there. . . . The Indians were incited to this attack by the French of Cape Breton, who were annoyed at one of their vessels being seized at Canso by a British war vessel for illegal fishing. . . . The Indians had indeed some reason to be disquieted, for the progress of the English settlements east of the Kennebec filled them with apprehensions. Unfortunately the English had not been always so just in their dealings with them that they could rely entirely on their forbearance. The Indians claimed their territorial rights in the lands over which the English settlements were spreading; the French encouraged them in this claim, alleging that they had never surrendered this territory to the English. While these questions were in controversy the Massachusetts authorities were guilty of an act which did not tend to allay the distrust of the Indians. This

was nothing less than an attempt to seize the person of Father Ralle, the Jesuit missionary at Norridgewock. He, whether justly or not, was blamed for inciting the Indians to acts of hostility, and was therefore peculiarly obnoxious to the English." The attempt to capture Father Ralle, at Norridgewock, which was made in December, 1721, and which failed, exasperated the Indians, and "in the summer of 1722 a war commenced, in which all the Indian tribes from Cape Canso to the Kennebec were involved. The French could not openly take part in the war, but such encouragement and assistance as they could give the Indians secretly they freely supplied." This war continued until 1725, and cost the lives of many of the colonists of New England and Nova Scotia. Its most serious event was the destruction of Norridgewock and the barbarous murder of Father Ralle, by an expedition from Massachusetts in the summer of 1724. In November, 1725, a treaty of peace was concluded, the Indians acknowledging the sovereignty of King George. After the conclusion of the Indian war, the inhabitants of Annapolis River took a qualified oath of allegiance, with a clause exempting them from bearing arms. At Mines and Chignecto they still persisted in their refusal; and when, on the death of George I. and the accession of George II., the inhabitants of Annapolis were called upon to renew their oath, they also refused again. In 1729 Governor Phillips returned to the province and had great success during the next year in persuading the Acadians, with a few exceptions only throughout the French settlements, to take an oath of allegiance without any condition as to the bearing or not bearing of arms. "The Acadians afterwards maintained that when they took this oath of allegiance, it was with the understanding that a clause was to be inserted, relieving them from bearing arms. The statement was probably accurate, for that was the position they always assumed, but the matter seems to have been lost sight of, and so for the time the question of oaths, which had been such a fertile cause of discord in the Province, appeared to be set at rest."—J. Hannay, *Hist. of Acadia, ch.* 17.

A. D. 1749-1755. — Futile discussion of boundary questions.—The Acadian "Neutrals" and their conduct.—The founding of Halifax. —Hostilities renewed.—"During the nominal peace which followed the Treaty of Aix-la-Chapelle, the representatives of the two governments were anxiously engaged in attempting to settle by actual occupation the question of boundaries, which was still left open by that treaty. It professed to restore the boundaries as they had been before the war; and before the war the entire basin of the Mississippi, as well as the tract between the St. Lawrence River and Gulf, the Bay of Fundy, and the Kennebec, was claimed by both nations, with some show of reason, as no convention between them had ever defined the rights of each. Names had been given to vast tracts of land whose limits were but partly defined, or at one time defined in one way, at another time in another, and when these names were mentioned in treaties they were understood by each party according to its own interest. The treaty of 1748, therefore, not only left abundant cause for future war, but left occasion for the continuance of petty border hostilities in time of nominal peace. Commissioners were appointed, French and English, to settle the question of the disputed territory, but the differences were too wide to be adjusted by anything but conquest. While the most important question was that of the great extent of territory at the west, and . . . both nations were devising means for establishing their claims to it, Acadia, or Nova Scotia, was the scene of a constant petty warfare. The French were determined to restrict the English province to the peninsula now known by that name. The Governor of Canada sent a few men under Boishebert to the mouth of the St. John's to hold that part of the territory. A little old fort built by the Indians had stood for fifty years on the St. John's at the mouth of the Nerepis, and there the men established themselves. A larger number was sent under La Corne to keep possession of Chignecto, on the isthmus which, according to French claims, formed the northern boundary of English territory. In all the years that England had held nominal rule in Acadia, not a single English settlement had been formed, and apparently not a step of progress had been taken in gaining the loyalty of the inhabitants. A whole generation had grown up during the time; but they were no less devoted to France than their fathers had been. It was said that the king of England had not one truly loyal subject in the peninsula, outside of the fort at Annapolis. . . . Among the schemes suggested for remedying this state of affairs, was one by Governor Shirley [of Massachusetts], to place strong bands of English settlers in all the important towns, in order that the Government might have friends and influence throughout the country. Nothing came of this; but in 1749 Parliament voted £40,000 for the purpose of settling a colony. . . . Twenty-five hundred persons being ready to go in less than two months from the time of the first advertisement, the colony was entrusted to Colonel Edward Cornwallis (uncle of the Cornwallis of the Revolutionary War), and he was made Governor of Nova Scotia. Chebucto was selected as the site of the colony, and the town was named Halifax in honor of the president of the Lords of Trade and Plantations [see, also, Halifax: A. D. 1749]. . . . In July, a council was held at Halifax, when Governor Cornwallis gave the French deputies a paper declaring what the Government would allow to the French subjects, and what would be required of them." They were called upon to take the oath of allegiance, so often refused before. They claimed the privilege of taking a qualified oath, such as had been formerly allowed in certain cases, and which exempted them from bearing arms. "They wished to stand as neutrals, and, indeed, were often called so. Cornwallis replied that nothing less than entire allegiance would be accepted. . . . About a month later the people sent in a declaration with a thousand signatures, stating that they had resolved not to take the oath, but were determined to leave the country. Cornwallis took no steps to coerce them, but wrote to England for instructions." Much of the trouble with the Acadians was attributed to a French missionary, La Loutre, who was also

accused of inciting the Indians to hostilities. In 1750, Major Lawrence was sent to Chignecto, with 400 men, to build a block-house on the little river Messagouche, which the French claimed as their southern boundary. "On the southern bank was a prosperous village called Beaubassin, and La Corne [the French commander] had compelled its inhabitants to take the oath of allegiance to the King of France. When Lawrence arrived, all the inhabitants of Beaubassin, about 1,000, having been persuaded by La Loutre, set fire to their houses, and, leaving behind the fruits of years of industry, turned their backs on their fertile fields, and crossed the river, to put themselves under the protection of La Corne's troops. Many Acadians from other parts of the peninsula also left their homes, and lived in exile and poverty under the French dominion, hoping for a speedy change of masters in Nova Scotia. . . . In the same year a large French fort, Beau Séjour, was built on the northern side of the Messagouche, and a smaller one, Gaspereaux, at Baie Verte. Other stations were also planted, forming a line of fortified posts from the Gulf of St. Lawrence to the mouth of the St. John's. . . . The commission appointed to settle the question of boundaries had broken up without accomplishing any results; and it was resolved by the authorities in Nova Scotia and Massachusetts [1754] that an expedition should be sent against Fort Beau Séjour. . . . Massachusetts . . . raised about 2,000 troops for the contemplated enterprise, who were under the command of Lieutenant-Colonel John Winslow. To this force were added about 300 regulars, and the whole was placed under the command of Lieutenant-Colonel Moncton. They reached Chignecto on the 2d of June," 1755. The French were found unprepared for long resistance, and Beau Séjour was surrendered on the 16th. "After Beau Séjour, the smaller forts were quickly reduced. Some vessels sent to the mouth of the St. John's found the French fort deserted and burned. The name of Beau Séjour was changed to Cumberland."—R. Johnson, *Hist. of the French War, ch.* 10.

A. D. 1755.—Frustrated naval expedition of the French. See Canada: A. D. 1755 (June).

A. D. 1755.—The removal of the Acadians and their dispersion in exile.—"The campaign of the year 1755, which had opened in Nova Scotia with so much success, and which promised a glorious termination, disappointed the expectations and awakened the fears of the Colonists. The melancholy and total defeat of the army under General Braddock, while on his march against Fort du Quesnè, threw a gloom over the British Provinces. Niagara and Crown-point were not only unsubdued, but it was evident that Governor Shirley would have to abandon, for this year at least, the attempt; while Louisburg was reinforced, the savages let loose upon the defenceless settlements of the English, and the tide of war seemed ready to roll back upon the invaders. Amidst this general panic, Governor Lawrence and his Council, aided by Admirals Boscawen and Moystyn, assembled to consider the necessary measures that were to be adopted towards the Acadians, whose character and situation were so peculiar as to distinguish them from every other people who had suffered under the scourge of war. . . . It was finally determined, at this consultation, to remove and disperse this whole people among the British Colonies; where they could not unite in any offensive measures, and where they might be naturalized to the Government and Country. The execution of this unusual and general sentence was allotted chiefly to the New England Forces, the Commander of which [Colonel Winslow], from the humanity and firmness of his character, was well qualified to carry it into effect. It was, without doubt, as he himself declared, disagreeable to his natural make and temper; and his principles of implicit obedience as a soldier were put to a severe test by this ungrateful kind of duty; which required an ungenerous, cunning, and subtle severity. . . . They were kept entirely ignorant of their destiny until the moment of their captivity, and were overawed, or allured, to labour at the gathering in of their harvest, which was secretly allotted to the use of their conquerors."—T. C. Haliburton, *Account of Nova Scotia, v.* 1, *pp.* 170–175.—"Winslow prepared for the embarkation. The Acadian prisoners and their families were divided into groups answering to their several villages, in order that those of the same village might, as far as possible, go in the same vessel. It was also provided that the members of each family should remain together; and notice was given them to hold themselves in readiness. 'But even now,' he writes, 'I could not persuade the people I was in earnest.' Their doubts were soon ended. The first embarkation took place on the 8th of October [1755]. . . . When all, or nearly all, had been sent off from the various points of departure, such of the houses and barns as remained standing were burned, in obedience to the orders of Lawrence, that those who had escaped might be forced to come in and surrender themselves. The whole number removed from the province, men, women, and children, was a little above 6,000. Many remained behind; and while some of these withdrew to Canada, Isle St. Jean, and other distant retreats, the rest lurked in the woods, or returned to their old haunts, whence they waged for several years a guerilla warfare against the English. Yet their strength was broken, and they were no longer a danger to the province. Of their exiled countrymen, one party overpowered the crew of the vessel that carried them, ran her ashore at the mouth of the St. John, and escaped. The rest were distributed among the colonies from Massachusetts to Georgia, the master of each transport having been provided with a letter from Lawrence addressed to the Governor of the province to which he was bound, and desiring him to receive the unwelcome strangers. The provincials were vexed at the burden imposed upon them; and though the Acadians were not in general ill-treated, their lot was a hard one. Still more so was that of those among them who escaped to Canada. . . . Many of the exiles eventually reached Louisiana, where their descendants now form a numerous and distinct population. Some, after incredible hardship, made their way back to Acadia, where, after the peace, they remained unmolested. . . . In one particular the authors of the deportation were disappointed in its results. They had hoped to substitute a loyal population for a disaffected

one; but they failed for some time to find settlers for the vacated lands. . . . New England humanitarianism, melting into sentimentality at a tale of woe, has been unjust to its own. Whatever judgment may be passed on the cruel measure of wholesale expatriation, it was not put in execution till every resource of patience and persuasion had been tried in vain."—F. Parkman, *Montcalm and Wolfe, v.* 1, *ch.* 8.—"The removal of the French Acadians from their homes was one of the saddest episodes in modern history, and no one now will attempt to justify it; but it should be added that the genius of our great poet [Longfellow in 'Evangeline'] has thrown a somewhat false and distorted light over the character of the victims. They were not the peaceful and simple-hearted people they are commonly supposed to have been; and their houses, as we learn from contemporary evidence, were by no means the picturesque, vine-clad, and strongly built cottages described by the poet. The people were notably quarrelsome among themselves, and to the last degree superstitious. They were wholly under the influence of priests appointed by the French bishops. . . . Even in periods when France and England were at peace, the French Acadians were a source of perpetual danger to the English colonists. Their claim to a qualified allegiance was one which no nation then or now could sanction. But all this does not justify their expulsion in the manner in which it was executed."—C. C. Smith, *The Wars on the Seaboard* (*Narrative and Critical Hist. of Am., v.* 5, *ch.* 7).—"We defy all past history to produce a parallel case, in which an unarmed and peaceable people have suffered to such an extent as did the French Neutrals of Acadia at the hands of the New England troops."—P. H. Smith, *Acadia, p.* 216.

NUMANTIAN WAR, The.—"In 143 B. C. the Celtiberians again appeared in the field [resisting the Romans in Spain]; and when, on the death of Viriathus, D. Junius Brutus had pushed the legions to the Atlantic in 137 B. C., and practically subdued Lusitania, the dying spirit of Spanish independence still held out in the Celtiberian fortress city of Numantia. Perched on a precipitous hill by the banks of the upper Douro, occupied only by eight thousand men, this little place defied the power of Rome as long as Troy defied the Greeks. . . . In 137 B. C. the consul, C. Hostilius Mancinus, was actually hemmed in by a sortie of the garrison, and forced to surrender. He granted conditions of peace to obtain his liberty; but the senate would not ratify them, though the young quæstor, Tiberius Gracchus, who had put his hand to the treaty, pleaded for faith and honour. Mancinus, stripped and with manacles on his hands, was handed over to the Numantines, who, like the Samnite Pontius, after the Caudine Forks, refused to accept him. In 134 B. C. the patience of the Romans was exhausted; Scipio was sent. . . . The mighty destroyer of Carthage drew circumvallations five miles in length around the stubborn rock, and waited for the result. The Virgilian picture of the fall of Troy is not more moving than are the brave and ghastly facts of the fall of Numantia. The market-place was turned into a funeral pyre for the gaunt, famine-stricken citizens to leap upon. . . . When the surrender was made only a handful of men marched out."—R. F. Horton, *Hist. of the Romans, ch.* 18.

B. C. 204.—Alliance with Carthage.—Subjection to Rome. See PUNIC WAR, THE SECOND.

B. C. 118-104.—The Jugurthine War.—The Numidian kingdom, over which the Romans, at the end of the second Punic War, had settled their friend Masinissa, passed at his death to his son Micipsa. In 118 B. C. Micipsa died, leaving two young sons, and also a bastard nephew, Jugurtha, whom he feared. He divided the kingdom between these three, hoping to secure the fidelity of Jugurtha to his sons. It was a policy that failed. Jugurtha made sure of what was given to him, and then grasped at the rest. One of his young cousins was soon cleared from his path by assassination; on the other he opened war. This latter, Adherbal by name, appealed to Rome, but Jugurtha despatched agents with money to bribe the senate, and a commission sent over to divide Numidia gave him the western and better half. The commissioners were no sooner out of Africa than he began war upon Adherbal afresh, shut him up in his strong capital, Cirta [B. C. 112], and placed the city under siege. The Romans again interfered, but, he captured Cirta, notwithstanding, and tortured Adherbal to death. The corrupt party at Rome which Jugurtha kept in his pay made every effort to stifle discussion of his nefarious doings; but one bold tribune, C. Memmius, roused the people on the subject and forced the senate to declare war against him. Jugurtha's gold, however, was still effectual, and it paralyzed the armies sent to Africa, by corrupting the venial officers who commanded them. Once, Jugurtha went to Rome, under a safe conduct, invited to testify as a witness against the men whom he had bribed, but really expecting to be able to further his own cause in the city. He found the people furious against him and he only saved himself from being forced to criminate his Roman senatorial mercenaries by buying a tribune, who brazenly vetoed the examination of the Numidian king. Jugurtha being, then, ordered out of Rome, the war proceeded again, and in 109 B. C. the command passed to an honest general, Q. Metellus, who took with him Caius Marius, the most capable soldier of Rome, whose capability was at that time not half understood. Under Metellus the Romans penetrated Numidia to Zama, but failed to take the town, and narrowly escaped a great disaster on the Muthul, where a serious battle was fought. In 107 B. C. Metellus was superseded by Marius, chosen consul for that year and now really beginning his remarkable career. Meantime Jugurtha had gained an ally in Bocchus, king of Mauretania, and Marius, after two campaigns of doubtful result, found more to hope from diplomacy than from war. With the help of Sulla,—his future great rival—who had lately been sent over to his army, in command of a troop of horse, he persuaded the Mauretanian king to betray Jugurtha into his hands. The dreaded Numidian was taken to Rome [B. C. 104], exhibited in the triumph of Marius, and then brutally thrust into the black dungeon called the Tullianum to die of slow starvation. Bocchus was rewarded for his treachery by the cession to him of part of Numidia; Marius, intoxicated with the plaudits of Rome, first saved it from the Cimbri and then stabbed it with his own sword; Sulla, inexplicable harbinger of the coming Cæsars, bided his time.—W. Ihne, *Hist. of Rome, bk.* 7, *ch.* 8.

NUMIDIANS AND MAURI, The.—"The union of the Aryan invaders [of North Africa] with the ancient populations of the coast sprung from Phut gave birth to the Mauri, or Maurusii, whose primitive name it has been asserted was Medes, probably an alteration of the word Amazigh. The alliance of the same invaders with the Getulians beyond the Atlas produced the Numidians. The Mauri were agriculturists, and of settled habits; the Numidians, as their Greek appellation indicates, led a nomadic life."—F. Lenormant, *Manual of Ancient Hist. of the East, bk.* 6, *ch.* 5 (*v.* 2).—In northern Africa, "on the south and west of the immediate territory of the Carthaginian republic, lived various races of native Libyans who are commonly known by the name of Numidians. But these were in no way, as their Greek name ('Nomads') would seem to imply, exclusively pastoral races. Several districts in their possession, especially in the modern Algeria, were admirably suited for agriculture. Hence they had not only fixed and permanent abodes, but a number of not unimportant cities, of which Hippo and Cirta, the residences of the chief Numidian princes, were the most considerable."—W. Ihne, *Hist. of Rome, bk.* 4, *ch.* 1 (*v.* 2).—The various peoples of North Africa known anciently and modernly as Libyans, Numidians, or Nomades, Mauri, Mauritanians or Moors, Gaetulians and Berbers, belong ethnographically to one family of men, distinguished alike from the negroes and the Egyptians.—T. Mommsen, *Hist. of Rome, bk.* 8, *ch.* 13.—See, also, LIBYANS; CARTHAGE: B. C. 146; PUNIC WAR, THE SECOND; and NUMIDIA: B. C. 118–104.

NUREMBERG.—"Nuremberg (Nürnberg) (Norimberga) is situated on the Regnitz, in the centre of Middle Franconia, about 90 miles northwest of Munich, to which it is second in size and importance, with a population of about 90,000. The name is said to be derived from the ancient inhabitants of Noricum, who migrated hither about the year 451, on being driven from their early settlements on the Danube by the Huns. Here they distinguished themselves by their skill in the working of metals, which abound in the neighbouring mountains. Before the eleventh century the history of Nuremberg is enveloped in a mist of impenetrable obscurity, from which it does not emerge until the time of the Emperor Henry III., who issued an edict, dated July 16, 1050, 'ad castrum Noremberc,' a proof that it was a place of considerable impor-

tance even at this early period. Nuremberg afterwards became the favourite residence of the Emperor Henry IV."—W. J. Wyatt, *Hist. of Prussia, v.* 2, *p.* 456.

ŒNOPHYTA, Battle of (B. C. 456). See Greece: B. C. 458–456.

ŒNOTRIANS, The.—"The territory [in Italy] known to Greek writers of the fifth century B. C. by the names of Œnotria on the coast of the Mediterranean, and Italia on that of the Gulfs of Tarentum and Squillace, included all that lies south of a line drawn across the breadth of the country, from the Gulf of Poseidonia (Pæstum) and the river Silarus on the Mediterranean Sea, to the north-west corner of the Gulf of Tarentum. It was bounded northwards by the Iapygians and Messapians, who occupied the Salentine peninsula and the country immediately adjoining to Tarentum, and by the Peuketians on the Ionic Gulf. . . . This Œnotrian or Pelasgian race were the population whom the Greek colonists found there on their arrival. They were known apparently under other names, such as the Sikels [Sicels], (mentioned even in the Odyssey, though their exact locality in that poem cannot be ascertained) the Italians, or Itali, properly so called—the Morgetes,—and the Chaones,—all of them names of tribes either cognate or subdivisional. The Chaones or Chaonians are also found, not only in Italy, but in Epirus, as one of the most considerable of the Epirotic tribes. . . . From hence, and from some other similarities of name, it has been imagined that Epirots, Œnotrians, Sikels, &c., were all names of cognate people, and all entitled to be comprehended under the generic appellation of Pelasgi. That they belonged to the same ethnical kindred there seems fair reason to presume, and also that in point of language, manners, and character, they were not very widely separated from the ruder branches of the Hellenic race. It would appear, too (as far as any judgment can be formed on a point essentially obscure) that the Œnotrians were ethnically akin to the primitive population of Rome and Latium on one side, as they were to the Epirots on the other; and that tribes of this race, comprising Sikels and Itali properly so called, as sections, had at one time occupied most of the territory from the left bank of the river Tiber southward between the Appenines and the Mediterranean."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22.

OGDEN TRACT, The. See New York: A. D. 1786–1799.

OGHAM INSCRIPTIONS.—"In the south and south-western counties of Ireland are to be found, in considerable numbers, a class of inscribed monuments, to which the attention of Irish archæologists has been from time to time directed, but with comparatively little result. . . . They [the inscriptions] are found engraved on pillar stones in that archaic character known to Irish philologists as the Ogham, properly pronounced Oum, and in an ancient dialect of the Gaedhelic (Gaelic). These monuments are almost exclusively found in the counties of Kerry, Cork, and Waterford, numbering, as far as I have been able to ascertain, 147; the rest of Ireland supplies 13. . . . Again it is worthy of remark, that while 29 Irish counties cannot boast of an Ogham monument, they have been found in England, Wales, and Scotland. In Devonshire, at Fardel, a stone has been discovered bearing not only a fine and well-preserved Ogham inscription, but also one in Romano-British letters. It is now deposited in the British Museum. . . . The Ogham letters, as found on Megalithic monuments, are formed by certain combinations of a simple short line, placed in reference to one continuous line, called the fleasg, or stem line; these combinations range from one to five, and their values depend upon their being placed above, across, or below the stem line; there are five consonants above, five consonants below, and five consonants across the line, two of which, NG and ST are double, and scarcely ever used. The vowels are represented by oval dots, or very short lines across the stem line. . . . The characters in general use on the monuments are 18 in number. . . . It may be expected from me that I should offer some conjecture as to the probable age of this mode of writing. This, I honestly acknowledge, I am unable to do, even approximately. . . . I am however decided in one view, and it is this, that the Ogham was introduced into Ireland long anterior to Christianity, by a powerful colony who landed on the south-west coast, who spread themselves along the southern and round the eastern shores, who ultimately conquered or settled the whole island, imposing their language upon the aborigines, if such preceded them."—R. R. Brash, *Trans. Int. Cong. of Prehistoric Archæology*, 1868.

OHIO: The Name.—"The words Ohio, Ontario, and Onontio (or Yonnondio)—which should properly be pronounced as if written 'Oheeyo,' 'Ontareeyo,' and 'Ononteeyo'—are commonly rendered 'Beautiful River,' 'Beautiful Lake,' 'Beautiful Mountain.' This, doubtless, is the meaning which each of the words conveys to an Iroquois of the present day, unless he belongs to the Tuscarora tribe. But there can be no doubt that the termination 'Io' (otherwise written 'iyo,' 'iio,' 'eeyo,' etc.) had originally

the sense, not of 'beautiful,' but of 'great.' . . . Ontario is derived from the Huron 'yontare,' or 'ontare,' lake (Iroquois, 'oniatare'), with this termination. . . . Ohio, in like manner, is derived, as M. Cuoq in the valuable notes to his Lexicon (p. 159) informs us, from the obsolete 'ohia,' river, now only used in the compound form 'ohionha.'"—H. Hale, *The Iroquois Book of Rites, app., note B.*

(Valley): The aboriginal inhabitants. See AMERICA, PREHISTORIC; AMERICAN ABORIGINES: ALGONQUIAN FAMILY, ALLEGHANS, DELAWARES, SHAWANESE.

(Valley): A. D. 1700-1735.—The beginnings of French Occupation. See CANADA: A. D. 1700–1735.

(Valley): A. D. 1748-1754.—The first movements of the struggle of French and English for possession.—"The close of King George's War was marked by an extraordinary development of interest in the Western country. The Pennsylvanians and Virginians had worked their way well up to the eastern foot-hills of the last range of mountains separating them from the interior. Even the Connecticut men were ready to overleap the province of New York and take possession of the Susquehanna. The time for the English colonists to attempt the Great Mountains in force had been long in coming, but it had plainly arrived. In 1748 the Ingles-Draper settlement, the first regular settlement of English-speaking men on the Western waters, was made at 'Draper's Meadow,' on the New River, a branch of the Kanawha. The same year Dr. Thomas Walker, accompanied by a number of Virginia gentlemen and a party of hunters, made their way by Southwestern Virginia into Kentucky and Tennessee. . . . The same year the Ohio company, consisting of thirteen prominent Virginians and Marylanders, and one London merchant, was formed. Its avowed objects were to speculate in Western lands, and to carry on trade on an extensive scale with the Indians. It does not appear to have contemplated the settlement of a new colony. The company obtained from the crown a conditional grant of 500,000 acres of land in the Ohio Valley, to be located mainly between the Monongahela and Kanawha Rivers, and it ordered large shipments of goods for the Indian trade from London. . . . In 1750 the company sent Christopher Gist, a veteran woodsman and trader living on the Yadkin, down the northern side of the Ohio, with instructions, as Mr. Bancroft summarizes them, 'to examine the Western country as far as the Falls of the Ohio; to look for a large tract of good level land; to mark the passes in the mountains; to trace the courses of the rivers; to count the falls; to observe the strength of the Indian nations.' Under these instructions, Gist made the first English exploration of Southern Ohio of which we have any report. The next year he made a similar exploration of the country south of the Ohio, as far as the Great Kanawha. . . . Gist's reports of his explorations added to the growing interest in the over-mountain country. At that time the Ohio Valley was waste and unoccupied, save by the savages, but adventurous traders, mostly Scotch-Irish, and commonly men of reckless character and loose morals, made trading excursions as far as the River Miami. The Indian town of Pickawillany, on the upper waters of that stream, became a great centre of English trade and influence. Another evidence of the growing interest in the West is the fact that the colonial authorities, in every direction, were seeking to obtain Indian titles to the Western lands, and to bind the Indians to the English by treaties. The Iroquois had long claimed, by right of conquest, the country from the Cumberland Mountains to the Lower Lakes and the Mississippi, and for many years the authorities of New York had been steadily seeking to gain a firm treaty-hold of that country. In 1684, the Iroquois, at Albany, placed themselves under the protection of King Charles and the Duke of York [see NEW YORK: A. D. 1684]; in 1726, they conveyed all their lands in trust to England [see NEW YORK: A. D. 1726], to be protected and defended by his Majesty to and for the use of the grantors and their heirs, which was an acknowledgment by the Indians of what the French had acknowledged thirteen years before at Utrecht. In 1744, the very year that King George's War began, the deputies of the Iroquois at Lancaster, Pa., confirmed to Maryland the lands within that province, and made to Virginia a deed that covered the whole West as effectually as the Virginian interpretation of the charter of 1609 [see VIRGINIA: A. D. 1744]. . . . This treaty is of the greatest importance in subsequent history; it is the starting-point of later negotiations with the Indians concerning Western lands. It gave the English their first real treaty-hold upon the West; and it stands in all the statements of the English claim to the Western country, side by side with the Cabot voyages. . . . There was, indeed, no small amount of dissension among the colonies, and it must not be supposed that they were all working together to effect a common purpose. The royal governors could not agree. There were bitter dissensions between governors and assemblies. Colony was jealous of colony. . . . Fortunately, the cause of England and the colonies was not abandoned to politicians. The time had come for the Anglo-Saxon column, that had been so long in reaching them, to pass the Endless Mountains; and the logic of events swept everything into the Westward current. In the years following the treaty of Aix-la-Chapelle the French were not idle. Galissonière, the governor of Canada, thoroughly comprehended what was at stake. In 1749 he sent Cèloron de Bienville into the Ohio Valley, with a suitable escort of whites and savages, to take formal possession of the valley in the name of the King of France, to propitiate the Indians, and in all ways short of actual warfare to thwart the English plans. Bienville crossed the portage from Lake Erie to Lake Chautauqua, the easternmost of the portages from the Lakes to the southern streams ever used by the French, and made his way by the Alleghany River and the Ohio as far as the Miami, and returned by the Maumee and Lake Erie to Montreal. His report to the governor was anything but reassuring. He found the English traders swarming in the valley, and the Indians generally well disposed to the English. Nor did French interests improve the two or three succeeding years. The Marquis Duquesne, who succeeded Galissonière, soon discovered the drift of events. He saw the necessity of action; he was clothed with power to act, and he was a man of action. And so, early in the year 1753, while the English governors and assemblies were still hesitating and disputing, he sent a strong

force by Lake Ontario and Niagara to seize and hold the northeastern branches of the Ohio. This was a master stroke: unless recalled, it would lead to war; and Duquesne was not the man to recall it. This force, passing over the portage between Presque Isle and French Creek, constructed Forts Le Bœuf and Venango, the second at the confluence of French Creek and the Alleghany River."—B. A. Hinsdale, *The Old Northwest, ch.* 5.

Also in: J. H. Perkins, *Annals of the West, ch.* 2.—B. Fernow, *The Ohio Valley in Colonial Days, ch.* 5.—See, also, Canada: A. D. 1750–1753.—O. H. Marshall, *De Celoron's Expedition to the Ohio in* 1749 (*Hist. Writings, pp.* 237–274).—N. B. Craig, *The Olden Time, v.* 1, *pp.* 1–10.

(Valley): A. D. 1754.—The opening battle.—Washington's first campaign.—The planting of the French at Forts Le Bœuf and Venango "put them during high water in easy communication by boat with the Alleghany River. French tact conciliated the Indians, and where that failed arrogance was sufficient, and the expedition would have pushed on to found new forts, but sickness weakened the men, and Marin, the commander, now dying, saw it was all he could do to hold the two forts, while he sent the rest of his force back to Montreal to recuperate. Late in the autumn Legardeur de Saint-Pierre arrived at Le Bœuf, as the successor of Marin. He had not been long there when on the 11th of December [1753] a messenger from Governor Dinwiddie, of Virginia, with a small escort, presented himself at the fort. The guide of the party was Christopher Gist; the messenger was George Washington, then adjutant-general of the Virginia militia. Their business was to inform the French commander that he was building forts on English territory, and that he would do well to depart peaceably. . . . At Le Bœuf Washington tarried three days, during which Saint-Pierre framed his reply, which was in effect that he must hold his post, while Dinwiddie's letter was sent to the French commander at Quebec. It was the middle of February, 1754, when Washington reached Williamsburg on his return, and made his report to Dinwiddie. The result was that Dinwiddie drafted 200 men from the Virginia militia, and despatched them under Washington to build a fort at the forks of the Ohio. The Virginia assembly, forgetting for the moment its quarrel with the governor, voted £10,000 to be expended, but only under the direction of a committee of its own. Dinwiddie found difficulty in getting the other colonies to assist, and the Quaker element in Pennsylvania prevented that colony from being the immediate helper which it might, from its position, have become. Meanwhile some backwoodsmen had been pushed over the mountains and had set to work on a fort at the forks. A much larger French force under Contrecœur soon summoned them, and the English retired. The French immediately began the erection of Fort Duquesne [on the site now covered by the city of Pittsburgh]. While this was doing, Dinwiddie was toiling with tardy assemblies and their agents to organize a regiment to support the backwoodsmen. Joshua Fry was to be its colonel, with Washington as second in command. The latter, with a portion of the men, had already pushed forward to Will's Creek, the present Cumberland. Later he advanced with 150 men to Great Meadows, where he learned that the French, who had been reinforced, had sent out a party from their new fort, marching towards him. Again he got word from an Indian — who, from his tributary character towards the Iroquois, was called Half-King, and who had been Washington's companion on his trip to Le Bœuf — that this chieftain with some followers had tracked two men to a dark glen, where he believed the French party were lurking. Washington started with forty men to join Half-King, and under his guidance they approached the glen and found the French. Shots were exchanged. The French leader, Jumonville, was killed, and all but one of his followers were taken or slain. The mission of Jumonville was to scour for English, by order of Contrecœur, now in command of Duquesne, and to bear a summons to any he could find, warning them to retire from French territory. The precipitancy of Washington's attack gave the French the chance to impute to Washington the crime of assassination; but it seems to have been a pretence on the part of the French to cover a purpose which Jumonville had of summoning aid from Duquesne, while his concealment was intended to shield him till its arrival. Rash or otherwise, this onset of the youthful Washington began the war. The English returned to Great Meadows, and while waiting for reinforcements from Fry, Washington threw up some entrenchments, which he called Fort Necessity. The men from Fry came without their leader, who had sickened and died, and Washington, succeeding to the command of the regiment, found himself at the head of 300 men, increased soon by an independent company from South Carolina. Washington again advanced toward Gist's settlement, when, fearing an attack, he sent back for Mackay, whom he had left with a company of regulars at Fort Necessity. Rumors thickening of an advance of the French, the English leader again fell back to Great Meadows, resolved to fight there. It was now the first of July, 1754. Coulon de Villiers, a brother of Jumonville, was now advancing from Duquesne. The attack was made on a rainy day, and for much of the time a thick mist hung between the combatants. After dark a parley resulted in Washington's accepting terms offered by the French, and the English marched out with the honors of war. The young Virginian now led his weary followers back to Will's Creek. . . . Thus they turned their backs upon the great valley, in which not an English flag now waved."—J. Winsor, *The Struggle for the Great Valleys of N. Am.* (*Narrative and Critical Hist. of Am., v.* 5, *ch.* 8).

(Valley): A. D. 1755.—Braddock's defeat.—The French possess the West and devastate the English frontiers.—"Now the English Government awoke to the necessity of vigorous measures to rescue the endangered Valley of the Ohio. A campaign was planned which was to expel the French from Ohio, and wrest from them some portions of their Canadian territory. The execution of this great design was intrusted to General Braddock, with a force which it was deemed would overbear all resistance. Braddock was a veteran who had seen the wars of

forty years. . . . He was a brave and experienced soldier, and a likely man, it was thought, to do the work assigned to him. But that proved a sad miscalculation. Braddock had learned the rules of war; but he had no capacity to comprehend its principles. In the pathless forests of America he could do nothing better than strive to give literal effect to those maxims which he had found applicable in the well-trodden battle-grounds of Europe. The failure of Washington in his first campaign had not deprived him of public confidence. Braddock heard such accounts of his efficiency that he invited him to join his staff. Washington, eager to efface the memory of his defeat, gladly accepted the offer. The troops disembarked at Alexandria. . . . After some delay, the army, with such reinforcements as the province afforded, began its march. Braddock's object was to reach Fort Du Quesne, the great centre of French influence on the Ohio. . . . Fort Du Quesne had been built [or begun] by the English, and taken from them by the French. It stood at the confluence of the Alleghany and Monongahela; which rivers, by their union at this point, form the Ohio. It was a rude piece of fortification, but the circumstances admitted of no better. . . . Braddock had no doubt that the fort would yield to him directly he showed himself before it. Benjamin Franklin looked at the project with his shrewd, cynical eye. He told Braddock that he would assuredly take the fort if he could only reach it; but that the long slender line which his army must form in its march 'would be cut like thread into several pieces' by the hostile Indians. Braddock 'smiled at his ignorance.' Benjamin offered no further opinion. It was his duty to collect horses and carriages for the use of the expedition, and he did what was required of him in silence. The expedition crept slowly forward, never achieving more than three or four miles in a day; stopping, as Washington said, 'to level every mole-hill, to erect a bridge over every brook.' It left Alexandria on the 20th April. On the 9th July Braddock, with half his army, was near the fort. There was yet no evidence that resistance was intended. No enemy had been seen; the troops marched on as to assured victory. So confident was their chief that he refused to employ scouts, and did not deign to inquire what enemy might be lurking near. The march was along a road twelve feet wide, in a ravine, with high ground in front and on both sides. Suddenly the Indian war-whoop burst from the woods. A murderous fire smote down the troops. The provincials, not unused to this description of warfare, sheltered themselves behind trees and fought with steady courage. Braddock, clinging to his old rules, strove to maintain his order of battle on the open ground. A carnage, most grim and lamentable, was the result. His undefended soldiers were shot down by an unseen foe. For three hours the struggle lasted; then the men broke and fled in utter rout and panic. Braddock, vainly fighting, fell mortally wounded, and was carried off the field by some of his soldiers. The poor pedantic man never got over his astonishment at a defeat so inconsistent with the established rules of war. 'Who would have thought it?' he murmured, as they bore him from the field. He scarcely spoke again, and died in two or three days. Nearly 800 men, killed and wounded, were lost in this disastrous encounter —about one-half of the entire force engaged. All the while England and France were nominally at peace. But now war was declared."—R. Mackenzie, *America: a history, bk.* 2, *ch.* 3. —"The news of the defeat caused a great revulsion of feeling. The highest hopes had been built on Braddock's expedition. . . . From this height of expectation men were suddenly plunged into the yawning gulf of gloom and alarm. The whole frontier lay exposed to the hatchet and the torch of the remorseless red man. . . . The apprehensions of the border settlers were soon fully justified. Dumas, who shortly succeeded de Contrecœur in the command at Fort Duquesne, set vigorously to work to put the Indians on the war-path against the defenceless settlements. 'M. de Contrecœur had not been gone a week,' he writes, 'before I had six or seven different war parties in the field at once, always accompanied by Frenchmen. Thus far, we have lost only two officers and a few soldiers; but the Indian villages are full of prisoners of every age and sex. The enemy has lost far more since the battle than on the day of his defeat.' All along the frontier the murderous work went on."—T. J. Chapman, *The French in the Allegheny Valley, pp.* 71–73.

(Valley): A. D. 1774.—Lord Dunmore's War with the Indians.—The territorial claims of Virginia.—The wrongs of Logan and his famous speech.—"On the eve of the Revolution, in 1774, the frontiersmen had planted themselves firmly among the Alleghanies. Directly west of them lay the untenanted wilderness, traversed only by the war parties of the red men, and the hunting parties of both reds and whites. No settlers had yet penetrated it, and until they did so there could be within its borders no chance of race warfare. . . . But in the southwest and the northwest alike, the area of settlement already touched the home lands of the tribes. . . . It was in the northwest that the danger of collision was most imminent; for there the whites and Indians had wronged one another for a generation, and their interests were, at the time, clashing more directly than ever. Much the greater part of the western frontier was held or claimed by Virginia, whose royal governor was, at the time, Lord Dunmore. . . . The

short but fierce and eventful struggle that now broke out was fought wholly by Virginians, and was generally known by the name of Lord Dunmore's war. Virginia, under her charter, claimed that her boundaries ran across to the South Seas, to the Pacific Ocean. The king of Britain had graciously granted her the right to take so much of the continent as lay within these lines, provided she could win it from the Indians, French, and Spaniards. . . . A number of grants had been made with the like large liberality, and it was found that they sometimes conflicted with one another. The consequence was that while the boundaries were well marked near the coast, where they separated Virginia from the long-settled regions of Maryland and North Carolina, they became exceeding vague and indefinite the moment they touched the mountains. Even at the south this produced confusion, . . . but at the north the effect was still more confusing, and nearly resulted in bringing about an intercolonial war between Pennsylvania and Virginia. The Virginians claimed all of extreme western Pennsylvania, especially Fort Pitt and the valley of the Monongahela, and, in 1774, proceeded boldly to exercise jurisdiction therein. Indeed a strong party among the settlers favored the Virginian claim. . . . The interests of the Virginians and Pennsylvanians not only conflicted in respect to the ownership of the land, but also in respect to the policy to be pursued regarding the Indians. The former were armed colonists, whose interest it was to get actual possession of the soil; whereas in Pennsylvania the Indian trade was very important and lucrative. . . . The interests of the white trader from Pennsylvania and of the white settler from Virginia were so far from being identical that they were usually diametrically opposite. The northwestern Indians had been nominally at peace with the whites for ten years, since the close of Bouquet's campaign. . . . Each of the ten years of nominal peace saw plenty of bloodshed. Recently they had been seriously alarmed by the tendency of the whites to encroach on the great hunting-grounds south of the Ohio. . . . The cession by the Iroquois of the same hunting-grounds, at the treaty of Fort Stanwix [see UNITED STATES OF AM.: A. D. 1765–1768], while it gave the whites a colorable title, merely angered the northwestern Indians. Half a century earlier they would hardly have dared dispute the power of the Six Nations to do what they chose with any land that could be reached by their war parties; but in 1774 they felt quite able to hold their own against their old oppressors. . . . The savages grew continually more hostile, and in the fall of 1773 their attacks became so frequent that it was evident a general outbreak was at hand. . . . The Shawnees were the leaders in all these outrages; but the outlaw bands, such as the Mingos and Cherokees, were as bad, and parties of Wyandots and Delawares, as well as of the various Miami and Wabash tribes, joined them. Thus the spring of 1774 opened with everything ripe for an explosion. . . . The borderers were anxious for a war; and Lord Dunmore was not inclined to baulk them. . . . Unfortunately the first stroke fell on friendly Indians." Dunmore's agent or lieutenant in the country, one Dr. Conolly, issued an open letter in April which was received by the backwoodsmen as a declaration and authorization of war. One band of these, led by a Maryland borderer, Michael Cresap, proceeded to hostilities at once by ambushing and shooting down some friendly Shawnees who were engaged in trade. This same party then set out to attack the camp of the famous chief Logan, whose family and followers were then dwelling at Yellow Creek, some 50 miles away. Logan was "an Iroquois warrior, who lived at that time away from the bulk of his people, but who was a man of note . . . among the outlying parties of Senecas and Mingos, and the fragments of broken tribes that dwelt along the upper Ohio. . . . He was greatly liked and respected by all the white hunters and frontiersmen whose friendship and respect were worth having; they admired him for his dexterity and prowess, and they loved him for his straightforward honesty, and his noble loyalty to his friends." Cresap's party, after going some miles toward Logan's camp, "began to feel ashamed of their mission; calling a halt, they discussed the fact that the camp they were preparing to attack consisted exclusively of friendly Indians, and mainly of women and children; and forthwith abandoned their proposed trip and returned home. . . . But Logan's people did not profit by Cresap's change of heart. On the last day of April a small party of men, women, and children, including almost all of Logan's kin, left his camp and crossed the river to visit Greathouse [another borderer, of a more brutal type], as had been their custom; for he made a trade of selling rum to the savages, though Cresap had notified him to stop. The whole party were plied with liquor, and became helplessly drunk, in which condition Greathouse and his associated criminals fell on and massacred them, nine souls in all. . . . At once the frontier was in a blaze, and the Indians girded themselves for revenge. . . . They confused the two massacres, attributing both to Cresap, whom they well knew as a warrior. . . . Soon all the back country was involved in the unspeakable horrors of a bloody Indian war," which lasted, however, only till the following October. Governor Dunmore, during the summer, collected some 3,000 men, one division of which he led personally to Fort Pitt and thence down the Ohio, accomplishing nothing of importance. The other division, composed exclusively of backwoodsmen, under General Andrew Lewis, marched to the mouth of the Kanawha River, and there, at Point Pleasant, the cape of land jutting out between the Ohio and the Kanawha, they fought, on the 10th of October, a great battle with the Indians which practically ended the war. This is sometimes called the battle of Point Pleasant, and sometimes the battle of the Great Kanawha. "It was the most closely contested of any battle ever fought with the northwestern Indians; and it was the only victory gained over a large body of them by a force but slightly superior in numbers. . . . Its results were most important. It kept the northwestern tribes quiet for the first two years of the Revolutionary struggle; and above all it rendered possible the settlement of Kentucky, and therefore the winning of the West. Had it not been for Lord Dunmore's War, it is more than likely that when the colonies achieved their freedom they would have found their western boundary fixed at the Alleghany Mountains." For some time after peace had been made with the

other chiefs Logan would not join in it. When he did yield a sullen assent, Lord Dunmore "was obliged to communicate with him through a messenger, a frontier veteran named John Gibson. . . . To this messenger Logan was willing to talk. Taking him aside, he suddenly addressed him in a speech that will always retain its place as perhaps the finest outburst of savage eloquence of which we have any authentic record. The messenger took it down in writing, translating it literally." The authenticity of this famous speech of Logan has been much questioned, but apparently with no good ground.—T. (Valley): A. D. 1786-1796.—Western Reserve of Connecticut.—Founding of Cleveland.—In September, 1786, Connecticut ceded to Congress the western territory which she claimed under her charter (see United States of Am.: A. D. 1781–1786; and Pennsylvania: A. D. 1753–1799), reserving, however, from the cession a tract "bounded north by the line of 42° 2′, or, rather, the international line, east by the western boundary of Pennsylvania, south by the 41st parallel, and west by a line parallel with the eastern boundary and distant from it 120 miles—supposed, at the time, to be equal in extent to the Susquehanna tract given to Pennsylvania, 1782. . . . This territory Connecticut was said 'to reserve,' and it soon came to be called 'The Connecticut Western Reserve,' 'The Western Reserve,' etc. . . . On May 11, 1792, the General Assembly quit-claimed to the inhabitants of several Connecticut towns who had lost property in consequence of the incursions into the State made by the British troops in the Revolution, or their legal representatives when they were dead, and to their heirs and assigns, forever, 500,000 acres lying across the western end of the reserve, bounded north by the lake shore. . . . The total number of sufferers, as reported, was 1,870, and the aggregate losses, £161,548, 11s., 6½d. The grant was of the soil only. These lands are known in Connecticut history as 'The Sufferers' Lands,' in Ohio history as 'The Fire Lands.' In 1796 the Sufferers were incorporated in Connecticut, and in 1803 in Ohio, under the title 'The Proprietors of the Half-million Acres of Land lying south of Lake Erie.' . . . In May, 1793, the Connecticut Assembly offered the remaining part of the Reserve for sale." In September, 1795, the whole tract was sold, without survey or measurement, for $1,200,000, and the Connecticut School Fund, which amounts to something more than two millions of dollars, consists wholly of the proceeds of that sale, with capitalized interest. "The purchasers of the Reserve, most of them belonging to Connecticut, but some to Massachusetts and New York, were men desirous of trying their fortunes in Western lands. Oliver Phelps, perhaps the greatest land-speculator of the time, was at their head. September 5, 1795, they adopted articles of agreement and association, constituting themselves the Connecticut Land Company. The company was never incorporated, but was what is called to-day a 'syndicate.'" In the spring of 1796 the company sent out a party of surveyors, in charge of its agent, General Moses Cleaveland, who reached "the mouth of the Cuyahoga River, July 22d, from which day there have always been white men on the site of the city that takes its name from him." In 1830 the spelling of the name of the infant city was changed from Cleaveland to Cleveland by the printer of its first newspaper, who found that the superfluous "a" made a heading too long for his form, and therefore dropped it out.—B. OLYMPIADS, The Era of the.—"The Era of the Olympiads, so called from its having originated from the Olympic games, which occurred every fifth year at Olympia, a city in Elis, is the most ancient and celebrated method of computing time. It was first instituted in the 776th year before the birth of our Saviour, and consisted of a revolution of four years. The first year of Jesus Christ is usually considered to correspond with the first year of the 195th olympiad; but as the years of the olympiads commenced at the full moon next after the summer solstice, i. e., about the first of July, . . . it must be understood that it corresponds only with the six last months of the 195th olympiad. . . . Each year of an olympiad was luni-solar, and contained 12 or 13 months, the names of which varied in the different states of Greece. The months consisted of 30 and 29 days alternately; and the short year consequently contained 354 days, while the intercalary year had 384. The computation by olympiads . . . ceased after the 304th olympiad, in the year of Christ 440."—Sir H. Nicolas, *Chronology of History, pp.* 1–2.

OLYMPIC GAMES.—"The character of a national institution, which the Amphictyonic council affected, but never really acquired, more truly belonged to the public festivals, which, though celebrated within certain districts, were not peculiar to any tribe, but were open and common to all who could prove their Hellenic blood. The most important of these festivals was that which was solemnized every fifth year on the banks of the Alpheus, in the territory of Elis; it lasted four days, and, from Olympia, the scene of its celebration, derived the name of the Olympic contest, or games, and the period itself which intervened between its returns was called an olympiad. The origin of this institution is involved in some obscurity, partly by the lapse of time, and partly by the ambition of the Eleans to exaggerate its antiquity and sanctity. . . . Though, however, the legends fabricated or adopted by the Eleans to magnify the antiquity and glory of the games deserve little attention, there can be no doubt that, from very early times, Olympia had been a site hallowed by religion, and it is highly probable that festivals of a nature similar to that which afterwards became permanent had been occasionally celebrated in the sanctuary of Jupiter. . . . Olympia, not so much a town as a precinct occupied by a great number of sacred and public buildings, originally lay in the territory of Pisa, which, for two centuries after the beginning of the olympiads, was never completely subject to Elis, and occasionally appeared as her rival, and excluded her from all share in the presidency of the games.

. . . It is probable that the northern Greeks were not at first either consulted or expected to take any share in the festival; and that, though never expressly confined to certain tribes, in the manner of an Amphictyonic congress, it gradually enlarged the sphere of its fame and attraction till it came to embrace the whole nation. The sacred truce was proclaimed by officers sent round by the Eleans: it put a stop to warfare, from the time of the proclamation, for a period sufficient to enable strangers to return home in safety. During this period the territory of Elis itself was of course regarded as inviolable, and no armed force could traverse it without incurring the penalty of sacrilege. . . . It [the festival] was very early frequented by spectators, not only from all parts of Greece itself, but from the Greek colonies in Europe, Africa, and Asia; and this assemblage was not brought together by the mere fortuitous impulse of private interest or curiosity, but was in part composed of deputations which were sent by most cities as to a religious solemnity, and were considered as guests of the Olympian god. The immediate object of the meeting was the exhibition of various trials of strength and skill, which, from time to time, were multiplied so as to include almost every mode of displaying bodily activity. They included races on foot and with horses and chariots; contests in leaping, throwing, wrestling, and boxing; and some in which several of the exercises were combined; but no combats with any kind of weapon. The equestrian contests, particularly that of the four-horsed chariots, were, by their nature, confined to the wealthy; and princes and nobles vied with each other in such demonstrations of their opulence. But the greater part were open to the poorest Greek, and were not on that account the lower in public estimation. . . . In the games described by Homer valuable prizes were proposed, and this practice was once universal; but, after the seventh olympiad, a simple garland, of leaves of the wild olive, was substituted at Olympia, as the only meed of victory. The main spring of emulation was undoubtedly the celebrity of the festival and the presence of so vast a multitude of spectators, who were soon to spread the fame of the successful athletes to the extremity of the Grecian world. . . . The Altis, as the ground consecrated to the games was called at Olympia, was adorned with numberless statues of the victors, erected, with the permission of the Eleans, by themselves or their families, or at the expense of their fellow citizens. It was also usual to celebrate the joyful event, both at Olympia and at the victor's home, by a triumphal procession, in which his praises were sung, and were commonly associated with the glory of his ancestors and his country. The most eminent poets willingly lent their aid on such occasions, especially to the rich and great. And thus it happened that sports, not essentially different from those of our village greens, gave birth to masterpieces of sculpture, and called forth the sublimest strains of the lyric muse. . . . Viewed merely as a spectacle designed for public amusement, and indicating the taste of the people, the Olympic games might justly claim to be ranked far above all similar exhibitions of other nations. It could only be for the sake of a contrast, by which their general purity, innocence, and humanity would be placed in the strongest light, that they could be compared with the bloody sports of a Roman or a Spanish amphitheatre, and the tournaments of our chivalrous ancestors, examined by their side, would appear little better than barbarous shows."—C. Thirlwall, *Hist. of Greece, ch.* 10.

OLYMPIUM AT ATHENS, The.—The building of a great temple to Jupiter Olympius was begun at Athens by Peisistratus as early as 530 B. C. Republican Athens refused to carry on a work which would be associated with the hateful memory of the tyrant, and it stood untouched until B. C. 174, when Antiochus Epiphanes employed a Roman architect to proceed with it. He, in turn, left it still unfinished, to be afterwards resumed by Augustus, and completed at last by Hadrian, 650 years after the foundations were laid.—W. M. Leake, *Topography of Athens, v.* 1, *app.* 10.

OLYMPUS.—The name Olympus was given by the Greeks to a number of mountains and mountain ranges; but the one Olympus which impressed itself most upon their imaginations, and which seemed to be the home of their gods, was the lofty height that terminates the Cambunian range of mountains at the east and forms part of the boundary between Thessaly and Macedonia. Its elevation is nearly 10,000 feet above the level of the sea and all travelers have seemed to be affected by the peculiar grandeur of its aspect. Other mountains called Olympus were in Elis, near Olympia, where the great games were celebrated, and in Laconia, near Sellasia. There was also an Olympus in the island of Cyprus, and two in Asia Minor, one in Lycia, and a range in Mysia, separating Bithynia from Galatia and Phrygia. See Thessaly, and Dorians and Ionians.

ON.—"A solitary obelisk of red granite, set up at least 4,000 years ago, alone marks the site of On, also called the City of the Sun, in Hebrew Beth-shemesh, in Greek Heliopolis. Nothing else can be seen of the splendid shrine and the renowned university which were the former glories of the place. . . . The university to which the wise men of Greece resorted perished when a new centre of knowledge was founded in the Greek city of Alexandria. . . . It was during the temporary independence of the country under native kings, after the first Persian rule, that Plato the philosopher and Eudoxus

the mathematician studied at Heliopolis. . . . The civil name of the town was An, the Hebrew On, the sacred name Pe-Ra, the 'Abode of the Sun.'"—R. S. Poole, *Cities of Egypt, ch.* 9.—The site of On, or Heliopolis, is near Cairo.

OPHIR, Land of.—The geographical situation of the land called Ophir in the Bible has been the subject of much controversy. Many recent historians accept, as "conclusively demonstrated," the opinion reached by Lassen in his Indische Alterthumskunde, that the true Ophir of antiquity was the country of Abhira, near the mouths of the Indus, not far from the present province of Guzerat. But some who accept Abhira as being the original Ophir conjecture that the name was extended in use to southern Arabia, where the products of the Indian Ophir were marketed.

OPPIAN LAW, The.—A law passed at Rome during the second Punic War (3d century, B. C.), forbidding any woman to wear a gay-colored dress, or more than half an ounce of gold ornament, and prohibiting the use of a car drawn by horses within a mile of any city or town. It was repealed B. C. 194.—H. G. Liddell, *Hist. of Rome, bk.* 4, *ch.* 3 (*v.* 1).

Also in: R. F. Horton, *Hist. of the Romans, ch.* 16.

OPPIDUM.—Among the Gauls and the Britons a town, or a fortified place, was called an oppidum. As Cæsar explained the term, speaking of the oppidum of Cassivellaunus, in Britain, it signified a "stockade or enclosed space in the midst of a forest, where they took refuge with their flocks and herds in case of an invasion."—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 19, *note E* (*v.* 2).

Also in: Cæsar, *Gallic War, bk.* 5, *ch.* 21.

OPTIMATES.—"New names came into fashion [in Rome], but it is difficult to say when they were first used. We may probably refer the origin of them to the time of the Gracchi [B. C. 133–121]. One party was designated by the name of Optimates, 'the class of the best.' The name shows that it must have been invented by the 'best,' for the people would certainly not have given it to them. We may easily guess who were the Optimates. They were the rich and powerful, who ruled by intimidation, intrigue, and bribery, who bought the votes of the people and sold their interests. . . . Opposed to the Optimates were the Populares."—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 20.—See Rome: B. C. 159–133.

ORACLES OF THE GREEKS.—"Wherever the worship of Apollo had fixed its roots, there were sibyls and prophets; for Apollo is nowhere conceivable without the beneficent light of prophecy streaming out from his abode. The happy situation and moral significance of leading colleges of priests procured a peculiar authority for individual oracles. Among these are the Lycian Patara, the Thymbræan oracle near Troja (to which belongs Cassandra, the most famed of Apollo's prophetesses), the Gryneum on Lesbos, the Clarian oracle near Colophon, and finally the most important of all the oracles of Asia Minor, the Didymæum near Miletus, where the family of the Branchidæ held the prophetic office as a hereditary honorary right. Delos connects the Apolline stations on the two opposite sides of the water: here, too, was a primitive oracle, where Anius, the son of Apollo, was celebrated as the founder of a priestly family of soothsayers. . . . The sanctuaries of Ismenian Apollo in Thebes were founded, the Ptoïum on the hill which separates the Hylian plain of the sea from the Copæic, and in Phocis the oracle of Abæ. The reason why the fame of all these celebrated seats of Apollo was obscured by that of Delphi lies in a series of exceptional and extraordinary circumstances by which this place was qualified to become a centre, not only of the lands in its immediate neighbourhood, like the other oracles, but of the whole nation. . . . With all the more important sanctuaries there was connected a comprehensive financial administration, it being the duty of the priests, by shrewd management, by sharing in profitable undertakings, by advantageous leases, by lending money, to increase the annual revenues. . . . There were no places of greater security, and they were, therefore, used by States as well as by private persons as places of deposit for their valuable documents, such as wills, compacts, bonds, or ready money. By this means the sanctuary entered into business relations with all parts of the Greek world, which brought it gain and influence. The oracles became money-institutions, which took the place of public banks. . . . It was by their acquiring, in addition to the authority of religious holiness, and the superior weight of mental culture, that power which was attainable by means of personal relations of the most comprehensive sort, as well as through great pecuniary means and national credit, that it was possible for the oracle-priests to gain so comprehensive an influence upon all Grecian affairs. . . . With the extension of colonies the priests' knowledge of the world increased, and with this the commanding eminence of the oracle-god. . . . The oracles were in every respect not only the provident eye, not only the religious conscience, of the Greek nation, but they were also its memory."—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 4.—"The

sites selected for these oracles were generally marked by some physical property, which fitted them to be the scenes of such miraculous manifestations. They were in a volcanic region, where gas escaping from a fissure in the earth might be inhaled, and the consequent exhilaration or ecstacy, partly real and partly imaginary, was a divine inspiration. At the Pythian oracle in Delphi there was thought to be such an exhalation. Others have supposed that the priests possessed the secret of manufacturing an exhilarating gas. . . . In each of the oracular temples of Apollo, the officiating functionary was a woman, probably chosen on account of her nervous temperament; — at first young, but, a love affair having happened, it was decided that no one under fifty should be eligible to the office. The priestess sat upon a tripod, placed over the chasm in the centre of the temple."—C. C. Felton, *Greece, Ancient and Modern, c.* 2, *lect.* 9.

ORANGE, The Principality.—"The little, but wealthy and delicious, tract of land, of which Orange is the capital, being about four miles in length and as many in breadth, lies in the Comté Venaissin, bordering upon that of Avignon, within a small distance of the Rhone; and made no inconsiderable part of that ancient and famous Kingdom of Arles which was established by Boso towards the end of the 9th century [see BURGUNDY: A. D. 888–1032; and 1032]. . . . In the beginning of the 9th century, historians tell us of one William, sirnamed Cornet, of uncertain extraction, sovereign of this State, and highly esteemed by the great Emperor Charlemagne, whose vassal he then was. Upon failure of the male descendants of this prince in the person of Rambald IV., who died in the 13th century, his lands devolved to Tiburga, great aunt to the said Rambald, who brought them in marriage to Bertrand II. of the illustrious house of Baux. These were common ancestors to Raymond V., father to Mary, with whom John IV. of Chalon contracted an alliance in 1386; and it was from them that descended in a direct male line the brave Philibert of Chalon, who, after many signal services rendered the Emperor Charles V., as at the taking of Rome more particularly, had the misfortune to be slain, leaving behind him no issue, in a little skirmish at Pistoya, while he had the command of the siege before Florence. Philibert had one only sister, named Claudia, whose education was at the French court," where, in 1515, she married Henry, of Nassau, whereby the principality passed to that house which was made most illustrious, in the next generation, by William the Silent, Prince of Orange. The Dutch stadtholders retained the title of Princes of Orange until William III. Louis XIV. seized the principality in 1672, but it was restored to the House of Nassau by the Peace of Ryswick (see FRANCE: A. D. 1697). On the death of William III. it was declared to be forfeited to the French crown, and was bestowed on the Prince of Conti; but the king of Prussia, who claimed it, was permitted, under the Treaty of Utrecht, to bear the title, without possession of the domain (see UTRECHT: A. D. 1712–1714).—J. Breval, *Hist. of the House of Nassau.*

ORDEAL, The.—"During the full fervor of the belief that the Divine interposition could at all times be had for the asking, almost any form of procedure, conducted under priestly observances, could assume the position and influence of an ordeal. As early as 592, we find Gregory the Great alluding to a simple purgatorial oath, taken by a Bishop on the relics of St. Peter, in terms which convey evidently the idea that the accused, if guilty, had exposed himself to imminent danger, and that by performing the ceremony unharmed he had sufficiently proved his innocence. But such unsubstantial refinements were not sufficient for the vulgar, who craved the evidence of their senses, and desired material proof to rebut material accusations. In ordinary practice, therefore, the principal modes by which the will of Heaven was ascertained were the ordeal of fire, whether administered directly, or through the agency of boiling water or red-hot iron; that of cold water; of bread or cheese; of the Eucharist; of the cross; the lot; and the touching of the body of the victim in cases of murder. Some of these, it will be seen, required a miraculous interposition to save the accused;

others to condemn; some depended altogether on volition, others on the purest chance; while others, again, derived their power from the influence exerted on the mind of the patient. They were all accompanied with solemn religious observances. . . . The ordeal of boiling water ('æneum,' 'judicium aquæ ferventis,' 'cacabus,' 'caldaria') is probably the oldest form in which the application of fire was judicially administered in Europe as a mode of proof. . . . A caldron of water was brought to the boiling point, and the accused was obliged with his naked hand to find a small stone or ring thrown into it; sometimes the latter portion was omitted, and the hand was simply inserted, in trivial cases to the wrist, in crimes of magnitude to the elbow, the former being termed the single, the latter the triple ordeal. . . . The cold-water ordeal ('judicium aquæ frigidæ') differed from most of its congeners in requiring a miracle to convict the accused, as in the natural order of things he escaped. . . . The basis of this ordeal was the superstitious belief that the pure element would not receive into its bosom any one stained with the crime of a false oath."—H. C. Lea, *Superstition and Force, ch.* 3.—See, also, Law, Criminal: A. D. 1198–1199.

A. D. 1844-1846.—The Boundary dispute with Great Britain and its settlement.—"The territory along the Pacific coast lying between California on the south and Alaska on the north — Oregon as it was comprehensively called — had been a source of dispute for some time between the United States and Great Britain. After some negotiations both had agreed with Russia to recognize the line of 54° 40′ as the southern boundary of the latter's possessions; and Mexico's undisputed possession of California gave an equally well marked southern limit, at the 42d parallel. All between was in dispute. The British had trading posts at the mouth of the Columbia, which they emphatically asserted to be theirs; we, on the other hand, claimed an absolutely clear title up to the 49th parallel, a couple of hundred miles north of the mouth of the Columbia, and asserted that for all the balance of the territory up to the Russian possessions our title was at any rate better than that of the British. In 1818 a treaty had been made providing for the joint occupation of the territory by the two powers, as neither was willing to give up its claim to the whole, or at the time at all understood the value of the possession, then entirely unpeopled. This treaty of joint occupancy had remained in force ever since. Under it the British had built great trading stations, and used the whole country in the interests of certain fur companies. The Americans, in spite of some vain efforts, were unable to compete with them in this line; but, what was infinitely more important, had begun, even prior to 1840, to establish actual settlers along the banks of the rivers, some missionaries being the first to come in. . . . The aspect of affairs was totally changed when in 1842 [1843] a huge caravan of over 1000 Americans made the journey from the frontiers of Missouri [under the lead of Dr. Marcus Whitman, a missionary and physician who had braved the perils and hardships of a winter journey from the Columbia River to Washington, in order to waken the country to a sense of the danger of losing Oregon, if settlers were not pushed forward without delay to occupy it]. . . . The next year 2000 more settlers of the same sort in their turn crossed the vast plains, wound their way among the Rocky Mountains, through the pass explored by Fremont, . . . and descended the western slope of the great water-shed to join their fellows by the banks of the Columbia. When American settlers were once in actual possession of the disputed territory, it became evident that the period of Great Britain's undisputed sway was over. . . . Tyler's administration did not wish to embroil itself with England; so it refused any aid to the settlers, and declined to give them grants of land, as under the joint occupancy treaty that would have given England offense and cause for complaint. But Benton and the other Westerners were perfectly willing to offend England, if by so doing they could help America to obtain Oregon, and were too rash and headstrong to count the cost of their actions. Accordingly, a bill was introduced providing for the settlement of Oregon, and giving each settler 640 acres, and additional land if he had a family. . . . It passed the Senate by a close vote, but failed in the House. . . . The unsuccessful attempts made by Benton and his supporters, to persuade the Senate to pass a resolution, requiring that notice of the termination of the joint occupancy treaty should forthwith be given, were certainly ill-advised. However, even Benton was not willing to go to the length to which certain Western men went, who insisted upon all or nothing. . . . He sympathized with the effort made by Calhoun while secretary of state to get the British to accept the line of 49° as the frontier; but the British government then rejected this proposition. In 1844 the Democrats made their campaign upon the issue of 'fifty-four forty or fight'; and Polk, when elected, felt

obliged to insist upon this campaign boundary. To this, however, Great Britain naturally would not consent; it was, indeed, idle to expect her to do so, unless things should be kept as they were until a fairly large American population had grown up along the Pacific coast, and had thus put her in a position where she could hardly do anything else. Polk's administration was neither capable nor warlike, however well disposed to bluster; and the secretary of state, the timid, shifty, and selfish politician, Buchanan, naturally fond of facing both ways, was the last man to wish to force a quarrel on a high-spirited and determined antagonist like England. Accordingly, he made up his mind to back down and try for the line of 49°, as proposed by Calhoun, when in Tyler's cabinet; and the English, for all their affected indifference, had been so much impressed by the warlike demonstrations in the United States, that they in turn were delighted . . . ; accordingly they withdrew their former pretensions to the Columbia River and accepted [June 15, 1846] the offered compromise."—T. Roosevelt, *Life of Thomas H. Benton, ch.* 12.

Also in: T. H. Benton, *Thirty Years' View, v.* 2, *ch.* 143, *and* 156–159.—*Treaties and Conv's between the U. S. and other countries (ed. of* 1889), *p.* 438.—W. Barrows, *Oregon.*

A. D. 1859.—Admission into the Union, with a constitution excluding free people of color.—"The fact that the barbarism of slavery was not confined to the slave States had many illustrations. Among them, that afforded by Oregon was a signal example. In 1857 she formed a constitution, and applied for admission into the Union. Though the constitution was in form free, it was very thoroughly imbued with the spirit of slavery; and though four fifths of the votes cast were for the rejection of slavery, there were seven eighths for an article excluding entirely free people of color. As their leaders were mainly proslavery, it is probable that the reason why they excluded slavery from the constitution was their fear of defeat in their application for admission. . . . On the 11th of February, 1859, Mr. Stephens reported from the Committee on Territories a bill for the admission of Oregon as a State. A minority report, signed by Grow, Granger, and Knapp, was also presented, protesting against its admission with a constitution so discriminating against color. The proposition led to an earnest debate;" but the bill admitting Oregon prevailed, by a vote of 114 to 103 in the House and 35 to 17 in the Senate.—H. Wilson, *Hist. of the Rise and Fall of the Slave Power, v.* 2, *ch.* 49.

A. D. 1429.—Deliverance by Joan of Arc.—In the summer of 1428 the English, under the Duke of Bedford, having maintained and extended the conquests of Henry V., were masters of nearly the whole of France north of the Loire. The city of Orleans, however, on the north bank of that river, was still held by the French, and its reduction was determined upon. The siege began in October, and after some months of vigorous operations there seemed to be no doubt that the hard-pressed city must succumb. It was then that Joan of Arc, known afterwards as the Maid of Orleans, appeared, and by the confidence she inspired drove the English from the field. They raised the siege on the 12th of May, 1429, and lost ground in France from that day.—Monstrelet, *Chronicles, bk.* 2, *ch.* 52–60.—See France: A. D. 1429–1431.

OSRHOËNE, OR OSROËNE.—A small principality or petty kingdom surrounding the city of Edessa, its capital, in northwestern Mesopotamia. It appears to have acquired its name and some little importance during the period of Parthian supremacy. It was a prince of Osrhoëne who betrayed the ill-fated army of Crassus to the Parthians at Carrhæ. In the reign of Caracalla Osrhoëne was made a Roman province. Edessa, the capital, claimed great antiquity, but is believed to have been really founded by Seleucus. During the first ten or eleven centuries of the Christian era Edessa was a city of superior importance in the eastern world, under dependent kings or princes of its own. It was especially noted for its schools of theology.—G. Rawlinson, *Sixth Great Oriental Monarchy, ch.* 11.

OSTIA.—Ostia, the ancient port of Rome, at the mouth of the Tiber, was regarded as a suburb of the city and had no independent existence. Its inhabitants were Roman citizens. In time, the maintaining of a harbor at Ostia was found to be impracticable, owing to deposits of silt from the Tiber, and artificial harbors were constructed by the emperors Claudius, Nero and Trajan, about two miles to the north of Ostia. They were known by the names Portus Augusti and Portus Trajani. In the 12th century the port and channel of Ostia were partially restored, for a time, but only to be abandoned again. The ancient city is now represented by a small hamlet, about two miles from the sea shore.—R. Burn, *Rome and the Campagna, ch.* 14.

OSTRACH, Battle of (1799). See FRANCE: A. D. 1798–1799 (AUGUST—APRIL).

OSTRACISM.—"The state [Athens] required means of legally removing persons who, by an excess of influence and adherents, virtually put an end to the equality among the citizens established by law, and thus threatened the state with a revival of party-rule. For this purpose, in the days of Clisthenes, and probably under his influence, the institution of ostracism, or judgment by potsherds, was established. By virtue of it the people were themselves to protect civic equality, and by a public vote remove from among them whoever seemed dangerous to them. For such a sentence, however, besides a public preliminary discussion, the unanimous vote of six thousand citizens was required. The honour and property of the exile remained untouched, and the banishment itself was only pronounced for a term of ten years."—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 2 (*v.* 1).—"The procedure [in ostracism] was as follows:—Every year, in the sixth or seventh Prytany, the question was put to the people whether it desired ostracism to be put in force or not. Hereupon of course orators came forward to support or oppose the proposal. The former they could only do by designating particular persons as sources of impending danger to freedom, or of confusion and injury to the commonwealth; in opposition to them, on the other side, the persons thus designated, and any one besides who desired it, were of course free to deny the danger, and to show that the anxiety was unfounded. If the people decided in favour of putting the ostracism in force, a day was appointed on which it was to take place. On this day the people assembled at the market, where an enclosure was erected with ten different entrances and accordingly, it is probable, the same number of divisions for the several Phylæ. Every citizen entitled to a vote wrote the name of the person he desired to have banished from the state upon a potsherd. . . . At one of the ten entrances the potsherds were put into the hands

of the magistrates posted there, the Prytanes and the nine Archons, and when the voting was completed were counted one by one. The man whose name was found written on at least six thousand potsherds was obliged to leave the country within ten days at latest."—G. F. Schömann, *Antiquities of Greece, pt.* 3, *ch.* 3.

OTTAWA, Canada: The founding of the City.—"In 1826 the village of Bytown, now Ottawa, the capital of the Dominion of Canada, was founded. The origin of this beautiful city was this: Colonel By, an officer of the Royal Engineers, came to survey the country with a view of making a canal to connect the tidal waters of the St. Lawrence with the great lakes of Canada. After various explorations, an inland route up the Ottawa to the Rideau affluent, and thence by a ship canal to Kingston on Lake Ontario, was chosen. Colonel By made his headquarters where the proposed canal was to descend, by eight locks, a steep declivity of 90 feet to the Ottawa River. 'The spot itself was wonderfully beautiful.' . . . It was the centre of a vast lumber-trade, and had expanded by 1858 to a large town."—W. P. Greswell, *Hist. of the Dominion of Canada, p.* 168.

OUDE, OR OUDH.—"Before the British settler had established himself on the peninsula of India, Oude was a province of the Mogul Empire. When that empire was distracted and weakened by the invasion of Nadir Shah [see India: A. D. 1662–1748], the treachery of the servant was turned against the master, and little by little the Governor began to govern for himself. But holding only an official, though an hereditary title, he still acknowledged his vassalage; and long after the Great Mogul had shrivelled into a pensioner and pageant, the Newab-Wuzeer of Oude was nominally his minister. Of the earliest history of British connexion with the Court of the Wuzeer, it is not necessary to write in detail. There is nothing less creditable in the annals of the rise and progress of the British power in the East. The Newab had territory; the Newab had subjects; the Newab had neighbours; more than all, the Newab had money. But although he possessed in abundance the raw material of soldiers, he had not been able to organise an army sufficient for all the external and

internal requirements of the State, and so he was fain to avail himself of the superior military skill and discipline of the white men, and to hire British battalions to do his work. . . . In truth it was a vicious system, one that can hardly be too severely condemned. By it we established a Double Government of the worst kind. The Political and Military government was in the hands of the Company; the internal administration of the Oude territories still rested with the Newab-Wuzeer. In other words, hedged in and protected by the British battalions, a bad race of Eastern Princes were suffered to do, or not to do, what they liked. . . . Every new year saw the unhappy country lapsing into worse disorder, with less disposition, as time advanced, on the part of the local Government to remedy the evils beneath which it was groaning. Advice, protestation, remonstrance were in vain. Lord Cornwallis advised, protested, remonstrated: Sir John Shore advised, protested, remonstrated. At last a statesman of a very different temper appeared upon the scene. Lord Wellesley was a despot in every pulse of his heart. But he was a despot of the right kind; for he was a man of consummate vigour and ability, and he seldom made a mistake. The condition of Oude soon attracted his attention; not because its government was bad and its people were wretched, but because that country might either be a bulwark of safety to our own dominions, or a sea of danger which might overflow and destroy us. . . . It was sound policy to render Oude powerful for good and powerless for evil. To the accomplishment of this it was necessary that large bodies of ill-disciplined and irregularly paid native troops in the service of the Newab-Wuzeer — lawless bands that had been a terror alike to him and to his people — should be forthwith disbanded, and that British troops should occupy their place. . . . The additional burden to be imposed upon Oude was little less than half a million of money, and the unfortunate Wuzeer, whose resources had been strained to the utmost to pay the previous subsidy, declared his inability to meet any further demands on his treasury. This was what Lord Wellesley expected — nay, more, it was what he wanted. If the Wuzeer could not pay in money, he could pay in money's worth. He had rich lands that might be ceded in perpetuity to the Company for the punctual payment of the subsidy. So the Governor-General prepared a treaty ceding the required provinces, and with a formidable array of British troops at his call, dragooned the Wuzeer into sullen submission to the will of the English Sultan. The new treaty was signed; and districts then yielding a million and a half of money, and now nearly double that amount of annual revenue, passed under the administration of the British Government. Now, this treaty — the last ever ratified between the two Governments — bound the Newab-Wuzeer to 'establish in his reserved dominions such a system of administration, to be carried on by his own officers, as should be conducive to the prosperity of his subjects, and be calculated to secure the lives and properties of the inhabitants,' and he undertook at the same time 'always to advise with and to act in conformity to the counsels of the officers of the East India Company.' But the English ruler knew well that there was small hope of these conditions being fulfilled. . . . Whilst the counsels of our British officers did nothing for the people, the bayonets of our British soldiers restrained them from doing anything for themselves. Thus matters grew from bad to worse, and from worse to worst. One Governor-General followed another; one Resident followed another; one Wuzeer followed another; but still the great tide of evil increased in volume, in darkness, and in depth. But, although the Newab-Wuzeers of Oude were, doubtless, bad rulers and bad men, it must be admitted that they were good allies. . . . They supplied our armies, in time of war, with grain; they supplied us with carriage-cattle; better still, they supplied us with cash. There was money in the Treasury of Lucknow, when there was none in the Treasury of Calcutta; and the time came when the Wuzeer's cash was needed by the British ruler. Engaged in an extensive and costly war, Lord Hastings wanted more millions for the prosecution of his great enterprises. They were forthcoming at the right time; and the British Government were not unwilling in exchange to bestow both titles and territories on the Wuzeer. The times were propitious. The successful close of the Nepaul war placed at our disposal an unhealthy and impracticable tract of country at the foot of the Hills. This 'terai' ceded to us by the Nepaulese was sold for a million of money to the Wuzeer, to whose domains it was contiguous, and he himself expanded and bloomed into a King under the fostering sun of British favour and affection."— J. W. Kaye, *Hist. of the Sepoy War in India, ch.* 3 (*v.* 1).—"By Lord Wellesley's treaty with the then Nawab-Vizier of Oude, that prince had agreed to introduce into his then remaining territories, such a system of administration as should be conducive to the prosperity of his subjects, and to the security of the lives and property of the inhabitants; and always to advise with, and act in conformity to the counsel of, the officers of the Company's Government. Advantage had been taken of this clause, from time to time, to remonstrate with the Oude princes on their misgovernment. I have no doubt that the charges to this effect were in great measure correct. The house of Oude has never been remarkable for peculiar beneficence as governors. A work lately published, the 'Private Life of an Eastern King,' affords, I suppose, a true picture of what they may have been as men. Still, the charges against them came, for the most part, from interested lips. . . . Certain it is that all disinterested English observers — Bishop Heber, for instance — entering Oude fresh from Calcutta, and with their ears full of the current English talk about its miseries, were surprised to find a well-cultivated country, a manly and independent people. . . . Under Lord Dalhousie's rule, however, and after the proclamation of his annexation policy, complaints of Oude misgovernment became — at Calcutta — louder and louder. Within Oude itself, these complaints were met, and in part justified, by a rising Moslem fanaticism. Towards the middle of 1855, a sanguinary affray took place at Lucknow" between Hindoos and Mussulmans, "in which the King took part with his co-religionists, against the advice of Colonel Outram, the then Resident. Already British troops near Lucknow were held in readiness to act; already the newspapers were openly speculating on immediate annexation. . . . At Fyzabad, new disturbances broke out between Hindoos and Moslems. The

former were victorious. A Moolavee, or doctor, of high repute, named Ameer Alee, proclaimed the holy war. Troops were ordered against him. . . . The talk of annexation grew riper and riper. The Indian Government assembled 16,000 men at Cawnpore. For months the Indian papers had been computing what revenue Oude yielded to its native prince — what revenue it might yield under the Company's management. Lord Dalhousie's successor, Lord Canning, was already at Bombay. But the former seems to have been anxious to secure for himself the glory of this step. The plea — the sole plea — for annexation, was maltreatment of their people by the Kings of Oude. . . . The King had been warned by Lord William Bentinck, by Lord Hardinge. He had declined to sign a new treaty, vesting the government of his country exclusively in the East India Company. He was now to be deposed; and all who withheld obedience to the Governor-General's mandate were to be rebels (7th February, 1856). The King followed the example of Pertaub Shean of Sattara — withdrew his guns, disarmed his troops, shut up his palace. Thus we entered into possession of 24,000 square miles of territory, with 3,000,000 to 4,000,000 inhabitants, yielding £1,000,000 of revenue. But it was expected by officials that it could be made to yield £1,500,000 of surplus. Can you wonder that it was annexed?"— J. M. Ludlow, *British India, pt.* 2, *lect.* 15 (*v.* 2).

OXFORD, Provisions of.—A system or constitution of government secured in 1258 by the English barons, under the lead of Earl Simon de Montfort. The king, Henry III., "was again and again forced to swear to it, and to proclaim it throughout the country. The special grievances of the barons were met by a set of ordinances called the Provisions of Westminster, which were produced after some trouble in October 1259."—W. Stubbs, *The Early Plantagenets, p.* 190.— The new constitution was nominally in force for nearly six years, repeatedly violated and repeatedly sworn to afresh by the king, civil war being constantly imminent. At length both sides agreed to submit the question of maintaining the Provisions of Oxford to the arbitration of Louis IX. of France, and his decision, called the Mise of Amiens, annulled them completely. De Montfort's party thereupon repudiated the award and the civil war called the "Barons' War" ensued.—C. H. Pearson, *Hist. of Eng. in the Early and Middle Ages, v.* 2, *ch.* 8.

Also in: W. Stubbs, *Select Charters, pt.* 6.— See England: A. D. 1216–1274.

OXFORD, OR TRACTARIAN MOVEMENT, The.—"Never was religion in England so uninteresting as it was in the earlier part of the 19th century. Never was a time when thought was so active, criticism so keen, taste so fastidious; and which so plainly demanded a religion intellectual, sympathetic, and attractive. This want the Tractarian, or Oxford movement, as it is called, attempted to supply. . . . But the Tractarians put before themselves an aim far higher than that. They attempted nothing less than to develope and place on a firm and imperishable basis what Laud and the Non-Jurors had tried tentatively to do; namely, to vindicate the Church of England from all complicity with foreign Protestantism, to establish her essential identity with the Church of the Apostles and Fathers through the mediæval Church, and to place her for the first time since the Reformation in her true position with regard to the Church in the East and the West. . . . Naturally the first work undertaken was the explanation of doctrine. The 'Tracts for the Times,' mainly written by Dr. Newman and Dr. Pusey, put before men what the writers believed to be the doctrine of the Church of England, with a boldness and precision of statement hitherto unexampled. The divine Authority of the Church. Her essential unity in all parts of the world. The effectiveness of regeneration in Holy Baptism. The reality of the presence of our Lord in Holy Communion. The sacrificial character of Holy Communion. The reality of the power to absolve sin committed by our Lord to the priesthood. Such were the doctrines

maintained in the Tractarian writings. . . . They were, of course, directly opposed to the popular Protestantism of the day, as held by the Evangelical party. They were equally opposed to the Latitudinarianism of the Broad Church party, who — true descendants of Tillotson and Burnet — were under the leadership of men like Arnold and Stanley, endeavouring to unite all men against the wickedness of the time on the basis of a common Christian morality under the guardianship of the State, unhampered by distinctive creeds or definite doctrines. No two methods could be more opposite."—H. O. Wakeman, *Hist. of Religion in Eng., ch.* 11.—"The two tasks . . . which the Tractarians set themselves, were to establish first that the authority of the primitive Church resided in the Church of England, and second, that the doctrines of the English Church were really identical with those of pre-Tridentine Christianity. . . . The Tractarians' second object is chiefly recollected because it produced the Tract which brought their series to an abrupt conclusion [1841]. Tract XC. is an elaborate attempt to prove that the articles of the English Church are not inconsistent with the doctrines of mediæval Christianity; that they may be subscribed by those who aim at being Catholic in heart and doctrine. . . . Few books published in the present century have made so great a sensation as this famous Tract. . . . Bagot, Bishop of Oxford, Mr. Newman's own diocesan, asked the author to suppress it. The request placed the author in a singular dilemma. The double object which he had set himself to accomplish became at once impossible. He had laboured to prove that authority resided in the English Church, and authority, in the person of his own diocesan, objected to his interpretation of the articles. For the moment Mr. Newman resolved on a compromise. He did not withdraw Tract XC., but he discontinued the series. . . . The discontinuance of the Tracts, however, did not alter the position of authority. The bishops, one after another, 'began to charge against' the author. Authority, the authority which Mr. Newman had laboured to establish, was shaking off the dust of its feet against him. The attacks of the bishops made Mr. Newman's continuance in the Church of England difficult. But, long before the attack was made, he had regarded his own position with dissatisfaction." It became intolerable to him when, in 1841, a Protestant bishop of Jerusalem was appointed, who exercised authority over both Lutherans and Anglicans. "A communion with Lutherans, Calvinists, and even Monophysites seemed to him an abominable thing, which tended to separate the English Church further and further from Rome. . . . From the hour that the see was established, his own lot was practically decided. For a few years longer he remained in the fold in which he had been reared, but he felt like a dying man. He gradually withdrew from his pastoral duties, and finally [in 1845] entered into communion with Rome. . . . A great movement never perishes for want of a leader. After the secession of Mr. Newman, the control of the movement fell into the hands of Dr. Pusey." —S. Walpole, *Hist. of Eng. from* 1815, *ch.* 21 (*v.* 4).

PACIFIC OCEAN: Its Discovery and its Name.—The first European to reach the shores of the Pacific Ocean was Vasco Nuñez de Balboa, who saw it, from "a peak in Darien" on the 25th of September, 1513 (see America: A. D. 1513–1517). "It was not for some years after this discovery that the name Pacific was applied to any part of the ocean; and for a long time after parts only of it were so termed, this part of it retained the original name of South Sea, so called because it lay to the south of its discoverer. The lettering of the early maps is here significant. All along from this time to the middle of the 17th century, the larger part of the Pacific was labeled 'Oceanus Indicus Orientalis,' or 'Mar del Sur,' the Atlantic, opposite the Isthmus, being called 'Mar del Norte.' Sometimes the reporters called the South Sea 'La Otra Mar,' in contradistinction to the 'Mare Oceanus' of Juan de la Cosa, or the 'Oceanus Occidentalis' of Ptolemy, as the Atlantic was then called. Indeed, the Atlantic was not generally known by that name for some time yet. Schöner, in 1520, terms it, as does Ptolemy in 1513, 'Oceanus Occidentalis'; Grynæus, in 1532, 'Oceanus Magnus'; Apianus, appearing in the Cosmography of 1575, although thought to have been drawn in 1520, 'Mar Atlicum.' Robert Thorne, 1527, in Hakluyt's Voy., writes 'Oceanus Occiden.'; Bordone, 1528, 'Mare Occidentale'; Ptolemy, 1530, 'Occean Occidentalis'; Ramusio, 1565, Viaggi, iii. 455, off Central America, 'Mar del Nort,' and in the great ocean, both north and south, 'Mar Ociano'; Mercator, 1569, north of the tropic of cancer, 'Oceanius Atlanticvs'; Hondius, 1595, 'Mar del Nort'; West-Indische Spieghel, 1624, 'Mar del Nort'; De Laet, 1633, 'Mar del Norte'; Jacob Colon, 1663, 'Mar del Nort'; Ogilby, 1671, 'Oceanus Atlanticum,' 'Mar del Norte,' and 'Oceanus Æthiopicus'; Dampier, 1699, 'the North or Atlantick Sea.' The Portuguese map of 1518, Munich Atlas, iv., is the first upon which I have seen a name applied to the Pacific; and there it is given . . . as 'Mar visto pelos Castelhanos,' Sea seen by the Spaniards. . . . On the globe of Johann Schöner, 1520, the two continents of America are represented with a strait dividing them at the Isthmus. The great island of Zipangri, or Japan, lies about midway

between North America and Asia. North of this island . . . are the words 'Orientalis Oceanus,' and to the same ocean south of the equator the words 'Oceanus Orientalis Indicus' are applied. Diego Homem, 1558, marks out upon his map a large body of water to the north-west of 'Terra de Florida,' and west of Canada, and labels it 'Mare leparamantium.' . . . Colon and Ribero call the South Sea 'Mar del Svr.' In Hakluyt's Voy. we find that Robert Thorne, in 1527, wrote 'Mare Australe.' Ptolemy, in 1530, places near the Straits of Magellan, 'Mare pacificum.' Ramusio, 1565, Viaggi, iii. 455, off Central America, places 'Mar del Sur,' and off the Straits of Magellan, 'Mar Oceano.' Mercator places in his atlas of 1569 plainly, near the Straits of Magellan, 'El Mar Pacifico,' and in the great sea off Central America 'Mar del Zur.' On the map of Hondius, about 1595, in Drake's 'World Encompassed,' the general term 'Mare Pacificvm' is applied to the Pacific Ocean, the words being in large letters extending across the ocean opposite Central America, while under it in smaller letters is 'Mar del Sur.' This clearly restricts the name South Sea to a narrow locality, even at this date. In Hondius' Map, 'Purchas, His Pilgrimes,' iv. 857, the south Pacific is called 'Mare Pacificum,' and the central Pacific 'Mar del Sur.'"—H. H. PADUS, The.—The name by which the river Po was known to the Romans. Dividing Cisalpine Gaul, as the river did, into two parts, they called the northern part Transpadane and the southern part Cispadane Gaul.

PÆANS.—"The pæans [among the ancient Greeks] were songs of which the tune and words expressed courage and confidence. 'All sounds of lamentation,' . . . says Callimachus, 'cease when the Ie Pæan, Ie Pæan, is heard.' . . . Pæans were sung, not only when there was a hope of being able, by the help of the gods, to overcome a great and imminent danger, but when the danger was happily past; they were songs of hope and confidence as well as of thanksgiving for victory and safety."—K. O. Müller, *Hist. of the Literature of Ancient Greece, v.* 1, *p.* 27.

PÆONIANS, The.—"The Pæonians, a numerous and much-divided race, seemingly neither Thracian nor Macedonian nor Illyrian, but professing to be descended from the Teukri of Troy, . . . occupied both banks of the Strymon, from the neighbourhood of Mount Skomius, in which that river rises, down to the lake near its mouth."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 25.

PAINTING, Ancient Egyptian.—"All Egyptian pictures appear to be simple records, . . . and Egyptian painting was accordingly more a symbolic writing than a liberal art—in a word, a coloured hieroglyph. . . . Egyptian painting is undoubtedly an art of great antiquity, and probably as old as any other art practised by the Egyptians, and certainly coeval with their sculpture. . . . Three classes of paintings have been discovered in Egypt,—those on the walls, those on the cases and cloths of mummies, and those on Papyrus rolls: the first class is the most numerous. . . . One striking characteristic is the brightness and purity of their colours. . . . The paintings still extant on the walls of tombs and temples are very numerous."

Greek.—"Few Greek paintings remain to corroborate ancient criticism; . . . on the other hand, the works of ancient writers contain abundant historical information on the subject. . . . Painting was in an apparently advanced state in Asia Minor and in Magna Græcia long before it made any progress in Greece itself. . . . Homer does not mention painting as an imitative art, nor is there in Greek theogony, or hero-worship, any god or hero, or an individual of any kind, who represents the class of painters. . . . Cimon of Cleonæ . . . may perhaps be considered the earliest Greek artist worthy of the name of a painter. He was probably not earlier than Solon, with whom he may have been contemporary." He "is recorded as the inventor of foreshortenings, or the first to make oblique views of the figure, which the Greeks, according to Pliny, termed 'Catagrapha.' He also first made muscular articulations, indicated the veins, and gave natural folds to draperies. . . . The essential development of

painting in Greece must be dated from the arrival of Polygnotus of Thasos, who accompanied Cimon to Athens, probably after his conquest of Thasos, 463 B. C. [see ATHENS: B. C. 466–454]. . . . Polygnotus first raised painting to the dignity of an independent art, and he brought it to that degree that it became the admiration and the wonder of all Greece. . . . About a generation or more subsequent to the arrival of Polygnotus at Athens, and shortly after the death [430 B. C.] of Phidias [the sculptor], dramatic effect was added to the essential style of Polygnotus and his contemporaries. This epoch was brought about chiefly by the efforts of Apollodorus of Athens and Zeuxis of Heraclea. . . . Athens and Sicyon were the great seats of the arts at this time. Apollodorus, who, according to Plutarch, was the inventor of tone, or the first great master of light and shade, was born at Athens, probably about 460. . . . The time of Alexander, or the Alexandrian period, has been termed the period of refinement in painting. The characteristics of the painters of this time were more varieties of effect and execution than any of the essential qualities of art. . . . Pamphilus and Melanthius were distinguished for their effective composition; Apelles for grace or beauty; Protogenes for elaborate execution; Pausias and Nicias excelled in light and shade of various kinds; Euphranor was distinguished for his universal excellence, or what, perhaps, may be termed academic precision. . . . Apelles, the Coryphæus of painters, whose career appears to have been from about 350 to 310 B. C., was, according to Pliny, a native of Cos, or, according to Suidas, of Colophon. . . . Apelles is completely Pliny's hero; yet his great superiority over other painters is asserted, not shown. . . . Painting was said among the Romans to have flourished chiefly during the period of Alexander and his successors; yet during the period of the immediate successors of Alexander a very sensible decay also had taken place in the art. . . . The falling off was not so much in mere technicalities as in the spirit of art; the artists of this day doubtless drew as well and coloured as well as those of the earlier times."

Roman.—"Rome was more distinguished for its collections than for its artists; there was not a single painter of great name, though many Greek artists were assembled at Rome. The destruction of Corinth by Mummius, 146 B. C. [see GREECE: B. C. 280–146], was in the first respect a great event for Rome, for from that time forth, for two or three centuries, Rome almost drained the ancient world of its works of art. . . . The paintings of Pompeii and Herculaneum have incontestably tended rather to lower the reputation of the ancient painters than otherwise, in the estimation of the world generally, though the competent judge will find, upon a judicious examination, the confirmation of ancient criticism in these remains; for they contain many great beauties, especially in composition, though they are evidently the works of the inferior artists of an inferior age. To judge, however, of the ancient masterpieces of art from such specimens, is tantamount to estimating the great works of modern ages by the ordinary patterns on common crockery and French paper-hangings." After Rome, "in consequence of the foundation of Constantinople, and the changes it involved, suffered similar spoliations to those it had previously inflicted upon Greece," there came "the period of the total decay of the imitative arts among the ancients."

Mediæval.—"Ancient art, as distinguished by its characteristics, may perhaps be said to have ceased at about the close of the third century of the Christian era. The establishment of Christianity, the division of the empire, and the incursions of barbarians, were the first great causes of the important revolutions experienced by the imitative arts, and the serious checks they received. It seems, however, to have been reserved for the fanatic fury of the earlier Iconoclasts most effectually to destroy all traces of their former excellence. . . . The early Christians had a decided aversion to all works of imitative art, as essentially conducive to idolatry. . . . It was not for several centuries after the placing of images was tolerated and encouraged by the Roman church that this aversion can have been overcome; and doubtless the very unnatural and purely representative style of design of the early ages of Christian art is due to it. . . . Though painters were doubtless in considerable numbers throughout the whole of the middle ages, the illuminations in MSS. constitute the principal or almost entire remains of actual painting of the period. . . . The great period for manuscript illuminations in the West was apparently the age of Charlemagne, who, as well as his grandson, Charles the Bald, was a great patron of such works of taste. . . . The Anglo-Saxons were long among the best illuminators; and the Irish also were distinguished for their excellence in this department of art."

Renaissance: Italy.—"Whatever were the causes, and they are not obvious, the formative arts made a surprising and comparatively sudden progress in the 13th century. Various promoting causes have been suggested as the source of this improvement; but it was doubtless owing to the combination of many influences. The Latin conquest of Constantinople in 1204, and the greater intercourse generally which then arose between the Italians and the Greeks or Byzantines, appears to have been one of the principal sources of the advancement. . . . The great fact of the revival of art is that it became imitative as well as representative, though in the first two centuries, or before Masaccio, the imitation was as much imaginary as real: the art of looking at Nature had to be learnt before the imitating her could be acquired. . . . Among the modern schools of Italy, the Florentine or Tuscan rather takes the precedence in point of time; not that there were not painters in Venice and Pisa and Siena, as early as at Florence, but it was the earliest school which distinguished itself. Another reason of the prominence of the Florentine school in history is that Vasari, being himself a Florentine, has made his native place conspicuous above all others in his lives of the painters. . . . The first painter of great fame, however, among the moderns, was Giovanni Gualtieri or Cimabue, who was born at Florence in the year 1240. Great prominence is given to the name of Cimabue, through Vasari commencing with him his 'Lives of the most eminent Artists from the revival of Art in Italy;' a distinction which is not justified by any remarkable superiority of his paintings over those of his immediate predecessors, though great improvement is evident in his works. . . . Giotto di Bondone, born at Vespi-

gnano in 1276 . . . is the first modern painter who can be declared free from the superstitious reverence of ancient forms, the trammels of Byzantine or middle-age art, and he surpassed his master Cimabue, as much as Cimabue surpassed those who preceded him. . . . He enriched many of the cities of Italy with his works. . . . But the greater part of his paintings have perished. . . . During the progress of painting in Tuscany, it was making nearly equal advancement in Umbria, in Rome and Venice, and in other parts of Italy. Painting was first developed in the Roman state in the cities of Umbria, Gubbio, Fabriano, Matelica, Borgo San Sepolcro, Urbino, Assisi, and other places. The influence, however, of the Umbrian school, as the early painting of these districts is termed, was extended not only over Romagna, but likewise over Tuscany. . . . It was not until after the time of Giotto, who executed some works in Padua and Verona, that there were any distinguished painters in the Venetian state."—R. N. Wornum, *The Epochs of Painting, ch.* 1-12.—"What . . . Giotto gave to art was, before all things else, vitality. His Madonnas are no longer symbols of a certain phase of pious awe, but pictures of maternal love. The Bride of God suckles her divine infant with a smile, watches him playing with a bird, or stretches out her arms to take him when he turns crying from the hands of the circumcising priest. By choosing incidents like these from real home-life, Giotto, through his painting, humanised the mysteries of faith, and brought them close to common feeling. Nor was the change less in his method than his motives. Before his day painting had been without composition, without charm of colour, without suggestion of movement or the play of living energy. He first knew how to distribute figures in the given space with perfect balance, and how to mass them together in animated groups agreeable to the eye. . . . He never failed to make it manifest that what he meant to represent was living. . . . The birth of Italian painting is closely connected with the religious life of the Italians. The building of the church of S. Francis at Assisi gave it the first great impulse; and to the piety aroused by S. Francis throughout Italy, but mostly in the valleys of the Apennines, it owed its animating spirit in the 14th century. The church of Assisi is double. One structure of nave, and choir, and transept, is imposed upon another; and the walls of both, from floor to coping-stone, are covered with fresco. . . . Many of these frescoes date from years before the birth of Giotto. Giunta the Pisan, Gaddo Gaddi, and Cimabue, are supposed to have worked there, painfully continuing or feebly struggling to throw off the decadent traditions of a dying art. In their school Giotto laboured, and modern painting arose with the movement of new life beneath his brush. . . . Those were noble days, when the painter had literally acres of walls given him to cover; when the whole belief of Christendom, grasped by his own faith, and firmly rooted in the faith of the people round him, as yet unimpaired by alien emanations from the world of classic culture, had to be set forth for the first time in art. His work was then a Bible, a compendium of grave divinity and human history, a book embracing all things needful for the spiritual and the civil life of man. He spoke to men who could not read, for whom there were no printed pages, but whose heart received his teaching through the eye. Thus painting was not then what it is now, a decoration of existence, but a potent and efficient agent in the education of the race. Such opportunities do not occur twice in the same age. Once in Greece for the pagan world; once in Italy for the modern world;—that must suffice for the education of the human race. Like Niccola Pisano, Giotto not only founded a school in his native city, but spread his manner far and wide over Italy, so that the first period of the history of painting is the Giottesque. . . . After the splendid outburst of painting in the first half of the fourteenth century, there came a lull. The thoughts and sentiments of mediæval Italy had been now set forth in art. The sincere and simple style of Giotto was worked out. But the new culture of the Revival had not as yet sufficiently penetrated the Italians for the painters to express it; nor had they mastered the technicalities of their craft in such a manner as to render the delineation of more complex forms of beauty possible. The years between 1400 and 1470 may be roughly marked out as the second period of great activity in painting. . . . The Renaissance, so far as painting is concerned, may be said to have culminated between the years 1470 and 1550. These dates, it must be frankly admitted, are arbitrary; nor is there anything more unprofitable than the attempt to define by strict chronology the moments of an intellectual growth so complex, so unequally progressive, and so varied as that of Italian art. All that the historian can hope to do is to strike a mean between his reckoning of years and his more subtle calculations based on the emergence of decisive genius in special men. . . . Bearing this in mind, it is still possible to regard the 80 years above mentioned as a period no longer of promise and preparation but of fulfilment and accomplishment. Furthermore, the 30 years at the close of the 15th century may be taken as one epoch in this climax of the art, while the first half of the 16th forms a second. Within the former falls the best work of Mantegna, Perugino, Francia, the Bellini, Signorelli, Fra Bartolommeo. To the latter we may reckon Michael Angelo, Raphael, Giorgione, Correggio, Titian, and Andrea del Sarto. Lionardo da Vinci, though belonging chronologically to the former epoch, ranks first among the masters of the latter; and to this also may be given Tintoretto, though his life extended far beyond it to the last years of the century. We thus obtain, within the period of 80 years from 1470 to 1550 two subordinate divisions of time, the one including the last part of the 15th century, the other extending over the best years of the 16th. . . . To Tuscany, to Umbria, and to Venice, roughly speaking, are due the really creative forces of Italian painting; and these three districts were marked by strong peculiarities. In art, as in politics, Florence and Venice exhibit distinct types of character. The Florentines developed fresco, and devoted their genius to the expression of thought by scientific design. The Venetians perfected oil-painting, and set forth the glory of the world as it appeals to the imagination and the senses. . . . More allied to the Tuscan than to the Venetian spirit, the Umbrian masters produced a style of genuine originality. The cities of the Central Apennines owed their specific quality of religious fervour to the influ-

ences emanating from Assisi."—J. A. Symonds, *The Renaissance in Italy, ch.* 4.

German, Flemish and Dutch.—"The consecration of the new cathedral of Cologne in 1322 seems to have given a great impetus to the arts of that place in the 14th century; and no independent school of painters can have been established there before that time. . . . Meister Wilhelm von Coeln, or William of Cologne, is the oldest painter of repute of this school, and the oldest German painter to whom existing pictures of worth are attributed. He lived in the middle and latter part of the 14th century. . . . Another celebrated painter of this school is Meister Stephan, supposed to be the scholar of Meister Wilhelm. Stephan was the painter of the famous Dom-bild, in the Cathedral of Cologne, as Albert Durer informs us in his 'Diary.' He seems to have been Stephan Lochner, or Loethener, as some read the name, a native of Constanz, but settled in Cologne. . . . A much more celebrated school than that of Cologne, and little subsequent to it in point of time, was established by the Van Eycks at Bruges in Flanders, a city which through its connection with the introduction of the new method of oil-painting holds a very prominent position in the history of art. Bruges may be considered the nursery of Flemish art, and it was its geographical capital for a long period, though it was afterwards superseded by Antwerp. . . . Tradition has preserved the names of four members of the Van Eyck family, which however does not appear to have been originally of Flanders, but from the convent to which John's daughter eventually retired, Maaseyck or its neighbourhood, in Limbourg. The names are Hubert, John, Lambert, and Margaret;—we know that three of them were painters, but there is no real evidence that Lambert was of the same profession. John was most probably the youngest of the family. . . . The new method of painting, or rather the new colouring medium discovered by the Van Eycks, has been frequently mentioned. What the method was is not known; but to distinguish it from the common method previously in use, it is sufficiently described by the general though vague term of oil-painting; it was, however, literally varnish painting. Oil-painting, in the strict sense of the term, was neither a mystery nor a novelty in the time of Hubert Van Eyck. . . . Vasari, who is the principal authority for this piece of history, speaks only generally; but yet he is sufficiently particular to explain that the Van Eyck medium was a compound of resins or resin with oils. . . . The great scholar of John Van Eyck was Rogier Vander Weyden, of Brussels, or of Louvain, called by Vasari Rogier of Bruges—Ruggieri da Bruggia. He is termed by the French, Maitre Rogel. . . . Other very distinguished painters of this school were Hans Memling, Hugo Vander Goes, and Gerard Vander Meire. Hans or Jan Memling or Memline, has now a reputation almost rivalling that of John Van Eyck. He was, according to some accounts, the pupil of the elder Vander Weyden; but where or when he was born it is equally uncertain. As he was settled and had property at Bruges, he probably belonged to that city, and he was born somewhere about 1425. . . . This school of art continued in the Netherlands with but little variety until the 16th century, when great changes were effected by the Flemish artists who had studied in Italy, after the production of the great works by Raphael and Michelangelo at Rome. The character of the art of Germany was of a kindred quality, and was in part derived from this early school of the Netherlands."—R. N. Wornum, *The Epochs of Painting, ch.* 14–15.—"The great effect of the mode of representation introduced by the Van Eycks appeared first of all in the adjacent districts of the Lower Rhine. The typical idealism of the Cologne school, which had arrived at such perfection in the works of Meister Stephan, declined and vanished, without leaving a trace, before the brilliant Flemish realism. . . . With far more independence and freedom, the Flemish influence was received by the schools of Upper and Central Germany. They do not so fully abandon the beautiful soft feeling and ideal spirit of the former period, nor do they adopt the same exactness of execution, but by a more middle course they arrive at a thoroughly peculiar style, in which occasionally we find a happy blending of the two fundamental elements. It may have partially contributed to this, that in Swabia, more than elsewhere in the North, extensive wall paintings were executed, many traces of which are to be found in the numerous late Gothic churches of the country. . . . Next to Ulm, the rich and ancient Augsburg was the second central point of Swabian art. We here find in successive generations the painter family Holbein. About the middle of the century, the family begins with a Hans Holbein, the grandfather of the famous later master. . . . His son, Hans Holbein, the elder, who was born about 1460, worked at first in his native city, and subsequently at Basle, whither he was summoned in 1504, and where he died in 1523. . . . Far more important than . . . these is, however, the son of the elder Holbein, Hans Holbein, the younger, one of the greatest and noblest masters of German art. He was born at Augsburg in 1495, worked at Lucerne in 1517, settled at Basle two years subsequently, and was summoned to England in 1526, where, through the influence of Sir Thomas More, he entered the service of King Henry VIII. In the year 1529, he went again to Basle, and spent several years there, engaged, by order of the Council, in the execution of larger works. He then returned to England, where, as has been recently proved, he died in London in 1543. While he is one of the most precocious geniuses of art history—appearing as an able painter at the age of fourteen—he is also among the few masters of the North who evidenced the decided influence of Italian art, and used it with perfect independence. Among the northern painters of that time, he is the only one, Dürer not even excepted, who reached a perfectly free and grand style, freed himself from the petty tastelessness of those around him, and conceived the human figure in its perfect truth and beauty." Contemporary with Holbein, but a little older, was Albert Dürer, born at Nuremberg in 1471. "Albert Dürer, as regards artistic gifts, need fear no comparison with any master in the world, not even with Raphael and Michael Angelo. Notwithstanding, in all that concerns the true means of expressing art, the clothing of the idea in the garment of the exquisite form, he lies so deeply fettered within the bonds of his own limited world, that he rarely rises to the same height of thought and expression." In 1494

Dürer "settled as a painter in his native city. He here worked for ten years, not merely as a painter, but also engaged in extensive works in engraving and woodcuts; until, in 1505, he made a journey to Italy, in which, however, he only became acquainted with Venice, Padua, and Bologna. Towards the end of the following year, he returned to Nuremberg, where, with fresh and restless activity, he executed a countless number of important works, not merely paintings, drawings, engravings, and woodcuts, but even produced excellent carved works in boxwood and steatite. In 1520 he made a second journey, this time to the Netherlands, from whence he returned in the following year. From this period he lived and worked uninterruptedly in his native city until his death in 1528. (He died, like Raphael, on a Good Friday.) In these latter years, besides his artistic works, he produced many scientific works — instructions on geometry, the art of fortification, and the proportions of the human body, thus evidencing his extensive and thorough information. All this astonishing fertility of mind unfolded in him wholly from personal inclination without outward stimulus, and indeed under the pressure of sad domestic circumstances and unfavourable relations of life. Germany had no Julius II. or Leo X., no Medici or Gonzaga, no art-loving aristocracy, no noble-minded governments. . . . Many pupils and imitators followed Dürer. . . . More important than all these imitators is one master, who carried the influence of the Franconian school to Saxony, and during a long and active life stood at the head of an extremely skilful school there. We allude to Lucas Cranach, rightly Lucas Sunder, who was born in a small place in Franconia, and lived from 1472 to 1553. . . . After Cranach, the Saxon school soon relapses into obscurity, and only his son, of the same name, inherits somewhat of his father's fame and art."—W. Lübke, *Hist. of Art, bk.* 4, *ch.* 5 (*v.* 2).—"Antwerp at the beginning of the 16th century occupied the first place as a School of Art in the Netherlands. The founder of this school was Quinten Massijs (1466–1531), usually called Matsys, and sometimes Metsys: he is popularly known as 'the Blacksmith of Antwerp.' Born at Louvain, the son of a locksmith, Quinten Matsys probably worked at first at his father's trade. . . . From the death of . . . Quinten Matsys we may trace the gradual decline of art in the Netherlands. The manly, robust, and realistic style of the Flemish painters . . . was now to be abandoned for the dreams and idealism of Italy. Flemish art ceased to be national, and its painters forsook the delineation of their own homely people, their quaint old-world cities, and their flat landscapes, to struggle after the azure skies and unveiled beauties of the Florentine and Venetian Schools. . . . The commencement of the 17th century witnessed the return of art in the Netherlands to the honest realism of the North, after its long banishment amid the idealism of the South. . . . It required, however, a potent magician to recall the Art of the Netherlands to life, and that magician appeared in the person of Peter Paul Rubens. Few men have led more stirring and successful lives. No painter except Titian was ever so courted by the great and wealthy. Handsome, well-born, fascinating in manner, Rubens succeeded in all which he undertook, and was equally praised as a diplomatist, a courtier, a patron, and a painter. He was essentially a man of the world, and born under a lucky star. His very pictures may be described as worldly, since though by no means irreligious as a man, there is no religion, no spirituality, in his works. . . . Rubens was an almost universal genius in his art, and has left a vast number of pictures dealing with nearly every kind of subject. . . . The great number of works attributed to him would seem almost fabulous, if we did not believe that many of them were really executed under the eye of the master by the pupils who worked from his designs. . . . Antoon van Dijck [or Van Dyck], the greatest of the pupils of Rubens, the son of a merchant of good standing, was born at Antwerp in 1599. At ten years of age he was studying art under Van Balen, and was registered in the Guild as his pupil; from him he proceeded to the studio of Rubens. . . . In 1620 he was engaged as an assistant by Rubens, and in the following year he was in England employed by James I. . . . His first visit to England seems to have been unfruitful, but in 1632 he became one of the court painters of Charles I. . . . Van Dyck died in Blackfriars on the 9th of December in 1641, and was buried hard by the tomb of John of Gaunt in old St. Paul's. . . . As a portrait painter Van Dyck occupies with Titian and Velasquez the first place. In fertility and production he was equal to Rubens, if we remember that his artistic life was very brief, and that he died at the age of 42. He lacked the inexhaustible invention which distinguishes his teacher. . . . David Teniers, the younger, was the third great master of the Netherlands, and the greatest genre painter of his country. He has been called the 'Proteus of painting,' and indeed he ranged through almost every kind of subject, 'from grave to gay, from lively to severe.' . . . Born at Antwerp in 1610, he received his earliest lessons in art from his father. Whether he was a pupil of Rubens is doubtful, but the influence of that master is traceable in the pictures of Teniers. . . . Flemish art, which had rapidly declined after Teniers, and was almost dead at the close of the 17th century, was partly revived by the school of the French painter David. It was not, however, till the beginning of the present century that a true revival took place." — H. J. Wilmot Buxton and E. J. Poynter, *German, Flemish and Dutch Painting, bk.* 2, *ch.* 2–3. — The 17th century found Holland fully entered on a new and fresh political life. "As ecclesiastical tradition had been repressed by the strong Protestantism of the land, art saw itself thrown at first upon the faithful portrayal of reality, which it brought to great perfection, especially in portrait painting. It is not the poetic breath of aristocratic delicacy, as in Van Dyck, nor the agitated life and power of Rubens, but a sober spirit of order and distinctness, a feeling of civil opulence and self-consciousness, which is expressed in the excellent portraits of these Dutch masters. Among the most excellent of them are Franz Hals (1584–1666), and, above all, the justly famed Bartholomaus van der Helst (1613–1670), whose principal works are, the Banquet of the Amsterdam Citizens on the Celebration of the Peace of Westphalia, in the Museum at Amsterdam, and the Judges of the Prizes of the Rifle Band of Amsterdam, in the Louvre. The same starting-

point was taken by the principal master of the Dutch school, Rembrandt van Ryn (1606–1669). There are many portraits belonging to his earlier life, in which, with superior talent, he devoted himself to the simple representation of nature. . . . Subsequently, he was no longer satisfied with this calm, objective mode of representation; a deep, inwardly suppressed, passionate flame urged him to a new style of conception, in which the figures themselves only tended to solve problems of the boldest character; a wonderful perfection of chiaro oscuro, a daring play with fantastic and even glaring effects of light, distinguish his later works. This tendency is, as it were, the expression of a violent protestation against all noble form and cheerful life in the light of day. . . . But, in spite of this want of nobler form and higher expression, his paintings entrance the spectator by their singular charm, by the constraining force of a mind stirred up in its very depths, and by a mysterious poetic power. Rembrandt executed, by preference, Old-Testament subjects, which were, in general, more suitable to the Puritan taste of the period, and in which he could satisfy, by Oriental costume and strong characterisation, the fantastic taste which formed an essential element in his art."—W. Lübke, *Hist. of Art, bk.* 4, *ch.* 6 (*v.* 2).

Spanish.—"The Spanish School of painting appears to have been one of the more recently established of the modern schools of Europe. The characteristic Spanish school has a close connection with the schools of Italy, especially those of Venice and Naples, in style, though its earlier development seems to have been due to the immigration of Flemish artists into Spain. . . . The principal works undertaken in Spain date from the time of Philip II.: they were chiefly executed by Italians, and the principal Spanish painters studied in Italy. . . . The painters of Spain have been classified in three principal schools: . . . they are those of Valencia, Madrid, and Seville. . . . The following are the most important: . . . Antonio del Rincon, Luis de Vargas, Morales, Joánes, Cespedes, Roélas, Ribalta, Pacheco, Alonso Cano, Velazquez, Zurbaran, and Murillo; the others are little known out of Spain. . . . Diego Velazquez de Silva, the head of the school of Madrid, and the prince of Spanish painters, was born at Seville in the spring of 1599. . . . He visited Madrid first in 1622, and was invited back the year afterwards by the Count Duke of Olivares, who procured him then the appointment of painter to Philip IV.; from this time Velazquez was established as a royal favourite. Velazquez being better known than any of the preceding painters, out of Spain, is accordingly better appreciated out of Spain. He visited Italy in 1629, but had formed his style before he went there. He belongs strictly to the naturalist school. . . . Velazquez ranks as a portrait-painter with Titian and Vandyck; and he had besides the great power of objective imitation characteristic of the naturalist school. There is, however, no laboured imitation in the works of Velazquez. . . . Velazquez was a good landscape-painter, but seldom attempted church subjects. . . . Bartolomé Estéban Murillo, born at Seville, and baptized January 1st, 1618, is the best known of all the Spanish masters out of Spain, and belongs to the same naturalist school, . . . though he frequently represented the most exalted subjects. He is sometimes called the Spanish Vandyck; he, however, belonged to a very different school of art from that of Vandyck. He is the great Caposcuola of the school of Seville, and is generally considered the prince of Spanish painters, though he had not the force or readiness of Velazquez: he wants the manly vigour of that great painter. Murillo, having acquired a good knowledge of art from his relative Juan del Castillo at Seville, became in 1642 the pupil of Velazquez at Madrid. . . . His greatest works were executed after he was fifty years of age, being nearly all produced between 1670 and 1680. His earlier works were of the low naturalist type, and commonly of humble subjects: flower-girls, beggar-boys, and the like; his later, much more refined and not less true, were chiefly of a religious character, his favourite subject being Our Lady of the Immaculate Conception, which he often painted, and sometimes with a beauty of composition and sentiment, and a richness and transparency of colouring far exceeding any other Spanish painter."—R. N. Wornum, *The Epochs of Painting, ch.* 29.

French.—"From the time when Charlemagne gathered Byzantine artists round him at Aix-la-Chapelle, to the dawn of the Renaissance, there are evidences of an uninterrupted Art activity in France; but besides that the interest attaching to such efforts is, in many cases, antiquarian rather than artistic, those in which the germs of French painting can be traced were long in assuming any national character. . . . The first gleam of any national character affecting French art appears about the middle of the 12th century, when the rise of the pointed Gothic architecture drove painting from the walls to the windows. Glass painting not only reached its highest perfection in France, but, from its peculiar style, indicated far more surely a future School of Painting than the mural frescoes. . . . The same influences that drove painting from the walls of churches turned the attention of artists during the 13th and 14th centuries to such subjects as retablos and altar-pieces. But these so-called artists do not pre-suppose an improved school of painting. In fact, before the 14th century, painting had no standing as a separate art, but was strictly subordinated to sculpture or architecture. The painter was still merely a decorator. . . . While frescoes and decorative painting supplied only a temporary want, miniature was from the first the real medium for the exercise of whatever artistic zeal existed. . . . It was the Italian wars, begun in 1494 by Charles VIII., that first brought the artistic treasures of Italy prominently before the eyes of the French monarchs, and the real history of French painting begins with those Italian artists who, in the reign of Francis I. (1515–1547), were employed by that prince at Fontainebleau, and formed the school called by that name. . . . At the end of the 16th century, there was a dearth of artists in France, owing to the Civil Wars and the League. . . . The middle of the 17th century was the opening for France of a period of great activity in Art, in which two strongly marked tendencies are apparent. The Italian influence . . . assumed during this time its greatest ascendancy over French painting, but more remarkable was the form impressed on the latter by the peculiar circumstances of the reign of Louis XIV. . . .

Louis encouraged Art sincerely if not altogether wisely, and his example was followed by the nobility. He was ably seconded in this respect by his ministers, Colbert and Louvois, and his favourite painter, Lebrun, and to their efforts were due, at least all the outward and material appliances which could serve to promote the progress of Art. . . . All this fostering care of Art was, however, rendered nugatory, to a great extent, by the prevailing tendencies of the time, which forced every artist to follow in the same groove." Two artists, however, stood "outside the influence of the France of their day, yet sum up in their work the characteristic merits and defects of the French school." These were Nicolas Poussin, "the greatest painter whom France can claim," — a native of Normandy, born in 1594, — and Eustache le Sueur, born at Paris in 1617. "In the extraordinary fertility and variety of his genius Poussin recalls Rubens and Murillo." "Le Sueur has been called the 'French Raphael,' and, although the comparison must not be strained too much, it is not wholly unjust." Distinction in landscape painting was given to France at this time by Claude Gallée, better known as Claude Lorraine. But the painter most distinctly representative of the period was Charles Le Brun, called "the Louis XIV. of Art," who painted with ostentation, on a grand scale, much to the liking of the ostentatious king. He founded the French Academy of Painting and the French School at Rome. Under the Regency, and during the reign of Louis XV., "the deterioration of government and of society found their analogue in the steady decline of painting. . . . The grosser side of this society found . . . artists to portray it; meanwhile its more amiable aspects were seized by Watteau, Lancret and Pater, each of whom brought a special qualification to the task." Watteau "was the only artist who so treated a conventional theme as to idealize it." A better spirit in Art was revived at the epoch of the Revolution, mainly through the influence of Jacques Louis David, born in 1748. "The influence exercised by David was profound, not only in France but in Europe generally. For nearly fifty years it more or less dominated painting." Like Poussin, David "turned for inspiration to pagan models." Among the greater painters of the next generation were Ingres, Delacroix, Scheffer and Delaroche, who "began an impulse which has lasted to the present day. Their methods may now be partially discredited, but to their efforts — ranging in such varied directions, and all having for their object generally to bring back painting from convention to nature — may be traced the independence and variety which now characterize the French school."—G. W. Smith, *Painting, Spanish and French, pp.* 97–212.

English.—"The origin of the English school cannot by any means be alleged to be lost in the mists of antiquity, since it dates only from the second quarter of the 18th century. It was then that English art shook off the German and Flemish yoke which she had borne from the reign of Henry VIII. to that of William III., first under the powerful influence of Holbein, Rubens, and Van Dyck, then under the lesser influence of Peter Lely, and finally of Godfrey Kneller. Since then she has been reclaimed by her own native artists. But if from that date we can point to such true English masters as Reynolds, Gainsborough, Constable, Lawrence, Hogarth, and Wilkie, this is only a passing glimmer, a glorious fire of straw, which was speedily extinguished in the absurd and monstrous Italianism which soon enveloped it and suffocated it to death. No good end is served by recalling the sad names of Benjamin West, Fuseli, James Northcote, John Opie, Benjamin Haydon, James Barry, and of all the moths who burnt their poor wings in the flame of Latin art, blinded themselves there, and then returned, to din into our ears through all the long period of their blindness the Heroics of their hideous nightmare. This long night was only illuminated by the noble talent of David Scott, who died unhonoured in 1849 at the age of 42, and by the genius of J. M. W. Turner, who died on the 19th December, 1851, at the age of 76, alone and uncared for, in a miserable hovel on the Thames near Battersea Bridge. This very year, 1851, was an epoch in the history of the modern English school. . . . Alone or in groups, certain young artists had for some years, amid the nothingness in which the English school was struggling, been attempting a reaction against the Italian turgidity and the academic platitudes of their time. My reader will know that I am here referring to the little band of pre-Raphaelites, to D. G. Rossetti, W. Holman Hunt, J. E. Millais, and their friends, of whom F. Madox Brown, though he took no part in the 'Brotherhood,' was perhaps the most active. In the exhibitions of 1849 the works of the pre-Raphaelites, judged on their own merits and without any reference to their school, had been favourably received by the critics. Afterwards, their society becoming known as well as their principle and motto, 'Truth,' sarcasms and even insults were heaped on the young artists. In 1851 they were in despair, and one of them had decided not to yield, but to expatriate himself, when Mr. Ruskin, the passionate admirer and apologist of Turner, threw himself into the fray, and wrote his celebrated letter to the 'Times.' The cause of truth in Art, and observation in Nature, eloquently pleaded though it was, was not won in a day; but at the first blow of the pick the old stronghold of the Academy was won, opinion veered round in favour of the pre-Raphaelites, and they had each day an increasing public." — E. Chesneau, *The English School of Painting* (*tr. by L. N. Etherington*), *introd.*—"One evening in the year 1848 three young men (one of them Italian by origin, the other two English), fellow-students and friends, as sailors are friends who sail together and can depend on each other, were drinking tea with the rich man of the three. They were turning over a collection of engravings on the table, from the Campo Santo at Pisa. These frescoes were a revelation to them, weary as they all three were of the commonplaces of the schools, and long as they had been in search of a master who would deliver them from impersonal movement, stereotyped gesture, expression transferred from the classic, and weakened with every transfer from the beauty of the original. No doubt thousands of tourists had passed by these frescoes and had not in consequence founded a new school. But such tourists were not possessed by the desire of making a position for themselves apart from the Leslies, the Mulreadys, the Maclises; they were not inspired by the ardour of 'the brave days when we were twenty-one.' These young men

spoke of that simple individual art, free from all studio rules and methods, the art of Benozzo Gozzoli and Orcagna, in which there is only the most scrupulous, the minutest imitation of nature, and the unaffected, limited expression of the religious idea. See how this horse sniffs death; and this hermit, how heartily he is praying. What should the colouring of all this be? Doubtless the crisp, brilliant colour of the Van Eycks and the Francias, laid on with no substratum. Our art is commonplace because it no longer draws its inspiration direct from nature; it lost that long ago. Rubens did not, nor the Caracci, nor even Giulio Romano, nor Raphael himself. To find masters to follow unhesitatingly we must look to art before Raphael, to pre-Raphaelite art. The night wore away, the teacups were emptied; with the last one pre-Raphaelitism was born. These three companions were Dante Gabriel Rossetti, William Holman Hunt and John Everett Millais. All three were endowed with great natural talents and a passionate desire for success. The trio made a perfect whole. Hunt had faith, Rossetti eloquence, and Millais talent. . . . In France these revolutionaries would have contented themselves with upholding the same ideal and frequenting the same café. In England, where three admirers of Shakespeare or of Browning cannot meet without forming a Shakespeare reading party, or a society for the explanation of Browning, the pre-Raphaelites formed themselves into a Brotherhood, and, as every Englishman fancies three or four separate letters of the alphabet after his name, they determined that each pre-Raphaelite Brother should add to his signature the initials of his new title — P. R. B." —R. de la Sizeranne, *English Contemporary Art* (*tr. from the French by H. M. Poynter*), *ch.* 2.

American.—"The most celebrated painters of [the colonial] period . . . and the only ones whose fame is more than local, are John Singleton Copley and Benjamin West. But as both of them left their country at an early age, never to return, they belong to England rather than to America. . . . The Revolutionary Period is, in many respects, the most interesting division, not only in the political, but also in the artistic history of the United States. It is so, not merely because it has left us the pictorial records of the men and the events of a most important epoch in the development of mankind, but also because it brought forth two painters who, while they were thoroughly American in their aspirations, were at the same time endowed with artistic qualities of a very high order. Gilbert Stuart and John Trumbull, the two painters alluded to, have a right to be considered the best of the American painters of the past, and will always continue to hold a prominent place in the history of their art. . . . Trumbull must not be judged as an artist by his large paintings in the Capitol at Washington, the commission for which he did not receive until 1817. To know him one must study him in his smaller works and sketches, now gathered in the gallery of Yale College. . . . The healthy impetus towards realistic historic painting given by Trumbull . . . died out, and what there is of historic and figure painting in the [following] period is mainly dominated by a false idealism, of which Washington Allston is the leading representative. To rival the old masters, to do what had been done before, to flee from the actual and the near to the unreal and the distant, to look upon monks and knights and robbers and Venetian senators as the embodiment of the poetic, in spite of the poet's warning to the contrary, was now the order of the day. . . . A somewhat similar spirit manifested itself in the works of John Vanderlyn (1776–1852), Rembrandt Peale (1787–1860), Samuel F. B. Morse (1791–1872), and Cornelius Ver Bryck (1813–1844). . . . The most interesting, . . . because the most original, manifestation of the art instinct in this period is found in landscape. In this department also it seemed for a time as if the influence of the old Italian masters would gain the upper hand. But the influence of Dusseldorf, aided by that of England, although not through its best representatives, such as Constable, gave a different turn to the course of affairs, and in a measure freed the artists from the thraldom of an antiquated school. . . . The greatest name . . . in the early history of landscape art in the United States is that of Thomas Cole (1801–1848), who came over from England with his parents in 1819, but received his first training, such as it was, in America. . . . The American students who went to England up to the middle of the present century were not influenced by those painters who, like Constable, are credited with having given the first impulse towards the development of modern art. This is true also of those who went to France. They fell in with the old-established Classic school, and were not affected by the rising Romantic and Colourist school until long after its triumphant establishment." In late years, however, "the tendency in this direction has been very marked, and the main points of attraction for the young American artist in Europe have been Paris and Munich. One of the results of this movement, consequent upon the preponderating attention given to colour and technique, has been an almost entire neglect of subject. What the art of America has gained, therefore, in outward attractiveness and in increase of skill, it has had to purchase at the expense of a still greater de-Americanisation than before."—S. R. Koehler, *American Painters* (in *Illustrated Handbooks of Art History*), *pp.* 192–218.

PALACE, Origin of the name.—The house of the first of the Roman Emperors, Augustus, was on the Palatine Hill, which had been appropriated by the nobility for their residence from the earliest age of the republic. The residence of Augustus was a quite ordinary mansion until A. U. C. 748 (B. C. 6) when it was destroyed by fire. It was then rebuilt on a grander scale, the people contributing, in small individual sums — a kind of popular testimonial — to the cost. Augustus affected to consider it public property, and gave up a large part of it to the recreation of the citizens. His successors added to it, and built more and more edifices connected with it; so that, naturally, it appropriated to itself the name of the hill, and came to be known as the Palatium, or Palace.—C. Merivale, *Hist. of the Romans*, *ch.* 40.

PALATINATE OF THE RHINE.—PALATINE ELECTORATE.—The Palatine Electorate or Palatinate (Pfalz in German), arose in the breaking up of the old Duchy of Franconia. See Franconia; also Palatine Counts, and Germany: A. D. 1125–1272.

A. D. 1214.—Acquisition by the Wittelsbach or Bavarian House.—The House of Wittelsbach (or Wisselbach), which acquired the Duchy of Bavaria in 1180, came also into possession of the Palatinate of the Rhine in 1214 (see Bavaria: A. D. 1180–1356). In the next century the two possessions were divided. "Rudolph, the elder brother of Louis III. [the emperor, known as Louis the Bavarian] inherited the County Palatine, and formed a distinct line from that of Bavaria for many generations. The electoral dignity was attached to the Palatine branch."—Sir A. Halliday, *Annals of the House of Hanover, v.* 1, *p.* 424.

A. D. 1518-1572.—The Protestant Reformation.—Ascendancy of Calvinism.—"The Electors Palatine of the Rhine might be justly regarded, during the whole course of the 16th century, as more powerful princes than those of Brandenburg. The lower Palatine, of which Heidelberg was then the capital, formed a considerable tract of country, situate on the banks of the Rhine and the Neckar, in a fertile, beautiful, and commercial part of Germany. . . . The upper Palatinate, a detached and distant province situated between Bohemia, Franconia, and Bavaria, which constituted a part of the Electoral dominions, added greatly to their political weight, as members of the Germanic body. . . . Under Louis V., Luther began to disseminate his doctrines at Heidelberg, which were eagerly and generally imbibed; the moderate character of the Elector, by a felicity rare in that age, permitting the utmost freedom of religious opinion, though he continued, himself, to profess the Catholic faith. His successors, who withdrew from the Romish see, openly declared their adherence to Lutheranism; but, on the accession of Frederic III., a new ecclesiastical revolution took place. He was the first among the Protestant German princes who introduced and professed the reformed religion denominated Calvinism. As the toleration accorded by the 'Peace of religion' to those who embraced the 'Confession of Augsburg,' did not in a strict and legal sense extend to or include the followers of Calvin, Frederic might have been proscribed and put to the Ban of the Empire: nor did he owe his escape so much to the lenity or friendship of the Lutherans, as to the mild generosity of Maximilian II., who then filled the Imperial throne, and who was an enemy to every species of persecution. Frederic III., animated with zeal for the support of the Protestant cause, took an active part in the wars which desolated the kingdom of France under Charles IX.; protected all the French exiles who fled to his court or dominions; and twice sent succours, under the command of his son John Casimir, to Louis, Prince of Condé, then in arms, at the head of the Hugonots."—Sir N. W. Wraxall, *Hist. of France,* 1574–1610, *v.* 2, *pp.* 163–165.

PALATINE, Counts.—In Germany, under the early emperors, after the dissolution of the dominion of Charlemagne, an office came into existence called that of the 'comes palatii'—Count Palatine. This office was created in the interest of the sovereign, as a means of diminishing the power of the local rulers. The Counts

Palatine were appointed as their coadjutors, often with a concurrent and sometimes with a sole jurisdiction. Their "functions were more extensive than those of the ancient 'missi dominici.' Yet the office was different. Under the Carlovingian emperors there had been one dignitary with that title, who received appeals from all the secular tribunals of the empire. The missi dominici were more than his mere colleagues, since they could convoke any cause pending before the ordinary judges and take cognisance of more serious cases even in the first instance. As the missi were disused, and as the empire became split among the immediate descendants of Louis le Debonnaire, the count palatine (comes palatii) was found inadequate to his numerous duties; and coadjutors were provided him for Saxony, Bavaria, and Swabia. After the elevation of Arnulf, however, most of these dignities ceased; and we read of one count palatine only — the count or duke of Franconia or Rhenish France. Though we have reason to believe that this high functionary continued to receive appeals from the tribunals of each duchy, he certainly could not exercise over them a sufficient control; nor, if his authority were undisputed, could he be equal to his judicial duties. Yet to restrain the absolute jurisdiction of his princely vassals was no less the interest of the people than the sovereign; and in this view Otho I. restored, with even increased powers, the provincial counts palatine. He gave them not only the appellant jurisdiction of the ancient comes palatii, but the primary one of the missi dominici. . . . They had each a castle, the wardenship of which was intrusted to officers named burgraves, dependent on the count palatine of the province. In the sequel, some of these burgraves became princes of the empire."—S. A. Dunham, *Hist. of the Germanic Empire, v.* 1, *pp.* 120–121.

PALATINE, The Elector. See GERMANY: A. D. 1125–1152; and PALATINATE OF THE RHINE.

PALATINE, The English Counties. — "The policy of the Norman kings stripped the earls of their official character. They ceased to have local jurisdiction or authority. Their dignity was of a personal nature, and they must be regarded rather as the foremost of the barons, and as their peers, than as a distinct order in the state. . . . An exception to the general policy of William [the Conqueror] as to earldoms was made in those governments which, in the next century, were called palatine. These were founded in Cheshire, and perhaps in Shropshire, against the Welsh, and in the bishopric of Durham both to oppose the Scots, and to restrain the turbulence of the northern people, who slew Walcher, the first earl-bishop, for his ill government. An earl palatine had royal jurisdiction within his earldom. So it was said of Hugh, earl of Chester, that he held his earldom in right of his sword, as the king held all England in right of his crown. All tenants-in-chief held of him; he had his own courts, took the whole proceeds of jurisdiction, and appointed his own sheriff. The statement that Bishop Odo had palatine jurisdiction in Kent may be explained by the functions which he exercised as justiciary."— W. Hunt, *Norman Britain, pp.* 118–119.— "The earldom of Chester has belonged to the eldest son of the sovereign since 1396; the palatinate jurisdiction of Durham was transferred to the crown in 1836 by act of Parliament, 6 Will. IV, c. 19."—W. Stubbs, *Const. Hist. of Eng., ch.* 9, *sect.* 98, *footnote* (*v.* 1). — See, also, PALATINE, THE IRISH COUNTIES.

PALATINE, The Hungarian. See HUNGARY: A. D. 1301–1442.

PALATINE, The Irish Counties. — "The franchise of a county palatine gave a right of exclusive civil and criminal jurisdiction; so that the king's writ should not run, nor his judges come within it, though judgment in its courts might be reversed by writ of error in the king's bench. The lord might enfeoff tenants to hold by knights' service of himself; he had almost all regalian rights; the lands of those attainted for treason escheated to him; he acted in every thing rather as one of the great feudatories of France or Germany than a subject of the English crown. Such had been the earl of Chester, and only Chester, in England; but in Ireland this dangerous independence was permitted to Strongbow in Leinster, to Lacy in Meath, and at a later time to the Butlers and Geraldines in parts of Munster. Strongbow's vast inheritance soon fell to five sisters, who took to their shares, with the same palatine rights, the counties of Carlow, Wexford, Kilkenny, Kildare, and the district of Leix, since called the Queen's County. In all these palatinates, forming by far the greater portion of the English territories, the king's process had its course only within the lands belonging to the church."—H. Hallam, *Const. Hist. of Eng., ch.* 18 (*v.* 3).

PALATINE HILL, The. — The Palatine City.—The Seven Mounts.—"The town which in the course of centuries grew up as Rome, in its original form embraced according to trustworthy testimony only the Palatine, or 'square Rome' (Roma quadrata), as it was called in later times from the irregularly quadrangular form of the Palatine hill. The gates and walls that enclosed this original city remained visible down to the period of the empire. . . . Many traces indicate that this was the centre and original seat of the urban settlement. . . . The 'festival of the Seven Mounts' ('septimontium'), again, preserved the memory of the more extended settlement which gradually formed round the Palatine. Suburbs grew up one after another, each protected by its own separate though weaker circumvallation and joined to the original ring-wall of the Palatine. . . . The 'Seven Rings' were, the Palatine itself; the cermalus, the slope of the Palatine in the direction of the morass that in the earliest times extended between it and the Capitoline (velabrum); the Velia, the ridge which connected the Palatine with the Esquiline, but in subsequent times was almost wholly obliterated by the buildings of the empire; the Fagutal, the Oppius, and the Cispius, the three summits of the Esquiline; lastly, the Sucusa, or Subura, a fortress constructed outside of the earthern rampart which protected the new town on the Carinae, in the low ground between the Esquiline and the Quirinal, beneath S. Pietro in Vincoli. These additions, manifestly the results of a gradual growth, clearly reveal to a certain extent the earliest history of the Palatine Rome. . . . The Palatine city of the Seven Mounts may have had a history of its own; no other tradition of it has survived than simply that of its having once existed. But as the leaves of the forest make room for the new growth of spring, although

they fall unseen by human eyes, so has this unknown city of the Seven Mounts made room for the Rome of history."—T. Mommsen, *Hist. of Rome, bk.* 1, *ch.* 4 (*v.* 1). —See, also, QUIRINAL; and SEVEN HILLS OF ROME.

PALATINES: A. D. 1709-1710.—Migration to Ireland and America.—"The citizens of London [England] were astonished to learn, in May and June, 1709, that 5,000 men, women and children, Germans from the Rhine, were under tents in the suburbs. By October the number had increased to 13,000, and comprised husbandmen, tradesmen, school teachers and ministers. These emigrants had deserted the Palatinate, owing to French oppression and the persecution by their prince, the elector John William, of the House of Newburgh, who had become a devoted Romanist, though his subjects were mainly Lutherans and Calvinists. Professor Henry A. Homes, in a paper treating of this emigration, read before the Albany Institute in 1871, holds that the movement was due not altogether to unbearable persecutions, but largely to suggestions made to the Palatines in their own country by agents of companies who were anxious to obtain settlers for the British colonies in America, and thus give value to the company's lands. The emigrants were certainly seized with the idea that by going to England its government would transport them to the provinces of New York, the Carolinas, and Pennsylvania. Of the latter province they knew much, as many Germans were already there. . . . Great efforts were made to prevent suffering among these poor people; thousands of pounds were collected for their maintenance from churches and individuals all over England; they were lodged in warehouses, empty dwellings and in barns, and the Queen had a thousand tents pitched for them back of Greenwich, on Blackheath. . . . Notwithstanding the great efforts made by the English people, very much distress followed this unhappy hegira. . . . Numbers of the younger men enlisted in the British army serving in Portugal, and some made their own way to Pennsylvania. . . . The Lord Lieutenant of Ireland petitioned the Queen that some of the people might be sent to him, and by February, 1710, 3,800 had been located across the Irish Sea, in the province of Munster, near Limerick. . . . Professor Homes recites in his monograph that they 'now number about 12,000 souls, and, under the name of Palatinates, continue to impress a peculiar character upon the whole district they inhabit.'. . . According to 'Luttrell's Diary,' about one-tenth of the whole number that reached England were returned by the Crown to Germany." A Swiss land company, which had bought 10,000 acres of land from the Lords Proprietors of Carolina, "covenanted with the English authorities for the transfer of about 700 of these poor Heidelberg refugees to the colony. Before the end of the year they had arrived with them at a point in North Carolina where the rivers Neuse and Trent join. Here they established a town, calling it New-Berne, in honor of Berne, Switzerland. . . . It has not been found possible to properly account for all the 13,000 Palatines who reached England. Queen Anne sent some of them to Virginia, settling them above the falls of the Rappahanock, in Spottsylvania County, from whence they spread into several adjoining counties, and into North Carolina. . . . After the Irish transportation, the largest number that was moved in one body, and probably the final one under government auspices, was the fleet-load that in the spring of 1710 was despatched to New York. . . . A fleet of ten ships set sail with Governor Hunter in March, having on board, as is variously estimated, between 3,000 and 4,000 Germans. . . . The immigrants were encamped on Nut, now Governor's Island, for about three months, when a tract of 6,000 acres of the Livingston patent was purchased for them, 100 miles up the Hudson, the locality now being embraced in Germantown, Columbia County. Eight hundred acres were also acquired on the opposite side of the river at the present location of Saugerties, in Ulster County. To these two points most of the immigrants were removed." But dissatisfaction with their treatment and difficulties concerning land titles impelled many of these Germans to move off, first into Schoharie County, and afterwards to Palatine Bridge, Montgomery County and German Flats, Herkimer County, N. Y., to both of which places they have affixed the names. Others went into Pennsylvania, which was for many years the favorite colony among German immigrants.—A. D. Mellick, Jr., *The Story of an Old Farm, ch.* 4.

PALE, The English.—"That territory within which the English retreated and fortified themselves when a reaction began to set in after their first success [under Henry II.] in Ireland," acquired the name of the Pale or the English Pale. But "that term did not really come into use until about the beginning of the 16th century. In earlier times this territory was called the English Land. It is generally called Galldacht, or the 'foreigner's territory,' in the Irish annals, where the term Galls comes to be applied to the descendants of the early adventurers, and that of Saxons to Englishmen newly arrived. The formation of the Pale is generally considered to date from the reign of Edward I. About the period of which we are now treating [reign of Henry IV.—beginning of 15th century] it began to be limited to the four counties of Louth, Meath, Kildare, and Dublin, which formed its utmost extent in the reign of Henry VIII. Beyond this the authority of the king of England was a nullity."—M. Haverty, *Hist. of Ireland, pp.* 313-314, *foot-note.*—See IRELAND: A. D. 1169-1175; and 1515.

PALFREYS, OR PALAFRENI. See DESTRIERS.

PALI.—"The earlier form of the ancient spoken language [of the Aryan race in India], called Pali or Magadhi, . . . was introduced into Ceylon by Buddhist missionaries from Magadha when Buddhism began to spread, and is now the sacred language of Ceylon and Burmah, in which all their Buddhist literature is written." The Pali language is thought to represent one of the stages in the development of the Prakrit, or common speech of the Hindus, as separated from the Sanskrit, or language of the learned. See SANSKRIT.—M. Williams, *Indian Wisdom, introd., pp. xxix–xxx, foot-note.*

PALILIA, Festival of the.—"The festival named Palilia [at Rome] was celebrated on the Palatine every year on the 21st April, in honour of Pales, the tutelary divinity of the shepherds, who dwelt on the Palatine. This day was held sacred as an anniversary of the day on which Romulus commenced the building of the city."—H. M. Westropp, *Early and Imperial Rome, p.* 40.

PALLA, The. See STOLA.

PALLADIUM, The.—"The Palladium, kept in the temple of Vesta at Rome, was a small figure of Pallas, roughly carved out of wood, about three feet high. Ilos, King of Troy, grandfather of Priam, after building the city asked Zeus to give him a visible sign that he would take it under his special protection. During the night the Palladium fell down from heaven, and was found the next morning outside his tent. The king built a temple for it, and from that time the Trojans firmly believed that as long as they could keep this figure their town would be safe; but if at any time it should be lost or stolen, some dreadful calamity would overtake them. The story further relates that, at the siege of Troy, its whereabouts was betrayed to Diomed, and he and the wily Ulysses climbed the wall at night and carried it off. The Palladium, enraged at finding itself in the Grecian camp, sprang three times in the air, its eyes flashing wildly, while drops of sweat stood on its brow. The Greeks, however, would not give it up, and Troy, robbed of her guardian, was soon after conquered by the Greeks. But an oracle having warned Diomed not to keep it, he, on landing in Italy, gave it to one of Æneas' companions, by whom it was brought into the neighbourhood of the future site of Rome. Another legend relates that Æneas saved it after the destruction of Troy, and fled with it to Italy, where it was afterwards placed by his descendants in the Temple of Vesta, in Rome. Here the inner and most sacred place in the Temple was reserved for it, and no man, not even the chief priest, was allowed to see it except when it was shown on the occasion of any high festival. The Vestals had strict orders to guard it carefully, and to save it in case of fire, as the welfare of Rome depended on its preservation."—F. Nösselt, *Mythology, Greek and Roman, p.* 3.

PALLESCHI, The. See FLORENCE: A. D. 1498–1500.

PALLIUM, The.—"The pallium, or mantle of the Greeks, from its being less cumbersome and trailing than the toga of the Romans, by degrees superseded the latter in the country and in the camp. When worn over armour, and fastened on the right shoulder with a clasp or button, this cloak assumed the name of paludamentum."—T. Hope, *Costume of the Ancients, v.* 1, *p.* 37.

PALMI. See FOOT, THE ROMAN.

PALMYRA, Earliest knowledge of.—"The outlying city of Palmyra—the name of which is first mentioned during the wars of M. Antony in Syria [B. C. 41]—was certainly at this period [of Augustus, B. C. 31—A. D. 14] independent and preserved a position of neutrality between the Romans and Parthians, while it carried on trade with both. It does not appear however to have as yet risen to a place of great importance, as its name is not mentioned by Strabo. The period of its prosperity dates only from the time of Hadrian."—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 20, *sect.* 1 (*v.* 2).

Rise and fall.—"Amidst the barren deserts of Arabia a few cultivated spots rise like islands out of the sandy ocean. Even the name of Tadmor, or Palmyra, by its signification in the Syriac as well as in the Latin language, denoted the multitude of palm-trees which afforded shade and verdure to that temperate region. The air was pure, and the soil, watered by some invaluable springs, was capable of producing fruits as well as corn. A place possessed of such singular advantages, and situated at a convenient distance between the gulf of Persia and the Mediterranean, was soon frequented by the caravans which conveyed to the nations of Europe a considerable part of the rich commodities of India. [It has been the opinion of some writers that Tadmor was founded by Solomon as a commercial station, but the opinion is little credited at present.] Palmyra insensibly increased into an opulent and independent city, and, connecting the Roman and the Parthian monarchies by the mutual benefits of commerce, was suffered to observe an humble neutrality, till at length, after the victories of Trajan, the little republic sunk into the bosom of Rome, and flourished more than one hundred and fifty years in the subordinate though honourable rank of a colony." On the occasion of the invasion of Syria by the Persian king, Sapor, when the Emperor Valerian was defeated and taken prisoner (A. D. 260–261), the only effectual resistance opposed to him was organized and led by a wealthy senator of Palmyra, Odenathus (some ancient writers call him a Saracen prince), who founded, by his exploits at that time, a substantial military power. Aided and

seconded by his famous wife, Zenobia, who is one of the great heroines of history, he extended his authority over the Roman East and defeated the Persian king in several campaigns. On his death, by assassination, in 267, Zenobia ascended the Palmyrenian throne and ruled with masculine firmness of character. Her dominions were extended from the Euphrates and the frontiers of Bithynia to Egypt, and are said, with some doubtfulness, to have included even that rich province, for a time. But the Romans, who had acquiesced in the rule of Odenathus, and recognized it, in the day of their weakness, now resented the presumption and the power of his widowed queen. Perhaps they had reason to fear her ambition and her success. Refusing to submit to the demands that were made upon her, she boldly challenged the attack of the warlike emperor, Aurelian, and suffered defeat in two great battles, fought A. D. 272 or 273, near Antioch and near Emesa. A vain attempt to hold Palmyra against the besieging force of the Roman, an unsuccessful flight and a capture by pursuing horsemen, ended the political career of the brilliant 'Queen of the East.' She saved her life somewhat ignobly by giving up her counsellors to Aurelian's vengeance. The philosopher Longinus was one who perished. Zenobia was sent to Rome and figured among the captives in Aurelian's triumph. She was then given for her residence a splendid villa at Tibur (Tivoli) twenty miles from Rome, and lived quietly through the remainder of her days, connecting herself, by the marriage of her daughters, with the noble families of Rome. Palmyra, which had been spared on its surrender, rashly rose in revolt quickly after Aurelian had left its gates. The enraged emperor returned and inflicted on the fated city a chastisement from which it never rose."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 10–11.

PALMYRÊNÉ, The.—Palmyrêné, or the Syrian Desert—the tract lying between Cœle-Syria on the one hand and the valley of the middle Euphrates on the other, and abutting towards the south on the great Arabian Desert, to which it is sometimes regarded as belonging.

PALSGRAVE.—An Anglicized form of Pfalzgraf, PALATINE COUNT, which see.

PALUDAMENTUM, The.—"As soon as the [Roman] consul entered upon his military career, he assumed certain symbols of command. The cloak of scarlet or purple which the imperator threw over his corslet was named the paludamentum, and this, which became in later times the imperial robe, he never wore except on actual service.—C. Merivale, *Hist. of the Romans, ch.* 31.—See, also, PALLIUM.

PALUS MÆOTIS, OR MÆOTIS PALUS.—The ancient Greek name of the Sea of Azov.

PAMIR, The.—"The Pamir and Tibet, which converge north of India and east of the Oxus, form jointly the culminating land of the continent. Disposed at right angles, and parallel, the one to the equator, the other to the meridian, they constitute the so-called 'Roof,' or 'Crown of the World,' though this expression is more usually restricted to the Pamir alone. With its escarpments, rising above the Oxus and Tarim plains west and east, the Pamir occupies, in the heart of the continent, an estimated area of 30,000 square miles. . . . It completely separates the two halves of Asia, and forms an almost impassable barrier to migration and warlike incursions. Yet notwithstanding its mean elevation of 13,000 feet above arable land, it has been frequently crossed by small caravans of traders or travellers, and by light columns of troops. . . . But of these travellers very few have left any record of their journey, and all took the lowest routes across the plateau."—É. Reclus, *The Earth and its Inhabitants: Asia, v.* 1, *ch.* 3, *sect.* 2.

PAMLICOS. See AMERICAN ABORIGINES: ALGONQUIAN FAMILY.

PAMPAS.—LLANOS.—"In the southern continent [of America], the regions which correspond with the prairies of the United States are the 'pampas' of the La Plata and the 'llanos' of Columbia [both 'pampa' and 'llano' having in Spanish the signification of 'a plain']. . . . The llanos of Venezuela and New Granada have an area estimated at 154,000 square miles. . . . The Argentine pampas . . . have a much more considerable extent, probably exceeding 500,000 square miles."—É. PANAMA CANAL.—PANAMA SCANDAL.—"The commencement of an undertaking [projected by Count Ferdinand de Lesseps, the builder of the Suez Canal] for connecting the Atlantic and Pacific oceans, through the Isthmus of Panama, was a natural result of the success achieved by the Suez Canal. Various sites have been proposed from time to time for the construction of a canal across the Isthmus, the most northern being the Tehuantepec route, at a comparatively broad part of the Isthmus, and the most southern the Atrato route, following for some distance the course of the Atrato River. The site eventually selected, in 1879, for the construction of a canal was at the narrowest part of the Isthmus, and where the central ridge is the lowest, known as the Panama route, nearly following the course of the Panama Railway. It was the only scheme that did not necessarily involve a tunnel or locks. The length of the route between Colon on the Atlantic, and Panama on the Pacific, is 46 miles, not quite half the length of the Suez Canal; but a tide-level canal involved a cutting across the Cordilleras, at the Culebra Pass, nearly 300 feet deep, mainly through rock. The section of the canal was designed on the lines of the Suez Canal, with a bottom width of 72 feet, and a depth of water of 27 feet, except in the central rock cutting, where the width was to be increased to 78¾ feet on account of the nearly vertical sides, and the depth to 29½ feet. . . . The work was commenced in 1882. . . . The difficulties and expenses, however, of the undertaking had been greatly under-estimated. The climate proved exceptionally unhealthy, especially when the soil began to be turned up by the excavations. The actual cost of the excavation was much greater than originally estimated; and the total amount of excavation required to form a level canal, which had originally been estimated at 100 million cubic yards, was subsequently computed, on more exact data, at 176½ million cubic yards. The preliminary works were also very extensive and costly; and difficulties were experienced, after a time, in raising the funds for carrying on the works, even when shares were offered at a very great discount. Eventually, in 1887, the capital at the disposal of the company had nearly come to an end; whilst only a little more than one-fifth of the excavation had been completed. . . . At that period it was determined to expedite the work, and reduce the cost of completing the canal, by introducing locks, and thus diminish the remaining amount of excavation by 85 million cubic yards; though the estimated cost, even with this modification, had increased from £33,500,000 to £65,500,000. . . . The financial embarrassments, however, of the company have prevented the carrying out of this scheme for completing the canal; and the works are at present [1891] at a standstill, in a very unfinished state."—L. F. Vernon-Harcourt, *Achievements in Engineering, ch.* 14.—"It was on December 14, 1888, that the Panama Canal Company stopped payments. Under the auspices of the French Government, a parliamentary inquiry was started in the hope of finding some means of saving the enterprise. Facts soon came to light, which, in the opinion of many, justified a prosecution. The indignation of the shareholders against the Count de Lesseps, his son, and the other Directors, waxed loud. In addition to ruinous miscalculations, these men were charged with corrupt expenditure with a view to influence public opinion. . . . The gathering storm finally burst on November 21 [1892], when the interpellation in regard to the Canal question was brought forward in the Chamber. M. Delahaye threw out suggestions of corruption against a large number of persons, alleging that 3,000,000 francs had been used by the company to bribe 150 Senators and Deputies. Challenged to give their names, he persisted in merely replying that if the Chamber wanted details, they must vote an inquiry. . . . It was ultimately agreed, by 311 to 243, to appoint a special Committee of 33 Members to conduct an investigation. The judicial summonses against the accused Directors were issued the same day, charging them with 'the use of fraudulent devices for creating belief in the existence of a chimerical event, the spending of sums accruing from issues handed to them for a fixed purpose, and the swindling of all or part of the fortune of others.' The case being called in the Court of Appeals, November 25, when all of the defendants—M. Ferdinand de Lesseps; Charles, his son; M. Marius Fontanes, Baron Cottu, and M. Eiffel—were absent, it was adjourned to January 10, 1893. . . . On November 28, the Marquis de la Ferronaye, followed by M. Brisson, the Chairman of the Committee of Inquiry, called the attention of the Government to the rumors regarding the death of Baron Reinach, and pressed the demand of the Committee that the body be exhumed, and the theory of suicide be tested. But for his sudden death, the Baron would have been included in the prosecution. He was said to have received immense sums for purposes of corruption; and his mysterious and sudden death on the eve of the prosecution started the wildest rumors of suicide and even murder. Public opinion demanded that full light be thrown on the episode; but the Minister of Justice said, that, as no formal charges of crime had been laid, the Government had no power to exhume the body. M. Loubet would make no concession in the matter; and, when M. Brisson moved a resolution of regret that the Baron's papers had not been sealed at his death, petulantly insisted that the order of the day 'pure and simple' be passed. This the Chamber refused to do by a vote of 304 to 219. The resignation of the Cabinet immediately followed. . . . A few days' interregnum followed during which M. Brisson and M. Casimir-Périer successively tried in vain to form a Cabinet. M. Ribot, the Foreign Minister, finally consented to try the task, and, on December 5, the new Ministry was announced. . . . The policy of the Government regarding the scandal now changed. . . . In the course of the investigation by the Committee, the most startling evidence of corruption was revealed. It was discovered that the principal Paris papers had received large amounts for puffing the Canal scheme. M. Thierrée, a banker, asserted that Baron Reinach had paid into his bank 3,390,000 francs in Panama funds, and had drawn it out in 26 checks to bearer. . . . On December 13, M. Rouvier, the Finance Minister, resigned, because his name had been connected with the scandal. . . . In the meantime, sufficient evidence had been gathered to cause the Government, on December 16, to arrest M. Charles de Lesseps, M. Fontane, and M. Sans-Leroy, Directors of the Canal Company, on the

charge, not, as before, of maladministration of the company's affairs, but of corrupting public functionaries. This was followed by the adoption of proceedings against five Senators and five Deputies.— *Quar. Reg. of Cur. Hist., March*, 1893. — "The trial of the De Lesseps, father and son, MM. Fontane, Cottu, and Eiffel, began January 10, before the court of appeals. MM. Fontane and Eiffel confessed, the latter to the bribery of Hebrard, director of 'Le Temps,' a newspaper, with 1,750,000 francs. On February 14, sentence was pronounced against Ferdinand and Charles De Lesseps, each being condemned to spend five years in prison and to pay a fine of 3,000 francs; MM. Fontane and Cottu, two years and 3,000 francs each; and M. Eiffel, two years and 20,000 francs. . . . On March 8, the trial of the younger de Lesseps, MM. Fontane, Baihaut, Blondin, and ex-Minister Proust, Senator Beral, and others, on charges of corruption, began before the assize court. . . . De Lesseps, . . . with MM. Baihaut and Blondin, was found guilty March 21, and sentenced to one year more of imprisonment. M. Blondin received a two-year sentence; but M. Baihaut was condemned to five years, a fine of 75,000 francs, and loss of civil rights. The others were acquitted."— *Cyclopedic Review of Current Hist., v. 3, no. 1* (1893). — "On June 15 the Court of Cassation quashed the judgment in the first trial on the ground that the acts had been committed more than three years before the institution of proceedings, reversing the ruling of the trial court that a preliminary investigation begun in 1891 suspended the three years' prescription. Fontane and Eiffel were set at liberty, but Charles de Lesseps had still to serve out the sentence for corruption." — *Appleton's Annual Cyclopædia*, 1893, p. 321. — The enemies of the Republic had wished to establish the venality of the popular representatives; "they succeeded only in showing the resistance that had been made to a temptation of which the public had not known before the strength and frequency. Instead of proving that many votes had been sold, they proved that many were found ready to buy them, which was very different."— P. De Coubertin, *L'Evolution Française sous la Troisième Republique*, p. 266.

PANNONIA AND NORICUM. — "The wide extent of territory which is included between the Inn, the Danube, and the Save — Austria, Styria, Carinthia, Carniola, the Lower Hungary, and Sclavonia — was known to the ancients under the names of Noricum and Pannonia. In their original state of independence their fierce inhabitants were intimately connected. Under the Roman government they were frequently united."— E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 1.—Pannonia embraced much the larger part of the territory described above, covering the center and heart of the modern Austro-Hungarian empire. It was separated from Noricum, lying west and northwest of it, by Mons Cetius. For the settlement of the Vandals in Pannonia, and its conquest by the Huns and Goths, see Vandals: Origin, &c.; Huns: A. D. 433–453, and 453; and Goths: A. D. 473–474.

PANORMUS.—The modern city of Palermo was of very ancient origin, founded by the Phœnicians and passing from them to the Carthaginians, who made it one of their principal naval stations in Sicily. Its Greek name, Panorma, signified a port always to be depended upon.

PANTHEON AT ROME, The.—"At the same time with his Thermæ, Agrippa [son-in-law and friend of Augustus] built the famous dome, called by Pliny and Dion Cassius, and in the inscription of Severus on the architrave of the building itself, the Pantheon, and still retaining that name, though now consecrated as a Christian church under the name of S. Maria ad Martyres or della Rotonda. This consecration, together with the colossal thickness of the walls, has secured the building against the attacks of time, and the still more destructive attacks of the barons of the Middle Ages. . . . The Pantheon will always be reckoned among the masterpieces of architecture for solid durability combined with beauty of interior effect. The Romans prided themselves greatly upon it as one of the wonders of their great capital, and no other dome of antiquity could rival its colossal dimensions. . . . The inscription assigns its completion to the year A. D. 27, the third consulship of Agrippa. . . . The original name Pantheon, taken in connection with the numerous niches for statues of the gods in the interior, seems to contradict the idea that it was dedicated to any peculiar deity or class of deities. The seven principal niches may have been intended for the seven superior deities, and the eight ædiculæ for the next in dignity, while the twelve niches in the upper ring were occupied by the inferior inhabitants of Olympus. Dion hints at this explanation when he suggests that the name was taken from the resemblance of the dome to the vault of heaven."— R. Burn, *Rome and the Campagna, ch.* 13, *pt.* 2.—"The world has nothing else like the Pantheon. . . . The rust and dinginess that have dimmed the precious marble on the walls; the pavement, with its great squares and rounds of porphyry and granite, cracked crosswise and in a hundred directions, showing how roughly the troublesome ages have trampled here; the gray dome above, with its opening to the sky, as if heaven were looking down into the interior of this place of worship, left unimpeded for prayers to ascend the more freely: all these things make an impression of solemnity, which Saint Peter's itself fails to produce. 'I think,' said the sculptor, 'it

is to the aperture in the dome — that great Eye, gazing heavenward — that the Pantheon owes the peculiarity of its effect.'"— N. Hawthorne, *The Marble Faun, ch.* 50.

PAPACY.

St. Peter and the Church at Rome.—"The generally received account among Roman Catholics, and one which can claim a long traditional acceptance, is that Peter came to Rome in the second year of Claudius (that is, A. D. 42), and that he held the see twenty-five years, a length of episcopate never reached again until by Pio Nono, who exceeded it. . . . Now if it is possible to prove a negative at all, we may conclude, with at least high probability, that Peter was not at Rome during any of the time on which the writings of the canonical Scriptures throw much light, and almost certainly that during that time he was not its bishop. We have an Epistle of Paul to the Romans full of salutations to his friends there, but no mention of their bishop. Nor is anything said of work done by Peter in founding that Church. On the contrary, it is implied that no Apostle had as yet visited it; for such is the inference from the passage already cited, in which Paul expresses his wish to see the Roman Christians in order that he might impart some spiritual gift to the end that they might be established. We have letters of Paul from Rome in which no message is sent from Peter; and in the very last of these letters Paul complains of being left alone, and that only Luke was with him. Was Peter one of the deserters? The Scripture accounts of Peter place him in Judæa, in Antioch, possibly in Corinth, but finally in Babylon. . . . Plainly, if Peter was ever at Rome, it was after the date of Paul's second Epistle to Timothy. Some Protestant controversialists have asserted that Peter was never at Rome; but though the proofs that he was there are not so strong as I should like them to be if I had any doctrine depending on it, I think the historic probability is that he was; though, as I say, at a late period of the history, and not long before his death. . . . For myself, I am willing, in the absence of any opposing tradition, to accept the current account that Peter suffered martyrdom at Rome. We know with certainty from John xxi. that Peter suffered martyrdom somewhere. If Rome, which early laid claim to have witnessed that martyrdom, were not the scene of it, where then did it take place? Any city would be glad to claim such a connexion with the name of the Apostle, and none but Rome made the claim. . . . From the question, whether Peter ever visited Rome, we pass now to a very different question: whether he was its bishop. . . . We think it scandalous when we read of bishops a hundred years ago who never went near their sees. . . . But if we are to believe Roman theory, the bad example had been set by St. Peter, who was the first absentee bishop. If he became bishop of Rome in the second year of Claudius, he appears never afterwards to have gone near his see until close upon his death. Nay, he never even wrote a letter to his Church while he was away; or if he did, they did not think it worth preserving. Baronius (in Ann. lviii. § 51) owns the force of the Scripture reasons for believing that Peter was not in Rome during any time on which the New Testament throws light. His theory is that, when Claudius commanded all Jews to leave Rome, Peter was forced to go away. And as for his subsequent absences, they were forced on him by his duty as the chief of the Apostles, having care of all the Churches. . . . These, no doubt, are excellent reasons for Peter's not remaining at Rome; but why, then, did he undertake duties which he must have known he could not fulfil?"—G. Salmon, *The Infallibility of the Church, pp.* 347–350.—The Roman Catholic belief as to St. Peter's episcopacy, and the primacy conferred by it on the Roman See, is stated by Dr. Döllinger as follows: "The time of . . . [St. Peter's] arrival in Rome, and the consequent duration of his episcopacy in that city, have been the subjects of many various opinions amongst the learned of ancient and modern times; nor is it possible to reconcile the apparently conflicting statements of ancient writers, unless we suppose that the prince of the apostles resided at two distinct periods in the imperial capital. According to St. Jerome, Eusebius, and Orosius, his first arrival in Rome was in the second year of the reign of Claudius (A. D. 42); but he was obliged, by the decree of the emperor, banishing all Jews from the city, to return to Jerusalem. From Jerusalem he undertook a journey through Asia Minor, and founded, or at least, visited, the Churches of Pontus, Gallacia, Cappadocia, and Bythinia. To these Churches he afterwards addressed his epistle from Rome. His second journey to Rome was in the reign of Nero; and it is of this journey that Dionysius, of Corinth, and Lactantius, write. There, with the blessed Paul, he suffered, in the year 67, the death of a martyr. We may now ascertain that the period of twenty-five years assigned by Eusebius and St. Jerome, to the episcopacy of St. Peter in Rome, is not a fiction of their imaginations; for from the second year of Claudius, in which the apostle founded the Church of Rome, to the year of his death, there intervene exactly twenty-five years. That he remained during the whole of this period in Rome, no one has pretended. . . . Our Lord conferred upon his apostle, Peter, the supreme authority in the Church. After he had required and obtained from him a public profession of his faith, he declared him to be the rock, the foundation upon which he would build his Church; and, at the same time, promised that he would give to him the keys of the kingdom of heaven. . . . In the enumeration of the apostles, frequently repeated by the Evangelists, we find that Peter is always the first named:—he is sometimes named alone, when the others are

mentioned in general. After the ascension of our Lord, it is he who directs and governs: he leads the assembly in which a successor to the apostle who had prevaricated, is chosen: after the descent of the Holy Ghost, he speaks first to the people, and announces to them Jesus Christ: he performs the first miracle, and, in the name of his brethren, addresses the synedrium: he punishes the crime of Ananias: he opens the gates of the Church to the Gentiles, and presides at the first council at Jerusalem. . . . The more the Church was extended, and the more its constitution was formed, the more necessary did the power with which Peter had been invested become,—the more evident was the need of a head which united the members in one body, of a point and centre of unity. . . . Succession by ordination was the means, by which from the beginning the power left by Christ in his Church was continued: thus the power of the apostles descended to the bishops, their successors, and thus as Peter died bishop of the Church of Rome, where he sealed his doctrine with his blood, the primacy which he had received would be continued in him by whom he was there succeeded. It was not without a particular interposition of Providence that this pre-eminence was granted to the city of Rome, and that it became the depository of ecclesiastical supremacy. This city, which rose in the midway between the east and the west, by its position, by its proximity to the sea, by its dignity, as capital of the Roman empire, being open on all sides to communication even with the most distant nations, was evidently more than any other adapted to become the centre of the universal Church. . . . There are not wanting, in the first three centuries, testimonies and facts, some of which directly attest, and others presuppose, the supremacy of the Roman Church and of its bishops."—J. J. I. Döllinger, *History of the Church, period* 1, *ch.* 1, *sect.* 4, *and ch.* 3, *sect.* 4 (*v.* 1).

Supremacy of the Roman See: Grounds of the Claim.—The historical ground of the claim to supremacy over the Christian Church asserted on behalf of the Roman See is stated by Cardinal Gibbons as follows: "I shall endeavor to show, from incontestable historical evidence, that the Popes have always, from the days of the Apostles, continued to exercise supreme jurisdiction, not only in the Western church, till the Reformation, but also throughout the Eastern church, till the great schism of the ninth century. 1. Take the question of appeals. An appeal is never made from a superior to an inferior court, nor even from one court to another of co-ordinate jurisdiction. We do not appeal from Washington to Richmond, but from Richmond to Washington. Now if we find the See of Rome, from the foundation of Christianity, entertaining and deciding cases of appeal from the Oriental churches; if we find that her decision was final and irrevocable, we must conclude that the supremacy of Rome over all the churches is an undeniable fact. Let me give you a few illustrations: To begin with Pope St. Clement, who was the third successor of St. Peter, and who is laudably mentioned by St. Paul in one of his Epistles. Some dissension and scandal having occurred in the church of Corinth, the matter is brought to the notice of Pope Clement. He at once exercises his supreme authority by writing letters of remonstrance and admonition to the Corinthians. And so great was the reverence entertained for these Epistles, by the faithful of Corinth, that for a century later it was customary to have them publicly read in their churches. Why did the Corinthians appeal to Rome far away in the West, and not to Ephesus so near home in the East, where the Apostle St. John still lived? Evidently because the jurisdiction of Ephesus was local, while that of Rome was universal. About the year 190, the question regarding the proper day for celebrating Easter was agitated in the East, and referred to Pope St. Victor I. The Eastern church generally celebrated Easter on the day on which the Jews kept the Passover; while in the West it was observed then, as it is now, on the first Sunday after the full moon of the vernal equinox. St. Victor directs the Eastern churches, for the sake of uniformity, to conform to the practice of the West, and his instructions are universally followed. Dionysius, Bishop of Rome, about the middle of the third century, having heard that the Patriarch of Alexandria erred on some points of faith, demands an explanation of the suspected Prelate, who, in obedience to his superior, promptly vindicates his own orthodoxy. St. Athanasius, the great Patriarch of Alexandria, appeals in the fourth century, to Pope Julius I., from an unjust decision rendered against him by the Oriental bishops; and the Pope reverses the sentence of the Eastern council. St. Basil, Archbishop of Cæsarea, in the same century, has recourse, in his afflictions, to the protection of Pope Damasus. St. John Chrysostom, Patriarch of Constantinople, appeals in the beginning of the fifth century, to Pope Innocent I., for a redress of grievances inflicted on him by several Eastern Prelates, and by the Empress Eudoxia of Constantinople. St. Cyril appeals to Pope Celestine against Nestorius; Nestorius also appeals to the same Pontiff, who takes the side of Cyril. Theodoret, the illustrious historian and Bishop of Cyrrhus, is condemned by the pseudo-council of Ephesus in 449, and appeals to Pope Leo. . . . John, Abbot of Constantinople, appeals from the decision of the Patriarch of that city to Pope St. Gregory I., who reverses the sentence of the Patriarch. In 859, Photius addressed a letter to Pope Nicholas I., asking the Pontiff to confirm his election to the Patriarchate of Constantinople. In consequence of the Pope's conscientious refusal, Photius broke off from the communion of the Catholic Church, and became the author of the Greek schism. Here are a few examples taken at random from Church History. We see Prelates most eminent for their sanctity and learning, occupying the highest position in the Eastern church, and consequently far removed from the local influences of Rome, appealing in every period of the early church, from the decisions of their own Bishops and their Councils to the supreme arbitration of the Holy See. If this does not constitute superior jurisdiction, I have yet to learn what superior authority means. 2. Christians of every denomination admit the orthodoxy of the Fathers of the first five centuries of the Church. No one has ever called in question the faith of such men as Basil, Chrysostom, Cyprian, Augustine, Jerome, Ambrose, and Leo. . . . Now the Fathers of the Church, with one voice, pay homage to the Bishops of Rome as their superiors. . . . 3. Ecumenical

Councils afford another eloquent vindication of Papal supremacy. An Ecumenical or General Council is an assemblage of Prelates representing the whole Catholic Church. . . . Up to the present time, nineteen Ecumenical Councils have been convened, including the Council of the Vatican. . . . The first General Council was held in Nicæa, in 325; the second, in Constantinople, in 381; the third, in Ephesus, in 431; the fourth, in Chalcedon, in 451; the fifth, in Constantinople, in 553; the sixth, in the same city, in 680; the seventh, in Nicæa, in 787; and the eighth, in Constantinople, in 869. The Bishops of Rome convoked these assemblages, or at least consented to their convocation; they presided by their legates over all of them, except the first and second councils of Constantinople, and they confirmed all these eight by their authority. Before becoming a law, the acts of the Councils required the Pope's signature. 4. I shall refer to one more historical point in support of the Pope's jurisdiction over the whole Church. It is a most remarkable fact that every nation hitherto converted from Paganism to Christianity, since the days of the Apostles, has received the light of faith from missionaries who were either especially commissioned by the See of Rome, or sent by Bishops in open communion with that See. This historical fact admits of no exception. Let me particularize: Ireland's Apostle is St. Patrick. Who commissioned him? Pope St. Celestine, in the fifth century. St. Palladius is the Apostle of Scotland. Who sent him? The same Pontiff, Celestine. The Anglo-Saxons received the faith from St. Augustine, a Benedictine monk, as all historians Catholic and non-Catholic testify. Who empowered Augustine to preach? Pope Gregory I., at the end of the sixth century. St. Remigius established the faith in France, at the close of the fifth century. He was in active communion with the See of Peter. Flanders received the Gospel in the seventh century from St. Eligius, who acknowledged the supremacy of the reigning Pope. Germany and Bavaria venerate as their Apostle St. Boniface, who is popularly known in his native England by his baptismal name of Winfrid. He was commissioned by Pope Gregory II., in the beginning of the eighth century, and was consecrated Bishop by the same Pontiff. In the ninth century, two saintly brothers, Cyril and Methodius, evangelized Russia, Sclavonia, and Moravia, and other parts of Northern Europe. They recognized the supreme authority of Pope Nicholas I., and of his successors, Adrian II. and John VIII. In the eleventh century, Norway was converted by missionaries introduced from England by the Norwegian King St. Olave. The conversion of Sweden was consummated in the same century by the British Apostles Saints Ulfrid and Eskill. Both of these nations immediately after their conversion commenced to pay Rome-scot, or a small annual tribute to the Holy See,—a clear evidence that they were in communion with the Chair of Peter. All the other nations of Europe, having been converted before the Reformation, received likewise the light of faith from Roman Catholic missionaries, because Europe then recognized only one Christian Chief."—James, Cardinal Gibbons, *The Faith of our Fathers, ch.* 10.

Also in: Francis P. Kenrick, Archbishop of Baltimore, *The Primacy of the Apostolic See vindicated.*

Supremacy of the Roman See: Grounds of the Denial.—"The first document by which the partisans of the Papal sovereignty justify themselves, is the letter written by St. Clement in the name of the Church at Rome to the Church at Corinth. They assert, that it was written by virtue of a superior authority attached to his title of Bishop of Rome. Now, it is unquestionable, 1st. That St. Clement was not Bishop of Rome when he wrote to the Corinthians. 2d. That in this matter he did not act of his own authority, but in the name of the Church at Rome, and from motives of charity. The letter signed by St. Clement was written A. D. 69, immediately after the persecution by Nero, which took place between the years 64 and 68, as all learned men agree. . . . It may be seen from the letter itself that it was written after a persecution; if it be pretended that this persecution was that of Domitian, then the letter must be dated in the last years of the first century, since it was chiefly in the years 95 and 96 that the persecution of Domitian took place. Now, it is easy to see from the letter itself, that it was written before that time, for it speaks of the Jewish sacrifices as still existing in the temple of Jerusalem. The temple was destroyed with the city of Jerusalem, by Titus A. D. 70. Hence, the letter must have been written before that year. Besides, the letter was written after some persecution, in which had suffered, at Rome, some very illustrious martyrs. There was nothing of the kind in the persecution of Domitian. The persecution of Nero lasted from the year 64 to the year 68. Hence it follows, that the letter to the Corinthians could only have been written in the year 69, that is to say, twenty-four years before Clement was Bishop of Rome. In presence of this simple calculation what becomes of the stress laid by the partisans of Papal sovereignty, upon the importance of this document as emanating from Pope St. Clement? Even if it could be shown that the letter of St. Clement was written during his episcopate, this would prove nothing, because this letter was not written by him by virtue of a superior and personal authority possessed by him, but from mere charity, and in the name of the Church at Rome. Let us hear Eusebius upon this subject: 'Of this Clement there is one epistle extant, acknowledged as genuine, . . . which he wrote in the name of the Church at Rome to that of Corinth, at the time when there was a dissension in the latter.' . . . He could not say more explicitly, that Clement did not in this matter act of his own authority, by virtue of any power he individually possessed. Nothing in the letter itself gives a suspicion of such authority. It thus commences: 'The Church of God which is at Rome, to the Church of God which is at Corinth.' . . . There is every reason to believe that St. Clement draughted this letter to the Corinthians. From the first centuries it has been considered as his work. It was not as Bishop of Rome, but as a disciple of the Apostles, that he wrote it. . . . In the second century the question concerning Easter was agitated with much warmth. Many Oriental Churches wished to follow the Judaical traditions, preserved by several Apostles in the celebration of that feast, and to hold it upon the fourteenth day of the March moon; other Eastern Churches, in agreement with the Western Churches according to an equally Apostolic tradition, cele-

brated the festival of Easter the Sunday following the fourteenth day of the March moon. The question in itself considered was of no great importance; and yet it was generally thought that all the Churches should celebrate at one and the same time the great Christian festival, and that some should not be rejoicing over the resurrection of the Saviour, while others were contemplating the mysteries of his death. How was the question settled? Did the Bishop of Rome interpose his authority and overrule the discussion, as would have been the case had he enjoyed a supreme authority? Let us take the evidence of History. The question having been agitated, 'there were synods and convocations of the Bishops on this question,' says Eusebius, 'and all unanimously drew up an ecclesiastical decree, which they communicated to all the Churches in all places. . . . There is an epistle extant even now of those who were assembled at the time; among whom presided Theophilus, Bishop of the Church in Cesarea and Narcissus, Bishop of Jerusalem. There is another epistle' (of the Roman Synod) 'extant on the same question, bearing the name of Victor. An epistle also of the Bishops in Pontus, among whom Palmas, as the most ancient, presided; also of the Churches of Gaul over whom Irenæus presided. Moreover, one from those in Osrhoene, and the cities there. And a particular epistle from Bacchyllus, Bishop of the Corinthians; and epistles of many others who, advancing one and the same doctrine, also passed the same vote.' It is evident that Eusebius speaks of the letter of the Roman synod in the same terms as of the others; he does not attribute it to Bishop Victor, but to the assembly of the Roman Clergy; and lastly, he only mentions it in the second place after that of the Bishops of Palestine. Here is a point irrefragably established; it is that in the matter of Easter, the Church of Rome discussed and judged the question in the same capacity as the other churches, and that the Bishop of Rome only signed the letter in the name of the synod which represented that Church."—Abbé Guettée, *The Papacy, pp.* 53–58.—"At the time of the Council of Nicæa it was clear that the metropolitans of Rome, Alexandria, and Antioch, held a superior rank among their brethren, and had a kind of ill-defined jurisdiction over the provinces of several metropolitans. The fathers of Nicæa recognized the fact that the privileges of these sees were regulated by customs already regarded as primitive, and these customs they confirmed. . . . The empire was afterwards divided for the purposes of civil government into four Prefectures. . . . The organization of the Church followed in its main lines that of the empire. It also had its dioceses and provinces, coinciding for the most part with the similarly named political divisions. Not only did the same circumstances which marked out a city for political preëminence also indicate it as a fit centre of ecclesiastical rule, but it was a recognized principle with the Church that the ecclesiastical should follow the civil division. At the head of a diocese was a patriarch, at the head of a province was a metropolitan; the territory of a simple bishop was a parish. . . . The see of Constantinople . . . became the oriental counterpart of that of Rome. . . . But the patriarchal system of government, like every other, suffered from the shocks of time. The patriarch of Antioch had, in the first instance, the most extensive territory, for he claimed authority not only over the civil diocese of the East, but over the Churches in Persia, Media, Parthia, and India, which lay beyond the limits of the empire. But this large organization was but loosely knit, and constantly tended to dissolution. . . . After the conquests of Caliph Omar the great see of Antioch sank into insignificance. The region subject to the Alexandrian patriarch was much smaller than that of Antioch, but it was better compacted. Here too however the Monophysite tumult so shook its organization that it was no longer able to resist the claims of the patriarch of Constantinople. It also fell under the dominion of the Saracens — a fate which had already befallen Jerusalem. In the whole East there remained only the patriarch of Constantinople in a condition to exercise actual authority. . . . According to Rufinus's version of the sixth canon of the Council of Nicæa, the Bishop of Rome had entrusted to him the care of the suburbicarian churches [probably including Lower Italy and most of Central Italy, with Sicily, Sardinia and Corsica]. . . . But many causes tended to extend the authority of the Roman patriarch beyond these modest limits. The patriarch of Constantinople depended largely for his authority on the will of the emperor, and his spiritual realm was agitated by the constant intrigues of opposing parties. His brother of Rome enjoyed generally more freedom in matters spiritual, and the diocese over which he presided, keeping aloof for the most part from controversies on points of dogma, was therefore comparatively calm and united. Even the Orientals were impressed by the majesty of old Rome, and gave great honour to its bishop. In the West, the highest respect was paid to those sees which claimed an Apostle as founder, and among these the Church of St. Peter and St. Paul naturally took the highest place. It was, in fact, the one apostolic see of Western Europe, and as such received a unique regard. . . . Doubtful questions about apostolic doctrine and custom were addressed certainly to other distinguished bishops, as Athanasius and Basil, but they came more readily and more constantly to Rome, as already the last appeal in many civil matters. We must not suppose however that the Churches of the East were ready to accept the sway of Rome, however they might respect the great city of the West. . . . The authority of the Roman see increased from causes which are sufficiently obvious to historical enquirers. But the greatest of the Roman bishops were far too wise to tolerate the supposition that their power depended on earthly sanctions. They contended steadfastly that they were the heads of the Church on earth, because they were the successors of him to whom the Lord had given the keys of the kingdom of heaven, St. Peter. And they also contended that Rome was, in the most emphatic sense, the mother-church of the whole West. Innocent I. claims that no Church had ever been founded in Italy, Gaul, Spain, Africa, Sicily, or the Mediterranean islands, except by men who had received their commission from St. Peter or his successors. At the same time, they admitted that the privileges of the see were not wholly derived immediately from its founder, but were conferred by past generations out of respect for St. Peter's see. But the bishop who most clearly and emphati-

cally asserted the claims of the Roman see to pre-eminence over the whole Church on earth was no doubt Leo I., a great man who filled a most critical position with extraordinary firmness and ability. Almost every argument by which in later times the authority of the see of St. Peter was supported is to be found in the letters of Leo. . . . The Empire of the West never seriously interfered with the proceedings of the Roman bishop; and when it fell, the Church became the heir of the empire. In the general crash, the Latin Christians found themselves compelled to drop their smaller differences, and rally round the strongest representative of the old order. The Teutons, who shook to pieces the imperial system, brought into greater prominence the essential unity of all that was Catholic and Latin in the empire, and so strengthened the position of the see of Rome. . . . It must not however be supposed that the views of the Roman bishops as to the authority of Rome were universally accepted even in the West. Many Churches had grown up independently of Rome and were abundantly conscious of the greatness of their own past. . . . And in the African Church the reluctance to submit to Roman dictation which had showed itself in Cyprian's time was maintained for many generations. . . . In Gaul too there was a vigorous resistance to the jurisdiction of the see of St. Peter."—S. Cheetham, *Hist. of the Christian Church during the First Six Centuries, pp.* 181–195.—"A colossal city makes a colossal bishop, and this principle reached its maximum embodiment in Rome. The greatest City of the World made the greatest Bishop of the World. Even when the Empire was heathen the City lifted the Bishop so high that he drew to himself the unwelcome attention of the secular power, and in succession, in consequence, as in no other see, the early Bishops of Rome were martyrs. When the Empire became Christian, Rome's place was recognized as first, and the principle on which that primacy rested was clearly and accurately defined when the Second General Council, acting on this principle, assigned to the new seat of empire, Constantinople, the second place; it was the principle, namely, of honor, based upon material greatness. . . . The principle of the primacy, as distinguished from the supremacy growing out of Petrine claims was the heart and soul of Gallicanism in contrast to Ultramontanism, and was crushed out even in the Roman communion not twenty years ago."—Rt. Rev. G. F. Seymour, *The Church of Rome in her relation to Christian Unity* ("*Hist. and Teachings of the Early Church*," *lect.* 5).

Origin of the Papal title.—"'Papa,' that strange and universal mixture of familiar endearment and of reverential awe, extended in a general sense to all Greek Presbyters and all Latin Bishops, was the special address which, long before the names of patriarch or archbishop, was given to the head of the Alexandrian church. . . . He was the Pope. The Pope of Rome was a phrase which had not yet [at the time of the meeting of the Council of Nicæa, A. D. 325] emerged in history. But Pope of Alexandria was a well-known dignity. . . . This peculiar Alexandrian application of a name, in itself expressing simple affection, is thus explained:—Down to Heraclas (A. D. 230), the Bishop of Alexandria, being the sole Egyptian Bishop, was called 'Abba' (father), and his clergy 'elders.' From his time more bishops were created, who then received the name of 'Abba,' and consequently the name of 'Papa' ('ab-aba,' pater patrum=grandfather) was appropriated to the primate. The Roman account (inconsistent with facts) is that the name was first given to Cyril, as representing the Bishop of Rome in the Council of Ephesus. (Suicer, in voce). The name was fixed to the Bishop of Rome in the 7th century."—A. P. Stanley, *Lects. on the Hist. of the Eastern Church, lect.* 3.

A. D. 42-461.—The early Bishops of Rome, to Leo the Great.—The following is the succession of the popes, according to Roman Catholic authorities, during the first four hundred and twenty years: "Peter, to the year of Christ 67; Linus, Anencletus, Clement; (to 77?) Evaristus, Alexander, Xystus, Telesphorus, Hyginus, to 142; Pius, to 157; Anicetus, to 168; Soter, to 177; Eleutherius, to 193; Victor, to 202; Zephyrinus, to 219; Callistus, to 223; Urban, to 230; Pontianus, to 235; Anterus, to 236; Fabian, to 250; Cornelius, from 251 to 252; Lucius, to 253; Stephan, to 257; Xystus II, to 258; Dionysius, from 259 to 269; Felix, to 274; Eutychianus, to 283; Caius, to 296; Marcellinus, to 304; Marcellus, after a vacancy of four years, from 308 to 310; Eusebius, from the 20th of May to the 26th of September, 310; Melchiades, from 311 to 314; Silvester, from 314 to 335. . . . Mark was chosen on the 18th of January 336, and died on the 7th of October of the same year. Julius I, from 337 to 352, the steadfast defender of St. Athanasius. . . . The less steadfast Liberius, from 352 to 366, purchased, in 358, his return from exile by an ill-placed condescension to the demands of the Arians. He, however, soon redeemed the honour which he had forfeited by this step, by his condemnation of the council of Rimini, for which act he was again driven from his Church. During his banishment, the Roman clergy were compelled to elect the deacon Felix in his place, or probably only as administrator of the Roman Church. When Liberius returned to Rome, Felix fled from the city, and died in the country, in 365. Damasus, from 366 to 384, by birth a Spaniard, had, at the very commencement of his pontificate, to assert his rights against a rival named Ursicinus, who obtained consecration from some bishops a few days after the election of Damasus. The faction of Ursicinus was the cause of much bloodshed. . . . Siricius, from 385 to 389, was, although Ursicinus again endeavoured to intrude himself, unanimously chosen by the clergy and people. . . . Anastasius, from 398 to 402; a pontiff, highly extolled by his successor, and by St. Jerome, of whom the latter says, that he was taken early from this earth, because Rome was not longer worthy of him, and that he might not survive the desolation of the city by Alaric. He was succeeded by Innocent I, from 402 to 417. . . . During the possession of Rome by Alaric [see Rome: A. D. 408–410], Innocent went to Ravenna, to supplicate the emperor, in the name of the Romans, to conclude a peace with the Goths. The pontificate of his successor, the Greek Zosimus, was only of

twenty one months. The election of Boniface, from 418 to 422, was disturbed by the violence of the archdeacon Eulalius, who had attached a small party to his interests. . . . He was followed by Celestine I, from 422 to 432, the combatant of Nestorianism and of Semipelagianism. To Sixtus III, from 432 to 440, the metropolitans, Helladius of Tarsus, and Eutherius of Tyana, appealed, when they were threatened with deposition at the peace between St. Cyril and John of Antioch. Leo the Great, from 440 to 461, is the first pope of whom we possess a collection of writings: they consist of 96 discourses on festivals, and 141 epistles. By his high and well-merited authority, he saved Rome, in 452, from the devastation of the Huns; and induced Attila, named 'the scourge of God,' to desist from his invasion of Italy [see HUNS: A. D. 452]. Again, when, in 457 [455], the Vandal king Geiserich entered Rome [see ROME: A. D. 455], the Romans were indebted to the eloquent persuasions of their holy bishop for the preservation, at least, of their lives."—J. J. I. Döllinger, *Hist. of the Church, v.* 2, *pp.* 213–215.—"For many centuries the bishops of Rome had been comparatively obscure persons: indeed, Leo was the first really great man who occupied the see, but he occupied it under circumstances which tended without exception to put power in his hand. . . . Circumstances were thrusting greatness upon the see of St. Peter: the glory of the Empire was passing into her hands, the distracted Churches of Spain and Africa, harassed and torn in pieces by barbarian hordes and wearied with heresies, were in no position to assert independence in any matter, and were only too glad to look to any centre whence a measure of organization and of strength seemed to radiate; and the popes had not been slow in rising to welcome and promote the greatness with which the current and tendency of the age was investing them. Their rule seems to have been, more than anything else, to make the largest claim, and enforce as much of it as they could, but the theory of papal power was still indeterminate, vague, unfixed. She was Patriarch of the West — what rights did that give her? . . . Was her claim . . . a claim of jurisdiction merely, or did she hold herself forth as a doctrinal authority in a sense in which other bishops were not? In this respect, again, the claim into which Leo entered was indefinite and unformulated. . . . The Imperial instincts of old Rome are dominant in him, all that sense of discipline, order, government — all the hatred of uniformity, individuality, eccentricity. These are the elements which make up Leo's mind. He is above all things a governor and an administrator. He has got a law of ecclesiastical discipline, a supreme canon of dogmatic truth, and these are his instruments to subdue the troubled world. . . . The rule which governed Leo's conduct as pope was a very simple one, it was to take every opportunity which offered itself for asserting and enforcing the authority of his see: he was not troubled with historical or scriptural doubts or scruples which might cast a shadow of indecision, 'the pale cast of thought,' on his resolutions and actions. To him the papal authority had come down as the great inheritance of his position; it was identified in his mind with the order, the authority, the discipline, the orthodoxy which he loved so dearly; it suited exactly his Imperial ambition, in a word, his 'Roman' disposition and character, and he took it as his single great weapon against heresy and social confusion."—C. Gore, *Leo the Great, ch.* 6 *and* 7.

A. D. 461-604.—The succession of Popes from Leo the Great to Gregory the Great.—The successor of Leo the Great, "the Sardinian Hilarius, from 461 to 468, had been one of his legates at the council of Ephesus in 449. . . . The zeal of Simplicius, from 468 to 483, was called into action chiefly by the confusion occasioned in the east by the Monophysites. The same may be said of Felix II (or III) from 483 to 492, in whose election the prefect Basilius concurred, as plenipotentiary of king Odoacer. Gelasius I, from 492 to 496, and Anastasius II, laboured, but in vain, in endeavouring to heal the schism, formed by Acacius, at Constantinople. This schism occasioned a division in Rome at the election of a new pontiff. The senator Festus had promised the emperor that he would enforce the reception of the Henoticon at Rome; and by means of corruption established against the deacon Symmachus, who had in his favour the majority of voices, a powerful party, which chose Laurence as antipope. Again was a double election the cause of bloody strife in the streets of Rome, until the Arian king, Theodoric, at Ravenna, declared for Symmachus, who gave to his rival the bishopric of Luceria. . . . More tranquil was the pontificate of the succeeding pope, Hormisdas, from 514 to 523, and made illustrious by the restoration of peace, in 519, in the eastern Church.—John I died at Ravenna, in 519, in prison, into which he was cast by the suspicious Theodoric, after his return from Constantinople.—Felix III (or IV) from 526 to 530, was chosen by the Romans, at the command of the king. At short intervals, followed Boniface II, from 530 to 532; and John II, from 533 to 535.—Agapite I went, at the desire of the Gothic king, Theodatus, to obtain peace from the emperor, to Constantinople, where he died in 536.—Sylverius died, in 540, during his second exile, on the island of Palmaria. . . . Vigilius, who was ordained in 537, and who became lawful pope in 540, was compelled to remain in the east, from 546 to 554, sometimes a prisoner in Constantinople, and sometimes in exile. He died at Syracuse, on his return to Rome, in 555. Pelagius I, from 555 to 560, found difficulty in obtaining an acknowledgement of his election, as, by his condemnation of the three articles, he was considered in the west as a traitor to the council of Chalcedon, and because there existed a suspicion that he was accessory to the death of Vigilius.—John III, from 560 to 573, beheld the commencement of the Lombard dominion in Italy.—Benedict I, from 574 to 578, and Pelagius II, from 578 to 590, ruled the Church during the melancholy times of the Lombard devastations. One of the most splendid appearances in the series of the Roman pontiffs was that of Gregory the Great, from 590 to 604."—J. J. I. Döllinger, *Hist. of the Church, v.* 2, *pp.* 213–217.—"Pope Pelagius died on the 8th of February, 590. The people of Rome . . . were at this time in the utmost straits. Italy lay prostrate and miserable under the Lombard invasion; the invaders now threatened Rome itself, and its inhabitants trembled; famine and pestilence within the city produced a climax of distress; an overflow of the Tiber at the time aggravated the

general alarm and misery; Gregory himself, in one of his letters, compares Rome at this time to an old and shattered ship, letting in the waves on all sides, tossed by a daily storm, its planks rotten and sounding of wreck. In this state of things all men's thoughts at once turned to Gregory. The pope was at this period the virtual ruler of Rome, and the greatest power in Italy; and they must have Gregory as their pope; for, if any one could save them, it was he. His abilities in public affairs had been proved; all Rome knew his character and attainments; he had now the further reputation of eminent saintliness. He was evidently the one man for the post; and accordingly he was unanimously elected by clergy, senate, and people. But he shrank from the proffered dignity. There was one way by which he might possibly escape it. No election of a pope could at this time take effect without the emperor's confirmation, and an embassy had to be sent to Constantinople to obtain it. Gregory therefore sent at the same time a letter to the emperor (Mauricius, who had succeeded Tiberius in 582), imploring him to withhold his confirmation; but it was intercepted by the prefect of the city, and another from the clergy, senate, and people sent in its place, entreating approval of their choice. . . . At length the imperial confirmation of his election arrived. He still refused; fled from the city in disguise, eluding the guards set to watch the gates, and hid himself in a forest cave. Pursued and discovered by means, it is said, of a supernatural light, he was brought back in triumph, conducted to the church of St. Peter, and at once ordained on the 3rd of September, 590. . . . Having been once placed in the high position he so little coveted, he rose to it at once, and fulfilled its multifarious duties with remarkable zeal and ability. His comprehensive policy, and his grasp of great issues, are not more remarkable than the minuteness of the details, in secular as well as religious matters, to which he was able to give his personal care. And this is the more striking in combination with the fact that, as many parts of his writings show, he remained all the time a monk at heart, thoroughly imbued with both the ascetic principles and the narrow credulity of contemporary monasticism. His private life, too, was still in a measure monastic: the monastic simplicity of his episcopal attire is noticed by his biographer; he lived with his clergy under strict rule, and in 595 issued a synodal decree substituting clergy for the boys and secular persons who had formerly waited on the pope in his chamber."—J. Barmby, *Gregory the Great, ch.* 2.—"Of the immense energy shown by St. Gregory in the exercise of his Principate, of the immense influence wielded by him both in the East and in the West, of the acknowledgment of his Principate by the answers which emperor and patriarch made to his demands and rebukes, we possess an imperishable record in the fourteen books of his letters which have been preserved to us. They are somewhat more than 850 in number. They range over every subject, and are addressed to every sort of person. If he rebukes the ambition of a patriarch, and complains of an emperor's unjust law, he cares also that the tenants on the vast estates of the Church which his officers superintend at a distance should not be in any way harshly treated. . . . The range of his letters is so great, their detail so minute, that they illuminate his time and enable us to form a mental picture, and follow faithfully that pontificate of fourteen years, incessantly interrupted by cares and anxieties for the preservation of his city, yet watching the beginnings and strengthening the polity of the western nations, and counterworking the advances of the eastern despotism. The divine order of greatness is, we know, to do and to teach. Few, indeed, have carried it out on so great a scale as St. Gregory. The mass of his writing preserved to us exceeds the mass preserved to us from all his predecessors together, even including St. Leo, who with him shares the name of Great, and whose sphere of action the mind compares with his. If he became to all succeeding times an image of the great sacerdotal life in his own person, so all ages studied in his words the pastoral care, joining him with St. Gregory of Nazianzum and St. Chrysostom. The man who closed his life at sixty-four, worn out, not with age, but with labour and bodily pains, stands, beside the learning of St. Jerome, the perfect episcopal life and statesmanship of St. Ambrose, the overpowering genius of St. Augustine, as the fourth doctor of the western Church, while he surpasses them all in that his doctorship was seated on St. Peter's throne. If he closes the line of Fathers, he begins the period when the Church, failing to preserve a rotten empire in political existence, creates new nations; nay, his own hand has laid for them their foundation-stones."—T. W. Allies, *The Holy See and the Wandering of the Nations, from St. Leo I. to St. Gregory I., pp.* 309–335.—See, also, Rome: A. D. 590–640.

A. D. 604-731.—The succession of Popes.—Sabinian, A. D. 604–606; Boniface III., 607; Boniface IV., 608–615; Deusdedit, 615–618; Boniface V., 619–625; Honorius I., 625–638; Severinus, 640; John IV., 640–642; Theodore I., 642–649; Martin I., 649–655; Eugenius I., 655–657; Vitalian, 657–672; Adeodatus II., 672–676; Donus I., 676–678; Agatho, 678–682; Leo II., 682–683; Benedict II., 684–685; John V., 685–686; Conon, 686–687; Sergius I., 687–701; John VI., 701–705; John VII., 705–707; Sisinnius, 708; Constantine, 708–715; Gregory II., 715–731.

A. D. 728-774.—Rise of the Papal Sovereignty at Rome.—The extinguishment of the authority of the Eastern emperors at Rome and in Italy began with the revolt provoked by the attempts of the iconoclastic Leo, the Isaurian, to abolish image-worship in the Christian churches (see Iconoclastic Controversy). The Pope, Gregory II., remonstrated vehemently, but in vain. At his signal all central Italy rose in revolt. "The exarch was compelled to shut himself up in Ravenna; for the cities of Italy, instead of obeying the imperial officers, elected magistrates of their own, on whom they conferred, in some cases, the title of duke. Assemblies were held, and the project of electing an emperor of the West was adopted." But another danger showed itself at this juncture which alarmed Rome and Italy more than the iconoclastic persecutions of the Byzantine emperor. The king of the Lombards took advantage of the insurrection to extend his own domains. He invaded the exarchate and got actual possession of Ravenna; whereat Pope Gregory turned his influence to the Byzantine side, with such effect that the Lombards were beaten back and Ravenna recovered. In 731 Gregory II. died and was suc-

ceeded by Pope Gregory III. "The election of Gregory III. to the papal chair was confirmed by the Emperor Leo in the usual form; nor was that pope consecrated until the mandate from Constantinople reached Rome. This was the last time the emperors of the East were solicited to confirm the election of a pope." Leo continued to press his severe measures against image-worship, and the pope boldly convened at Rome a synod of ninety-three bishops which excommunicated the whole body of the Iconoclasts, emperor and all. The latter now dispatched a strong expedition to Italy to suppress the threatening papal power; but it came to naught, and the Byzantine authority was practically at an end, already, within the range of papal leadership. "From this time, A. D. 733, the city of Rome enjoyed political independence under the guidance and protection of the popes; but the officers of the Byzantine emperors were allowed to reside in the city, justice was publicly administered by Byzantine judges, and the supremacy of the Eastern Empire was still recognised. So completely, however, had Gregory III. thrown off his allegiance, that he entered into negotiations with Charles Martel, in order to induce that powerful prince to take an active part in the affairs of Italy. The pope was now a much more powerful personage than the Exarch of Ravenna, for the cities of central Italy, which had assumed the control of their local government, intrusted the conduct of their external political relations to the care of Gregory, who thus held the balance of power between the Eastern emperor and the Lombard king. In the year 742, while Constantine V., the son of Leo, was engaged with a civil war, the Lombards were on the eve of conquering Ravenna, but Pope Zacharias threw the whole of the Latin influence into the Byzantine scale, and enabled the exarch to maintain his position until the year 751, when Astolph, king of the Lombards, captured Ravenna. The exarch retired to Naples, and the authority of the Byzantine emperors in central Italy ended."—G. Finlay, *Hist. of the Byzantine Empire, bk.* 1, *ch.* 1, *sect.* 2.—The Lombards, having obtained Ravenna and overturned the throne of the Byzantine exarchs, were now bent on extending their sovereignty over Rome. But the popes found an ally beyond the Alps whose interests coincided with their own. Pepin, the first Carolingian king of the Franks, went twice to their rescue and broke the Lombard power; his son Charlemagne finished the work [see LOMBARDS: A. D. 754–774], and by the acts of both these kings the bishops of Rome were established in a temporal no less than a spiritual principality.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 49.

ALSO IN: P. Godwin, *Hist. of France: Ancient Gaul, bk.* 4, *ch.* 15.—See, also, FRANKS: A. D. 768–814.

A. D. 731-816.—The succession of Popes.—Gregory III., A. D. 731–741; Zacharias, 741–752; Stephen I. (or II.), 752; Stephen II. (or III.), 752–757; Paul I., 757–767; Stephen III. (or IV.), 768–772; Hadrian I., 772–795; Leo III., 795–816.

A. D. 755-774.—Origin of the Papal States. —The Donations of Pepin and Charlemagne. —As the result of Pepin's second expedition to Italy (A. D. 755), "the Lombard king sued for quarter, promised to fulfil the terms of the treaty made in the preceding year, and to give up all the places mentioned in it. Pepin made them all over to the Holy See, by a solemn deed, which was placed in the archives of the Roman Church. . . . Pepin took such steps as should insure the execution of the Lombard's oath. Ravenna, Rimini, Resaro, Fano, Cesena, Sinigaglia, Jesi, Forlimpopoli, Forli, Castrocaro, Montefeltro, Acerragio, Montelucari, supposed to be the present Nocera, Serravalle, San Marigni, Bobio, Urbino, Caglio, Luccoli, Eugubio, Comacchio and Narni were evacuated by the Lombard troops; and the keys of the 22 cities were laid, with King Pepin's deed of gift, upon the Confession of St. Peter. The independence of the Holy See was established."—J. E. Darras, *Gen. Hist. of the Catholic Church, period* 3, *ch.* 10.—"An embassy from the Byzantine emperor asserted, during the negotiation of the treaty, the claims of that sovereign to a restoration of the exarchate; but their petitions and demands failed of effect on 'the steadfast heart of Pippin' [or Pepin], who declared that he had fought alone in behalf of St. Peter, on whose Church he would bestow all the fruits of victory. Fulrad, his abbot, was commissioned to receive the keys of the twenty-two towns his arms had won, and to deposit them as a donation on the grave of the apostle at Rome. Thus the Pope was made the temporal head of that large district . . . which, with some few changes, has been held by his successors."—P. Godwin, *Hist. of France: Ancient Gaul, bk.* 4, *ch.* 15.—"When on Pipin's death the restless Lombards again took up arms and menaced the possessions of the Church, Pipin's son Charles or Charlemagne swept down like a whirlwind from the Alps at the call of Pope Hadrian [774], seized king Desiderius in his capital, assumed himself the Lombard crown, and made northern Italy thenceforward an integral part of the Frankish empire. . . . Whether out of policy or from that sentiment of reverence to which his ambitious mind did not refuse to bow, he was moderate in claims of jurisdiction, he yielded to the pontiff the place of honour in processions, and renewed, although in the guise of a lord and conqueror, the gift of the Exarchate and Pentapolis, which Pipin had made to the Roman Church twenty years before."—J. Bryce, *The Holy Roman Empire, ch.* 4.—"It is reported, also, . . . that, jealous of the honor of endowing the Holy See in his own name, he [Charlemagne] amplified the gifts of Pippin by annexing to them the island of Corsica, with the provinces of Parma, Mantua, Venice, and Istria, and the duchies of Spoleto and Beneventum. . . . This rests wholly upon the assertion of Anastasius; but Karl could not give away what he did not possess, and we know that Corsica, Venice and Beneventum were not held by the Franks till several years later. . . . Of the nature and extent of these gifts nothing is determined: that they did not carry the right of eminent domain is clear from the subsequent exercise of acts of sovereignty within them by the Frankish monarchs; and the probability is, according to the habits of the times, that the properties were granted only under some form of feudal vassalage."—P. Godwin, *Hist. of France: Ancient Gaul, bk.* 4, *ch.* 16.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 49.—"Indefinite in their terms, these grants were never meant by the donors to convey full dominion

over the districts — that belonged to the head of the Empire — but only as in the case of other church estates, a perpetual usufruct or 'dominium utile.' They were, in fact, mere endowments. Nor had the gifts been ever actually reduced into possession."—J. Bryce, *The Holy Roman Empire, ch.* 10.

A. D. 774 (?).—Forgery of the "Donation of Constantine."—"Before the end of the 8th century some apostolical scribe, perhaps the notorious Isidore, composed the decretals and the donation of Constantine, the two magic pillars of the spiritual and temporal monarchy of the popes [see below: A. D. 829–847]. This memorable donation was introduced to the world by an epistle of Adrian I., who exhorts Charlemagne to imitate the liberality and revive the name of the great Constantine. According to the legend, the first of the Christian emperors was healed of the leprosy, and purified in the waters of baptism, by St. Silvester, the Roman bishop; and never was physician more gloriously recompensed. His royal proselyte withdrew from the seat and patrimony of St. Peter, declared his resolution of founding a new capital in the East; and resigned to the popes the free and perpetual sovereignty of Rome, Italy, and the provinces of the West. This fiction was productive of the most beneficial effects. The Greek princes were convicted of the guilt of usurpation; and the revolt of Gregory was the claim of his lawful inheritance. The popes were delivered from their debt of gratitude; and the nominal gifts of the Carlovingians were no more than the just and irrevocable restitution of a scanty portion of the ecclesiastical State."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 49.—"But this is not all, although this is what historians, in admiration of its splendid audacity, have chiefly dwelt upon. The edict proceeds to grant to the Roman pontiff and his clergy a series of dignities and privileges, all of them enjoyed by the emperor and his senate, all of them shewing the same desire to make the pontifical a copy of the imperial office. The Pope is to inhabit the Lateran palace, to wear the diadem, the collar, the purple cloak, to carry the sceptre, and to be attended by a body of chamberlains. . . . The practice of kissing the Pope's foot was adopted in imitation of the old imperial court. It was afterwards revived by the German Emperors."—J. Bryce, *The Holy Roman Empire, ch.* 7, *and foot-note.*

(or X.), 1057–1058; Benedict X., antipope, 1058–1059; Nicholas II., 1058–1061; Alexander II., 1061–1073.

A. D. 829-847.—The False Decretals.—"There existed in each of the national churches, a collection of ecclesiastical laws, or canons, which were made use of as circumstances required. One of these collections was in use in Spain as early as the sixth century, and was subsequently attributed to Isidore, Bishop of Seville. Towards the middle of the ninth century, a new recension of these canons appeared in France, based upon the so-called Isidorian collection, but into which many spurious fragments, borrowed from private collections and bearing upon their face incontestable evidence of the ignorance of their authors, had been introduced. This recension contained also a number of forged documents. There were, altogether, above a hundred spurious decrees of popes, from Clement to Damasus (A. D. 384), not to mention some of other popes, and many false canons of councils. It also contained the forged Deed of Donation ascribed to Constantine [see above: A. D. 774 ?]. However, these decretals, which, as they stand, are now proved, both by intrinsic and extrinsic arguments, to be impudent forgeries, are nevertheless, in matter of fact, the real utterances of popes, though not of those to whom they are ascribed, and hence the forgery is, on the whole, one of chronological location, and does not affect their essential character."—J. Alzog, *Manual of Universal Church History, v.* 2, *p.* 195. — "Various opinions exist as to the time at which this collection was made, and the precise date of its publication. Mabillon supposes the compilation to have been made about A. D. 785; and in this opinion he is followed by others. But the collection did not appear until after the death of Charlemagne. Some think that these Decretals cannot be of an earlier date than 829, and Blondel supposed that he discovered in them traces of the acts of a council at Paris held in that year. All that can be determined is that most probably the Decretals were first published in France, perhaps at Mayence, about the middle of the ninth century; but it is impossible to discover their real author. The spuriousness of these Decretals was first exposed by the Magdeburg Centuriators, with a degree of historical and critical acumen beyond the age in which they lived. The Jesuit Turrianus endeavoured, but in vain, to defend the spurious documents against this attack. . . . Of these Epistles none (except two, which appear on other grounds to be spurious) were ever heard of before the ninth century. They contain a vast number of anachronisms

and historical inaccuracies. Passages are quoted from more recent writings, including the Vulgate, according to the version of Jerome; and, although the several Epistles profess to have been written by different pontiffs, the style is manifestly uniform, and often very barbarous, such as could not have proceeded from Roman writers of the first century. . . . The success of this forgery would appear incredible, did we not take into account the weak and confused government of the successors of Charlemagne, in whose time it was promulgated; the want of critical acumen and resources in that age; the skill with which the pontiffs made use of the Decretals only by degrees; and the great authority and power possessed by the Roman pontiffs in these times. The name of Isidore also served to recommend these documents, many persons being ready to believe that they were in fact only a completion of the genuine collection of Isidore, which was highly esteemed. . . . The unknown compiler was subsequently called Pseudo-Isidorus."— J. E. Riddle, *Hist. of the Papacy, v.* 1, *pp.* 405–407.

A. D. 887-1046.— Demoralization of the Church.—Degradation of the Holy See.—Reforms of the Emperor, Henry III.—"No exaggeration is possible of the demoralized state into which the Christian world, and especially the Church of Rome, had fallen in the years that followed the extinction of the Carlovingian line (A. D. 887). The tenth century is even known among Protestants 'par excellence' as the sæculum obscurum, and Baronius expresses its portentous corruption in the vivid remark that Christ was as if asleep in the vessel of the Church. 'The infamies prevalent among the clergy of the time,' says Mr. Bowden [Life of Hildebrand], 'as denounced by Damiani and others, are to be alluded to, not detailed.' . . . When Hildebrand was appointed to the monastery of St. Paul at Rome, he found the offices of devotion systematically neglected, the house of prayer defiled by the sheep and cattle who found their way in and out through its broken doors, and the monks, contrary to all monastic rule, attended in their refectory by women. The excuse for these irregularities was the destitution to which the holy house was reduced by the predatory bands of Campagna; but when the monastic bodies were rich, as was the case in Germany, matters were worse instead of better. . . . At the close of the ninth century, Stephen VI. dragged the body of an obnoxious predecessor from the grave, and, after subjecting it to a mock trial, cut off its head and three fingers, and threw it into the Tiber. He himself was subsequently deposed, and strangled in prison. In the years that followed, the power of electing to the popedom fell into the hands of the intriguing and licentious Theodora, and her equally unprincipled daughters, Theodora and Marozia [see Rome: A. D. 903–964]. These women, members of a patrician family, by their arts and beauty, obtained an unbounded influence over the aristocratic tyrants of the city. One of the Theodoras advanced a lover, and Marozia a son, to the popedom. The grandson of the latter, Octavian, succeeding to her power, as well as to the civil government of the city, elevated himself, on the death of the then Pope, to the apostolic chair, at the age of eighteen, under the title of John XII. (A. D. 956). His career was in keeping with such a commencement. 'The Lateran Palace,' says Mr. Bowden, 'was disgraced by becoming a receptacle for courtezans: and decent females were terrified from pilgrimages to the threshold of the Apostles by the reports which were spread abroad of the lawless impurity and violence of their representative and successor.' . . . At length he was carried off by a rapid illness, or by the consequences of a blow received in the prosecution of his intrigues. Boniface VII. (A. D. 974), in the space of a few weeks after his elevation, plundered the treasury and basilica of St. Peter of all he could conveniently carry off, and fled to Constantinople. John XVIII. (A. D. 1003) expressed his readiness, for a sum of money from the Emperor Basil, to recognize the right of the Greek Patriarch to the title of ecumenical or universal bishop, and the consequent degradation of his own see; and was only prevented by the general indignation excited by the report of his intention. Benedict IX. (A. D. 1033) was consecrated Pope, according to some authorities, at the age of ten or twelve years, and became notorious for adulteries and murders. At length he resolved on marrying his first cousin; and, when her father would not assent except on the condition of his resigning the popedom, he sold it for a large sum, and consecrated the purchaser as his successor. Such are a few of the most prominent features of the ecclesiastical history of these dreadful times, when, in the words of St. Bruno, 'the world lay in wickedness, holiness had disappeared, justice had perished, and truth had been buried; Simon Magus lording it over the Church, whose bishops and priests were given to luxury and fornication.' Had we lived in such deplorable times as have been above described . . . we should have felt for certain, that if it was possible to retrieve the Church, it must be by some external power; she was helpless and resourceless; and the civil power must interfere, or there was no hope. So thought the young and zealous emperor, Henry III. (A. D. 1039), who, though unhappily far from a perfect character, yet deeply felt the shame to which the Immaculate Bride was exposed, and determined with his own right hand to work her deliverance. . . . This well-meaning prince did begin that reformation which ended in the purification and monarchical estate of the Church. He held a Council of his Bishops in 1047; in it he passed a decree that 'Whosoever should make any office or station in the Church a subject of purchase or sale, should suffer deprivation and be visited with excommunication;' at the same time, with regard to his own future conduct, he solemnly pledged himself as follows:—'As God has freely of His mere mercy bestowed upon me the crown of the empire, so will I give freely and without price all things that pertain unto His religion.' This was his first act; but he was aware that the work of reform, to be thoroughly executed, must proceed from Rome, as the centre of the ecclesiastical commonwealth, and he determined, upon those imperial precedents and feudal principles

which Charlemagne had introduced, himself to appoint a Pope, who should be the instrument of his general reformation. The reigning Pope at this time was Gregory VI., and he introduces us to so curious a history that we shall devote some sentences to it. Gregory was the identical personage who had bought the papal office of the profligate Benedict IX. for a large sum, and was consecrated by him, and yet he was far from a bad sort of man after all. . . . He had been known in the world as John Gratianus; and at the time of his promotion was arch-priest of Rome. 'He was considered,' says Mr. Bowden, 'in those bad times more than ordinarily religious; he had lived free from the gross vices by which the clergy were too generally disgraced.' . . . He could not be quite said to have come into actual possession of his purchase; for Benedict, his predecessor, who sold it to him, being disappointed in his intended bride, returned to Rome after an absence of three months, and resumed his pontifical station, while the party of his intended father-in-law had had sufficient influence to create a Pope of their own, John, Bishop of Sabina, who paid a high price for his elevation, and took the title of Sylvester III. And thus there were three self-styled Popes at once in the Holy City, Benedict performing his sacred functions at the Lateran, Gregory at St. Peter's, and Sylvester at Santa Maria Maggiore. Gregory, however, after a time, seemed to preponderate over his antagonists; he maintained a body of troops, and with these he suppressed the suburban robbers who molested the pilgrims. Expelling them from the sacred limits of St. Peter's, he carried his arms further, till he had cleared the neighbouring towns and roads of these marauders. . . . This was the point of time at which the Imperial Reformer made his visitation of the Church and See of the Apostles. He came into Italy in the autumn of 1046, and held a Council at Sutri, a town about thirty miles to the north of Rome. Gregory was allowed to preside; and, when under his auspices the abdication of Benedict had been recorded, and Sylvester had been stripped of his sacerdotal rank and shut up in a monastery for life, Gregory's own turn came" and he was persuaded to pronounce a sentence of condemnation upon himself and to vacate the pontifical chair. "The new Pope whom the Emperor gave to the Church instead of Gregory VI., Clement II., a man of excellent character, died within the year. Damasus II. also, who was his second nomination, died in three or four weeks after his formal assumption of his pontifical duties. Bruno, Bishop of Toul, was his third choice. . . . And now we are arrived at the moment when the State reformer struck his foot against the hidden rock. . . . He had chosen a Pope, but 'quis custodiat ipsos custodes'? What was to keep fast that Pope in that very view of the relation of the State to the Church, that plausible Erastianism, as it has since been called, which he adopted himself? What is to secure the Pope from the influences of some Hildebrand at his elbow, who, a young man himself, shall rehearse, in the person of his superior, that part which he is one day to play in his own, as Gregory VII.? Such was the very fact; Hildebrand was with Leo, and thus commences the ecclesiastical career of that wonderful man."—J. H. Newman, *Essays Critical and Historical, v.* 2, *pp.* 255–265.

A. D. 1056-1122.—Hildebrand and Henry IV.—The imperious pontifical reign of Gregory VII.—Empire and Papacy in conflict.—The War of Investitures.— "Son of a Tuscan carpenter, but, as his name shows, of German origin, Hildebrand had been from childhood a monk in the monastery of Sta Maria, on Mount Aventine, at Rome, where his uncle was abbot, and where he became the pupil of a learned Benedictine archbishop, the famous Laurentius of Amalfi, and formed a tender friendship with St. Odilon of Cluny [or Clugny]. Having early attached himself to the virtuous Pope Gregory VI., it was with indignation that he saw him confounded with two unworthy competitors, and deposed together with them by the arbitrary influence of the emperor at Sutri. He followed the exiled pontiff to France, and, after his death, went to enrol himself among the monks of Cluny, where he had previously resided, and where, according to several writers, he held the office of prior. During a part of his youth, however, he must have lived at the German Court, where he made a great impression on the Emperor Henry III., and on the best bishops of the country, by the eloquence of his preaching. . . . It was at Cluny that Hildebrand met, in 1049, the new Pope, Bruno, Bishop of Toul. . . . Bruno himself had been a monk: his cousin, the Emperor Henry III., had, by his own authority, caused him to be elected at Worms, December 1048, and proclaimed under the name of Leo IX. Hildebrand, seeing him already clothed with the pontifical purple, reproached him for having accepted the government of the Church, and advised him to guard ecclesiastical liberty by being canonically elected at Rome. Bruno yielded to this salutary remonstrance; laying aside the purple and the pontifical ornaments, he caused Hildebrand to accompany him to Rome, where his election was solemnly renewed by the Roman clergy and people. This was the first blow given to the usurped authority of the emperor. From that moment Hildebrand was withdrawn from Cluny by the Pope, in spite of the strong resistance of the Abbot St. Hugh. Created Cardinal Subdeacon of the Roman Church, and Abbot of San Paolo fuori le Mura, he went on steadily towards the end he had in view. Guided by his advice, Leo IX., after having renewed his courage at Monte Cassino, prepared several decrees of formal condemnation against the sale of benefices and against the marriage of priests; and these decrees were fulminated in a series of councils on both sides the Alps, at Rome, Verceil, Mayence, and Reims. The enemy, till then calm in the midst of his usurped rule, felt himself sharply wounded. Nevertheless, the simoniacal bishops, accomplices or authors of all the evils the Pope wished to cure, pretended as well as they could not to understand the nature and drift of the pontiff's act. They hoped time would be their friend; but they were soon undeceived. Among the

many assemblies convoked and presided over by Pope Leo IX., the Council of Reims, held in 1094, was the most important. . . . Henry I., King of France, opposed the holding of this Council with all his might. . . . The Pope stood his ground: he was only able to gather round him twenty bishops; but, on the other hand, there came fifty Benedictine abbots. Thanks to their support, energetic canons were promulgated against the two great scandals of the time, and several guilty prelates were deposed. They went still further: a decree pronounced by this Council vindicated, for the first time in many years, the freedom of ecclesiastical elections, by declaring that no promotion to the episcopate should be valid without the choice of the clergy and people. This was the first signal of the struggle for the enfranchisement of the Church, and the first token of the preponderating influence of Hildebrand. From that time all was changed. A new spirit breathed on the Church —a new life thrilled the heart of the papacy. . . . Vanquished and made prisoner by the Normans — not yet, as under St. Gregory VII., transformed into devoted champions of the Church —Leo IX. vanquished them, in turn, by force of courage and holiness, and wrested from them their first oath of fidelity to the Holy See while granting to them a first investiture of their conquests. Death claimed the pontiff when he had reigned five years. . . . At the moment when the struggle between the papacy and the Western empire became open and terrible, the East, by a mysterious decree of Providence, finally separated itself from Catholic unity. . . . The schism was completed by Michael Cerularius, whom the Emperor Constantine Monomachius had placed, in 1043, on the patriarchal throne. The separation took place under the vain pretext of Greek and Latin observances on the subject of unleavened bread, of strangled meats, and of the singing of the Alleluia. . . . Leo IX. being dead, the Romans wished to elect Hildebrand, and only renounced their project at his most earnest entreaties. He then hastened to cross the Alps, and directed his steps to Germany [1054], provided with full authority from the Roman clergy and people to choose, under the eyes of the Emperor Henry III., whoever, among the prelates of the empire, that prince should judge most worthy of the tiara. . . . Hildebrand selected Gebhard, Bishop of Eichstadt; and in spite of the emperor, who desired to keep near him a bishop who enjoyed his entire confidence — in spite even of Gebhard himself — he carried him off to Rome, where, according to the ancient custom, the clergy proceeded to his election under the name of Victor II. The new Pope, at the risk of his life, adhered to the counsels of Hildebrand, and continued the war made by his predecessor on simoniacal bishops and married priests. . . . At this crisis [October, 1056] the Emperor Henry III. died in the flower of his age, leaving the throne of Germany to his only son, a child of six years old, but already elected and crowned — the regent being his mother, the Empress Agnes. . . . Victor II. had scarcely followed the emperor to the tomb [July, 1057] when the Roman clergy hastened, for the first time, to elect a Pope without any imperial intervention. In the absence of Hildebrand, the unanimous choice of the electors fixed on the former chancellor and legate at Constantinople of Leo IX., on Frederic, monk and abbot of Monte Cassino," raised to the throne by the name of Stephen, sometimes numbered as the ninth, but generally as the tenth Pope of that name.— Count de Montalembert, *The Monks of the West, bk.* 19, *ch.* 2 (*v.* 6).— Stephen X. died in the year following his election, and again the papal chair was filled during the absence of Hildebrand from Rome. The new Pope, who took the name of Benedict X., was obnoxious to the reforming party, of which Hildebrand was the head, and the validity of his election was denied. With the support of the imperial court in Germany, Gerard, Bishop of Florence, was raised to the throne, as Nicholas II., and his rival gave way to him. Nicholas II., dying in 1061, was succeeded by Alexander II. elected equally under Hildebrand's influence. On the death of Alexander in 1073, Hildebrand himself was forced against his will, to accept the papal tiara. He "knew well the difficulties that would beset one who should endeavour to govern the Church as became an upright and conscientious Pope. Hence, dreading the responsibility, he protested, but to no purpose, against his own elevation to the papal throne. . . . Shrinking from its onerous duties, Gregory thought he saw one way still open by which he might escape the burden. The last decree on papal elections contained an article requiring that the Pope-elect should receive the approval of the Emperor of Germany. Gregory, who still assumed only the title of 'Bishop-elect of Rome,' notified Henry IV., King of Germany and Emperor-elect, of what had taken place, and begged him not to approve the action or confirm the choice of the Romans. 'But should you,' he went on to say, 'deny my prayer, I beg to assure you that I shall most certainly not allow your scandalous and notorious excesses to go unpunished.' Several historians, putting this bold declaration beside the decree of Nicholas II. (A. D. 1059), which went on the assumption that the King of Germany did not enjoy the right of approving the Pope-elect until after he had been crowned Emperor, and then, only by a concession made to himself personally, have pronounced it supposititious. But when it is recollected that its authenticity rests upon the combined testimony of Bonizo, Bishop of Sutri, the friend of Hildebrand, and of William, abbot of Metz, as well as on the authority of the Acta Vaticana, it is difficult to see how the objection can be sustained. . . . Henry IV., on receiving news of Hildebrand's election, sent Count Eberhard, of Nellenburg, as his plenipotentiary to Rome to protest against the proceeding. The politic Hildebrand was careful not to be taken at a disadvantage. 'I have indeed' said he, 'been elected by the people, but against my own will. I would not, however, allow myself to be forced to take priest's orders until my election should have been ratified by the king and the princes of Germany.' Lambert of Hersfeld informs us that Henry was so pleased with this manner of speech that he gave orders to allow the consecration to go on, and the ceremony was accordingly performed on the Feast of the Purification in the following year (A. D. 1074). This is the last instance of a papal election being ratified by an emperor. . . . Out of respect to the memory of Gregory VI., his former friend and master, Hildebrand, on ascending the papal throne, took the ever-illustrious name of Gregory VII."— J. Alzog, *Manual of*

Universal Church Hist., v. 2, *pp.* 347–348. — "From the most remote Christian antiquity, the marriage of clergymen had been regarded with the dislike, and their celibacy rewarded by the commendation, of the people. . . . This prevailing sentiment had ripened into a customary law, and the observance of that custom had been enforced by edicts and menaces, by rewards and penalties. But nature had triumphed over tradition, and had proved too strong for Councils and for Popes. When Hildebrand ascended the chair first occupied by a married Apostle, his spirit burned within him to see that marriage held in her impure and unhallowed bonds a large proportion of those who ministered at the altar, and who handled there the very substance of the incarnate Deity. It was a profanation well adapted to arouse the jealousy, not less than to wound the conscience, of the Pontiff. Secular cares suited ill with the stern duties of a theocratic ministry. Domestic affections would choke or enervate in them that corporate passion which might otherwise be directed with unmitigated ardour towards their chief and centre. Clerical celibacy would exhibit to those who trod the outer courts of the great Christian temple, the impressive and subjugating image of a transcendental perfection, too pure not only for the coarser delights of sense, but even for the alloy of conjugal or parental love. It would fill the world with adherents of Rome, in whom every feeling would be quenched which could rival that sacred allegiance. . . . With such anticipations, Gregory, within a few weeks from his accession, convened a council at the Lateran, and proposed a law, not, as formerly, forbidding merely the marriage of priests, but commanding every priest to put away his wife, and requiring all laymen to abstain from any sacred office which any wedded priest might presume to celebrate. Never was legislative foresight so verified by the result. What the great Council of Nicæa had attempted in vain, the Bishops assembled in the presence of Hildebrand accomplished, at his instance, at once, effectually, and for ever. Lamentable indeed were the complaints, bitter the reproaches, of the sufferers. Were the most sacred ties thus to be torn asunder at the ruthless bidding of an Italian priest? Were men to become angels, or were angels to be brought down from heaven to minister among men? Eloquence was never more pathetic, more just, or more unavailing. Prelate after prelate silenced these complaints by austere rebukes. Legate after legate arrived with papal menaces to the remonstrants. Monks and abbots preached the continency they at least professed. Kings and barons laughed over their cups at many a merry tale of compulsory divorce. Mobs pelted, hooted, and besmeared with profane and filthy baptisms the unhappy victims of pontifical rigour. It was a struggle not to be prolonged — broken hearts pined and died away in silence. Expostulations subsided into murmurs, and murmurs were drowned in the general shout of victory. Eight hundred years have since passed away. Amidst the wreck of laws, opinions, and institutions, this decree of Hildebrand's still rules the Latin Church, in every land where sacrifices are offered on her altars. . . . With this Spartan rigour towards his adherents, Gregory combined a more than Athenian address and audacity towards his rivals and antagonists. So long as the monarchs of the West might freely bestow on the objects of their choice the sees and abbeys of their states, papal dominion could be but a passing dream, and papal independency an empty boast. Corrupt motives usually determined that choice; and the objects of it were but seldom worthy. Ecclesiastical dignities were often sold to the highest bidder, and then the purchaser indemnified himself by a use no less mercenary of his own patronage; or they were given as a reward to some martial retainer, and the new churchman could not forget that he had once been a soldier. The cope and the coat-of-mail were worn alternately. The same hand bore the crucifix in the holy festival, and the sword in the day of battle. . . . In the hands of the newly consecrated Bishop was placed a staff, and on his finger a ring, which, received as they were from his temporal sovereign, proclaimed that homage and fealty were due to him alone. And thus the sacerdotal Proconsuls of Rome became, in sentiment at least, and by the powerful obligation of honour, the vicegerents, not of the Pontifex Maximus, but of the Imperator. To dissolve this 'trinoda necessitas' of simoniacal preferments, military service, and feudal vassalage, a feebler spirit would have exhorted, negotiated, and compromised. To Gregory it belonged to subdue men by courage, and to rule them by reverence. Addressing the world in the language of his generation, he proclaimed to every potentate, from the Baltic to the Straits of Calpé, that all human authority being holden of the divine, and God himself having delegated his own sovereignty over men to the Prince of the Sacred College, a divine right to universal obedience was the inalienable attribute of the Roman Pontiffs. . . . In turning ever the collection of the epistles of Hildebrand, we are every where met by this doctrine asserted in a tone of the calmest dignity and the most serene conviction. Thus he informs the French monarch that every house in his kingdom owed to Peter, as their father and pastor, an annual tribute of a penny, and he commands his legates to collect it in token of the subjection of France to the Holy See. He assures Solomon the King of Hungary, that his territories are the property of the Holy Roman Church. Solomon being incredulous and refractory, was dethroned by his competitor for the Hungarian crown. His more prudent successor, Ladislaus, acknowledged himself the vassal of the Pope, and paid him tribute. . . . From every part of the European continent, Bishops are summoned by these imperial missives to Rome, and there are either condemned and deposed, or absolved and confirmed in their sees. In France, in Spain, and in Germany, we find his legates exercising the same power; and the correspondence records many a stern rebuke, sometimes for their undue remissness, sometimes for their misapplied severity. The rescripts of Trajan scarcely exhibit a firmer assurance both of the right and the power to control every other authority, whether secular or sacerdotal, throughout the civilized world."— Sir J. Stephen, *Hildebrand* (*Edinburgh Rev., April*, 1845).—"By investiture in mediæval church law is meant the act of bestowing a church office, with the use of symbols, on the clergyman who has been appointed to fill it. It is especially to signify the act by which secular princes conferred on the chosen candidates the offices of bishop and abbot

that the word is used since the eleventh century. The struggle which the papacy and the church carried on in the last half of the 11th and on into the 12th century for the purpose of doing away with this same right of the princes to confer such offices is called in consequence the war of the investitures. That the nomination of the bishops was a right pertaining to the sovereign was a view of the matter which had gained ground already in the time of the Frankish monarchy. The German kings up to the eleventh century insisted all the more on this right from the fact that the bishoprics and imperial abbacies had in course of time lost their original character of church organizations. They had been appanaged with imperial and other lands, with political and public rights, with immunities, rights of coinage, etc. . . . They had, in consequence, become transformed into political districts, on a par with those of the secular princes and obliged, like the latter, to bear the public burdens, especially that of providing war-contingents and supplies. It is true that in the period in question, although for the most part the king openly and freely filled the bishoprics and abbacies of his own accord, some elections had been carried through by the cathedral chapter, the other secular canons, the nobles, vassals and ministeriales of the bishopric. This was usually on the ground of royal privileges, of special royal permission, or of a designation of the candidate by the king. However the person might have been elected he could only enter into possession of the bishopric or abbacy after the king had formally conferred the office upon him. The death of a bishop would be announced to the king by envoys from the episcopal residence who at the same time, handing over the episcopal crosier and ring, would beg that the king would see to the refilling of the vacant office. It need hardly be said that any new candidate who might in the meantime have been elected presented himself likewise at court. The king discussed the matter of the bestowal of the vacant bishopric or abbacy with his secular and ecclesiastical nobles and councillors. His next step was to confer the office on the candidate he had chosen by means of investiture, that is by handing him the episcopal crosier and ring. The candidate in return had to take the oath of fealty and to perform the act of homage, the so-called hominium. This is how an episcopal office, at that time regarded as a conglomeration of ecclesiastical and secular rights, was regularly filled. . . . After the middle of the 11th century there began to show itself within the reform-party, which at that time gave the tone at Rome, a tendency, ever growing stronger, in favor of achieving the complete liberation of the church from the secular influence. The German kingdom and empire were to be subordinated to the papacy as to the proper controlling power. Those who held these views declared that the investiture of the bishops and abbots by the king was simony because, as was the custom on the part of those receiving other feudal grants, certain presents were made in return. It was demanded that the episcopal symbols, the ring and the crosier, should no longer be disposed of at the hand of a layman. As a matter of fact there had frequently been carried on an unworthy traffic with the bishoprics in consequence of the manner of conferring them. The ecclesiastical legislators, besides passing general laws against simony, came forward at first cautiously enough with the regulation that the clergy should accept no churches from the hands of a layman. The direct clash with the German court came later, in 1068, where the king had conferred the bishopric of Milan as usual through investiture, while the people, under the influence of the papal reform-party, demanded a bishop elected canonically and with Rome's consent. The king did not give way and Gregory VII., in the Roman synod of 1074, increased the severity of the earlier laws against simony, opening the struggle in a synod of the following year by ordaining that the people should not be present at ecclesiastical functions performed by those clergy who had gained office through simony, the reference being to those bishops who adhered to the king. Furthermore the royal right of conferring bishoprics by investiture was now directly denied. With this attack on an old and customary prerogative of the German king, one too which in earlier times had even been expressly acknowledged by the pope, an attempt was made to thoroughly undermine the foundations of the German empire and to rob the royal power of one of its chief supports. The bishops and abbots were princes of the realm, possessing, besides a number of privileges, the large feudal and allodial holdings which went with their churches. They had, on behalf of their bishoprics, to sustain the largest share of the empire's burdens. The crown found in them the chief props and supports of its power, for the ecclesiastical principalities could be freely granted to devoted adherents without regard to the hereditary dynastic claims of families. The only legal bond by which these princes were bound to the crown was the investiture with its oath of fealty and homage. The prohibition of this, then, denoted the cessation of the relationship which assured the dependence of the ecclesiastical princes on the king and on the empire and the performance of their duties to that empire. It delivered over the considerable material wealth and power of the imperial bishoprics and abbacies to a clergy that was loosed from all connection with the crown. With regard to the manner in which in future, according to the opinion of Gregory VII. or the church-reform party, the bishoprics were to be filled, the above-mentioned synod does not express itself. The decrees of the Roman synod of 1080, as well as Gregory's own further attitude, however, make it appear unquestionable that, with the formal restoration of the old so-called canonical election by clergy and people in common with the metropolitan and his suffragans, he purposed the actual subjection to the pope of the episcopacy and of the resources which in consequence of its political position stood at its command. From the election of a secular clergy which should be freed from national and state interests by the carrying out of the celibacy laws . . . there could result as a rule only bishops submissive to the papal court."—Hinschius, *Investiturstreit* (*Herzog's Realencyklopædie für protestantische Theologie und Kirche*, v. 6).—"At first Gregory appeared to desire to direct his weapons against King Philip of France, 'the worst of the tyrants who enslaved the Church.' . . . But with a more correct estimate of the circumstances of Germany and the dangers which threatened from Lombardy, he let this conflict

drop and turned against Henry IV. The latter had so alienated Saxony and Thuringia by harsh proceedings, that they desired to accuse him to the Pope of oppression and simony. Gregory immediately demanded the dismissal of the councillors who had been excommunicated by his predecessor. His mother, who was devoted to the Pope, sought to mediate, and the Saxon revolt which now broke out (still in 1073) still further induced him to give way. He wrote a submissive letter to the Pope, rendered a repentant confession at Nuremberg in 1074 in the presence of his mother and two Roman cardinals, and, along with the excommunicated councillors, who had promised on oath to surrender all church properties obtained by simony, was received into the communion of the Church. . . . But . . . Henry, after overthrowing his enemies, soon returned to his old manner, and the German clergy resisted the interference of the Pope. At the Roman Synod (February, 1075) Gregory then decreed numerous ecclesiastical penalties against resistant German and Lombard bishops, and five councillors of the King were once more laid under the ban on account of simony. But in addition, at a Roman synod of the same year, he carried through the bold law of investiture, which prohibited bishops and abbots from receiving a bishopric or abbacy from the hands of a layman, and prohibited the rulers from conferring investiture on penalty of excommunication. Before the publication of the law Gregory caused confidential overtures to be made to the King, in order, as it seems, to give the King an opportunity of taking measures to obviate the threatening dangers which were involved in this extreme step. At the same time he himself was threatened and entangled on all hands; Robert Guiscard, whom he had previously excommunicated, he once more laid under the ban. . . . Henry, who in the summer of 1075 still negotiated directly with the Pope through ambassadors, after completely overthrowing the Saxons now ceased to pay any attention. . . . At Worms (24th January 1076) he caused a great portion of the German bishops to declare the deposition of the Pope who, as was said, was shattering the Empire and degrading the bishops. The Lombard bishops subscribed the decree of deposition at Piacenza and Pavia. Its bearers aroused a fearful storm against themselves at the Lenten Synod of Rome (1076), and Gregory now declared the excommunication and deposition of Henry, and released his subjects from their oath. Serious voices did indeed deny the Pope's right to the latter course; but a portion of the German bishops at once humbled themselves before the Pope, others began to waver, and the German princes, angered over Henry's government, demanded at Tribur in October, 1076, that the King should give satisfaction to the Pope, and the Pope hold judgment on Henry in Germany itself; if by his own fault Henry should remain under the ban for a year's time, another King was to be elected. Henry then resolved to make his peace with the Pope in order to take their weapon out of the hands of the German princes. Before the Pope came to Germany, he hastened in the winter with his wife and child from Besançon, over Mont Cenis, and found a friendly reception in Lombardy, so that the Pope, already on the way to Germany, betook himself to the Castle of Canossa to the Margravine Matilda of Tuscany, fearing an evil turn of affairs from Henry and the Lombards who were hostile to the Pope. But Henry was driven by his threatened position in Germany to seek release from the ban above every thing. This brought him as a penitent into the court-yard of Canossa (January 1077), where Gregory saw him stand from morning till evening during three days before he released him from the ban at the intercession of Matilda."— W. Moeller, *Hist. of the Christian Church in the Middle Ages, pp.* 256–258.—"It was on the 25th of January, 1077, that the scene took place, which, as is natural, has seized so strongly upon the popular imagination, and has so often supplied a theme for the brush of the painter, the periods of the historian, the verse of the poet. . . . The king was bent upon escaping at any sacrifice from the bond of excommunication and from his engagement to appear before the Pontiff, at the Diet summoned at Augsburg for the Feast of the Purification. The character in which he presented himself before Gregory was that of a penitent, throwing himself in deep contrition upon the Apostolic clemency, and desirous of reconciliation with the Church. The Pope, after so long experience of his duplicity, disbelieved in his sincerity, while, as a mere matter of policy, it was in the highest degree expedient to keep him to his pact with the German princes and prelates. . . . On three successive days did he appear barefooted in the snowy court-yard of the castle, clad in the white garb of a penitent, suing for relief from ecclesiastical censure. It was difficult for Gregory to resist the appeal thus made to his fatherly compassion, the more especially as Hugh, Abbot of Cluny, and the Countess Matilda besought him 'not to break the bruised reed.' Against his better judgment, and in despite of the warnings of secular prudence, the Pope consented on the fourth day to admit to his presence the royal suppliant. . . . The conditions of absolution imposed upon the king were mainly four: that he should present himself upon a day and at a place, to be named by the Pontiff, to receive the judgment of the Apostolic See, upon the charges preferred by the princes and prelates of Germany, and that he should abide the Pontifical sentence — his subjects meanwhile remaining released from their oath of fealty; that he should respect the rights of the Church and carry out the papal decrees; and that breach of this engagement should entitle the Teutonic magnates to proceed to the election of another king. Such were the terms to which Henry solemnly pledged himself, and on the faith of that pledge the Pontiff, assuming the vestments of religion, proceeded to absolve him with the appointed rites. . . . So ends the first act in this great tragedy. Gregory's misgivings as to the king's sincerity soon receive too ample justification. 'Fear not,' the Pontiff is reported to have said, with half contemptuous sadness to the Saxon envoys who complained of his lenity to the monarch: 'Fear not, I send him back to you more guilty than he came.' Henry's words to the Pope had been softer than butter; but he had departed with war in his heart. . . . Soon he lays a plot for seizing Gregory at Mantua, whither the Pontiff is invited for the purpose of presiding over a Council. But the vigilance of the Great Countess foils the proposed treachery. Shortly the ill-advised monarch again assumes an attitude of open hostility

to the Pope. . . . The Teutonic princes, glad to throw off an authority which they loathe and despise — not heeding the advice to pause given by the Roman legates — proceed at the Diet of Forchein to the election of another king. Their choice falls upon Rudolph of Swabia, who is crowned at Metz on the 26th of March, 1077. The situation is now complicated by the strife between the two rival sovereigns. . . . At last, in Lent, 1080, Gregory, no longer able to tolerate the continual violation by Henry of the pledges given at Canossa, and greatly moved by tidings of his new and manifold sacrileges and cruelties, pronounces again the sentence of excommunication against him, releasing his subjects from their obedience, and recognizing Rudolph as king. Henry thereupon calls together some thirty simoniacal and incontinent prelates at Brixen, and causes them to go through the form of electing an anti-pope in the person of Guibert, Archbishop of Ravenna, an ecclesiastic some time previously excommunicated by Gregory for grave offences. Then the tide turns in Henry's favour. At the battle of the Elster (15th October, 1080), Rudolph is defeated and mortally wounded, and on the same day the army of the Great Countess is overthrown and dispersed at La Volta in the Mantuan territory. Next year, in the early spring, Henry crosses the Alps and advances towards Rome. . . . A little before Pentecost Henry appears under the walls of the Papal city, expecting that his party within it will throw open the gates to him; but his expectation is disappointed. . . . In 1082, the monarch again advances upon Rome and ineffectually assaults it. In the next year he makes a third and more successful attempt, and captures the Leonine city. . . . On the 21st of March, 1084, the Lateran Gate is opened to Henry by the treacherous Romans, and the excommunicated monarch, with the anti-pope by his side, rides in triumph through the streets. The next day, Guibert solemnly takes possession of St. John Lateran, and bestows the Imperial Crown upon Henry in the Vatican Basilica. Meanwhile Gregory is shut up in the Castle of St. Angelo. Thence, after six weeks, he is delivered by Guiscard, Duke of Calabria, the faithful vassal of the Holy See. But the burning of the city by Guiscard's troops, upon the uprising of the Romans, turns the joy of his rescue into mourning. Eight days afterwards he quits 'the smoking ruins of his once beautiful Rome,' and after pausing for a few days, at Monte Casino, reaches Salerno, where his life pilgrimage is to end."—W. S. Lilly, *The Turning-Point of the Middle Ages (Contemporary Rev., August,* 1882).— Gregory died at Salerno on the 25th of May, 1085, leaving Henry apparently triumphant; but he had inspired the Papacy with his will and mind, and the battle went on. At the end of another generation — in A. D. 1122 — the question of investitures was settled by a compromise called the Concordat of Worms. "Both of the contending parties gave up something, but one much more than the other; the Church shadows, the State substance. The more important elections should be henceforth made in the presence of the Emperor, he engaging not to interfere with them, but to leave to the Chapter or other electing body the free exercise of their choice. This was in fact to give over in most instances the election to the Pope; who gradually managed to exclude the Emperor from all share in Episcopal appointments. The temporalities of the See or Abbey were still to be made over to the Bishop or Abbot elect, not, however, any longer by the delivering to him of the ring and crozier, but by a touch of the sceptre, he having done homage for them, and taken the oath of obedience. All this was in Germany to find place before consecration, being the same arrangement that seven years earlier had brought the conflict between Anselm and our Henry I. to an end."—R. C. Trench, *Lect's on Medieval Ch. Hist., lect.* 9.

A. D. 1059.—Institution of the procedure of Papal Election.—"According to the primitive custom of the church, an episcopal vacancy was filled up by election of the clergy and people belonging to the city or diocese. . . . It is probable that, in almost every case, the clergy took a leading part in the selection of their bishops; but the consent of the laity was absolutely necessary to render it valid. They were, however, by degrees excluded from any real participation, first in the Greek, and finally in the western church. . . . It does not appear that the early Christian emperors interfered with the freedom of choice any further than to make their own confirmation necessary in the great patriarchal sees, such as Rome and Constantinople, which were frequently the objects of violent competition, and to decide in controverted elections. . . . The bishops of Rome, like those of inferior sees, were regularly elected by the citizens, laymen as well as ecclesiastics. But their consecration was deferred until the popular choice had received the sovereign's sanction. The Romans regularly despatched letters to Constantinople or to the exarchs of Ravenna, praying that their election of a pope might be confirmed. Exceptions, if any, are infrequent while Rome was subject to the eastern empire. This, among other imperial prerogatives, Charlemagne might consider as his own. . . . Otho the Great, in receiving the imperial crown, took upon him the prerogatives of Charlemagne. There is even extant a decree of Leo VIII., which grants to him and his successors the right of naming future popes. But the authenticity of this instrument is denied by the Italians. It does not appear that the Saxon emperors went to such a length as nomination, except in one instance (that of Gregory V. in 996); but they sometimes, not uniformly, confirmed the election of a pope, according to ancient custom. An explicit right of nomination was, however, conceded to the emperor Henry III. in 1047, as the only means of rescuing the Roman church from the disgrace and depravity into which it had fallen. Henry appointed two or three very good popes. . . . This high prerogative was perhaps not designed to extend beyond Henry himself. But even if it had been transmissible to his successors, the infancy of his son Henry IV., and the factions of that minority, precluded the possibility of its exercise. Nicolas II., in 1059, published a decree which restored the right of election to the Romans, but with a remarkable variation from

the original form. The cardinal bishops (seven in number, holding sees in the neighbourhood of Rome, and consequently suffragans of the pope as patriarch or metropolitan) were to choose the supreme pontiff, with the concurrence first of the cardinal priests and deacons (or ministers of the parish churches of Rome), and afterwards of the laity. Thus elected, the new pope was to be presented for confirmation to Henry, 'now king, and hereafter to become emperor,' and to such of his successors as should personally obtain that privilege. This decree is the foundation of that celebrated mode of election in a conclave of cardinals which has ever since determined the headship of the church. . . . The real author of this decree, and of all other vigorous measures adopted by the popes of that age, whether for the assertion of their independence or the restoration of discipline, was Hildebrand"—afterwards Pope Gregory VII.—H. Hallam, *The Middle Ages, ch. 7, pt. 1 (v. 2).*

A. D. 1077-1102.—Donation of the Countess Matilda.—"The Countess Matilda, born in 1040, was daughter of Boniface, Marquis of Tuscany, and Beatrice, sister of the Emperor Henry III. On the death of her only brother, without issue, she succeeded to all his dominions, of Tuscany, Parma, Lucca, Mantua and Reggio. Rather late in life, she married Guelpho, son of the Duke of Bavaria—no issue resulting from their union. This princess displayed great energy and administrative ability in the troubled times in which she lived, occasionally appearing at the head of her own troops. Ever a devoted daughter of the Church, she specially venerated Pope Gregory VII., to whom she afforded much material support, in the difficulties by which he was constantly beset. To this Pontiff, she made a donation of a considerable portion of her dominions, for the benefit of the Holy See, A. D. 1077, confirming the same in a deed to Pope Pascal II., in 1102, entituled 'Cartula donationis Comitissæ Mathildis facta S. Gregorio PP. VII., et innovata Paschali PP. II.'; apud Theiner 'Codex Diplomaticus,' etc., tom. 1, p. 10. As the original deed to Gregory VII. is not extant, and the deed of confirmation or renewal does not recite the territories conveyed, there is some uncertainty about their exact limits. However, it is generally thought that they comprised the district formerly known as the Patrimony of Saint Peter, lying on the right bank of the Tiber, and extending from Aquapendente to Ostia. The Countess Matilda died in 1115, aged 75."—J. N. Murphy, *The Chair of Peter, p. 235, foot-note.*—See below: A. D. 1122–1250.

A. D. 1122-1250.—Continued conflict with the Empire.—The Popes and the Hohenstaufen Emperors.—"The struggle about investiture ended, as was to be expected, in a compromise; but it was a compromise in which all the glory went to the Papacy. Men saw that the Papal claims had been excessive, even impossible; but the object at which they aimed, the freedom of the Church from the secularising tendencies of feudalism, was in the main obtained. . . . But the contest with the Empire still went on. One of the firmest supporters of Gregory VII. had been Matilda, Countess of Tuscany, over whose fervent piety Gregory had thrown the spell of his powerful mind. At her death, she bequeathed her possessions, which embraced nearly a quarter of Italy, to the Holy See [see above: A. D. 1077–1102]. Some of the lands which she had held were allodial, some were fiefs of the Empire; and the inheritance of Matilda was a fruitful source of contention to two powers already jealous of one another. The constant struggle that lasted for two centuries gave full scope for the development of the Italian towns. . . . The old Italian notion of establishing municipal freedom by an equilibrium of two contending powers was stamped still more deeply on Italian politics by the wars of Guelfs and Ghibellins. The union between the Papacy and the Lombard Republics was strong enough to humble the mightiest of the Emperors. Frederic Barbarossa, who held the strongest views of the Imperial prerogative, had to confess himself vanquished by Pope Alexander III. [see Italy: A. D. 1154–1162, to 1174–1183], and the meeting of Pope and Emperor at Venice was a memorable ending to the long struggle; that the great Emperor should kiss the feet of the Pope whom he had so long refused to acknowledge, was an act which stamped itself with dramatic effect on the imagination of men, and gave rise to fables of a still more lowly submission [see Venice: A. D. 1177]. The length of the strife, the renown of Frederic, the unswerving tenacity of purpose with which Alexander had maintained his cause, all lent lustre to this triumph of the Papacy. The consistent policy of Alexander III., even in adverse circumstances, the calm dignity with which he asserted the Papal claims, and the wisdom with which he used his opportunities, made him a worthy successor of Gregory VII. at a great crisis in the fortunes of the Papacy. It was reserved, however, for Innocent III. to realise most fully the ideas of Hildebrand. If Hildebrand was the Julius, Innocent was the Augustus, of the Papal Empire. He had not the creative genius nor the fiery energy of his great forerunner; but his clear intellect never missed an opportunity, and his calculating spirit rarely erred from its mark. . . . On all sides Innocent III. enjoyed successes beyond his hopes. In the East, the crusading zeal of Europe was turned by Venice to the conquest of Constantinople [see Crusades: A. D. 1201–1203], and Innocent could rejoice for a brief space in the subjection of the Eastern Church. In the West, Innocent turned the crusading impulse to the interest of the Papal power, by diverting it against heretical sects which, in Northern Italy and the South of France, attacked the system of the Church [see Albigenses]. . . . Moreover Innocent saw the beginning, though he did not perceive the full importance, of a movement which the reaction against heresy produced within the Church. The Crusades had quickened men's activity, and the heretical sects had aimed at kindling greater fervour of spiritual life. . . . By the side of the monastic aim of averting, by the prayers and

penitence of a few, God's anger from a wicked world, there grew up a desire for self-devotion to missionary labour. Innocent III. was wise enough not to repulse this new enthusiasm, but find a place for it within the ecclesiastical system. Francis of Assisi gathered round him a body of followers who bound themselves to a literal following of the Apostles, to a life of poverty and labour, amongst the poor and outcast; Dominic of Castile formed a society which aimed at the suppression of heresy by assiduous teaching of the truth. The Franciscan and Dominican orders grew almost at once into power and importance, and their foundation marks a great reformation within the Church [see MENDICANT ORDERS]. The reformation movement of the eleventh century, under the skilful guidance of Hildebrand, laid the foundations of the Papal monarchy in the belief of Europe. The reformation of the thirteenth century found full scope for its energy under the protection of the Papal power; for the Papacy was still in sympathy with the conscience of Europe, which it could quicken and direct. These mendicant orders were directly connected with the Papacy, and were free from all episcopal control. Their zeal awakened popular enthusiasm; they rapidly increased in number and spread into every land. The Friars became the popular preachers and confessors, and threatened to supersede the old ecclesiastical order. Not only amongst the common people, but in the universities as well, did their influence become supreme. They were a vast army devoted to the service of the Pope, and overran Europe in his name. They preached Papal indulgences, they stirred up men to crusades in behalf of the Papacy, they gathered money for the Papal use. . . . The Emperor Frederic II., who had been brought up under Innocent's guardianship, proved the greatest enemy of the newly-won sovereignty of the Pope. King of Sicily and Naples, Frederic was resolved to assert again the Imperial pretensions of North Italy, and then win back the Papal acquisitions in the centre; if his plan had succeeded, the Pope would have lost his independence and sunk to be the instrument of the house of Hohenstaufen. Two Popes of inflexible determination and consummate political ability were the opponents of Frederic. Gregory IX. and Innocent IV. flung themselves with ardour into the struggle, and strained every nerve till the whole Papal policy was absorbed by the necessities of the strife [see ITALY: A. D. 1183–1250; and GERMANY: A. D. 1138–1268]. . . . Frederic II. died [1250], but the Popes pursued with their hostility his remotest descendants, and were resolved to sweep the very remembrance of him out of Italy. To accomplish their purpose, they did not hesitate to summon the aid of the stranger. Charles of Anjou appeared as their champion, and in the Pope's name took possession of the Sicilian kingdom [see ITALY: A. D. 1250–1268]. By his help the last remnants of the Hohenstaufen house were crushed, and the claims of the Empire to rule over Italy were destroyed for ever. But the Papacy got rid of an open enemy only to introduce a covert and more deadly foe. The Angevin influence became superior to that of the Papacy, and French popes were elected that they might carry out the wishes of the Sicilian king. By its resolute efforts to escape from the power of the Empire, the Papacy only paved the way for a connexion that ended in its enslavement to the influence of France."—M. Creighton, *Hist. of the Papacy during the Period of the Reformation, v.* 1, *pp.* 18–23.

A. D. 1198-1216.—The establishing of Papal Sovereignty in the States of the Church.—"Innocent III. may be called the founder of the States of the Church. The lands with which Pippin and Charles had invested the Popes were held subject to the suzerainty of the Frankish sovereign and owned his jurisdiction. On the downfall of the Carolingian Empire the neighbouring nobles, calling themselves Papal vassals, seized on these lands; and when they were ousted in the Pope's name by the Normans, the Pope did not gain by the change of neighbours. Innocent III. was the first Pope who claimed and exercised the rights of an Italian prince. He exacted from the Imperial Prefect in Rome the oath of allegiance to himself; he drove the Imperial vassals from the Matildan domain [see TUSCANY: A. D. 685–1115], and compelled Constance, the widowed queen of Sicily, to recognise the Papal suzerainty over her ancestral kingdom. He obtained from the Emperor Otto IV. (1201) the cession of all the lands which the Papacy claimed, and so established for the first time an undisputed title to the Papal States."—M. Creighton, *Hist. of the Papacy during the Period of the Reformation, v.* 1, *p.* 21.

A. D. 1198-1303.—The acme of Papal power.—The pontificates from Innocent III. to Boniface VIII.—"The epoch when the spirit of papal usurpation was most strikingly displayed was the pontificate of Innocent III. In each of the three leading objects which Rome had pursued, independent sovereignty, supremacy over the Christian church, control over the princes of the earth, it was the fortune of this pontiff to conquer. He realized . . . that fond hope of so many of his predecessors, a dominion over Rome and the central parts of Italy. During his pontificate Constantinople was taken by the Latins; and however he might seem to regret a diversion of the crusaders, which impeded the recovery of the Holy Land, he exulted in the obedience of the new patriarch and the reunion of the Greek church. Never, perhaps, either before or since, was the great eastern schism in so fair a way of being healed; even the kings of Bulgaria and Armenia acknowledged the supremacy of Innocent, and permitted his interference with their ecclesiastical institutions. The maxims of Greg-

ory VII. were now matured by more than a hundred years, and the right of trampling upon the necks of kings had been received, at least among churchmen, as an inherent attribute of the papacy. 'As the sun and the moon are placed in the firmament' (such is the language of Innocent), 'the greater as the light of the day, and the lesser of the night, thus are there two powers in the church — the pontifical, which, as having the charge of souls, is the greater; and the royal, which is the less, and to which the bodies of men only are intrusted.' Intoxicated with these conceptions (if we may apply such a word to successful ambition), he thought no quarrel of princes beyond the sphere of his jurisdiction. 'Though I cannot judge of the right to a fief,' said Innocent to the kings of France and England, 'yet it is my province to judge where sin is committed, and my duty to prevent all public scandals.'. . . Though I am not aware that any pope before Innocent III. had thus announced himself as the general arbiter of differences and conservator of the peace throughout Christendom, yet the scheme had been already formed, and the public mind was in some degree prepared to admit it. . . . The noonday of papal dominion extends from the pontificate of Innocent III. inclusively to that of Boniface VIII.; or, in other words, through the 13th century. Rome inspired during this age all the terror of her ancient name. She was once more the mistress of the world, and kings were her vassals."— H. Hallam, *The Middle Ages, ch.* 7, *pt.* 1–2 (*v.* 2).

A. D. 1294-1348.—The stormy pontificate of Boniface VIII.—His conflict with Philip IV. of France.—The "Babylonish Captivity." —Purchase of Avignon, which becomes the Papal Seat.—Boniface VIII., who came to the Papal throne in 1294, "was a man of so much learning that Petrarch extols him as the wonder of the world. His craft and cruelty, however, were shown in his treatment of Celestine V. [his predecessor], whom he first persuaded to resign the pontificate, five months after his election, on account of his inexperience in politics; and then, having succeeded to the chair, instead of letting the good man return to the cloister for which he panted, he kept him in confinement to the day of his death. His resentment of the opposition of the two cardinals Colonna to his election was so bitter, that not content with degrading them, he decreed the whole family — one of the most illustrious in Rome — to be for ever infamous, and incapable of ecclesiastical dignities. He pulled down their town of Præneste, and ordered the site to be sown with salt to extinguish it, like Carthage, for ever. This pontificate is famous for the institution of the Jubilee, though, according to some accounts, it was established a century before by Innocent III. By a bull dated 22nd February 1300, Boniface granted a plenary remission of sins to all who, before Christmas, in that and every subsequent hundredth year, should visit the churches of St. Peter and St. Paul daily, for 30 days if inhabitants of Rome, and for half that time if strangers. His private enemies, the Colonnas, Frederic of Sicily, who had neglected to pay his tribute, and the abettors of the Saracens, were the only persons excluded. The city was crowded with strangers, who flocked to gain the indulgence; enormous sums were offered at the holy tombs; and the solemnity became so profitable that Clement VI. reduced the period for its observance from 100 years to 50, and later popes have brought it down to 25. Boniface appeared at the jubilee with the spiritual and temporal swords carried before him, the bearers of which proclaimed the text, — 'Behold, here are two swords.'. . . The pope had the pleasure of receiving a . . . respectful recognition from the barons of Scotland. Finding themselves hard pressed by the arms of Edward I., they resolved to accept a distant, in preference to a neighbouring, master; accordingly, they tendered the kingdom to the pope, pretending that, from the most ancient times, Scotland had been a fief of the holy Roman See. Boniface, eagerly embracing the offer, commanded the archbishop of Canterbury to require the king to withdraw his troops, and submit his pretensions to the apostolic tribunal. . . . Boniface got no other satisfaction than to be told that the laws of England did not permit the king to subject the rights of his crown to any foreign tribunal. His conflict with the king of France was still more unfortunate. Philip the Fair, like our own Edward I., thought fit to compel the clergy to contribute towards the expenses of his repeated campaigns. The pope thereupon issued a bull entitled 'Clericis laicos' (A. D. 1296), charging the laity with inveterate hostility to the clergy, and prohibiting, under pain of excommunication, any payment out of ecclesiastical revenues without his consent. The king retorted by prohibiting the export of coin or treasure from his dominions, without license from the crown. This was cutting off the pope's revenue at a blow, and so modified his anger that he allowed the clergy to grant a 'free benevolence' to the king, when in urgent need. A few years after (1301), Philip imprisoned a bishop on charge of sedition, when Boniface thundered out his bulls 'Salvator mundi,' and 'Ausculta fili,' the first of which suspended all privileges accorded by the Holy See to the French king and people, and the second, asserting the papal power in the now familiar text from Jeremiah [Jer. i. 10], summoned the superior clergy to Rome. Philip burned the bull, and prohibited the clergy from obeying the summons. The peers and people of

France stood by the crown, treating the exhortations of the clergy with defiance. The pope, incensed at this resistance, published the Decretal called 'Unam sanctam,' which affirms the unity of the Church, without which there is no salvation, and hence the unity of its head in the successor of St. Peter. Under the pope are two swords, the spiritual and the material — the one to be used by the church, the other for the church. . . . The temporal sword is . . . subject to the spiritual, and the spiritual to God only. The conclusion is, 'that it is absolutely essential to the salvation of every human being that he be subject unto the Roman pontiff.' The king, who showed great moderation, appealed to a general council, and forbad his subjects to obey any orders of Boniface till it should be assembled. The pope resorted to the usual weapons. He drew up a bull for the excommunication of the king; offered France to Albert of Austria, king of the Romans, and wrote to the king of England to incite him to prosecute his war. Meantime, Philip having sent William de Nogaret on an embassy to the pope, this daring envoy conceived the design of making him prisoner. Entering Anagni [the pope's native town and frequent residence, 40 miles from Rome] at the head of a small force, privately raised in the neighbourhood, the conspirators, aided by some of the papal household, gained possession of the palace and burst into the pope's presence. Boniface, deeming himself a dead man, had put on his pontifical robes and crown, but these had little effect on the irreverent intruders. De Nogaret was one of the Albigenses; his companion, a Colonna, was so inflamed at the sight of his persecutor that he struck him on the face with his mailed hand, and would have killed him but for the intervention of the other. The captors unaccountably delaying to carry off their prize, the people of the place rose and rescued the Holy Father. He hastened back to Rome, but died of the shock a month after, leaving a dangerous feud between the Church and her eldest son."—G. Trevor, *Rome: from the Fall of the Western Empire, ch.* 9.—"Boniface has been consigned to infamy by contemporary poets and historians, for the exhibition of some of the most revolting features of the human character. Many of the charges, such as that he did not believe in eternal life; that he was guilty of monstrous heresy; that he was a wizard; and that he asserted that it is no sin to indulge in the most criminal pleasures — are certainly untrue. They are due chiefly to his cruelty to Celestine and the Celestinians, and his severity to the Colonnas, which led the two latter to go everywhere blackening his character. They have been exaggerated by Dante; and they may be ascribed generally to his pride and violence, and to the obstinate determination, formed by a man who 'was born an age too late,' to advance claims then generally becoming unpopular, far surpassing in arrogance those maintained by the most arbitrary of his predecessors. . . . This victory of Philip over Boniface was, in fact, the commencement of a wide-spread reaction on the part of the laity against ecclesiastical predominance. The Papacy had first shown its power by a great dramatic act, and its decline was shown in the same manner. The drama of Anagni is to be set against the drama of Canossa."—A. R. Pennington, *The Church in Italy, ch.* 6.—"The next pope, Benedict XI., endeavoured to heal the breach by annulling the decrees of Boniface against the French king, and reinstating the Colonnas; but he was cut off by death in ten months from his election [1304], and it was generally suspected that his removal was effected by poison. . . . On the death of Benedict, many of the cardinals were for closing the breach with France by electing a French pope; the others insisted that an Italian was essential to the independence of the Holy See. The difference was compromised by the election of the archbishop of Bordeaux, a Frenchman by birth, but owing his preferments to Boniface, and an active supporter of his quarrel against Philip. The archbishop, however, had secretly come to terms with the king, and his first act, as Clement V., was to summon the cardinals to attend him at Lyons, where he resolved to celebrate his coronation. The Sacred College crossed the Alps with undissembled repugnance, and two-and-seventy years elapsed before the Papal court returned to Rome. This period of humiliation and corruption the Italian writers not inaptly stigmatise as the 'Babylonish captivity.' Clement began his pontificate by honourably fulfilling his engagements with the French. He absolved the king and all his subjects. . . . If it be true that the king claimed . . . the condemnation of Boniface as a heretic, Clement had the manliness to refuse. He ventured to inflict a further disappointment by supporting the claim of Henry of Luxembourg to the empire in preference to the French king's brother. To escape the further importunities of his too powerful ally, the pope removed into the dominions of his own vicar, the king of Naples (A. D. 1309). The place selected was Avignon, belonging to Charles the Lame as count of Provence. . . . In the 9th century, it [Avignon] passed to the kings of Arles, or Burgundy, but afterwards became a free republic, governed by its own consuls, under the suzerainty of the count of Provence. . . . The Neapolitan dynasty, though of French origin, was independent of the French crown, when the pope took up his residence at Avignon. Charles the Lame was soon after succeeded by his third son Robert, who, dying in 1343, left his crown to his granddaughter Joanna, the young and beautiful wife of Andrew, prince of Hungary. . . . In one of her frequent exiles Clement took advantage of her necessities to purchase her rights in Avignon for 80,000 gold florins, but this inadequate price was never paid. The pope placed it to the account of the tribute due to himself from the Neapolitan crown, and having procured a renunciation of the paramount suzerainty of the emperor, he took possession of the city and territory as absolute sovereign (A. D. 1348)."—G. Trevor, *Rome: from the Fall of the Western Empire, ch.* 9–10.

A. D. 1305-1377.—The Popes of "the Babylonish Captivity" at Avignon.—The following is the succession of the Popes during the Avignon period: Boniface VIII., A. D. 1294–1303; Benedict XI., 1303–1304; Clement V., 1305–1314; John XXII., 1316–1334; Benedict XII., 1334–1342; Clement VI., 1342–1352; Innocent VI., 1352–1362; Urban V., 1362–1370; Gregory XI., 1371–1378.—"The Avignon Popes, without exception, were all more or less dependent upon

France. Frenchmen themselves, and surrounded by a College of Cardinals in which the French element predominated, they gave a French character to the government of the Church. This character was at variance with the principle of universality inherent in it and in the Papacy. . . . The migration to France, the creation of a preponderance of French Cardinals, and the consequent election of seven French Popes in succession, necessarily compromised the position of the Papacy in the eyes of the world, creating a suspicion that the highest spiritual power had become the tool of France. This suspicion, though in many cases unfounded, weakened the general confidence in the Head of the Church, and awakened in the other nations a feeling of antagonism to the ecclesiastical authority which had become French. The bonds which united the States of the Church to the Apostolic See were gradually loosened. . . . The dark points of the Avignon period have certainly been greatly exaggerated. The assertion that the Government of the Avignon Popes was wholly ruled by the 'will and pleasure of the Kings of France,' is, in this general sense, unjust. The Popes of those days were not all so weak as Clement V., who submitted the draft of the Bull, by which he called on the Princes of Europe to imprison the Templars, to the French King. Moreover, even this Pope, the least independent of the 14th century Pontiffs, for many years offered a passive resistance to the wishes of France, and a writer [Wenck], who has thoroughly studied the period, emphatically asserts that only for a few years of the Pontificate of Clement V. was the idea so long associated with the 'Babylonian Captivity' of the Popes fully realized. The extension of this epithet to the whole of the Avignon sojourn is an unfair exaggeration."—L. Pastor, *Hist. of the Popes from the Close of the Middle Ages, v.* 1, *pp.* 58–60.

A. D. 1352-1378.—Subjugation of the States of the Church and the return from Avignon to Rome.—Revolt and war in the Papal States, supported by Florence.—"Under the pontificate of Innocent VI. the advantages reaped by the Papal See from its sojourn at Avignon seemed to have come to an end. The disturbed condition of France no longer offered them security and repose. . . . Moreover, the state of affairs in Italy called loudly for the Pope's intervention. . . . The desperate condition of the States of the Church, which had fallen into the hands of small princes, called for energetic measures, unless the Popes were prepared to see them entirely lost to their authority. Innocent VI. sent into Italy a Spanish Cardinal, Gil Albornoz, who had already shown his military skill in fighting against the Moors. The fiery energy of Albornoz was crowned with success, and the smaller nobles were subdued in a series of hard fought battles. In 1367 Urban V. saw the States of the Church once more reduced into obedience to the Pope." Several motives, accordingly, combined "to urge Urban V., in 1367, to return to Rome amid the cries of his agonised Cardinals, who shuddered to leave the luxury of Avignon for a land which they held to be barbarous. A brief stay in Rome was sufficient to convince Urban V. that the fears of his Cardinals were not unfounded. . . . After a visit of three years Urban returned to Avignon; his death, which happened three months after his return, was regarded by many as a judgment of God upon his desertion of Rome. Urban V. had returned to Rome because the States of the Church were reduced to obedience: his successor, Gregory XI., was driven to return through dread of losing entirely all hold upon Italy. The French Popes awakened a strong feeling of natural antipathy among their Italian subjects, and their policy was not associated with any of the elements of state life existing in Italy. Their desire to bring the States of the Church immediately under their power involved the destruction of the small dynasties of princes, and the suppression of the democratic liberties of the people. Albornoz had been wise enough to leave the popular governments untouched, and to content himself with bringing the towns under the Papal obedience. But Urban V. and Gregory XI. set up French governors, whose rule was galling and oppressive; and a revolt against them was organised by Florence [1376], who, true to her old traditions, unfurled a banner inscribed only with the word 'Liberty.' The movement spread through all the towns in the Papal States, and in a few months the conquests of Albornoz had been lost. The temporal dominion of the Papacy might have been swept away if Florence could have brought about the Italian league which she desired. But Rome hung back from the alliance, and listened to Gregory XI., who promised to return if Rome would remain faithful. The Papal excommunication handed over the Florentines to be the slaves of their captors in every land, and the Kings of England and France did not scruple to use the opportunity offered to their cupidity. Gregory XI. felt that only the Pope's presence could save Rome for the Papacy. In spite of evil omens — for his horse refused to let him mount when he set out on his journey — Gregory XI. left Avignon; in spite of the entreaties of the Florentines Rome again joyfully welcomed the entry of its Pope in 1377. But the Pope found his position in Italy to be surrounded with difficulties. His troops met with some small successes, but he was practically powerless, and aimed only at settling terms of peace with the Florentines. A congress was called for this purpose, and Gregory XI. was anxiously awaiting its termination that he might return to Avignon, when death seized him, and his last hours were embittered by the thoughts of the crisis that was now inevitable."—M. Creighton, *Hist. of the Papacy during the Period of the Reformation, introd., ch.* 2 (*v.* 1).

A. D. 1377-1417.—Election of Urban VI. and Clement VII.—The Great Western Schism.—Battle in Rome and siege and par-

tial destruction of Castle St. Angelo.—The Council of Pisa.—Forty years of Popes and Anti-Popes.—"For 23 years after Rienzi's death, the seat of the Papal Court remained at Avignon; and during this period Rome and the States of the Church were harried to death by contending factions. . . . At last Gregory XI. returned, in January, 1377. The keys of the Castle St. Angelo were sent to him at Corneto; the papal Court was re-established in Rome; but he survived only about a year, and died in March, 1378. Then came the election of a new Pope, which was held in the Castle St. Angelo. While the conclave was sitting, a crowd gathered round the place, crying out, 'Romano lo volemo'—we will have a Roman for Pope. Yet, notwithstanding this clamour, Cardinal Prignani, Archbishop of Bari, and a Neapolitan by birth, was finally chosen, under the title of Urban VI.—[this being an intended compromise between the Italian party and the French party in the college of Cardinals]. When Cardinal Orsini presented himself at the window to announce that a new Pope had been elected, the mob below cried out, 'His name, his name!' 'Go to St. Peter's and you will learn,' answered the Cardinal. The people, misunderstanding his answer, supposed him to announce the election of Cardinal Tebaldeschi, who was arch-priest of St. Peter's, and a Roman by birth. This news was received with great joy and acclamation," which turned to rage when the fact was known. Then "the people . . . broke into still fiercer cries, rushed to arms, and gathering round the conclave, threatened them with death unless a Roman was elected. But the conclave was strong in its position, and finally the people were pacified, and accepted Urban VI. Such, however, was the fear of the Cardinals, that they were with difficulty persuaded to proceed to the Vatican and perform the ceremonies necessary for the installation of the new Pope. This, however, finally was done, and the Castle was placed in the charge of Pietro Guntellino, a Frenchman, and garrisoned by a Gallic guard, the French Cardinals remaining also within its walls for safety. On the 20th of September they withdrew to Fondi, and in conjunction with other schismatics they afterwards [September 20, 1378] elected an anti-Pope [Robert of Geneva] under the title of Clement VII. Guntellino, who took part with them, on being summoned by Urban to surrender the Castle, refused to do so without the order of his compatriots, the French Cardinals at Avignon. Meantime the papal and anti-papal party assaulted each other, first with citations, censures, and angry words, and then with armed force. The anti-papal party, having with them the Breton and Gascon soldiery, and the Savoyards of the Count of Mountjoy, the anti-Pope's nephew, marched upon the city, overcame the undisciplined party of the Pope, reinforced the Castle St. Angelo, and fortified themselves in the Vatican, ravaging the Campagna on their way. The papal party now besieged the Castle, attacking it with machines and artillery, but for a year's space it held out. Finally, on the 28th of April, 1379, the anti-papal party were utterly routed by Alberico, Count of Palliano and Galeazzo, at the head of the papal, Italian, and imperial forces. Terrible was the bloodshed of this great battle, at which, according to Baronius, 5,000 of the anti-papal army fell. But the Castle still refused to surrender," until famine forced a capitulation. "The damage done to it during this siege must have been very great. In some parts it had been utterly demolished, and of all its marbles not a trace now remained. . . . After the surrender of the Castle to Urban, such was the rage of the people against it for the injury it had caused them during the siege, that they passed a public decree ordering it to be utterly destroyed and razed to the earth. . . . In consequence of this decree, an attempt was made to demolish it. It was stripped of everything by which it was adorned, and its outer casing was torn off; but the solid interior of peperino defied all their efforts, and the attempt was given up." —W. W. Story, *Castle St. Angelo, ch.* 5.—"Urban was a learned, pious, and austere man; but, in his zeal for the reformation of manners, the correction of abuses, and the retrenchment of extravagant expenditure, he appears to have been wanting in discretion; for immediately after his election he began to act with harshness to the members of the Sacred College, and he also offended several of the secular princes. Towards the end of June, 12 of the cardinals—11 Frenchmen and one Spaniard—obtained permission to leave Rome, owing to the summer heats, and withdrew to Anagni. Here, in a written instrument, dated 9th August, 1378, they protested against the election, as not having been free, and they called on Urban to resign. A few days later, they removed to Fondi, in the kingdom of Naples, where they were joined by three of the Italians whom they had gained over to their views; and, on the 19th of September, the 15 elected an antipope, the French Cardinal Robert of Cevennes [more frequently called Robert of Geneva], who took the name of Clement VII. and reigned at Avignon 16 years, dying September 16, 1394. Thus there were two claimants of the Papal throne—Urban holding his court at Rome, and Clement residing with his followers at Avignon. The latter was strong in the support of the sovereigns of France, Scotland, Naples, Aragon, Castile, and Savoy; while the remainder of Christendom adhered to Urban. Clement was succeeded by Peter de Luna, the Cardinal of Aragon, who, on his election, assumed the name of Benedict XIII., and reigned at Avignon 23 years—A. D. 1394–1417. This lamentable state of affairs lasted altogether 40 years. Urban's successors at Rome, duly elected by the Italian cardinals and those of other nations acting with them, were, Boniface IX., a Neapolitan, A. D. 1389–1404; Innocent VII., a native of Sulmona, A. D. 1404–1406; Gregory XII., a Venetian, A. D. 1406–1409; Alexander V., a native of Candia, who reigned ten months, A. D. 1409–1410; and John XXIII., a Neapolitan, A. D. 1410–1417. . . . Although the Popes above enumerated, as having reigned at Rome, are now regarded as the legitimate pontiffs, and, as such, are inscribed in the Catalogues of Popes, while Clement and Benedict are classed as antipopes, there prevailed at the time much uncertainty on the subject. . . . In February, 1395, Charles VI. of France convoked an assembly of the clergy of his dominions, under the presidency of Simon Cramandus, Patriarch of Alexandria, in order, if possible, to terminate the schism. The assembly advised that the rival Pontiffs, Boniface IX. and Benedict XIII., should abdicate. The same view was taken by most of the

universities of Europe," but the persons chiefly concerned would not accept it. Nor was it found possible in 1408 to bring about a conference of the two popes. The cardinals, then, of both parties, withdrew support from the factious pontiffs and held a general meeting at Leghorn. There they agreed that Gregory XII. and Benedict XIII. had equally lost all claim to obedience, and they resolved to convoke, on their own authority "a General Council, to meet at Pisa, on the 25th of March, 1409. Gregory and Benedict were duly informed thereof, and were requested to attend the council. . . . The Council of Pisa sat from March 25th to August 7th, 1409. There were present 24 cardinals of both 'obediences,' 4 patriarchs, 12 archbishops, 80 bishops, 87 abbots; the procurators of 102 absent archbishops and bishops, and of 200 absent abbots; the generals of 4 mendicant orders; the deputies of 13 Universities . . . ; the representatives of over 100 cathedral and collegiate chapters, 282 doctors and licentiates of canon and civil law; and the ambassadors of the Kings of England, France, Poland, Bohemia, Portugal, Sicily, and Cyprus." Both claimants of the Papacy were declared unworthy to preside over the Church, and forbidden to act as Pope. In June, the conclave of cardinals assembled and elected a third Pope — one Peter Filargo, a Friar Minor, who took the name of Alexander V., but who died ten months afterwards. The cardinals then elected as his successor Cardinal Cossa, "a politic worldly man, who assumed the name of John XXIII." But, meantime, Germany, Naples and some of the other Italian States still adhered to Gregory, and Benedict kept the support of Scotland, Spain and Portugal. The Church was as much divided as ever. "The Council of Pisa . . . only aggravated the evil which it laboured to cure. Instead of two, there were now three claimants of the Papal Chair. It was reserved for the General Council of Constance to restore union and peace to the Church."—J. N. Murphy, *The Chair of Peter, ch.* 20.—"The amount of evil wrought by the schism of 1378, the longest known in the history of the Papacy, can only be estimated, when we reflect that it occurred at a moment, when thorough reform in ecclesiastical affairs was a most urgent need. This was now utterly out of the question, and, indeed, all evils which had crept into ecclesiastical life were infinitely increased. Respect for the Holy See was also greatly impaired, and the Popes became more than ever dependent on the temporal power, for the schism allowed each Prince to choose which Pope he would acknowledge. In the eyes of the people, the simple fact of a double Papacy must have shaken the authority of the Holy See to its very foundations. It may truly be said that these fifty years of schism prepared the way for the great Apostacy of the 16th century."—L. Pastor, *Hist. of the Popes from the Close of the Middle Ages, v.* 1, *p.* 141.

A. D. 1414-1418. — The Council of Constance.—Election of Martin V.—Ending of the Great Schism and failure of Church Reform.—"In April, A. D. 1412, the Pope [John XXIII.], to preserve appearances, opened at Rome the council which had been agreed upon at Pisa for the reformation of the Church in her Head and members. Quite a small number of bishops put in an appearance, who, after having condemned the antipopes, and some heretical propositions of Wycliffe and John Huss, hastily adjourned. John, who does not seem to have had any very earnest wish to correct his own life, and who, consequently, could not be expected to be over solicitous about the correction of those of others, was carefully provident to prevent the bishops coming to Rome in excessive numbers. He had come to a secret understanding with Ladislaus, his former enemy, that the latter should have all the roads well guarded. Ladislaus soon turned against the Pope, and forced him to quit Rome, and seek refuge, first at Florence, and next at Bologna (A. D. 1413). From this city John opened communications with the princes of Europe with the purpose of fixing a place for holding the council. . . . The Emperor Sigismund appointed the city of Constance, where the council did, in fact, convene, November 1, A. D. 1414. . . . The abuses which prevailed generally throughout the Church, and which were considerably increased by the existence of three rival Popes, and by the various theories on Church government called forth by the controversy, greatly perplexed men's minds, and created much anxiety as to the direction affairs might eventually take. This unsettled state of feeling accounts for the unusually large number of ecclesiastics who attended the council. There were 18,000 ecclesiastics of all ranks, of whom, when the number was largest, 3 were patriarchs, 24 cardinals, 33 archbishops, close upon 150 bishops, 124 abbots, 50 provosts, and 300 doctors in the various degrees. Many princes attended in person. There were constantly 100,000 strangers in the city, and, on one occasion, as many as 150,000, among whom were many of a disreputable character. Feeling ran so high that, as might have been anticipated, every measure was extreme. Owing to the peculiar composition of the Council, at which only a limited number of bishops were present, and these chiefly in the interest of John XXIII., it was determined to decide all questions, not by a majority of episcopal suffrages, but by that of the representatives of the various nations, including doctors. The work about to engage the Council was of a threefold character, viz., 1. To terminate the papal schism; 2. To condemn errors against faith, and particularly those of Huss; and 3. To enact reformatory decrees. . . . It was with some difficulty that John could be induced to attend at Constance, and when he did finally consent, it was only because he was forced to take the step by the representations

of others. . . . Regarding the Council as a continuation of that of Pisa, he naturally thought that he would be recognized as the legitimate successor of the Pope chosen by the latter. . . . All questions were first discussed by the various nations, each member of which had the right to vote. Their decision was next brought before a general conference of nations, and this result again before the next session of the Council. This plan of organisation destroyed the hopes of John XXIII., who relied for success on the preponderance of Italian prelates and doctors. . . . To intimidate John, and subdue his resistance, a memorial, written probably by an Italian, was put in circulation, containing charges the most damaging to that pontiff's private character. . . . So timely and effective was this blow that John was thenceforth utterly destitute of the energy and consideration necessary to support his authority, or direct the affairs of the Council." In consequence, he sent a declaration to the Council that, in order to give peace to the Church, he would abdicate, provided his two rivals in the Papacy, Gregory XII. and Benedict XIII., would also resign. Later, in March, 1415, he repeated this promise under oath. The Emperor, Sigismund, was about to set out to Nizza to induce the other claimants to resign, when John's conduct gave rise to a suspicion that he did not intend to act in good faith. He was charged with an intention to escape from the Council, with the assistance of Frederic, Duke of Austria. He now gave his promise under oath not to depart from the city before the Council had dissolved. "But, notwithstanding these protestations, John escaped (March 21, 1415), disguised as a groom, during a great tournament arranged by the duke, and made his way to Schaffhausen, belonging to the latter, thence to Laufenburg and Freiburg, thence again to the fortress of Brisac, whence he had intended to pass to Burgundy, and on to Avignon. That the Council went on with its work after the departure of John, and amid the general perplexity and confusion, was entirely due to the resolution of the emperor, the eloquence of Gerson [of the University of Paris], and the indefatigable efforts of the venerable master, now cardinal, d'Ailly. The following memorable decrees were passed . . . : 'A Pope can neither transfer nor dissolve a general Council without the consent of the latter, and hence the present Council may validly continue its work even after the flight of the Pope. All persons, without distinction of rank, even the Pope himself, are bound by its decisions, in so far as these relate to matters of faith, to the closing of the present schism, and to the reformation of the Church of God in her Head and members. All Christians, not excepting the Pope, are under obligation to obey the Council.'. . . Pope John, after getting away safe to Schaffhausen, complained formally of the action of the Council towards himself, summoned all the cardinals to appear personally before him within six days, and sent memorials to the King of France [and others], . . . justifying his flight. Still the Council went on with its work; disposed, after a fashion, of the papal difficulty, and of the cases of Huss and Jerome of Prague [whom it condemned and delivered to the civil authorities, to be burned—see BOHEMIA: A. D. 1405–1415]. . . . In the meantime, Frederic, Margrave of Brandenburg, acting under the joint order of Council and Emperor, arrested the fugitive Pope at Freiburg, and led him a prisoner to Radolfzell, near Constance, where 54 (originally 72) charges —some of them of a most disgraceful character—extracted from the testimony of a host of witnesses, were laid before him by a committee of the Council." He attempted no defense, and on May 29, 1415, John XXIII. was formally and solemnly deposed and was kept in confinement for the next three years. In July, Gregory XII. was persuaded to resign his papal claims and to accept the dignity of Cardinal Legate of Ancona. Benedict XIII., more obstinate, refused to give up his pretensions, though abandoned even by the Spaniards, and was deposed, on the 26th of July, 1417. "The three claimants to the papacy having been thus disposed of, it now remained to elect a legitimate successor to St. Peter. Previously to proceeding to an election, a decree was passed providing that, in this particular instance, but in no other, six deputies of each nation should be associated with the cardinals in making the choice." It fell upon Otho Colonna, "a cardinal distinguished for his great learning, his purity of life, and gentleness of disposition." In November, 1417, he was anointed and crowned under the name of Martin V. The Council was formally closed on the 16th of May following, without having accomplished the work of Church reformation which had been part of its intended mission. "Sigismund and the German nation, and for a time the English also, insisted that the question of the reformation of the Church, the chief points of which had been sketched in a schema of 18 articles, should be taken up and disposed of before proceeding to the election of a Pope." But in this they were baffled. "Martin, the newly elected Pope, did not fully carry out all the proposed reforms. It is true, he appointed a committee composed of six cardinals and deputies from each nation, and gave the work into their hands; but their councils were so conflicting that they could neither come to a definite agreement among themselves, nor would they consent to adopt the plan of reform submitted by the Pope."—J. Alzog, *Manual of Universal Church Hist., sects.* 270–271 (*v.* 3).—"The election of Martin V. might have been a source of unalloyed happiness to Christendom, if he had at once taken the crucial question of Church Reform vigorously in hand; but the Regulations of the Chancery issued soon after his accession showed that little was to be expected from him in this respect. They perpetuated most of the practices in the Roman Court which the Synod had designated as abuses. Neither the isolated measures afterwards substituted for the universal reform so urgently required, nor the Concordats made with Germany, the three Latin nations, and England, sufficed to meet the exigencies of the case, although they produced a certain amount of good. The Pope was indeed placed in a most difficult position, in the face of the various and opposite demands made upon him, and the tenacious resistance offered by interests now long established to any attempt to bring things back to their former state. The situation was complicated to such a degree that any change might have brought about a revolution. It must also be borne in mind that all the proposed reforms involved a diminution of

the Papal revenues; the regular income of the Pope was small and the expenditure was very great. For centuries, complaints of Papal exactions had been made, but no one had thought of securing to the Popes the regular income they required. . . . The delay of the reform, which was dreaded by both clergy and laity, may be explained, though not justified, by the circumstances we have described. It was an unspeakable calamity that ecclesiastical affairs still retained the worldly aspect caused by the Schism, and that the much needed amendment was again deferred."—L. Pastor, *Hist. of the Popes, from the Close of the Middle Ages, v.* 1, *pp.* 209–210.

A. D. 1431.—Election of Eugenius IV.

A. D. 1431-1448.—The Council of Basle.—Triumph of the Pope and defeat, once more, of Church Reform.—"The Papacy had come forth so little scathed from the perils with which at one time these assemblies menaced it, that a Council was no longer that word of terror which a little before it had been. There was more than one motive for summoning another, if indeed any help was to be found in them. Bohemia, wrapt in the flames of the Hussite War, was scorching her neighbours with fiercer fires than those by which she herself was consumed. The healing of the Greek Schism was not yet confessed to be hopeless, and the time seemed to offer its favourable opportunities. No one could affirm that the restoration of sound discipline, the reformation of the Church in head and in members, had as yet more than begun. And thus, in compliance with the rule laid down at the Council of Constance,—for even at Rome they did not dare as yet openly to set at nought its authority,—Pope Eugenius IV. called a third Council together [1431], that namely of Basle. . . . Of those who sincerely mourned over the Church's ills, the most part, after the unhappy experience of the two preceding Councils, had so completely lost all faith in these assemblies that slight regard was at first yielded to the summons; and this Council seemed likely to expire in its cradle as so many had done before, as not a few should do after. The number of Bishops and high Church dignitaries who attended it was never great. A democratic element made itself felt throughout all its deliberations; a certain readiness to resort to measures of a revolutionary violence, such as leaves it impossible to say that it had not itself to blame for much of its ill-success. At the first indeed it displayed unlooked-for capacities for work, entering into important negotiations with the Hussites for their return to the bosom of the Church; till the Pope, alarmed at these tokens of independent activity, did not conceal his ill-will, making all means in his power to dissolve the Council. This, meanwhile, growing in strength and in self-confidence, re-affirmed all of strongest which had been affirmed already at Pisa and Constance, concerning the superiority of Councils over Popes; declared of itself that, as a lawfully assembled Council, it could neither be dissolved, nor the place of its meeting changed, unless by its own consent; and, having summoned Eugenius and his Cardinals to take their share in its labours, began the work of reformation in earnest. Eugenius yielded for the time; recalled the Bull which had hardly stopped short of anathematizing the Council; and sent his legates to Basle. Before long, however, he and the Council were again at strife; Eugenius complaining, apparently with some reason, that in these reforms one source after another of the income which had hitherto sustained the Papal Court was being dried up, while no other provision was made for the maintenance of its due dignity, or even for the defraying of its necessary expenses. As the quarrel deepened the Pope removed the seat of the Council to Ferrara (Sept. 18, 1437), on the plea that negotiations with the envoys of the Greek Church would be more conveniently conducted in an Italian city; and afterwards to Florence. The Council refused to stir, first suspending (Jan. 24, 1438), then deposing the Pope (July 7, 1439), and electing another, Felix V., in his stead; this Felix being a retired Duke of Savoy, who for some time past had been playing the hermit in a villa on the shores of the lake of Geneva [see Savoy: 11–15th Centuries]. The Council in this extreme step failed to carry public opinion with it. It was not merely that Eugenius denounced his competitor by the worst names he could think of, declaring him a hypocrite, a wolf in sheep's clothing, a Moloch, a Cerberus, a Golden Calf, a second Mahomet, an antichrist; but the Church in general shrank back in alarm at the prospect of another Schism, to last, it might be, for well-nigh another half century. And thus the Council lost ground daily; its members fell away; its confidence in itself departed; and, though it took long in dying, it did in the end die a death of inanition (June 23, 1448). Again the Pope remained master of the situation, the last reforming Council,—for it was the last,—having failed in all which it undertook as completely and as ingloriously as had done the two which went before."—R. C. Trench, *Lects. on Medieval Church History, lect.* 20.—"In the year 1438 the Emperor John and the Greek Patriarch made their appearance at the council of Ferrara. In the following year the council was transferred to Florence, where, after long discussions, the Greek emperor, and all the members of the clergy who had attended the council, with the exception of the Bishop of Ephesus, adopted the doctrine of the Roman church concerning the possession of the Holy Ghost, the addition to the Nicene Creed, the nature of purgatory, the condition of the soul after its separation from the body until the day of judgment, the use of unleavened bread in the sacrament of the Lord's Supper, and the papal supremacy. The union of the two churches was solemnly ratified in the magnificent cathedral of Florence on the 6th of July 1439, when the Greeks abjured their ancient faith in a vaster edifice and under a loftier dome than that of their own much-vaunted temple of St. Sophia. The Emperor John derived none of the advantages he had expected from the simulated union of the churches. Pope Eugenius, it is true, supplied him liberally with money, and bore all the expenses both of the Greek court and clergy during their absence from Constantinople; he also presented the emperor with two galleys, and furnished him with a guard of 300 men, well equipped, and paid at the cost of the papal treasury; but his Holiness forgot his promise to send a fleet to defend Constantinople, and none

of the Christian princes showed any disposition to fight the battles of the Greeks, though they took up the cross against the Turks. On his return John found his subjects indignant at the manner in which the honour and doctrines of the Greek church had been sacrificed in an unsuccessful diplomatic speculation. The bishops who had obsequiously signed the articles of union at Florence, now sought popularity by deserting the emperor, and making a parade of their repentance, lamenting their wickedness in falling off for a time from the pure doctrine of the orthodox church. The only permanent result of this abortive attempt at Christian union was to increase the bigotry of the orthodox, and to furnish the Latins with just grounds for condemning the perfidious dealings and bad faith of the Greeks. In both ways it assisted the progress of the Othoman power. The Emperor John, seeing public affairs in this hopeless state, became indifferent to the future fate of the empire, and thought only of keeping on good terms with the sultan."—G. Finlay, *History of the Byzantine and Greek Empires, bk. 4, ch. 2, sect. 6 (v. 2).*—Pope "Eugenius died, February 23, 1447; . . . but his successors were able to secure the fruits of the victory [over the Council of Basle] for a long course of years. The victory was won at a heavy cost, both for the Popes and for Christendom; for the Papacy recovered its ascendancy far more as a political than as a religious power. The Pope became more than ever immersed in the international concerns of Europe, and his policy was a tortuous course of craft and intrigue, which in those days passed for the new art of diplomacy. . . . To revert to a basis of spiritual domination lay beyond the vision of the energetic princes, the refined dilettanti, the dexterous diplomatists, who sat upon the chair of St. Peter during the age succeeding the Council of Basle. Of signs of uneasiness abroad they could not be quite ignorant; but they sought to divert men's minds from the contemplation of so perplexing a problem as Church reform, by creating or fostering new atmospheres of excitement and interest; . . . or at best (if we may adopt the language of their apologists) they took advantage of the literary and artistic movement then active in Italy as a means to establish a higher standard of civilisation which might render organic reform needless."—R. L. Poole, *Wycliffe and Movements for Reform, ch. 12.*

A. D. 1464.—Election of Paul II.

A. D. 1471-1513.—The darkest age of Papal crime and vice.—Sixtus IV. and the Borgias.—The warrior Pontiff, Julius II.—"The impunity with which the Popes escaped the councils held in the early part of the 15th century was well fitted to inspire them with a reckless contempt for public opinion; and from that period down to the Reformation, it would be difficult to parallel among temporal princes the ambitious, wicked, and profligate lives of many of the Roman Pontiffs. Among these, Francesco della Rovere, who succeeded Paul II. with the title of Sixtus IV., was not the least notorious. Born at Savona, of an obscure family, Sixtus raised his nephews, and his sons who passed for nephews, to the highest dignities in Church and State, and sacrificed for their aggrandisement the peace of Italy and the cause of Christendom against the Turks. Of his two nephews, Julian and Leonard della Rovere, the former, afterwards Pope Julius II., was raised to the purple in the second year of his uncle's pontificate." It was this pope—Sixtus IV.—who had a part in the infamous "Conspiracy of the Pazzi" to assassinate Lorenzo de' Medici and his brother [see Florence: A. D. 1469-1492]. "This successor of St. Peter took a pleasure in beholding the mortal duels of his guards, for which he himself sometimes gave the signal. He was succeeded [1484] by Cardinal Gian Batista Cibò, a Genoese, who assumed the title of Innocent VIII. Innocent was a weak man, without any decided principle. He had seven children, whom he formally acknowledged, but he did not seek to advance them so shamelessly as Sixtus had advanced his 'nephews.' . . . Pope Innocent VIII. [who died July 25, 1492] was succeeded by the atrocious Cardinal Roderigo Borgia, a Spaniard of Valencia, where he had at one time exercised the profession of an advocate. After his election he assumed the name of Alexander VI. Of 20 cardinals who entered the conclave, he is said to have bought the suffrages of all but five; and Cardinal Ascanio Sforza, whom he feared as a rival, was propitiated with a present of silver that was a load for four mules. Alexander's election was the signal for flight to those cardinals who had opposed him. . . . Pope Alexander had by the celebrated Vanozza, the wife of a Roman citizen, three sons: John, whom he made Duke of Gandia, in Spain; Cæsar and Geoffrey; and one daughter, Lucretia."—T. H. Dyer, *Hist. of Modern Europe, v. 1, pp. 105, 108, 175, 177-178.*—Under the Borgias, "treasons, assassinations, tortures, open debauchery, the practice of poisoning, the worst and most shameless outrages, are unblushingly and publicly tolerated in the open light of heaven. In 1490, the Pope's vicar having forbidden clerics and laics to keep concubines, the Pope revoked the decree, 'saying that that was not forbidden, because the life of priests and ecclesiastics was such that hardly one was to be found who did not keep a concubine, or at least who had not a courtesan.' Cæsar Borgia at the capture of Capua 'chose forty of the most beautiful women, whom he kept for himself; and a pretty large number of captives were sold at a low price at Rome.' Under Alexander VI., 'all ecclesiastics, from the greatest to the least, have concubines in the place of wives, and that publicly. If God hinder it not,' adds this historian, 'this corruption will pass to the monks and religious orders, although, to confess the truth, almost all the monasteries of the town have become bawdhouses, without any one to speak against it.' With respect to Alexander VI., who loved his daughter Lucretia, the reader may find in Burchard the description of the marvellous orgies in which he joined with Lucretia and Cæsar, and

the enumeration of the prizes which he distributed. Let the reader also read for himself the story of the bestiality of Pietro Luigi Farnese, the Pope's son, how the young and upright Bishop of Fano died from his outrage, and how the Pope, speaking of this crime as 'a youthful levity,' gave him in this secret bull 'the fullest absolution from all the pains which he might have incurred by human incontinence, in whatever shape or with whatever cause.' As to civil security, Bentivoglio caused all the Marescotti to be put to death; Hippolyto d' Este had his brother's eyes put out in his presence; Cæsar Borgia killed his brother; murder is consonant with their public manners, and excites no wonder. A fisherman was asked why he had not informed the governor of the town that he had seen a body thrown into the water; 'he replied that he had seen about a hundred bodies thrown into the water during his lifetime in the same place, and that no one had ever troubled about it.' 'In our town,' says an old historian, 'much murder and pillage was done by day and night, and hardly a day passed but some one was killed.' Cæsar Borgia one day killed Peroso, the Pope's favourite, between his arms and under his cloak, so that the blood spurted up to the Pope's face. He caused his sister's husband to be stabbed and then strangled in open day, on the steps of the palace; count, if you can, his assassinations. Certainly he and his father, by their character, morals, open and systematic wickedness, have presented to Europe the two most successful images of the devil. . . . Despotism, the Inquisition, the Cicisbei, dense ignorance, and open knavery, the shamelessness and the smartness of harlequins and rascals, misery and vermin,—such is the issue of the Italian Renaissance."—H. A. Taine, *Hist. of English Literature, v.* 1, *pp.* 354–355.—"It is certain . . . that the profound horror with which the name of Alexander VI. strikes a modern ear, was not felt among the Italians at the time of his election. The sentiment of hatred with which he was afterwards regarded arose partly from the crimes by which his Pontificate was rendered infamous, partly from the fear which his son Cesare inspired, and partly from the mysteries of his private life which revolted even the corrupt conscience of the 16th century. This sentiment of hatred had grown to universal execration at the time of his death. In course of time, when the attention of the Northern nations had been directed to the iniquities of Rome, and when the glaring discrepancy between Alexander's pretension as a Pope and his conduct as a man had been apprehended, it inspired a legend, which, like all legends, distorts the facts which it reflects. Alexander was, in truth, a man eminently fitted to close an old age and to inaugurate a new, to demonstrate the paradoxical situation of the Popes by the inexorable logic of his practical impiety, and to fuse two conflicting world-forces in the cynicism of supreme corruption. . . . Alexander was a stronger and a firmer man than his immediate predecessors. 'He combined,' says Guicciardini, 'craft with singular sagacity, a sound judgment with extraordinary powers of persuasion; and to all the grave affairs of life he applied ability and pains beyond belief.' His first care was to reduce Rome to order. The old factions of Colonna and Orsini, which Sixtus had scotched, but which had raised their heads again during the dotage of Innocent, were destroyed in his pontificate. In this way, as Machiavelli observed, he laid the real basis for the temporal power of the Papacy. Alexander, indeed, as a sovereign, achieved for the Papal See what Louis XI. had done for the throne of France, and made Rome on its small scale follow the type of the large European monarchies. . . . Former Pontiffs had raised money by the sale of benefices and indulgences: this, of course, Alexander also practised—to such an extent, indeed, that an epigram gained currency; 'Alexander sells the keys, the altars, Christ. Well, he bought them; so he has a right to sell them.' But he went further and took lessons from Tiberius. Having sold the scarlet to the highest bidder, he used to feed his prelate with rich benefices. When he had fattened him sufficiently, he poisoned him, laid hands upon his hoards, and recommenced the game. . . . Former Popes had preached crusades against the Turk, languidly or energetically according as the coasts of Italy were threatened. Alexander frequently invited Bajazet to enter Europe and relieve him of the princes who opposed his intrigues in the favour of his children. The fraternal feeling which subsisted between the Pope and the Sultan was to some extent dependent on the fate of Prince Djem, a brother of Bajazet and son of the conqueror of Constantinople, who had fled for protection to the Christian powers, and whom the Pope kept prisoner, receiving 40,000 ducats yearly from the Porte for his jail fee. . . . Lucrezia, the only daughter of Alexander by Vannozza, took three husbands in succession, after having been formally betrothed to two Spanish nobles. . . . History has at last done justice to the memory of this woman, whose long yellow hair was so beautiful, and whose character was so colourless. The legend which made her a poison-brewing Mænad, has been proved a lie—but only at the expense of the whole society in which she lived. . . . It seems now clear enough that not hers, but her father's and her brother's, were the atrocities which made her married life in Rome a byeword. She sat and smiled through all the tempests which tossed her to and fro, until she found at last a fair port in the Duchy of Ferrara. . . . [On the 12th of August, 1503], the two Borgias invited the Cardinal Carneto to dine with them in the Belvedere of Pope Innocent. Thither by the hands of Alexander's butler they previously conveyed some poisoned wine. By mistake they drank the death-cup mingled for their victim. Alexander died, a black and swollen mass, hideous to contemplate, after a sharp struggle with the poison."—J. A. Symonds, *Renaissance in Italy: The Age of the Despots, ch.* 6.—The long-accepted story of Pope Alexander's poisoning, as related above by Mr. Symonds, is now discredited. "The principal reason why this picturesque tale has of late been generally regarded as a fiction is the apparent impossibility of reconciling it with a fact in connexion with Pope Alexander's last illness which admits of no dispute, the date of its commencement. The historians who relate the poisoning unanimously assert that the effect was sudden and overpowering, that the pope was carried back to the Vatican in a dying state and expired shortly afterwards. The 18th of August has hitherto been accepted without dispute as the date of his death: it follows, therefore, that the fatal banquet must have been on the 17th at

the earliest. But a cloud of witnesses, including the despatches of ambassadors resident at the papal court, prove that the pope's illness commenced on the 12th, and that by the 17th his condition was desperate. The Venetian ambassador and a Florentine letter-writer, moreover, the only two contemporary authorities who assign a date for the entertainment, state that it was given on the 5th or 6th, . . . which would make it a week before the pope was taken ill. . . . It admits . . . of absolute demonstration that the banquet could not have been given on the 12th or even on the 11th, and of proof hardly less cogent that the pope did actually die on the 18th. All the evidence that any entertainment was ever given, or that any poisoning was ever attempted, connects the name of Cardinal Corneto with the transaction. He and no other, according to all respectable authorities (the statement of late writers that ten cardinals were to have been poisoned at once may be dismissed without ceremony as too ridiculous for discussion), was the cardinal whom Alexander on this occasion designed to remove. Now, Cardinal Corneto was not in a condition to partake of any banquet either on 11 Aug. or 12 Aug. Giustiniani, the Venetian ambassador, who attributes the pope's illness to a fever contracted at supper at the cardinal's villa on 5 Aug., says, writing on the 13th, 'All have felt the effects, and first of all Cardinal Adrian [Corneto], who attended mass in the papal chapel on Friday [11 Aug.], and after supper was attacked by a violent paroxysm of fever, which endured until the following morning; yesterday [the 12th] he had it again, and it has returned to-day.' Evidently, then, the cardinal could not give or even be present at an entertainment on the 12th, and nothing could have happened on that day to throw a doubt on the accuracy of Burcardus's statement that the pope was taken ill in the morning, which would put any banquet and any poisoning during the course of it out of the question. . . . There is, therefore, no reason for discrediting the evidence of the two witnesses, the only contemporary witnesses to date, who fix the supper to 5 Aug. or 6 Aug. at the latest. It is possible that poison may have been then administered which did not produce its effects until 12 Aug.; but the picturesque statement of the suddenness of the pope's illness and the consternation thus occasioned are palpable fictions, which so gravely impair the credit of the historians relating them that the story of the poisoning cannot be accepted on their authority. . . . The story, then, that Alexander accidentally perished by poison which he had prepared for another — though not in itself impossible or even very improbable — must be dismissed as at present unsupported by direct proof or even incidental confirmation of any kind. It does not follow that he may not have been poisoned designedly."—R. Garnett, *The Alleged Poisoning of Alexander VI.* (*English Historical Rev., April,* 1894).—"Of Pius III., who reigned for a few days after Alexander, no account need be taken. Giuliano della Rovere was made Pope in 1503. Whatever opinion may be formed of him considered as the high-priest of the Christian faith, there can be no doubt that Julius II. was one of the greatest figures of the Renaissance, and that his name, instead of that of Leo X., should by right be given to the golden age of letters and of arts in Rome. He stamped the century with the impress of a powerful personality. It is to him we owe the most splendid of Michael Angelo's and Raphael's masterpieces. The Basilica of St. Peter's, that materialized idea, which remains to symbolize the transition from the Church of the Middle Ages to the modern semi-secular supremacy of Papal Rome, was his thought. No nepotism, no loathsome sensuality, no flagrant violation of ecclesiastical justice stain his pontificate. His one purpose was to secure and extend the temporal authority of the Popes; and this he achieved by curbing the ambition of the Venetians, who threatened to enslave Romagna, by reducing Perugia and Bologna to the Papal sway, by annexing Parma and Piacenza, and by entering on the heritage bequeathed to him by Cesare Borgia. At his death he transmitted to his successors the largest and most solid sovereignty in Italy. But restless, turbid, never happy unless fighting, Julius drowned the peninsula in blood. He has been called a patriot, because from time to time he raised the cry of driving the barbarians from Italy: it must, however, be remembered that it was he, while still Cardinal di San Pietro in Vincoli, who finally moved Charles VIII. from Lyons; it was he who stirred up the League of Cambray [see VENICE: A. D. 1508–1509] against Venice, and who invited the Swiss mercenaries into Lombardy [see ITALY: A. D. 1510–1513]; in each case adding the weight of the Papal authority to the forces which were enslaving his country. . . . Leo X. succeeded Julius in 1513, to the great relief of the Romans, wearied with the continual warfare of the old 'Pontefice terribile.'"—J. A. Symonds, *Renaissance in Italy: The Age of the Despots, ch.* 6.

15th-16th Centuries.—At the beginning of the Reformation Movement.—"An increase in pilgrimages first begins to mark a new phase of religious life which was encouraged by the admonitions of preachers of repentance like Capistrano. Like an avalanche did the numbers grow of the pilgrims who streamed together from all parts of Upper and Central Germany, from the foot of the Alps to the Harz Mountains. . . . If that way of striving after righteousness before God, vain and mistaken as it seems to us, may be looked upon as religion, then the last fifty or sixty years before the reformation show an exceptionally high degree of religious feeling, or at least of religious need; a feeling ever increasing through lack of means to satisfy it. With regard to the clergy, indeed, things looked dark enough, especially in North and Central Germany. One does not know which was greater, their lack of knowledge or their lack of morality. . . . That period of history, indeed, might be called a prosperous one by any one regarding merely superficially the condition of social and political affairs. It is well known how German

commerce prospered at that time, extending to all parts of the world and ever having new paths opened up for it by the new discoveries. Frenchmen and Italians, astounded at the riches and princely splendor which the commercial magnates in the South German trade-centres were able to display, sang the praises of the prosperity and culture of the land. Industry and commerce were on the increase, and art, realizing its highest aims, found an abiding-place and self-sacrificing patrons in the houses of the citizens. With every year the number of high and low-grade schools on the Rhine and in South Germany increased in number, and were still scarcely able to do justice to the pressing educational needs. An undercurrent of fresh and joyous creative impulse, full of promise for the future, can be traced among the burghers. But if one regards the age as a whole one sees everywhere not only a threatening, but actually a present decline. The abundant popular literature, more even than the writings of scholars, gives a clear insight into these matters. . . . There is reason to believe that never, even counting the present day, have there been so many beggars as in those decades. It must be borne in mind that, both practically and theoretically, beggary was furthered by the church. Much from her rich table fell into the lap of the poor man, and actually not only was it no shame to beg, but beggary was a vocation like any other. . . . Men did, on the other hand, have the consciousness that the great accumulation of capital in the hands of individuals furthered poverty as it always does. The complaints are general against 'selfishness'; the pauper, the town artisan, the noble and the scholar are remarkably in accord on this one point, that deception, usury and cheating are the only explanation of the prosperity of the merchant. When the knight attacked the goods-waggons of the traders he believed that he was only taking what rightfully belonged to himself. The merchants and the rich prelates were responsible to his mind for the deterioration of his own class or estate which can no longer hold its own against the rich civilians. All the more does he oppress his own serfs. Only seldom among the higher classes do we hear a word of pity for the poor man, a word of blame against the fleecing and harassing of the peasants; much oftener bitter scorn and mockery, which nevertheless is founded on fear; for men know well enough in their inmost souls that the peasant is only waiting for a suitable moment in which to strike out and take bloody vengeance, and anxiously do they await the future. Even among the citizens themselves those who were without possessions were filled with hatred against the rich and against those of high degree. The introduction of Roman law, unintelligible to the burgher and peasant, made the feeling of being without law a common one. The more firmly did men pin their faith on that future in which the Last Judgment of God was to come and annihilate priests and lords. Such impressions, which were kept vivid by an ever-spreading popular literature, by word of mouth and by pictorial representations, could only be heightened by the state of political affairs in the last decades of the 15th century and the first years of the 16th. . . . With intense interest did men follow the transactions of the diets which promised to better affairs. One plan of taxation followed on the heels of another. What project was left undiscussed for the better carrying out of the Peace of the Land! In the end everything remained as it had been save the want and general discomfort which increased from year to year. Bad harvests and consequent rise in prices, famine, severe sicknesses and plagues are once more the stock chapters in the chronicles. Frightful indeed were the ravages caused by the first, almost epidemic, appearance of the Syphilis; with regard to which, during the whole period of the reformation, the moral judgment wavered. . . . It is a wondrous, gloomy time, torn by contradictions, a time in which all is in a ferment, everything seems to totter. Everything but one institution, the firmly welded edifice of the Roman church. To Germany also came the news of the horrible vices with which the popes just at this time disgraced the Holy See: people knew that no deed was too black for them when it was a question of satisfying their greed of power and their lust. But nevertheless they remained the successors of Peter and the representatives of Christ, and so little can one speak of a process of dissolution in the church, that the latter appears on the contrary the only stable power and the religious-ecclesiastical idea is rather the one that rules all things. Although men to a great extent scorn and mock her servants and long often with burning hatred for their annihilation, yet it continues always to be the church that holds the keys of the Kingdom of Heaven and that can avert the wrath of God; the church, to which the anxious soul turns as the last anchor of hope and tries to outdo itself in her service. It is not indeed pious reverence for a God who is holy and yet gracious that draws the sinners to their knees, but the dread of the tortures of purgatory and of the wrath of Him who sits above the world to judge it. This causes the soul, restless, dissatisfied, to be ceaseless in its endeavors to conciliate the Angry One through sacrificial service — the whole religious activity being one half-despairing 'Miserere' called forth by fear. Such was the spirit of the age in which Martin Luther was born and in which he passed his youth." — Kolde, *Martin Luther* (*trans. from the German*), *v.* 1, *pp.* 5–27.

A. D. 1516-1517.—Monetary demands of the court and family of Pope Leo X., and his financial expedients.—The theory of Indulgences and their marketability. — "The position which the pope [Leo X.], now absolute lord of Florence and master of Siena, occupied, the powerful alliances he had contracted with the other powers of Europe, and the views which his

family entertained on the rest of Italy, rendered it absolutely indispensable for him, spite of the prodigality of a government that knew no restraint, to be well supplied with money. He seized every occasion of extracting extraordinary revenues from the church. The Lateran council was induced, immediately before its dissolution (15th of March, 1517), to grant the pope a tenth of all church property throughout Christendom. Three different commissions for the sale of indulgences traversed Germany and the northern states at the same moment. These expedients were, it is true, resorted to under various pretexts. The tenths were, it was said, to be expended in a Turkish war, which was soon to be declared; the produce of indulgences was for the building of St. Peter's Church, where the bones of the martyrs lay exposed to the inclemency of the elements. But people had ceased to believe in these pretences. . . . For there was no doubt on the mind of any reasonable man, that all these demands were mere financial speculations. There is no positive proof that the assertion then so generally made — that the proceeds of the sale of indulgences in Germany was destined in part for the pope's sister Maddelena — was true. But the main fact is indisputable, that the ecclesiastical aids were applied to the uses of the pope's family."—L. Ranke, *Hist. of the Reformation in Germany, bk.* 2, *ch.* 1 (*v.* 1).—"Indulgences, in the earlier ages of the Church, had been a relaxation of penance, or of the discipline imposed by the Church on penitents who had been guilty of mortal sin. The doctrine of penance required that for such sin satisfaction should be superadded to contrition and confession. Then came the custom of commuting these appointed temporal penalties. When Christianity spread among the northern nations, the canonical penances were frequently found to be inapplicable to their condition. The practice of accepting offerings of money in the room of the ordinary forms of penance, harmonized with the penal codes in vogue among the barbarian peoples. At first the priest had only exercised the office of an intercessor. Gradually the simple function of declaring the divine forgiveness to the penitent transformed itself into that of a judge. By Aquinas, the priest is made the instrument of conveying the divine pardon, the vehicle through which the grace of God passes to the penitent. With the jubilees, or pilgrimages to Rome, ordained by the popes, came the plenary indulgences, or the complete remission of all temporal penalties — that is, the penalties still obligatory on the penitent — on the fulfillment of prescribed conditions. These penalties might extend into purgatory, but the indulgence obliterated them all. In the 13th century, Alexander of Hales and Thomas Aquinas set forth the theory of supererogatory merits, or the treasure of merit bestowed upon the Church through Christ and the saints, on which the rulers of the Church might draw for the benefit of the less worthy and more needy. This was something distinct from the power of the keys, the power to grant absolution, which inhered in the priesthood alone. The eternal punishment of mortal sin being remitted or commuted by the absolution of the priest, it was open to the Pope or his agents, by the grant of indulgences, to remit the temporal or terminable penalties that still rested on the head of the transgressor. Thus souls might be delivered forthwith from purgatorial fire. Pope Sixtus IV., in 1477, had officially declared that souls already in purgatory are emancipated 'per modum suffragii'; that is, the work done in behalf of them operates to effect their release in a way analogous to the efficacy of prayer. Nevertheless, the power that was claimed over the dead, was not practically diminished by this restriction. The business of selling indulgences had grown by the profitableness of it. 'Everywhere,' says Erasmus, 'the remission of purgatorial torment is sold; nor is it sold only, but forced upon those who refuse it.' As managed by Tetzel and the other emissaries sent out to collect money for the building of St. Peter's Church, the indulgence was a simple bargain, according to which, on the payment of a stipulated sum, the individual received a full discharge from the penalties of sin or procured the release of a soul from the flames of purgatory. The forgiveness of sins was offered in the market for money."—G. P. Fisher, *The Reformation, ch.* 4.—The doctrine concerning indulgences which the Roman Catholic Church maintains at the present day is stated by one of its most eminent prelates as follows: "What then is an Indulgence? It is no more than a remission by the Church, in virtue of the keys, or the judicial authority committed to her, of a portion, or the entire, of the temporal punishment due to sin. The infinite merits of Christ form the fund whence this remission is derived: but besides, the Church holds that, by the communion of Saints, penitential works performed by the just, beyond what their own sins might exact, are available to other members of Christ's mystical body; that, for instance, the sufferings of the spotless Mother of God, afflictions such as probably no other human being ever felt in the soul, — the austerities and persecutions of the Baptist, the friend of the Bridegroom, who was sanctified in his mother's womb, and chosen to be an angel before the face of the Christ, — the tortures endured by numberless martyrs, whose lives had been pure from vice and sin, — the prolonged rigours of holy anchorites, who, flying from the temptations and dangers of the world, passed many years in penance and contemplation, all these made consecrated and valid through their union with the merits of Christ's passion, — were not thrown away, but formed a store of meritorious blessings, applicable to the satisfaction of other sinners. It is evident that, if the temporal punishment reserved to sin was anciently believed to be remitted through the penitential acts, which the sinner assumed, any other substitute for them, that the authority imposing or recommending them received as an equivalent, must have been considered by it truly of equal value, and as acceptable before God. And so it must be now. If the duty of exacting such satisfaction devolves upon the Church, — and it must be the same now as it formerly was, — she necessarily possesses at present the same power of substitution, with the same efficacy, and, consequently, with the same effects. And such a substitution is what constitutes all that Catholics understand by the name of an Indulgence. . . . Do I then mean to say, that during the middle ages, and later, no abuse took place in the practise of indulgences? Most certainly not. Flagrant and too frequent

abuses, doubtless, occurred through the avarice, and rapacity, and impiety of men; especially when indulgence was granted to the contributors towards charitable or religious foundations, in the erection of which private motives too often mingle. But this I say, that the Church felt and ever tried to remedy the evil. . . . The Council of Trent, by an ample decree, completely reformed the abuses which had subsequently crept in, and had been unfortunately used as a ground for Luther's separation from the Church."—N. Wiseman, *Lect's on the Principal Doctrines and Practices of the Catholic Church, lect.* 12.

A. D. 1517.—Tetzel and the hawking of Indulgences through Germany.—"In Germany the people were full of excitement. The Church had opened a vast market on earth. The crowd of customers, and the cries and jests of the sellers, were like a fair—and that, a fair held by monks. The article which they puffed off and offered at the lowest price, was, they said, the salvation of souls. These dealers travelled through the country in a handsome carriage, with three outriders, made a great show, and spent a great deal of money. . . . When the cavalcade was approaching a town, a deputy was dispatched to the magistrate: 'The grace of God and St. Peter is before your gates,' said the envoy; and immediately all the place was in commotion. The clergy, the priests, the nuns, the council, the schoolmasters, the schoolboys, the trade corporations with their banners, men and women, young and old, went to meet the merchants, bearing lighted torches in their hands, advancing to the sound of music and of all the bells, 'so that,' says a historian, 'they could not have received God Himself in greater state.' The salutations ended, the whole cortége moved towards the church, the Pope's bull of grace being carried in advance on a velvet cushion, or on a cloth of gold. The chief indulgence-merchant followed next, holding in his hand a red wooden cross. In this order the whole procession moved along, with singing, prayers, and incense. The organ pealed, and loud music greeted the hawker monk and those who accompanied him, as they entered the temple. The cross he bore was placed in front of the altar; the Pope's arms were suspended from it. . . . One person especially attracted attention at these sales. It was he who carried the great red cross and played the principal part. He wore the garb of the Dominicans. He had an arrogant bearing and a thundering voice, and he was in full vigour, though he had reached his sixty-third year. This man, the son of a goldsmith of Leipsic, named Dietz, was called John Dietzel, or Tetzel. He had received numerous ecclesiastical honours. He was Bachelor in Theology, prior of the Dominicans, apostolic commissioner and inquisitor, and since the year 1502 he had filled the office of vendor of indulgences. The skill he had acquired soon caused him to be named commissioner-in-chief. . . . The cross having been elevated and the Pope's arms hung upon it, Tetzel ascended the pulpit, and with a confident air began to extol the worth of indulgences, in presence of the crowd whom the ceremony had attracted to the sacred spot. The people listened with open mouths. Here is a specimen of one of his harangues:—'Indulgences,' he said, 'are the most precious and sublime gifts of God. This cross (pointing to the red cross) has as much efficacy as the cross of Jesus Christ itself. Come, and I will give you letters furnished with seals, by which, even the sins that you may have a wish to commit hereafter, shall be all forgiven you. I would not exchange my privileges for those of St. Peter in heaven; for I have saved more souls by my indulgences than the Apostle by his discourses. There is no sin so great, that an indulgence cannot remit it. Repentance is not necessary. But, more than that; indulgences not only save the living, they save the dead also. Priest! noble! merchant! woman! young girl! young man!—hearken to your parents and your friends who are dead, and who cry to you from the depths of the abyss: "We are enduring horrible tortures! A small alms would deliver us. You can give it, and you will not!"' The hearers shuddered at these words, pronounced in the formidable voice of the charlatan monk. 'The very instant,' continued Tetzel, 'the piece of money chinks at the bottom of the strong box, the soul is freed from purgatory, and flies to heaven.' . . . Such were the discourses heard by astonished Germany in the days when God was raising up Luther. The sermon ended, the indulgence was considered as 'having solemnly established its throne' in that place. Confessionals were arranged, adorned with the Pope's arms; and the people flocked in crowds to the confessors. They were told, that, in order to obtain the full pardon of all their sins, and to deliver the souls of others from purgatory, it was not necessary for them to have contrition of heart, or to make confession by mouth; only, let them be quick and bring money to the box. Women and children, poor people, and those who lived on alms, all of them soon found the needful to satisfy the confessor's demands. The confession being over—and it did not require much time—the faithful hurried to the sale, which was conducted by a single monk. His counter stood near the cross. He fixed his sharp eyes upon all who approached him, scrutinized their manners, their bearing, their dress, and demanded a sum proportioned to the appearance of each. Kings, queens, princes, archbishops, bishops, had to pay, according to regulation, twenty-five ducats; abbots, counts, and barons, ten; and so on, or according to the discretion of the commissioner. For particular sins, too, both Tetzel in Germany, and Samson in Switzerland, had a special scale of prices."—J. N. Merle D'Aubigne, *The Story of the Reformation, pt.* 1, *ch.* 6 (*or Hist. of the Reformation, bk.* 3, *ch.* 1).

A. D. 1517.—Luther's attack upon the Indulgences.—His 95 Theses nailed to the Wittenberg Church.—The silent support of Elector Frederick of Saxony.—The satisfaction of awakened Germany.—"Wittenberg was an old-fashioned town in Saxony, on the Elbe. Its main street was parallel with the broad river, and within its walls, at one end of it, near the Elster gate, lay the University, founded by the good Elector—Frederic of Saxony—of which Luther was a professor; while at the other end of it was the palace of the Elector and the palace church of All Saints. The great parish church lifted its two towers from the centre of the town, a little back from the main street. This was the town in which Luther had been preaching for

years, and towards which Tetzel, the seller of indulgences, now came, just as he did to other towns, vending his 'false pardons'— granting indulgences for sins to those who could pay for them, and offering to release from purgatory the souls of the dead, if any of their friends would pay for their release. As soon as the money chinked in his money-box, the souls of their dead friends would be let out of purgatory. This was the gospel of Tetzel. It made Luther's blood boil. He knew that what the Pope wanted was people's money, and that the whole thing was a cheat. This his Augustinian theology had taught him, and he was not a man to hold back when he saw what ought to be done. He did see it. On the day [October 31] before the festival of All Saints, on which the relics of the Church were displayed to the crowds of country people who flocked into the town, Luther passed down the long street with a copy of ninety-five theses or Statements [see text below] against indulgences in his hand, and nailed them upon the door of the palace church ready for the festival on the morrow. Also on All Saints' day he read them to the people in the great parish church. It would not have mattered much to Tetzel or the Pope that the monk of Wittenberg had nailed up his papers on the palace church, had it not been that he was backed by the Elector of Saxony."—F. Seebohm, *The Era of the Protestant Revolution, pt. 2, ch. 3 (c).*—"As the abuse complained of had a double character, religious and political, or financial, so also political events came in aid of the opposition emanating from religious ideas. Frederick of Saxony [on the occasion of an indulgence proclaimed in 1501] . . . had kept the money accruing from it in his own dominions in his possession, with the determination not to part with it, till an expedition against the infidels, which was then contemplated, should be actually undertaken; the pope and, on the pope's concession, the emperor, had demanded it of him in vain: he held it for what it really was — a tax levied on his subjects; and after all the projects of a war against the Turks had come to nothing, he had at length applied the money to his university. Nor was he now inclined to consent to a similar scheme of taxation. . . . The sale of indulgences at Jüterbock and the resort of his subjects thither, was not less offensive to him on financial grounds than to Luther on spiritual. Not that the latter were in any degree excited by the former; this it would be impossible to maintain after a careful examination of the facts; on the contrary, the spiritual motives were more original, powerful, and independent than the temporal, though these were important, as having their proper source in the general condition of Germany. The point whence the great events arose which were soon to agitate the world, was the coincidence of the two. There was . . . no one who represented the interests of Germany in the matter. There were innumerable persons who saw through the abuse of religion, but no one who dared to call it by its right name and openly to denounce and resist it. But the alliance between the monk of Wittenberg and the sovereign of Saxony was formed; no treaty was negotiated; they had never seen each other; yet they were bound together by an instinctive mutual understanding. The intrepid monk attacked the enemy; the prince did not promise him his aid — he did not even encourage him; he let things take their course. . . . Luther's daring assault was the shock which awakened Germany from her slumber. That a man should arise who had the courage to undertake the perilous struggle, was a source of universal satisfaction, and as it were tranquillised the public conscience. The most powerful interests were involved in it; — that of sincere and profound piety, against the most purely external means of obtaining pardon of sins; that of literature, against fanatical persecutors, of whom Tetzel was one; the renovated theology against the dogmatic learning of the schools, which lent itself to all these abuses; the temporal power against the spiritual, whose usurpations it sought to curb; lastly, the nation against the rapacity of Rome."—L. Ranke, *Hist. of the Reformation in Germany, bk. 2, ch. 1 (v. 1).*

A. D. 1517.— The Ninety-five Theses of Luther.—The following is a translation of the ninety-five theses: "In the desire and with the purpose of elucidating the truth, a disputation will be held on the underwritten propositions at Wittemberg, under the presidency of the Reverend Father Martin Luther, Monk of the Order of St. Augustine, Master of Arts and of Sacred Theology, and ordinary Reader of the same in that place. He therefore asks those who cannot be present and discuss the subject with us orally, to do so by letter in their absence. In the name of our Lord Jesus Christ. Amen. **1.** Our Lord and Master Jesus Christ in saying: 'Repent ye,' etc., intended that the whole life of believers should be penitence. **2.** This word cannot be understood of sacramental penance, that is, of the confession and satisfaction which are performed under the ministry of priests. **3.** It does not, however, refer solely to inward penitence; nay such inward penitence is naught, unless it outwardly produces various mortifications of the flesh. **4.** The penalty thus continues as long as the hatred of self — that is, true inward penitence — continues; namely, till our entrance into the kingdom of heaven. **5.** The Pope has neither the will nor the power to remit any penalties, except those which he has imposed by his own authority, or by that of the canons. **6.** The Pope has no power to remit any guilt, except by declaring and warranting it to have been remitted by God; or at most by remitting cases reserved for himself; in which cases, if his power were despised, guilt would certainly remain. **7.** God never remits any man's guilt, without at the same time subjecting him, humbled in all things, to the authority of his representative the priest. **8.** The penitential canons are imposed only on the living, and no burden ought to be imposed on the dying, according to them. **9.** Hence the Holy Spirit acting in the Pope does well for us, in that, in his decrees, he always makes exception of the article of death and of necessity. **10.** Those priests act wrongly and unlearnedly, who, in the case of the dying, reserve the canonical penances for purgatory. **11.** Those tares about changing of the canonical penalty into the penalty of purgatory seem surely to have been sown while the bishops were asleep. **12.** Formerly the canonical penalties were imposed not after, but before absolution, as tests of true contrition.

13. The dying pay all penalties by death, and are already dead to the canon laws, and are by right relieved from them. 14. The imperfect soundness or charity of a dying person necessarily brings with it great fear, and the less it is, the greater the fear it brings. 15. This fear and horror is sufficient by itself, to say nothing of other things, to constitute the pains of purgatory, since it is very near to the horror of despair. 16. Hell, purgatory, and heaven appear to differ as despair, almost despair, and peace of mind differ. 17. With souls in purgatory it seems that it must needs be that, as horror diminishes, so charity increases. 18. Nor does it seem to be proved by any reasoning or any scriptures, that they are outside of the state of merit or of the increase of charity. 19. Nor does this appear to be proved, that they are sure and confident of their own blessedness, at least all of them, though we may be very sure of it. 20. Therefore the Pope, when he speaks of the plenary remission of all penalties, does not mean simply of all, but only of those imposed by himself. 21. Thus those preachers of indulgences are in error who say that, by the indulgences of the Pope, a man is loosed and saved from all punishment. 22. For in fact he remits to souls in purgatory no penalty which they would have had to pay in this life according to the canons. 23. If any entire remission of all penalties can be granted to any one, it is certain that it is granted to none but the most perfect, that is, to very few. 24. Hence the greater part of the people must needs be deceived by this indiscriminate and high-sounding promise of release from penalties. 25. Such power as the Pope has over purgatory in general, such has every bishop in his own diocese, and every curate in his own parish, in particular. 26. The Pope acts most rightly in granting remission to souls, not by the power of the keys (which is of no avail in this case) but by the way of suffrage. 27. They preach man, who say that the soul flies out of purgatory as soon as the money thrown into the chest rattles. 28. It is certain that, when the money rattles in the chest, avarice and gain may be increased, but the suffrage of the Church depends on the will of God alone. 29. Who knows whether all the souls in purgatory desire to be redeemed from it, according to the story told of Saints Severinus and Paschal. 30. No man is sure of the reality of his own contrition, much less of the attainment of plenary remission. 31. Rare as is a true penitent, so rare is one who truly buys indulgences — that is to say, most rare. 32. Those who believe that, through letters of pardon, they are made sure of their own salvation, will be eternally damned along with their teachers. 33. We must especially beware of those who say that these pardons from the Pope are that inestimable gift of God by which man is reconciled to God. 34. For the grace conveyed by these pardons has respect only to the penalties of sacramental satisfaction, which are of human appointment. 35. They preach no Christian doctrine, who teach that contrition is not necessary for those who buy souls out of purgatory or buy confessional licences. 36. Every Christian who feels true compunction has of right plenary remission of pain and guilt, even without letters of pardon. 37. Every true Christian, whether living or dead, has a share in all the benefits of Christ and of the Church, given him by God, even without letters of pardon. 38. The remission, however, imparted by the Pope is by no means to be despised, since it is, as I have said, a declaration of the Divine remission. 39. It is a most difficult thing, even for the most learned theologians, to exalt at the same time in the eyes of the people the ample effect of pardons and the necessity of true contrition. 40. True contrition seeks and loves punishment; while the ampleness of pardons relaxes it, and causes men to hate it, or at least gives occasion for them to do so. 41. Apostolic pardons ought to be proclaimed with caution, lest the people should falsely suppose that they are placed before other good works of charity. 42. Christians should be taught that it is not the mind of the Pope that the buying of pardons is to be in any way compared to works of mercy. 43. Christians should be taught that he who gives to a poor man, or lends to a needy man, does better than if he bought pardons. 44. Because, by a work of charity, charity increases, and the man becomes better; while, by means of pardons, he does not become better, but only freer from punishment. 45. Christians should be taught that he who sees any one in need, and, passing him by, gives money for pardons, is not purchasing for himself the indulgences of the Pope, but the anger of God. 46. Christians should be taught that, unless they have superfluous wealth, they are bound to keep what is necessary for the use of their own households, and by no means to lavish it on pardons. 47. Christians should be taught that, while they are free to buy pardons, they are not commanded to do so. 48. Christians should be taught that the Pope, in granting pardons, has both more need and more desire that devout prayer should be made for him, than that money should be readily paid. 49. Christians should be taught that the Pope's pardons are useful, if they do not put their trust in them, but most hurtful, if through them they lose the fear of God. 50. Christians should be taught that, if the Pope were acquainted with the exactions of the preachers of pardons, he would prefer that the Basilica of St. Peter should be burnt to ashes, than that it should be built up with the skin, flesh, and bones of his sheep. 51. Christians should be taught that, as it would be the duty, so it would be the wish of the Pope, even to sell, if necessary, the Basilica of St. Peter, and to give of his own money to very many of those from whom the preachers of pardons extract money. 52. Vain is the hope of salvation through letters of pardon, even if a commissary — nay the Pope himself — were to pledge his own soul for them. 53. They are enemies of Christ and of the Pope, who, in order that pardons may be preached, condemn the word of God to utter silence in other churches. 54. Wrong is done to the word of God when, in the same sermon, an equal or longer time is spent on pardons that on it. 55. The mind of the Pope necessarily is that, if pardons, which are a very small matter, are celebrated with single bells, single processions, and single ceremonies, the Gospel, which is a very great matter, should be preached with a hundred bells, a hundred processions, and a hundred ceremonies. 56. The treasures of the Church, whence the Pope grants indulgences, are neither sufficiently named nor known among the people of Christ. 57. It is

clear that they are at least not temporal treasures, for these are not so readily lavished, but only accumulated, by many of the preachers. **58.** Nor are they the merits of Christ and of the saints, for these, independently of the Pope, are always working grace to the inner man, and the cross, death, and hell to the outer man. **59.** St. Lawrence said that the treasures of the Church are the poor of the Church, but he spoke according to the use of the word in his time. **60.** We are not speaking rashly when we say that the keys of the Church, bestowed through the merits of Christ, are that treasure. **61.** For it is clear that the power of the Pope is alone sufficient for the remission of penalties and of reserved cases. **62.** The true treasure of the Church is the Holy Gospel of the glory and grace of God. **63.** This treasure, however, is deservedly most hateful, because it makes the first to be last. **64.** While the treasure of indulgences is deservedly most acceptable, because it makes the last to be first. **65.** Hence the treasures of the Gospel are nets, wherewith of old they fished for the men of riches. **66.** The treasures of indulgences are nets, wherewith they now fish for the riches of men. **67.** Those indulgences, which the preachers loudly proclaim to be the greatest graces, are seen to be truly such as regards the promotion of gain. **68.** Yet they are in reality in no degree to be compared to the grace of God and the piety of the cross. **69.** Bishops and curates are bound to receive the commissaries of apostolic pardons with all reverence. **70.** But they are still more bound to see to it with all their eyes, and take heed with all their ears, that these men do not preach their own dreams in place of the Pope's commission. **71.** He who speaks against the truth of apostolic pardons, let him be anathema and accursed. **72.** But he, on the other hand, who exerts himself against the wantonness and licence of speech of the preachers of pardons, let him be blessed. **73.** As the Pope justly thunders against those who use any kind of contrivance to the injury of the traffic in pardons. **74.** Much more is it his intention to thunder against those who, under the pretext of pardons, use contrivances to the injury of holy charity and of truth. **75.** To think that Papal pardons have such power that they could absolve a man even if — by an impossibility — he had violated the Mother of God, is madness. **76.** We affirm on the contrary that Papal pardons cannot take away even the least of venial sins, as regards its guilt. **77.** The saying that, even if St. Peter were now Pope, he could grant no greater graces, is blasphemy against St. Peter and the Pope. **78.** We affirm on the contrary that both he and any other Pope has greater graces to grant, namely, the Gospel, powers, gifts of healing, etc. (1 Cor. xii. 9). **79.** To say that the cross set up among the insignia of the Papal arms is of equal power with the cross of Christ, is blasphemy. **80.** Those bishops, curates, and theologians who allow such discourses to have currency among the people, will have to render an account. **81.** This licence in the preaching of pardons makes it no easy thing, even for learned men, to protect the reverence due to the Pope against the calumnies, or, at all events, the keen questionings of the laity. **82.** As for instance: — Why does not the Pope empty purgatory for the sake of most holy charity and of the supreme necessity of souls—this being the most just of all reasons—if he redeems an infinite number of souls for the sake of that most fatal thing money, to be spent on building a basilica — this being a very slight reason? **83.** Again; why do funeral masses and anniversary masses for the deceased continue, and why does not the Pope return, or permit the withdrawal of the funds bequeathed for this purpose, since it is a wrong to pray for those who are already redeemed? **84.** Again; what is this new kindness of God and the Pope, in that for money's sake, they permit an impious man and an enemy of God to redeem a pious soul which loves God, and yet do not redeem that same pious and beloved soul, out of free charity, on account of its own need? **85.** Again; why is it that the penitential canons, long since abrogated and dead in themselves in very fact and not only by usage, are yet still redeemed with money, through the granting of indulgences, as if they were full of life? **86.** Again; why does not the Pope, whose riches are at this day more ample than those of the wealthiest of the wealthy, build the one basilica of St. Peter with his own money, rather than with that of poor believers? **87.** Again; what does the Pope remit or impart to those who, through perfect contrition, have a right to plenary remission and participation? **88.** Again; what greater good would the Church receive if the Pope, instead of once, as he does now, were to bestow these remissions and participations a hundred times a day on any one of the faithful? **89.** Since it is the salvation of souls, rather than money, that the Pope seeks by his pardons, why does he suspend the letters and pardons granted long ago, since they are equally efficacious. **90.** To repress these scruples and arguments of the laity by force alone, and not to solve them by giving reasons, is to expose the Church and the Pope to the ridicule of their enemies, and to make Christian men unhappy. **91.** If then pardons were preached according to the spirit and mind of the Pope, all these questions would be resolved with ease; nay, would not exist. **92.** Away then with all those prophets who say to the people of Christ: 'Peace, peace,' and there is no peace. **93.** Blessed be all those prophets, who say to the people of Christ: 'The cross, the cross,' and there is no cross. **94.** Christians should be exhorted to strive to follow Christ their head through pains, deaths, and hells. **95.** And thus trust to enter heaven through many tribulations, rather than in the security of peace."—H. Wace and C. A. Buchheim, *First Principles of the Reformation, pp.* 6–13.

A. D. 1517-1521.— Favoring circumstances under which the Reformation in Germany gained ground.—The Bull "Exurge Domine." —Excommunication of Luther.—The imperial summons from Worms.—"It was fortunate for Luther's cause that he lived under a prince like the Elector of Saxony. Frederick, indeed, was a devout catholic; he had made a pilgrimage to Palestine, and had filled All Saints' Church at Wittenberg with relics for which he had given large sums of money. His attention, however, was now entirely engrossed by his new university, and he was unwilling to offer up to men like Tetzel so great an ornament of it as Dr. Martin Luther, since whose appointment at Wittenberg the number of students had so wonderfully increased as to throw the universities of

Erfurt and Leipsic quite into the shade. . . . As one of the principal Electors he was completely master in his own dominions, and indeed throughout Germany he was as much respected as the Emperor; and Maximilian, besides his limited power, was deterred by his political views from taking any notice of the quarrel. Luther had thus full liberty to prepare the great movement that was to ensue. . . . The contempt entertained by Pope Leo X. for the whole affair was also favourable to Luther; for Frederick might not at first have been inclined to defend him against the Court of Rome. . . . The Court of Rome at length became more sensible of the importance of Luther's innovations and in August 1518, he was commanded either to recant, or to appear and answer for his opinions at Rome, where Silvester Prierias and the bishop Ghenucci di Arcoli had been appointed his judges. Luther had not as yet dreamt of throwing off his allegiance to the Roman See. In the preceding May he had addressed a letter to the Pope himself, stating his views in a firm but modest and respectful tone, and declaring that he could not retract them. The Elector Frederick, at the instance of the university of Wittenberg, which trembled for the life of its bold and distinguished professor, prohibited Luther's journey to Rome, and expressed his opinion that the question should be decided in Germany by impartial judges. Leo consented to send a legate to Augsburg to determine the cause, and selected for that purpose Cardinal Thomas di Vio, better known by the name of Cajetanus, derived from his native city of Gaeta. . . . Luther set out for Augsburg on foot provided with several letters of recommendation from the Elector, and a safe conduct from the Emperor Maximilian. . . . Luther appeared before the cardinal for the first time, October 12th, at whose feet he fell; but it was soon apparent that no agreement could be expected. . . . Cajetanus, who had at first behaved with great moderation and politeness, grew warm, demanded an unconditional retraction, forbade Luther again to appear before him till he was prepared to make it, and threatened him with the censures of the Church. The fate of Huss stared Luther in the face, and he determined to fly. His patron Staupitz procured him a horse, and on the 20th of October, Langemantel, a magistrate of Augsburg, caused a postern in the walls to be opened for him before day had well dawned. . . . Cajetanus now wrote to the Elector Frederick complaining of Luther's refractory departure from Augsburg, and requiring either that he should be sent to Rome or at least be banished from Saxony. . . . So uncertain were Luther's prospects that he made preparations for his departure. . . . At length, just on the eve of his departure, he received an intimation from Frederick that he might remain at Wittenberg. Before the close of the year he gained a fresh accession of strength by the arrival of Melanchthon, a pupil of Reuchlin, who had obtained the appointment of Professor of Greek in the university. Frederick offered a fresh disputation at Wittenberg; but Leo X. adopted a course more consonant with the pretensions of an infallible Church by issuing a Bull dated November 9th 1518, which, without adverting to Luther or his opinions, explained and enforced the received doctrine of indulgences. It failed, however, to produce the desired effect. . . . Leo now tried the effects of seduction. Carl Von Miltitz, a Saxon nobleman, canon of Mentz, Trèves, and Meissen, . . . was despatched to the Elector Frederick with the present of a golden rose, and with instructions to put an end, as best he might, to the Lutheran schism. On his way through Germany, Miltitz soon perceived that three fourths of the people were in Luther's favour; nor was his reception at the Saxon Court of a nature to afford much encouragement. . . . Miltitz saw the necessity for conciliation. Having obtained an interview with Luther at Altenburg, Miltitz persuaded him to promise that he would be silent, provided a like restraint were placed upon his adversaries. . . . Luther was even induced to address a letter to the Pope, dated from Altenburg, March 3rd 1519, in which, in humble terms, he expressed his regret that his motives should have been misinterpreted, and solemnly declared that he did not mean to dispute the power and authority of the Pope and the Church of Rome, which he considered superior to everything except Jesus Christ alone. . . . The truce effected by Miltitz lasted only a few months. It was broken by a disputation to which Dr. Eck challenged Bodenstein, a Leipsic professor, better known by the name of Carlstadt. . . . The Leipsic disputation was preceded and followed by a host of controversies. The whole mind of Germany was in motion, and it was no longer with Luther alone that Rome had to contend. All the celebrated names in art and literature sided with the Reformation; Erasmus, Ulrich von Hutten, Melanchthon, Lucas Cranach, Albert Dürer, and others. Hans Sachs, the Meistersänger of Nuremberg, composed in his honour the pretty song called 'the Wittenberg Nightingale.' Silvester von Schaumburg and Franz von Sickingen invited Luther to their castles, in case he were driven from Saxony; and Schaumburg declared that 100 more Franconian knights were ready to protect him. . . . The Elector Frederick became daily more convinced that his doctrines were founded in Scripture. . . . Meanwhile, Luther had made great strides in his opinions since the publication of his Theses. . . . He had begun to impugn many of the principles of the Romish church; and so far from any longer recognising the paramount authority of the Pope, or even of a general council, he was now disposed to submit to no rule but the Bible. The more timid spirits were alarmed at his boldness, and even Frederick himself exhorted him to moderation. It must be acknowledged, indeed, that Luther sometimes damaged his cause by the intemperance of his language; an instance of which is afforded by the remarkable letter he addressed to Leo X., April 6th 1520, as a dedication to his treatise 'De Libertate Christiana.' . . . The letter just alluded to was, perhaps, the immediate cause of the famous Bull, 'Exurge Domine,' which Leo fulminated against Luther, June 15th 1520. The Bull, which is conceived in mild terms, condemned forty-one propositions extracted from Luther's works, allowed him sixty days to recant, invited him to Rome, if he pleased to come, under a safe conduct, and required him to cease from preaching and writing, and to burn his published treatises. If he did not conform within the above period, he was condemned as a notorious and irreclaimable heretic; all princes and magistrates were required to seize him and his adherents, and to send them

to Rome; and all places that gave them shelter were threatened with an interdict. The Bull was forwarded to Archbishop Albert of Mentz; but in North Germany great difficulty was found in publishing it. . . . On December 10th Luther consummated his rebellion by taking that final step which rendered it impossible for him to recede. On the banks of the Elbe before the Elster Gate of Wittenberg, . . . Luther, in the presence of a large body of professors and students, solemnly committed with his own hands to the flames the Bull by which he had been condemned, together with the code of the canon law, and the writings of Eck and Emser, his opponents. . . . On January 3rd 1521, Luther and his followers were solemnly excommunicated by Leo with bell, book, and candle, and an image of him, together with his writings, was committed to the flames. . . . At the Diet of Worms which was held soon after, the Emperor [Charles V., who succeeded Maximilian in 1519] having ordered that Luther's books should be delivered up to the magistrates to be burnt, the States represented to him the uselessness and impolicy of such a step, pointing out that the doctrines of Luther had already sunk deep into the hearts of the people; and they recommended that he should be summoned to Worms and interrogated whether he would recant without any disputation. . . . In compliance with the advice of the States, the Emperor issued a mandate, dated March 6th 1521, summoning Luther to appear at Worms within twenty-one days. It was accompanied with a safe conduct."—T. H. Dyer, *Hist. of Modern Europe, bk.* 2, *ch.* 3 (*v.* 1).

A. D. 1519-1524.—The sale of Indulgences in Switzerland.—Beginning of the Reformation under Zwingli.—Near the close of the year 1518, Ulric Zwingle, or Zwingli, or Zuinglius, already much respected for his zealous piety and his learning, "was appointed preacher in the collegiate church at Zurich. The crisis of his appearance on this scene was so extraordinary as to indicate to every devout mind a providential dispensation, designed to raise up a second instrument in the work of reformation, and that, almost by the same means which had been employed to produce the first. One Bernhard Samson, or Sanson, a native of Milan, and a Franciscan monk, selected this moment to open a sale of indulgences at Zurich. He was the Tetzel of Switzerland. He preached through many of its provinces, exercising the same trade, with the same blasphemous pretensions and the same clamorous effrontery; and in a land of greater political freedom his impostures excited even a deeper and more general disgust. . . . He encountered no opposition till he arrived at Zurich. But here appears a circumstance which throws a shade of distinction between the almost parallel histories of Samson and Tetzel. The latter observed in his ministration all the necessary ecclesiastical forms; the former omitted to present his credentials to the bishop of the diocese, and acted solely on the authority of the pontifical bulls. Hugo, Bishop of Constance, was offended at this disrespectful temerity, and immediately directed Zwingle and the other pastors to exclude the stranger from their churches. The first who had occasion to show obedience to this mandate was John Frey, minister of Staufberg. Bullinger, Dean of Bremgarten, was the second. From Bremgarten, after a severe altercation which ended by the excommunication of that dignitary, Samson proceeded to Zurich. Meanwhile Zwingle had been engaged for about two months in rousing the indignation of the people against the same object; and so successfully did he support the instruction of the Bishop, and such efficacy was added to his eloquence by the personal unpopularity of Samson, that the senate determined not so much as to admit him within the gates of the city. A deputation of honour was appointed to welcome the pontifical legate without the walls. He was then commanded to absolve the Dean from the sentence launched against him, and to depart from the canton. He obeyed, and presently turned his steps towards Italy and repassed the mountains. This took place at the end of February, 1519. The Zurichers immediately addressed a strong remonstrance to the Pope, in which they denounced the misconduct of his agent. Leo replied, on the last of April, with characteristic mildness; for though he maintained, as might be expected, the Pope's authority to grant those indulgences, . . . yet he accorded the prayer of the petition so far as to recall the preacher, and to promise his punishment, should he be convicted of having exceeded his commission. . . . But Zwingle's views were not such as long to be approved by an episcopal reformer in that [the Roman] church. . . . He began to invite the Bishop, both by public and private solicitations, with perfect respect but great earnestness, to give his adhesion to the evangelical truth . . . and to permit the free preaching of the gospel throughout his diocese. . . . From the beginning of his preaching at Zurich it was his twofold object to instruct the people in the meaning, design, and character of the scriptural writings; and at the same time to teach them to seek their religion only there. His very first proceeding was to substitute the gospel of St. Matthew, as the text-book of his discourses, for the scraps of Scripture exclusively treated by the papal preachers; and he pursued this purpose by next illustrating the Acts of the Apostles, and the epistles of Paul and Peter. He considered the doctrine of justification by faith as the corner-stone of Christianity, and he strove to draw away his hearers from the gross observances of a pharasaical church to a more spiritual conception of the covenant of their redemption. . . . His success was so considerable, that at the end of 1519 he numbered as many as 2,000 disciples; and his influence so powerful among the chiefs of the commonwealth, that he procured, in the following year, an official decree to the effect: That all pastors and ministers should thenceforward reject the unfaithful devices and ordinances of men, and teach with freedom such doctrines only as rested on the authority of the prophecies, gospels, and apostolical epistles."—G. Waddington, *Hist. of the Reformation, ch.* 27 (*v.* 2).—"With unflagging zeal and courage Zwingli followed his ideal in politics, viz., to rear a republic on the type of the Greek free states of old, with perfect national independence. Thanks to his influence Zurich in 1521 abolished 'Reis-

laufen,' and the system of foreign pay [mercenary military service]. This step, however, brought down on the head of Zurich the wrath of the twelve sister republics, which had just signed a military contract with Francis I. . . . It was only in 1522 that he began to launch pamphlets against the abuses in the Church-fasting, celibacy of the clergy and the like. On the 29th of January, 1523, Zwingli obtained from the Council of Zurich the opening of a public religious discussion in presence of the whole of the clergy of the canton, and representatives of the Bishop of Constance, whose assistance in the debate the Council had invited. In 67 theses, remarkable for their penetration and clearness, he sketched out his confession of faith and plan of reform. . . . On the 25th of October, 1523, a second discussion initiated the practical consequences of the reformed doctrine — the abrogation of the mass and image worship. Zwingli's system was virtually that of Calvin, but was conceived in a broader spirit, and carried out later on in a far milder manner by Bullinger. . . . The Council gave the fullest approval to the Reformation. In 1524 Zwingli married Anne Reinhard, the widow of a Zurich nobleman (Meyer von Knonau), and so discarded the practice of celibacy obtaining amongst priests. . . . In 1524 Zwingli began to effect the most sweeping changes with the view of overthrowing the whole fabric of mediæval superstition. In the direction of reform he went far beyond Luther, who had retained oral confession, altar pictures, &c. The introduction of his reforms in Zurich called forth but little opposition. True, there were the risings of the Anabaptists, but these were the same everywhere. . . . Pictures and images were removed from the churches, under government direction. . . . At the Landgemeinden [parish gatherings] called for the purpose, the people gave an enthusiastic assent to his doctrines, and declared themselves ready 'to die for the gospel truth.' Thus a national Church was established, severed from the diocese of Constance, and placed under the control of the Council of Zurich and a clerical synod. The convents were turned into schools, hospitals, and poorhouses." —Mrs. L. Hug and R. Stead, *Switzerland, ch.* 22.

A. D. 1521-1522.—Luther before the Diet at Worms.—His friendly abduction and concealment at Wartburg.— His translation of the Bible.—"On the 2nd of April [1521], the Tuesday after Easter, Luther set out on his momentous journey. He travelled in a cart with three of his friends, the herald riding in front in his coat of arms. . . . The Emperor had not waited for his appearance to order his books to be burnt. When he reached Erfurt on the way the sentence had just been proclaimed. The herald asked him if he still meant to go on. 'I will go,' he said, 'if there are as many devils in Worms as there are tiles upon the house-tops. Though they burnt Huss, they could not burn the truth.' The Erfurt students, in retaliation, had thrown the Bull into the water. The Rector and the heads of the university gave Luther a formal reception as an old and honoured member; he preached at his old convent, and he preached again at Gotha and at Eisenach. Caietan had protested against the appearance in the Diet of an excommunicated heretic. The Pope himself had desired that the safe-conduct should not be respected, and the bishops had said that it was unnecessary. Manœuvres were used to delay him on the road till the time allowed had expired. But there was a fierce sense of fairness in the lay members of the Diet, which it was dangerous to outrage. Franz von Sickingen hinted that if there was foul play it might go hard with Cardinal Caietan — and Von Sickingen was a man of his word in such matters. On the 16th of April, at ten in the morning, the cart entered Worms, bringing Luther in his monk's dress, followed and attended by a crowd of cavaliers. The town's people were all out to see the person with whose name Germany was ringing. As the cart passed through the gates the warder on the walls blew a blast upon his trumpet. . . . Luther needed God to stand by him, for in all that great gathering he could count on few assured friends. The princes of the empire were resolved that he should have fair play, but they were little inclined to favour further a disturber of the public peace. The Diet sate in the Bishop's palace, and the next evening Luther appeared. The presence in which he found himself would have tried the nerves of the bravest of men: the Emperor, sternly hostile, with his retinue of Spanish priests and nobles; the archbishops and bishops, all of opinion that the stake was the only fitting place for so insolent a heretic; the dukes and barons, whose stern eyes were little likely to reveal their sympathy, if sympathy any of them felt. One of them only, George of Frundsberg, had touched Luther on the shoulder as he passed through the ante-room. 'Little monk, little monk,' he said, 'thou hast work before thee, that I, and many a man whose trade is war, never faced the like of. If thy heart is right, and thy cause good, go on in God's name. He will not forsake thee.' A pile of books stood on a table when he was brought forward. An officer of the court read the titles, asked if he acknowledged them, and whether he was ready to retract them. Luther was nervous, not without cause. He answered in a low voice that the books were his. To the other question he could not reply at once. He demanded time. His first appearance had not left a favourable impression; he was allowed a night to consider. The next morning, April 18, he had recovered himself; he came in fresh, courageous, and collected. His old enemy, Eck, was this time the spokesman against him, and asked what he was prepared to do. He said firmly that his writings were of three kinds: some on simple Gospel truth, which all admitted, and which of course he could not retract; some against Papal laws and customs, which had tried the consciences of Christians and had been used as excuses to oppress and spoil the German people. If he retracted these he would cover himself with shame. In a third sort he had attacked particular persons, and perhaps had been too violent. Even here he declined to retract simply, but would admit his fault if fault could be proved. He gave his answers in a clear strong voice, in Latin first, and then in German. There was a pause, and then Eck said that he had spoken disrespectfully; his heresies

had been already condemned at the Council at Constance; let him retract on these special points, and he should have consideration for the rest. He required a plain Yes or No from him, 'without horns.' The taunt roused Luther's blood. His full brave self was in his reply. 'I will give you an answer,' he said, 'which has neither horns nor teeth. Popes have erred and councils have erred. Prove to me out of Scripture that I am wrong, and I submit. Till then my conscience binds me. Here I stand. I can do no more. God help me. Amen.' All day long the storm raged. Night had fallen, and torches were lighted in the hall before the sitting closed. Luther was dismissed at last; it was supposed, and perhaps intended, that he was to be taken to a dungeon. But the hearts of the lay members of the Diet had been touched by the courage which he had shown. They would not permit a hand to be laid on him. . . . When he had reached his lodging again, he flung up his hands. 'I am through!' he cried. 'I am through! If I had a thousand heads they should be struck off one by one before I would retract.' The same evening the Elector Frederick sent for him, and told him he had done well and bravely. But though he had escaped so far, he was not acquitted. Charles conceived that he could be now dealt with as an obstinate heretic. At the next session (the day following), he informed the Diet that he would send Luther home to Wittenberg, there to be punished as the Church required. The utmost that his friends could obtain was that further efforts should be made. The Archbishop of Treves was allowed to tell him that if he would acknowledge the infallibility of councils, he might be permitted to doubt the infallibility of the Pope. But Luther stood simply upon Scripture. There, and there only, was infallibility. The Elector ordered him home at once, till the Diet should decide upon his fate. . . . A majority in the Diet, it was now clear, would pronounce for his death. If he was sentenced by the Great Council of the Empire, the Elector would be no longer able openly to protect him. It was decided that he should disappear, and disappear so completely that no trace of him should be discernible. On his way back through the Thuringian Forest, three or four miles from Altenstein, a party of armed men started out of the wood, set upon his carriage, seized and carried him off to Wartburg Castle. There he remained, passing by the name of the Ritter George, and supposed to be some captive knight. The secret was so well kept, that even the Elector's brother was ignorant of his hiding place. Luther was as completely lost as if the earth had swallowed him. . . . On the 8th of May the Edict of Worms was issued, placing him under the ban of the empire; but he had become 'as the air invulnerable,' and the face of the world had changed before he came back to it. . . . Luther's abduction and residence at Wartburg is the most picturesque incident in his life. He dropped his monk's gown, and was dressed like a gentleman; he let his beard grow and wore a sword. . . . The revolution, deprived of its leader, ran wild meanwhile. An account of the scene at Worms, with Luther's speeches, and wood cut illustrations, was printed on broadsheets and circulated in hundreds of thousands of copies. The people were like schoolboys left without a master. Convents and monasteries dissolved by themselves; monks and nuns began to marry; there was nothing else for the nuns to do, turned as they were adrift without provision. The Mass in most of the churches in Saxony was changed into a Communion. But without Luther it was all chaos, and no order could be taken. So great was the need of him, that in December he went to Wittenberg in disguise; but it was not yet safe for him to remain there. He had to retreat to his castle again, and in that compelled retreat he bestowed on Germany the greatest of all the gifts which he was able to offer. He began to translate the Bible into clear vernacular German. . . . He had probably commenced the work at the beginning of his stay at the castle. In the spring of 1522 the New Testament was completed. In the middle of March, the Emperor's hands now being fully occupied, the Elector sent him word that he need not conceal himself any longer; and he returned finally to his home and his friends. The New Testament was printed in November of that year, and became at once a household book in Germany. . . . The Old Testament was taken in hand at once, and in two years half of it was roughly finished." — J. A. Froude, *Luther: a Short Biog., pp.* 28–35.

A. D. 1521-1535.—Beginning of the Protestant Reform movement in France.—Hesitation of Francis I.—His final persecution of the Reformers. — "The long contest for Gallican rights had lowered the prestige of the popes in France, but it had not weakened the Catholic Church, which was older than the monarchy itself, and, in the feeling of the people, was indissolubly associated with it. The College of the Sorbonne, or the Theological Faculty at Paris, and the Parliament, which had together maintained Gallican liberty, were united in stern hostility to all doctrinal innovations. . . . In Southern France a remnant of the Waldenses had survived, and the recollection of the Catharists was still preserved in popular songs and legends. But the first movements towards reform emanated from the Humanist culture. A literary and scientific spirit was awakened in France through the lively intercourse with Italy which subsisted under Louis XII. and Francis I. By Francis especially, Italian scholars and artists were induced in large numbers to take up their abode in France. Frenchmen likewise visited Italy and brought home the classical culture which they acquired there. Among the scholars who cultivated Greek was Budæus, the foremost of them, whom Erasmus styled the 'wonder of France.' After the 'Peace of the Dames' was concluded at Cambray, in 1529, when Francis surrendered Italy to Charles V., a throng of patriotic Italians who feared or hated the Spanish rule, streamed over the Alps and gave a new impulse to literature and art. Poets, artists, and scholars found in the king a liberal and enthusiastic patron. The new studies, especially Hebrew and Greek, were opposed by all the might of the Sorbonne, the leader of which was the Syndic, Beda. He and his associates were on the watch for heresy, and every author who was suspected of overstepping the bounds of ortho-

doxy was immediately accused and subjected to persecution. Thus two parties were formed, the one favorable to the new learning, and the other inimical to it and rigidly wedded to the traditional theology. The Father of the French Reformation, or the one more entitled to this distinction than any other, is Jacques Lefèvre. . . . Lefèvre was honored among the Humanists as the restorer of philosophy and science in the University. Deeply imbued with a religious spirit, in 1509 he put forth a commentary on the Psalms, and in 1512 a commentary on the Epistles of Paul. As early as about 1512, he said to his pupil Farel: 'God will renovate the world, and you will be a witness of it'; and in the last named work, he says that the signs of the times betoken that a renovation of the Church is near at hand. He teaches the doctrine of gratuitous justification, and deals with the Scriptures as the supreme and sufficient authority. But a mystical, rather than a polemical vein characterizes him; and while this prevented him from breaking with the Church, it also blunted the sharpness of the opposition which his opinions were adapted to produce. One of his pupils was Briçonnet, Bishop of Meaux, who held the same view of justification with Lefèvre, and fostered the evangelical doctrine in his diocese. The enmity of the Sorbonne to Lefèvre and his school took a more aggressive form when the writings of Luther began to be read in the University and elsewhere. . . . The Sorbonne [1521] formally condemned a dissertation of Lefèvre on a point of evangelical history, in which he had controverted the traditional opinion. He, with Farel, Gérard Roussel, and other preachers, found an asylum with Briçonnet. Lefèvre translated the New Testament from the Vulgate, and, in a commentary on the Gospels, explicitly pronounced the Bible the sole rule of faith, which the individual might interpret for himself, and declared justification to be through faith alone, without human works or merit. It seemed as if Meaux aspired to become another Wittenberg. At length a commission of parliament was appointed to take cognizance of heretics in that district. Briçonnet, either intimidated, as Beza asserts, or recoiling at the sight of an actual secession from the Church, joined in the condemnation of Luther and of his opinions, and even acquiesced in the persecution which fell upon Protestantism within his diocese. Lefèvre fled to Strasburg, was afterwards recalled by Francis I., but ultimately took up his abode in the court of the King's sister, Margaret, the Queen of Navarre. Margaret, from the first, was favorably inclined to the new doctrines. There were two parties at the court. The mother of the King, Louisa of Savoy, and the Chancellor Duprat, were allies of the Sorbonne. . . . Margaret, on the contrary, a versatile and accomplished princess, cherished a mystical devotion which carried her beyond Briçonnet in her acceptance of the teaching of the Reformers. . . . Before the death of her first husband, the Duke of Alençon, and while she was a widow, she exerted her influence to the full extent in behalf of the persecuted Protestants, and in opposition to the Sorbonne. After her marriage to Henry d'Albret, the King of Navarre, she continued, in her own little court and principality, to favor the reformed doctrine and its professors [see NAVARRE: A. D. 1528–1563]. . . . The drift of her influence appears in the character of her daughter, the heroic Jeanne d'Albret, the mother of Henry IV., and in the readiness of the people over whom Margaret immediately ruled to receive the Protestant faith. . . . Francis I., whose generous patronage of artists and men of letters gave him the title of 'Father of Science,' had no love for the Sorbonne, for the Parliament, or for the monks. He entertained the plan of bringing Erasmus to Paris, and placing him at the head of an institution of learning. He read the Bible with his mother and sister, and felt no superstitious aversion to the leaders of reform. . . . The revolt of the Constable Bourbon [see FRANCE: A. D. 1520–1523] made it necessary for Francis to conciliate the clergy; and the battle of Pavia, followed by the captivity of the King, and the regency of his mother, gave a free rein to the persecutors. An inquisitorial court, composed partly of laymen, was ordained by Parliament. Heretics were burned at Paris and in the provinces. Louis de Berquin, who combined a culture which won the admiration of Erasmus, with the religious earnestness of Luther, was thrown into prison." Three times the King interposed and rescued him from the persecutors; but at last, in November, 1529, Berquin was hanged and burned.—G. P. Fisher, *The Reformation, ch.* 8.—"Such scenes [as the execution of Berquin], added to the preaching and dissemination of the Scriptures and religious tracts, caused the desire for reform to spread far and wide. In the autumn of 1534, a violent placard against the mass was posted about Paris, and one was even fixed on the king's own chamber. The cry was soon raised, 'Death! death to the heretics!' Francis had long dallied with the Reformation. . . . Now . . . he develops into what was quite contrary to his disposition, a cruel persecutor. A certain bourgeois of Paris, unaffected by any heretical notions, kept in those days a diary of what was going on in Paris, and from this precious document . . . we learn that between the 13th of November, 1534, and the 13th of March, 1535, twenty so-called Lutherans were put to death in Paris. . . . The panic caused by the Anabaptist outbreak at Munster may perhaps account for the extreme cruelty, . . . as the siege was in actual progress at the time. It was to defend the memories of the martyrs of the 29th of January, 1535, and of others who had suffered elsewhere, and to save, if possible, those menaced with a similar fate, that Calvin wrote his 'Institution of the Christian Religion.' A timid, feeble-bodied young student, he had fled from France [1535], in the hope of finding some retreat where he might lose himself in the studies he loved. Passing through Geneva [1536] with the intention of staying there only for a night, he met the indefatigable, ubiquitous, enterprising, courageous Farel, who, taking him by the hand, adjured him to stop and carry on the work in that city. Calvin shrank instinctively, but . . . was forced to yield. . . . Calvin once settled at Geneva had no more doubt about his calling than if he had been Moses himself."—R. Heath, *The Reformation in France, bk.* 1, *ch.* 2–3.

A. D. 1522.—Election of Adrian VI.

A. D. 1522-1525.—The deepening and strengthening of the Lutheran Reformation and its systematic organization.—The two diets of Nuremberg.—The Catholic League of Ratisbon.—The formal adoption of the Reformed Religion in Northern Germany.—"Fortunately for the reformation, the emperor was prevented from executing the edict of Worms by his absence from Germany, by the civil commotions in Spain, and still more by the war with Francis I., which extended into Spain, the Low Countries, and Italy, and for above eight years involved him in a continued series of contests and negotiations at a distance from Germany. His brother, Ferdinand, on whom, as joint president of the council of regency, the administration of affairs devolved, was occupied in quelling the discontents in the Austrian territories, and defending his right to the crowns of Hungary and Bohemia; and thus the government of the empire was left to the council of regency, of which several members were inclined to favour innovation. In consequence of these circumstances, the Lutherans were enabled to overcome the difficulties to which innovators of every kind are exposed; and they were no less favoured by the changes at the court of Rome. Leo dying in 1521, Adrian, his successor, who, by the influence of Charles, was raised to the pontifical chair, on the 9th of January, 1522, saw and lamented the corruptions of the church, and his ingenuous, but impolitic confessions, that the whole church, both in its head and members, required a thorough reformation, strengthened the arguments of his opponents. . . . Nothing, perhaps, proved more the surprising change of opinion in Germany, the rapid increase of those whom we shall now distinguish by the name of Lutherans, and the commencement of a systematic opposition to the church of Rome, than the transactions of the two diets of Nuremberg, which were summoned by the archduke Ferdinand, principally for the purpose of enforcing the execution of the edict of Worms. In a brief dated in November, 1522, and addressed to the first diet, pope Adrian, after severely censuring the princes of the empire for not carrying into execution the edict of Worms, exhorted them, if mild and moderate measures failed, to cut off Luther from the body of the church, as a gangrened and incurable member. . . . At the same time, with singular inconsistency, he acknowledged the corruptions of the Roman court as the source of the evils which overspread the church, [and] promised as speedy a reformation as the nature of the abuses would admit. . . . The members of the diet, availing themselves of his avowal, advised him to assemble a council in Germany for the reformation of abuses, and drew up a list of a hundred grievances which they declared they would no longer tolerate, and, if not speedily delivered from such burdens, would procure relief by the authority with which God had intrusted them. . . . The recess of the diet, published in March, 1523, was framed with the same spirit; instead of threats of persecution, it only enjoined all persons to wait with patience the determination of a free council, forbade the diffusion of doctrines likely to create disturbances, and subjected all publications to the approbation of men of learning and probity appointed by the magistrate. Finally, it declared, that as priests who had married, or monks who had quitted their convents, were not guilty of a civil crime, they were only amenable to an ecclesiastical jurisdiction, and liable at the discretion of the ordinary to be deprived of their ecclesiastical privileges and benefices. The Lutherans derived their greatest advantages from these proceedings, as the gross corruptions of the church of Rome were now proved by the acknowledgment of the pontiff himself. . . . From this period they confidently appealed to the confession of the pontiff, and as frequently quoted the hundred grievances which were enumerated in a public and authentic act of the Germanic body. They not only regarded the recess as a suspension of the edict of Worms, but construed the articles in their own favour. . . . Hitherto the innovators had only preached against the doctrines and ceremonies of the Roman church, without exhibiting a regular system of their own." But now "Luther was persuaded, at the instances of the Saxon clergy, to form a regular system of faith and discipline; he translated the service into the German tongue, modified the form of the mass, and omitted many superstitious ceremonies; but he made as few innovations as possible, consistently with his own principles. To prevent also the total alienation or misuse of the ecclesiastical revenues, he digested a project for their administration, by means of an annual committee, and by his writings and influence effected its introduction. Under this judicious system the revenues of the church, after a provision for the clergy, were appropriated for the support of schools; for the relief of the poor, sick, and aged, of orphans and widows; for the reparation of churches and sacred buildings; and for the erection of magazines and the purchase of corn against periods of scarcity. These regulations and ordinances, though not established with the public approbation of the elector, were yet made with his tacit acquiescence, and may be considered as the first institution of a reformed system of worship and ecclesiastical polity; and in this institution the example of the churches of Saxony was followed by all the Lutheran communities in Germany. The effects of these changes were soon visible, and particularly at the meeting of the second diet of Nuremberg, on the 10th of January, 1524. Faber, canon of Strasburgh, who had been enjoined to make a progress through Germany for the purpose of preaching against the Lutheran doctrines, durst not execute his commission, although under the sanction of a safe conduct from the council of regency. Even the legate Campegio could not venture to make his public entry into Nuremberg with the insignia of his dignity, . . . for fear of being insulted by the populace. . . . Instead, therefore, of annulling the acts of the preceding diet, the new assembly pursued the same line of conduct. . . . The recess was, if possible, still more galling to the court of Rome, and more hostile to its prerogatives than that of the former diet. . . . The Catholics, thus failing in their efforts to obtain the support of the diet, on the 6th of July, 1524, entered into an association at Ratisbon, under the auspices of Campegio, in which the archduke Ferdinand, the duke of Bavaria, and most of the German bishops concurred, for enforcing the edict of Worms. At the same time, to conciliate the Germans, the legate published 29 articles for

the amendment of some abuses; but these being confined to points of minor importance, and regarding only the inferior clergy, produced no satisfaction, and were attended with no effect. Notwithstanding this formidable union of the Catholic princes, the proceedings of the diet of Nuremberg were but the prelude to more decisive innovations, which followed each other with wonderful rapidity. Frederic the Wise, elector of Saxony, dying in 1525, was succeeded by his brother, John the Constant, who publicly espoused and professed the Lutheran doctrines. The system recently digested by Luther, with many additional alterations, was introduced by his authority, and declared the established religion; and by his order the celebrated Melanchthon drew up an apology in defence of the reformed tenets for the princes who adopted them. Luther himself, who had in the preceding year thrown off the monastic habit, soon after the accession of the new sovereign ventured to give the last proof of his emancipation from the fetters of the church of Rome, by espousing, on the 13th of July, 1525, Catherine Bora, a noble lady, who had escaped from the nunnery at Nimptschen, and taken up her residence at Wittemberg. The example of the elector of Saxony was followed by Philip, landgrave of Hesse Cassel, a prince of great influence and distinguished civil and military talents; by the dukes of Mecklenburgh, Pomerania, and Zell; and by the imperial cities of Nuremberg, Strasburgh, Frankfort, Nordhausen, Magdeburgh, Brunswick, Bremen, and others of less importance. . . . Albert, margrave of Brandenburgh, grandmaster of the Teutonic order, . . . in 1525, renounced his vow of celibacy, made a public profession of the Lutheran tenets, and, with the consent of Sigismond, king of Poland, secularised Eastern Prussia."—W. Coxe, *Hist. of the House of Austria, ch.* 28 (*v.* 1).

A. D. 1523-1527.—The double-dealings of Pope Clement VII. with the emperor and the king of France.—Imperial revenge.—The sack of Rome. See Italy: A. D. 1523–1527, and 1527.

A. D. 1524.—Institution of the Order of the Theatines. See Theatines.

A. D. 1525-1529.—The League of Torgau.—Contradictory action of the Diets at Spires.—The Protest of Lutheran princes which gave rise to the name "Protestants."—"At the Diet of Nuremberg it had been determined to hold an assembly shortly after at Spires for the regulation of ecclesiastical affairs. The princes were to procure beforehand from their councillors and scholars a statement of the points in dispute. The grievances of the nation were to be set forth, and remedies were to be sought for them. The nation was to deliberate and act on the great matter of religious reform. The prospect was that the evangelical party would be in the majority. The papal court saw the danger that was involved in an assembly gathered for such a purpose, and determined to prevent the meeting. At this moment war was breaking out between Charles and Francis. Charles had no inclination to offend the Pope. He forbade the assembly at Spires, and, by letters addressed to the princes individually, endeavored to drive them into the execution of the edict of Worms. In consequence of these threatening movements, the Elector of Saxony and the Landgrave of Hesse entered into the defensive league of Torgau, in which they were joined by several Protestant communities. The battle of Pavia and the capture of Francis I. [see France: A. D. 1523–1525] were events that appeared to be fraught with peril to the Protestant cause. In the Peace of Madrid (January 14, 1526) both sovereigns avowed the determination to suppress heresy. But the dangerous preponderance obtained by the Emperor created an alarm throughout Europe; and the release of Francis was followed by the organization of a confederacy against Charles, of which Clement was the leading promoter [see Italy: A. D. 1523–1527]. This changed the imperial policy in reference to the Lutherans. The Diet of Spires in 1526 unanimously resolved that, until the meeting of a general council, every state should act in regard to the edict of Worms as it might answer to God and his imperial majesty. Once more Germany refused to stifle the Reformation, and adopted the principle that each of the component parts of the Empire should be left free to act according to its own will. It was a measure of the highest importance to the cause of Protestantism. It is a great landmark in the history of the German Reformation. The war of the Emperor and the Pope involved the necessity of tolerating the Lutherans. In 1527, an imperial army, composed largely of Lutheran infantry, captured and sacked the city of Rome. For several months the Pope was held a prisoner. For a number of years the position of Charles with respect to France and the Pope, and the fear of Turkish invasion, had operated to embolden and greatly strengthen the cause of Luther. But now that the Emperor had gained a complete victory in Italy, the Catholic party revived its policy of repression."—G. P. Fisher, *The Reformation, ch.* 4.—"While Charles and Clement were arranging matters in 1529, a new Diet was held at Spires, and the reactionists exerted themselves to obtain a reversal of that ordinance of the Diet of 1526 which had given to the reformed doctrines a legal position in Germany. Had it been possible, the Papist leaders would have forced back the Diet on the old Edict of Worms, but in this they were baffled. Then they took up another line of defence and aggression. Where the Worms Edict had been enforced, it was, they urged, to be maintained; but all further propagation of the reformed doctrines, all religious innovation whatever, was to be forbidden, pending the assemblage of a General Council. . . . This doom of arrest and paralysis—this imperious mandate, 'Hitherto shall ye come, but no further,'—could not be brooked by the followers of Luther. They possessed the advantage of being admirably led. Philip of Hesse supplied some elements of sound counsel that were wanting in Luther himself. . . . Luther regarded with favour . . . the doctrine of passive obedience. It was too much his notion that devout Germans, if their Emperor commanded them to renounce the truth, should simply die at the stake without a murmur. . . . The most ripe and recent inquiries seem to prove that it was about this very time, when the Evangelical

Princes and Free Cities of Germany were beginning to put shoulder to shoulder and organise resistance, in arms if necessary, to the Emperor and the Pope, that Luther composed 'Ein' feste Burg ist unser Gott,' a psalm of trust in God, and in God only, as the protector of Christians. He took no fervent interest, however, in the Diet; and Philip and his intrepid associates derived little active support from him. These were inflexibly determined that the decree of the majority should not be assented to. Philip of Hesse, John of Saxony, Markgraf George the Pious of Brandenburg-Anspach, the Dukes of Lunenburg and Brunswick, the Prince of Anhalt, and the representatives of Strasburg, Nürnberg, and twelve other free cities [Ulm, Constance, Reutlingen, Windsheim, Memmingen, Lindau, Kempten, Heilbron, Isna, Weissemburgh, Nordlingen, and St. Gallen], entered a solemn protest against the Popish resolution. They were called Protestants. The name, as is customary with names that felicitously express and embody facts, was caught up in Germany and passed into every country in Europe and the world."—P. Bayne, *Martin Luther, his Life and Work, bk.* 14, *ch.* 4 (*v.* 2).

A. D. 1527-1533.—The rupture with England. See England: A. D. 1527–1534.

A. D. 1530-1531.—The Diet at Augsburg.—Presentation and condemnation of the Protestant Confession of Faith.—The breach with the Reformation complete.—"In the year 1530, Charles V., seeing France prostrate, Italy quelled, and Solyman driven within his own boundaries, determined upon undertaking the decision of the great question of the Reformation. The two conflicting parties were summoned, and met at Augsburg. The sectaries of Luther, known by the general name of protestants, were desirous to be distinguished from the other enemies of Rome, the excesses committed by whom would have thrown odium upon their cause; to be distinguished from the Zwinglian republicans of Switzerland, odious to the princes and to the nobles; above all, they desired not to be confounded with the anabaptists, proscribed by all as the enemies of society and of social order. Luther, over whom there was still suspended the sentence pronounced against him at Worms, whereby he was declared a heretic, could not appear at Augsburg; his place was supplied by the learned and pacific Melancthon, a man timid and gentle as Erasmus, whose friend he continued to be, despite of Luther. The elector, however, conveyed the great reformer as near to the place of convocation as regard to his friend's personal safety rendered advisable. He had him stationed in the strong fortress of Coburg. From this place, Luther was enabled to maintain with ease and expedition a constant intercourse with the protestant ministers. . . . Melancthon believed in the possibility of effecting a reconciliation between the two parties. Luther, at a very early period of the schism, saw that they were utterly irreconcilable. In the commencement of the Reformation, he had frequently had recourse to conferences and to public disputations. It was then of moment to him to resort to every effort, to try, by all the means in his power, to preserve the bond of Christianity, before he abandoned all hope of so doing. But towards the close of his life, dating from the period of the Diet of Augsburg, he openly discouraged and disclaimed these wordy contests, in which the vanquished would never avow his defeat. On the 26th of August, 1530, he writes: 'I am utterly opposed to any effort being made to reconcile the two doctrines; for it is an impossibility, unless, indeed, the pope will consent to abjure papacy. Let it suffice us that we have established our belief upon the basis of reason, and that we have asked for peace. Why hope to convert them to the truth?' And on the same day (26th August), he tells Spalatin: 'I understand you have undertaken a notable mission — that of reconciling Luther and the pope. But the pope will not be reconciled and Luther refuses. Be mindful how you sacrifice both time and trouble.' . . . These prophecies were, however, unheeded: the conferences took place, and the protestants were required to furnish their profession of faith. This was drawn up by Melancthon." The Confession, as drawn up by Melancthon, was adopted and signed by five electors, 30 ecclesiastical princes, 23 secular princes, 22 abbots, 32 counts and barons, and 39 free and imperial cities, and has since been known as the Augsburg Confession.—J. Michelet, *Life of Luther* (*tr. by W. Hazlitt*), *bk.* 3, *ch.* 1.—"A difficulty now arose as to the public reading of the Confession in the Diet. The Protestant princes, who had severally signed it, contended against the Catholic princes, that, in fairness, it should be read; and, against the emperor, that, if read at all, it should be read in German, and not in Latin. They were successful in both instances, and the Confession was publicly read in German by Bayer, one of the two chancellors of the Elector of Saxony, during the afternoon session of June 25, held in the chapel of the imperial palace. Campeggio, the Papal Legate, was absent. The reading occupied two hours, and the powerful effect it produced was, in a large measure, due to the rich, sonorous voice of Bayer, and to his distinct articulation and the musical cadence of his periods. Having finished, he handed the Confession to the Emperor, who submitted it for examination to Eck, Conrad Wimpina, Cochlæus, John Faber, and others of the Catholic theologians present in the Diet." These prepared a "Confutation" which was "finally agreed upon and read in a public session of the Diet, held August 3rd, and with which the Emperor and the Catholic princes expressed themselves fully satisfied. The Protestant princes were commanded to disclaim their errors, and return to the allegiance of the ancient faith, and 'should you refuse,' the Emperor added, 'we shall regard it a conscientious duty to proceed as our coronation oath and our office of protector of Holy Church require.' This declaration roused the indignant displeasure of the Protestant princes. Philip of Hesse . . . excited general alarm by abruptly breaking off the transactions, lately entered upon between the princes and the bishops, and suddenly quitting Augsburg. Charles V. now ordered the controverted points to be discussed in his presence, and appointed seven Protestants and an equal number of Catholics to put forward and defend the views of their respective parties." Subsequently Melanc-

thon "prepared and published his 'Apology for the Augsburg Confession,' which was intended to be an answer to the 'Confutation' of the Catholic theologians. The Protestant princes laid a copy of the 'Apology' before the emperor, who rejected both it and the Confession. . . . After many more fruitless attempts to bring about a reconciliation, the emperor, on the 22nd of September, the day previous to that fixed for the departure of the Elector of Saxony, published an edict, in which he stated, among other things, that 'the Protestants have been refuted by sound and irrefragable arguments drawn from Holy Scripture.' 'To deny free-will,' he went on to say, 'and to affirm that faith without works avails for man's salvation, is to assert what is absurdly erroneous; for, as we very well know from past experience, were such doctrines to prevail, all true morality would perish from the earth. But that the Protestants may have sufficient time to consider their future course of action, we grant them from this to the 15th of April of next year for consideration.' On the following day, Joachim, Elector of Brandenburg, speaking in the emperor's name, addressed the evangelic princes and deputies of the Protestant cities as follows: 'His majesty is extremely amazed at your persisting in the assertion that your doctrines are based on Holy Scripture. Were your assertion true, then would it follow that his Majesty's ancestors, including so many kings and emperors, as well as the ancestors of the Elector of Saxony, were heretics!' . . . The Protestant princes forthwith took their leave of the emperor. On the 13th of October, the 'Recess,' or decree of the Diet, was read to the Catholic States, which on the same day entered into a Catholic League. On the 17th of the same month, sixteen of the more important German cities refused to aid the emperor in repelling the Turks, on the ground that peace had not yet been secured to Germany. The Zwinglian and Lutheran cities were daily becoming more sympathetic and cordial in their relations to each other. Charles V. informed the Holy See, October 23, of his intention of drawing the sword in defence of the faith. The 'Recess' was read to the Protestant princes November 11, and rejected by them on the day following, and the deputies of Hesse and Saxony took their departure immediately after. . . . The decree was rather more severe than the Protestants had anticipated, inasmuch as the emperor declared that he felt it to be his conscientious duty to defend the ancient faith, and that 'the Catholic princes had promised to aid him to the full extent of their power.' . . . The appointment of the emperor's brother, Ferdinand, as King of the Romans (1531), gave deep offence to the Protestant princes, who now expressed their determination of withholding all assistance from the emperor until the 'Recess' of Augsburg should have been revoked. Assembling at Smalkald, . . . they entered into an alliance offensive and defensive, known as the League of Smalkald, on March 29, 1531, to which they severally bound themselves to remain faithful for a period of six years."—J. Alzog, *Manual of Universal Church Hist., sect.* 312 (*v.* 3).

A. D. 1534.—Election of Paul III.

A. D. 1534-1540.—Beginnings of the Counter-Reformation.—"A well-known sentence in Macaulay's Essay on Ranke's 'History of the Popes' asserts, correctly enough, that in a particular epoch of history 'the Church of Rome, having lost a large part of Europe, not only ceased to lose, but actually regained nearly half of what she had lost.' Any fairly correct use of the familiar phrase 'the Counter-Reformation' must imply that this remarkable result was due to a movement pursuing two objects, originally distinct, though afterwards largely blended, viz., the regeneration of the Church of Rome, and the recovery of the losses inflicted upon her by the early successes of Protestantism. . . . The earliest continuous endeavour to regenerate the Church of Rome without impairing her cohesion dates from the Papacy of Paul III. [1534–1549], within which also falls the outbreak of the first religious war of the century [see Germany: A. D. 1546–1552]. Thus the two impulses which it was the special task of the Counter-Reformation to fuse were brought into immediate contact. The onset of the combat is marked by the formal establishment of the Jesuit Order [1540] as a militant agency devoted alike to both the purposes of the Counter-Reformation, and by the meeting of the Council of Trent [1545] under conditions excluding from its programme the task of conciliation."—A. W. Ward, *The Counter Reformation, pp. vii–viii.*—"I intend to use this term Counter-Reformation to denote the reform of the Catholic Church, which was stimulated by the German Reformation, and which, when the Council of Trent had fixed the dogmas and discipline of Latin Christianity, enabled the Papacy to assume a militant policy in Europe, whereby it regained a large portion of the provinces that had previously lapsed to Lutheran and Calvinistic dissent. . . . The centre of the world-wide movement which is termed the Counter-Reformation was naturally Rome. Events had brought the Holy See once more into a position of prominence. It was more powerful as an Italian State now, through the support of Spain and the extinction of national independence, than at any previous period of history. In Catholic Christendom its prestige was immensely augmented by the Council of Trent. At the same epoch, the foreigners who dominated Italy, threw themselves with the enthusiasm of fanaticism into this Revival. Spain furnished Rome with the militia of the Jesuits and with the engines of the Inquisition. The Papacy was thus able to secure successes in Italy which were elsewhere only partially achieved. . . . In order to understand the transition of Italy from the Renaissance to the Counter-Reformation manner, it will be well to concentrate attention on the history of the Papacy

during the eight reigns [1534–1605] of Paul III., Julius III., Paul IV., Pius IV., Pius V., Gregory XIII., Sixtus V., and Clement VIII. In the first of these reigns we hardly notice that the Renaissance has passed away. In the last we are aware of a completely altered Italy."—J. A. Symonds, *Renaissance in Italy: The Catholic Reaction, ch.* 2, *with foot-note* (*v.* 1).

A. D. 1537-1563.—Popular weakness of the Reformation movement in Italy.—Momentary inclination towards the Reform at Rome.—Beginning of the Catholic Reaction.—The Council of Trent and its consolidating work.—"The conflict with the hierarchy did not take the same form in Italy as elsewhere. . . . There is no doubt that the masses saw no cause for discontent under it. We have proof that the hierarchy was popular—that among the people, down to the lowest grades, the undiminished splendour of the Papacy was looked upon as a pledge of the power of Italy. But this did not prevent reform movements from taking place. The Humanistic school had its home here; its opposition tendencies had not spared the Church any more than Scholasticism; it had everywhere been the precursor and ally of the intellectual revolt, and not the least in Italy. There were from the first eminent individuals at Venice, Modena, Ferrara, Florence, even in the States of the Church themselves, who were more or less followers of Luther. The cardinals Contarini and Morone, Bembo and Sadolet, distinguished preachers like Peter Martyr, Johann Valdez, and Bernardino Occhino, and from among the princely families an intellectual lady, Renata of Ferrara, were inclined to the new doctrines. But they were leaders without followers; the number of their adherents among the masses was surprisingly small. The Roman Curia, under the Pontificate of Paul III.,1534–49, vacillated in its policy for a time; between 1537–41, the prevailing sentiments were friendly and conciliatory towards Reform. . . . They were, in fact, gravely entertaining the question at Rome, whether it would not be better to come to terms with Reform, to adopt the practicable part of its programme, and so put an end to the schism which was spreading so fast in the Church. . . . An honest desire then still prevailed to effect a reconciliation. Contarini was in favour of it with his whole soul. But it proceeded no further than the attempt; for once the differences seemed likely to be adjusted, so far as this was possible; but in 1542, the revulsion took place, which was never again reversed. Only one result remained. The Pope could no longer refuse to summon a council. The Emperor had been urging it year after year; the Pope had acceded to it further than any of his predecessors had done; and, considering the retreat which now took place, this concession was the least that could be demanded. At length, therefore, three years after it was convened, in May, 1542, the council assembled at Trent in December, 1545. It was the Emperor's great desire that a council should be held in Germany, that thus the confidence of the Germans in the supreme tribunal in the great controversy might be gained; but the selection of Trent, which nominally belonged to Germany, was the utmost concession that could be obtained. The intentions of the Emperor and the Pope with regard to the council were entirely opposed to each other. The Pope was determined to stifle all opposition in the bud, while the Emperor was very desirous of having a counterpoise to the Pope's supremacy in council, provided always that it concurred in the imperial programme. . . . The assembly consisted of Spanish and Italian monks in overwhelming majority, and this was decisive as to its character. When consulted as to the course of business, the Emperor had expressed a wish that those questions on which agreement between the parties was possible should first be discussed. There were a number of questions on which they were agreed, as, for example, Greek Christianity. Even now there are a number of points on which Protestants and Catholics are agreed, and differ from the Eastern Church. If these questions were considered first, the attendance of the Protestants would be rendered very much easier; it would open the door as widely as possible, they would probably come in considerable numbers, and might in time take a part which at least might not be distasteful to the Emperor, and might influence his ideas on Church reform. The thought that they were heretics was half concealed. But Rome was determined to pursue the opposite course, and at once to agitate those questions on which there was the most essential disagreement, and to declare all who would not submit to be incorrigible heretics. . . . The first subjects of discussion were, the authority of the Scriptures in the text of the Vulgate, ecclesiastical tradition, the right of interpretation, the doctrine of justification. These were the questions on which the old and new doctrines were irreconcilably at variance; all other differences were insignificant in comparison. And these questions were decided in the old Roman Catholic sense; not precisely as they had been officially treated in 1517—for the stream of time had produced some little effect—but in the main the old statutes were adhered to, and everything rejected which departed from them. This conduct was decisive. . . . Nevertheless some reforms were carried out. Between the time of meeting and adjournment, December, 1545, to the spring of 1547, the following were the main points decided on:—1. The bishops were to provide better teachers and better schools. 2. The bishops should themselves expound the word of God. 3. Penalties were to be enforced for the neglect of their duties, and various rules were laid down as to the necessary qualifications for the office of a bishop. Dispensations, licenses, and privileges were abolished. The Church was therefore to be subjected to a reform which abolished sundry abuses, without conceding any change in her teaching. The course the council was taking excited the Emperor's extreme displeasure. . . . He organized a sort of opposition to Rome; his commissaries kept up a good understanding with the Protestants, and it was evident that he meant to make use of them for an attack on the Pope. This made Rome eager to withdraw the assembly from the influence of German bishops and imperial agents as soon as possible. A fever which had broken out at Trent, but had soon disappeared, was made a pretext for transferring the council to Bologna, in the spring of 1547. The imperial commissioners protested that the decrees of such a hole-and-corner council would be null and void. The contest remained undecided for years. Paul III. died in the midst of it, in November, 1549, and was succeeded by Cardinal del

Monte, one of the papal legates at the council, as Pope Julius III. The Emperor at length came to an understanding with him, and in May, 1551, the council was again opened at Trent. . . . The assembly remained Catholic; the Protestant elements, which were represented at first, all disappeared after the turn of affairs in 1552 [see GERMANY: A. D. 1546–1552; and 1552–1561]. After that there was no further thought of an understanding with the heretics. The results for reform were very small indeed. The proceedings were dragging wearily on when a fresh adjournment was announced in 1552. Pope Julius III. died in March, 1555. His successor, the noble Cardinal Cervin, elected as Marcellus II., died after only twenty-two days, and was succeeded by Cardinal Caraffa as Paul IV., 1555–9. . . . He was the Pope of the restoration. The warm Neapolitan blood flowed in his veins, and he was a fiery, energetic character. He was not in favour of any concessions or abatement, but for a complete breach with the new doctrines, and a thorough exclusiveness for the ancient Church. He was one of the ablest men of the time. As early as in 1542, he had advised that no further concessions should be made, but that the Inquisition, of which indeed he was the creator, should be restored. It was he who decidedly initiated the great Catholic reaction. He established the Spanish Inquisition in Italy, instituted the first Index, and gave the Jesuits his powerful support in the interests of the restoration. This turn of affairs was the answer to the German religious Peace. Since the Protestants no longer concerned themselves about Rome, Rome was about to set her house in order without them, and as a matter of course the council stood still." But in answer to demands from several Catholic princes, "the council was convened afresh by the next Pope, Pius IV. (1559–65), in November, 1560, and so the Council of Trent was opened for the third time in January, 1562. Then began the important period of the council, during which the legislation to which it has given a name was enacted. . . . The Curia reigned supreme, and, in spite of the remonstrances of the Emperor and of France, decided that the council should be considered a continuation of the previous ones, which meant—'All the decrees aimed against the Protestants are in full force; we have no further idea of coming to terms with them.' The next proceeding was to interdict books and arrange an Index [see below: A. D. 1559–1595]. . . . The restoration of the indisputable authority of the Pope was the ruling principle of all the decrees. . . . The great achievement of the council for the unity of the Catholic Church was this: it formed into a code of laws, on one consistent principle, that which in ancient times had been variable and uncertain, and which had been almost lost sight of in the last great revolution. Controverted questions were replaced by dogmas, doubtful traditions by definite doctrines; a uniformity was established in matters of faith and discipline which had never existed before, and an impregnable bulwark was thus erected against the sectarian spirit and the tendency to innovation. Still when this unity was established upon a solid basis, the universal Church of former times was torn asunder." The Council of Trent was closed December 4, 1563, 18 years after its opening.—L. Häusser, *Period of the Reformation, ch.* 19 *and* 16.

A. D. 1550.—Election of Julius III.

A. D. 1555 (April).—Election of Marcellus II.

A. D. 1555 (May).—Election of Paul IV.

A. D. 1555-1603.—The aggressive age of the reinvigorated Church.—Attachment and subserviency to Spain.—Giovanni Piero Caraffa, founder of the Order of the Theatines, was raised to the papal chair in 1555, assuming the title of Paul IV. He "entered on his station with the haughty notions of its prerogatives which were natural to his austere and impetuous spirit. Hence his efforts in concert with France, unsuccessful as they proved, to overthrow the Spanish greatness, that he might extricate the popedom from the galling state of dependence to which the absolute ascendancy of that power in Italy had reduced it. Paul IV. is remarkable as the last pontiff who embarked in a contest which had now become hopeless, and as the first who, giving a new direction to the policy of the holy see, employed all the influence, the arts, and the resources of the Roman church against the protestant cause. He had, during the pontificate of Paul III. [1534–1549], already made himself conspicuous for his persecuting zeal. He had been the principal agent in the establishment of the inquisition at Rome, and had himself filled the office of grand inquisitor. He seated himself in the chair of St. Peter with the detestable spirit of that vocation; and the character of his pontificate responded to the violence of his temper. His mantle descended upon a long series of his successors. Pius IV., who replaced him on his death in 1559; Pius V., who received the tiara in the following year; Gregory XIII., who was elected in 1572, and died in 1585; Sixtus V., who next reigned until 1590; Urban VII., Gregory XIV., and Innocent IX., who each filled the papal chair only a few months; and Clement VIII., whose pontificate commenced in 1592 and extended beyond the close of the century [1603]: all pursued the same political and religious system. Resigning the hope, and perhaps the desire, of re-establishing the independence of their see, they maintained an intimate and obsequious alliance with the royal bigot of Spain; they seconded his furious persecution of the protestant faith; they fed the civil wars of the Low Countries, of France, and of Germany."—G. Procter, *Hist. of Italy, ch.* 9.—"The Papacy and Catholicism had long maintained themselves against these advances of their enemy [the Protestant Reformation], in an attitude of defence it is true, but passive only; upon the whole they were compelled to endure them. Affairs now assumed a different aspect. . . . It may be affirmed generally that a vital and active force was again manifested, that the church had regenerated her creed in the spirit of the age, and had established reforms in accordance with the demands of the times. The religious tendencies which had

appeared in southern Europe were not suffered to become hostile to herself, she adopted them, and gained the mastery of their movements; thus she renewed her powers, and infused fresh vigour into her system. . . . The influence of the restored Catholic system was first established in the two southern peninsulas, but this was not accomplished without extreme severities. The Spanish Inquisition received the aid of that lately revived in Rome; every movement of Protestantism was violently suppressed. But at the same time those tendencies of the inward life which renovated Catholicism claimed and enchained as her own, were peculiarly powerful in those countries. The sovereigns also attached themselves to the interests of the church. It was of the highest importance that Philip II., the most powerful of all, adhered so decidedly to the popedom; with the pride of a Spaniard, by whom unimpeachable Catholicism was regarded as a sign of a purer blood and more noble descent, he rejected every adverse opinion: the character of his policy was however not wholly governed by mere personal feeling. From remote times, and more especially since the regulations established by Isabella, the kingly dignity of Spain had assumed an ecclesiastical character; in every province the royal authority was strengthened by the addition of spiritual power; deprived of the Inquisition, it would not have sufficed to govern the kingdom. Even in his American possessions, the king appeared above all in the light of a disseminator of the Christian and Catholic faith. This was the bond by which all his territories were united in obedience to his rule; he could not have abandoned it, without incurring real danger. The extension of Huguenot opinions in the south of France caused the utmost alarm in Spain; the Inquisition believed itself bound to redoubled vigilance. . . . The power possessed by Philip in the Netherlands secured to the southern system an immediate influence over the whole of Europe; but besides this, all was far from being lost in other countries. The emperor, the kings of France and Poland, with the duke of Bavaria, still adhered to the Catholic church. On all sides there were spiritual princes whose expiring zeal might be reanimated; there were also many places where Protestant opinions had not yet made their way among the mass of the people. The majority of the peasantry throughout France, Poland, and even Hungary, still remained Catholic. Paris, which even in those days exercised a powerful influence over the other French towns, had not yet been affected by the new doctrines. In England a great part of the nobility and commons were still Catholic; and in Ireland the whole of the ancient native population remained in the old faith. Protestantism had gained no admission into the Tyrolese or Swiss Alps, nor had it made any great progress among the peasantry of Bavaria. Canisius compared the Tyrolese and Bavarians with the two tribes of Israel, 'who alone remained faithful to the Lord.' The internal causes on which this pertinacity, this immovable attachment to tradition, among nations so dissimilar, was founded, might well repay a more minute examination. A similar constancy was exhibited in the Walloon provinces of the Netherlands. And now the papacy resumed a position in which it could once more gain the mastery of all these inclinations, and bind them indissolubly to itself. Although it had experienced great changes, it still possessed the inestimable advantage of having all the externals of the past and the habit of obedience on its side. In the council so prosperously concluded, the popes had even gained an accession of that authority which it had been the purpose of the temporal powers to restrict; and had strengthened their influence over the national churches; they had moreover abandoned that temporal policy by which they had formerly involved Italy and all Europe in confusion. They attached themselves to Spain with perfect confidence and without any reservations, fully returning the devotion evinced by that kingdom to the Roman church. The Italian principality, the enlarged dominions of the pontiff, contributed eminently to the success of his ecclesiastical enterprises; while the interests of the universal Catholic church were for some time essentially promoted by the overplus of its revenues. Thus strengthened internally, thus supported by powerful adherents, and by the idea of which they were the representatives, the popes exchanged the defensive position, with which they had hitherto been forced to content themselves, for that of assailants."—L. von Ranke, *Hist. of the Popes, bk.* 5, *sect.* 2 (*v.* 1).

A. D. 1559.—Election of Pius IV.

A. D. 1559-1595.—The institution of the Index.—"The first 'Index' of prohibited books published by Papal authority, and therefore, unlike the 'catalogi' previously issued by royal, princely, or ecclesiastical authorities, valid for the whole Church, was that authorised by a bull of Paul IV. in 1559. In 1564 followed the Index published by Pius IV., as drawn up in harmony with the decrees of the Council of Trent, which, after all, appears to be a merely superficial revision of its predecessor. Other Indices followed, for which various authorities were responsible, the most important among them being the Index Expurgatorius, sanctioned by a bull of Clement VIII. in 1595, which proved so disastrous to the great printing trade of Venice."—A. W. Ward, *The Counter-Reformation, ch.* 2.

A. D. 1570-1571.—Holy League with Venice and Spain against the Turks.—Great battle and victory of Lepanto. See TURKS: A. D. 1566–1571.

A. D. 1570-1597.—The Catholic Reaction in Germany.—"Altogether about the year 1570 the spread of protestantism in Germany and the lands under its influence had reached its zenith. . . . Yet beyond a doubt its lasting success was only legally assured in places where it had won over the governing power and could stand on the generally recognized basis of the religious peace. This was the case in the secular principalities of the protestant dynasties, but not in the Wittelsbach and Hapsburgh lands, where its lawful existence depended only on the personal concessions of the existing ruler, and still less in the ecclesiastical territories. . . . To give it here the secure legal basis which it lacked was the most important problem, as regarded internal German affairs, of the protestant policy. . . . The only way to attain this was to secure the recognition on the part of the empire of the free right of choosing a confession in the bishoprics; in other words the renunciation of the 'Ecclesiastical Reservation.' . . . This goal could only be attained

if the protestants advanced in a solid phalanx. This is, however, just what they could not do. For they themselves were torn by bitter contentions with regard to the faith. . . . From this point of view it was no boon that Calvinism, the specifically French form of protestantism, found entrance also into Germany. . . . Under its influence, to begin with, the Saxon-Thuringian church became divided in its interpretation of the teachings concerning justification and the Lord's Supper. . . . The complications were still further increased when Frederick III. of the Palatinate, elector since 1559, disgusted at the quarrelsomeness of the Lutheran theologians, dismissed the zealot Tilemann in August 1560, and in 1563 gave over the recognized church of the Palatinate to Calvinism. Herewith he completely estranged the Lutherans who did not regard the Calvinists as holding the same faith. . . . Germany could no longer count itself among the great powers and at home the discord was ever increasing. The motion of the Palatinate in the electoral diet of October 1575 to incorporate in the religious peace the so-called 'Declaration of King Ferdinand' with regard to it, and thus to secure the local option with regard to a creed in the bishoprics, was opposed not only by the ecclesiastical members of the electoral college but also by the electorate of Saxony. In consequence of the same party strife a similar motion of the Palatinate, made in the diet of Regensburg, was lost. . . . On the one hand hostilities grew more bitter among the German protestants, on the other the Roman church, supported by the power of the Spanish world-monarchy, advanced everywhere, within and without the German empire, to a well-planned attack. . . . She had won her first victory in the empire with the refusal in 1576 to grant the local option of creed, for this was almost equivalent to a recognition on the protestant side of the 'Ecclesiastical Reservation.' The more eagerly did Rome, by demanding the oath drawn up in the council of Trent, strive to chain fast her bishops to her, to remove those who made opposition even if it had to happen by disregarding the law of the land and the religious treaties, to bring zealous catholic men into the episcopal sees—everywhere to set the reaction in motion. The manner of proceeding was always the same: the protestant pastors and teachers were banished; the catholic liturgy, in which the utmost splendor was unfolded, was reintroduced into the churches, and competent catholic clergy were put in office. The members of the community, left without a leader, had now only the choice allowed to them of joining the catholic church or of emigrating; the protestant officials were replaced by catholic ones; new institutions of learning, conducted by Jesuits, were founded for the purpose of winning the rising generation, inwardly also, for catholicism. Beyond a doubt this whole work of restoration put an end in many cases to a confused and untenable state of affairs, but at least as often it crushed down by force a healthy, natural development and wrought havoc in the moral life of the people. Thus did the reaction gain the ascendancy in most of the ecclesiastical principalities of the South; in the North the scale still hung in the balance. . . . And in this condition of affairs the discord among the protestants grew worse year by year! 'Their war is our peace' was the exultant cry of the catholics when they looked upon this schism. In order to preserve pure Lutheranism from any deviation, the electoral court of Saxony caused the 'Formula of Concord' to be drawn up by three prominent theologians in the monastery of Bergen near Magdeburg (20 May 1577), and compelled all pastors and teachers of the land to accept them under pain of dismissal from office. As this necessarily accentuated the differences with the Calvinists, John Casimir of the Palatinate endeavored, in the Convention of Frankfort on the Main in 1577, to unite the protestants of all denominations and all lands . . . in a common effort at defence; but his appeal and the embassy which he sent to the evangelical princes met with no very favorable reception. On the contrary in course of time 86 estates of the empire accepted the Formula of Concord which was now published in Dresden, together with the names of those who had signed it, on the 25th of June 1580, the 50th anniversary of handing in the Augsburg Confession. What a pass had matters come to since that great epoch! . . . At any rate the unity of the German protestants was completely at an end, and especially any joint action between Saxony and the Palatinate had been rendered impossible. . . . In 1582 the Roman party opened a well-planned campaign for the purpose of putting itself in full possession of the power in the empire. The emperor belonged as it was to their confession, so all depended on the manner in which the diet should be made up; and this again depended on who should be members of the college of princes: for in the college of electors the votes of the protestants and catholics were equal inasmuch as the Bohemian vote was 'dormant,' and of the imperial cities only a few were still catholic. In the electoral college, then, the protestants possessed the majority so long as the 'administrators' [of the bishoprics] maintained as hitherto their seat and their vote." But the Catholics, acting unitedly, while the Protestants were hopelessly divided, succeeded at last in expelling Archbishop Gebhard, who had renounced their communion, from the princely see of Cologne, and finally (1597) they secured a majority in the electoral college.—Kaemmel, *Deutsche Geschichte* (*trans. from the German*), *pp.* 701–715.

A. D. 1591.—Election of Clement VIII.

A. D. 1597.—Annexation of Ferrara to the States of the Church.—"The loss which the papal states sustained by the alienation of Parma and Placentia was repaired, before the end of the 16th century, by the acquisition of a duchy little inferior in extent to those territories:—that of Ferrara." With the death, in 1597, of

Alfonso II., the persecutor of Tasso, "terminated the legitimate Italian branch of the ancient and illustrious line of Este. But there remained an illegitimate representative of his house, whom he designed for his successor; don Cesare da Este, the grandson of Alfonso I. by a natural son of that duke. The inheritance of Ferrara and Modena had passed in the preceding century to bastards, without opposition from the popes, the feudal superiors of the former duchy. But the imbecile character of don Cesare now encouraged the reigning pontiff, Clement VIII., to declare that all the ecclesiastical fiefs of the house of Este reverted, of right, to the holy see on the extinction of the legitimate line. The papal troops, on the death of Alfonso II., invaded the Ferrarese state; and Cesare suffered himself to be terrified by their approach into an ignominious and formal surrender of that duchy to the holy see. By the indifference of the Emperor Rodolph II., he was permitted to retain the investiture of the remaining possessions of his ancestors: the duchies of Modena and Reggio, over which, as imperial and not papal fiefs, the pope could not decently assert any right. In passing beneath the papal yoke, the duchy of Ferrara, which, under the government of the house of Este, had been one of the most fertile provinces of Italy, soon became a desert and marshy waste. The capital itself lost its industrious population and commercial riches; its architectural magnificence crumbled into ruins, and its modern aspect retains no trace of that splendid court in which literature and art repaid the fostering protection of its sovereigns, by reflecting lustre on their heads."—G. Procter, *Hist. of Italy, ch.* 9.

A. D. 1605 (April).—Election of Leo XI.

A. D. 1605 (May).—Election of Paul V.

A. D. 1605-1700.—The conflict with Venice. —Opposition of Urban VIII. to the Emperor. —Annexation of Urbino to the States of the Church.—Half a century of unimportant history.—"Paul V. (1605–1621) was imbued with mediæval ideas as to the papal authority and the validity of the canon-law. These speedily brought him into collision with the secular power, especially in Venice, which had always maintained an attitude of independence towards the papacy. Ecclesiastical disputes [growing out of a Venetian decree forbidding alienations of secular property in favor of the churches] were aggravated by the fact that the acquisition of Ferrara had extended the papal states to the frontiers of Venice, and that frequent differences arose as to the boundary line between them. The defence of the republic and of the secular authority in church affairs was undertaken with great zeal and ability by Fra Paoli Sarpi, the famous historian of the Council of Trent. Paul V. did not hesitate to excommunicate the Venetians [1606], but the government compelled the clergy to disregard the pope's edict. The Jesuits, Theatines, and Capuchins were the only orders that adhered to the papacy, and they had to leave the city. If Spain had not been under the rule of the pacific Lerma, it would probably have seized the opportunity to punish Venice for its French alliance. But France and Spain were both averse to war, and Paul V. had to learn that the papacy was powerless without secular support. By the mediation of the two great powers, a compromise was arranged in 1607. The Jesuits, however, remained excluded from Venetian territory for another half-century. This was the first serious reverse encountered by the Catholic reaction [see VENICE: A. D. 1606–1607]. . . . The attention of the Catholic world was now absorbed in the Austrian schemes for the repression of Protestantism in Germany, which received the unhesitating support both of Paul and of his successor, Gregory XV. [1621–1623]. The latter was a great patron of the Jesuits. Under him the Propaganda was first set on foot. . . . The pontificate of Urban VIII. (1623–1644) was a period of great importance. He regarded himself rather as a temporal prince than as head of the Church. He fortified Rome and filled his states with troops. The example of Julius II. seemed to find an imitator. Urban was imbued with the old Italian jealousy of the imperial power, and allied himself closely with France. . . . At the moment when Ferdinand II. had gained his greatest success in Germany he was confronted with the hostility of the pope. Gustavus Adolphus landed in Germany, and by a strange coincidence Protestantism found support in the temporal interests of the papacy. The Catholics were astounded and dismayed by Urban's attitude. . . . Urban VIII. succeeded in making an important addition to the papal states by the annexation of Urbino, in 1631, on the death of Francesco Maria, the last duke of the Della Rovere family. But in the government of the states he met with great difficulties. . . . Urban VIII.'s relatives, the Barberini, quarreled with the Farnesi, who had held Parma and Piacenza since the pontificate of Paul III. The pope was induced to claim the district of Castro, and this claim aroused a civil war (1641–1644) in which the papacy was completely worsted. Urban was forced to conclude a humiliating treaty and directly afterwards died. His successors [Innocent X., 1644–1655; Alexander VII., 1655–1667; Clement IX., 1667–1669; Clement X., 1670–1676; Innocent XI., 1676–1689; Alexander VIII., 1689–1691; Innocent XII., 1691–1700] are of very slight importance to the history of Europe. . . . The only important questions in which the papacy was involved in the latter half of the century were the schism of the Jansenists and the relations with Louis XIV."—R. Lodge, *Hist. of Modern Europe, ch.* 12.

ALSO IN: J. E. Darras, *General Hist. of the Catholic Church, period* 7, *ch.* 7; *period* 8, *ch.* 1–3 (*v.* 4).—T. A. Trollope, *Paul the Pope and Paul the Friar.*—A. Robertson, *Fra Paolo Sarpi.*

A. D. 1621.—Election of Gregory XV.

A. D. 1622.—Founding of the College of the Propaganda.—Cardinal Alexander Ludovisio, elected pope on the 9th of February, 1621, taking the name of Gregory XV., "had always shown the greatest zeal for the conversion of infidels and heretics; this zeal inspired the design of founding the College of the Propaganda (1622). The origin of the Propaganda is properly to be traced to an edict of Gregory XIII., in virtue of which a certain number of cardinals were charged with the direction of missions to the East, and catechisms were ordered to be printed in the less-known languages. But the institution was neither firmly established nor provided with the requisite funds. Gregory XV. gave it a constitution, contributed the necessary funds from his private purse, and as it

met a want the existence of which was really felt and acknowledged, its success was daily more and more brilliant. Who does not know what the Propaganda has done for philological learning? But it chiefly labored, with admirable grandeur of conception and energy, to fulfil its great mission — the propagation of the Catholic faith — with the most splendid results. Urban VIII., the immediate successor of Gregory XV., completed the work by the addition of the 'Collegium de Propaganda Fide,' where youth are trained in the study of all the foreign languages, to bear the name of Christ to every nation on the globe."—J. E. Darras, *General Hist. of the Catholic Church, period 7, ch. 7, sect.* 10 (*v.* 4).

A. D. 1623.—Election of Urban VIII.

A. D. 1623-1626.—The Valtelline War. See France: A. D. 1624–1626.

A. D. 1644-1667.—Pontificates of Innocent X. and Alexander VII.—Growth of Nepotism. — Sixtus V. had "invented a system of nepotism which was so actively followed up by his successors, that even a short reign provided the means of accumulating a brilliant fortune. That pontiff raised one nephew to the rank of cardinal, with a share of the public business and an ecclesiastical income of a hundred thousand crowns. Another he created a marquess, with large estates in the Neapolitan territory. The house of Ferretti thus founded, long maintained a high position, and was frequently represented in the College of Cardinals. The Aldobrandini, founded in like manner by Clement VIII., the Borghesi by Paul V., the Ludovisi by Gregory XV., and the Barberini by Urban VIII., now vied in rank and opulence with the ancient Roman houses of Colonna and Orsini, who boasted that for centuries no peace had been concluded in Christendom in which they were not expressly included. On the death of Urban VIII. (29th July 1644) the Barberini commanded the votes of eight-and-forty cardinals, the most powerful faction ever seen in the conclave. Still, the other papal families were able to resist their dictation, and the struggle terminated in the election of Cardinal Pamfili, who took the name of Innocent X. During the interval of three months, the city was abandoned to complete lawlessness; assassinations in the streets were frequent; no private house was safe without a military guard, and a whole army of soldiers found occupation in protecting the property of their employers. This was then the usual state of things during an interregnum. Innocent X., though seventy-two years of age at his election, was full of energy. He restrained the disorders in the city. . . . Innocent brought the Barberini to strict account for malpractices under his predecessor, and wrested from them large portions of their ill-gotten gain. So far, however, from reforming the system out of which these abuses sprung, his nepotism exhibited itself in a form which scandalised even the Roman courtiers. The pope brought his sister-in-law, Donna Olimpia Maidalchina, from Viterbo to Rome, and established her in a palace, where she received the first visits of foreign ambassadors on their arrival, gave magnificent entertainments, and dispensed for her own benefit the public offices of the government. . . . Her daughters were married into the noblest families. Her son, having first been appointed the cardinal-nephew, soon after renounced his orders, married, and became the secular-nephew. The struggle for power between his mother and his wife divided Rome into new factions, and the feud was enlarged by the ambition of a more distant kinsman, whom Innocent appointed to the vacant post of cardinal-nephew. The pontiff sank under a deep cloud from the disorders in his family and the palace, and when he died (5th January, 1655) the corpse laid three days uncared for, till an old canon, who had been long dismissed from his household, expended half-a-crown on its interment. . . . Fabio Chigi, who came next as Alexander VIII. [VII.] brought to the tottering chair a spotless reputation, and abilities long proved in the service of the church. His first act was to banish the scandalous widow; her son was allowed to retain her palace and fortune. Beginning with the loudest protestations against nepotism, now the best established institution at Rome, in the phrase of the time, the pope soon 'became a man.' The courtiers remonstrated on his leaving his family to live a plain citizen's life at Siena: it might involve the Holy See in a misunderstanding with Tuscany. . . . The question was gravely proposed in consistory, and the flood-gates being there authoritatively unclosed, the waters of preferment flowed abundantly on all who had the merit to be allied with Fabio Chigi. After discharging this arduous duty, the pope relieved himself of further attention to business, and spent his days in literary leisure. His nephews, however, had less power than formerly, from the growth of the constitutional principle. The cardinals, in their different congregations, with the official secretaries, aspired to the functions of responsible advisers."—G. Trevor, *Rome, from the Fall of the Western Empire, pp.* 416–418.

A. D. 1682-1693.—Successful contest with Louis XIV. and the Gallican Church. — "It has always been the maxim of the French court, that the papal power is to be restricted by means of the French clergy, and that the clergy, on the other hand, are to be kept in due limits by means of the papal power. But never did a prince hold his clergy in more absolute command than Louis XIV. . . . The prince of Condé declared it to be his opinion, that if it pleased the king to go over to the Protestant church, the clergy would be the first to follow him. And certainly the clergy of France did support their king without scruple against the pope. The declarations they published were from year to year increasingly decisive in favour of the royal authority. At length there assembled the convocation of 1682. 'It was summoned and dissolved,' remarks a Venetian ambassador, 'at the convenience of the king's ministers, and was guided by their suggestions.' The four articles drawn up by this assembly have from that time been regarded as the manifesto of the Gallican immunities. The first three repeat assertions of principles laid down in earlier times; as, for example, the independence of the secular power, as regarded the spiritual authority; the superiority

of councils over the pope; and the inviolable character of the Gallican usages. But the fourth is more particularly remarkable, since it imposes new limits even to the spiritual authority of the pontiff. 'Even in questions of faith, the decision of the pope is not incapable of amendment, so long as it is without the assent of the church.' We see that the temporal power of the kingdom received support from the spiritual authority, which was in its turn upheld by the secular arm. The king is declared free from the interference of the pope's temporal authority; the clergy are exempted from submission to the unlimited exercise of his spiritual power. It was the opinion of contemporaries, that although France might remain within the pale of the Catholic church, it yet stood on the threshold, in readiness for stepping beyond it. The king exalted the propositions above named into a kind of 'Articles of Faith,' a symbolical book. All schools were to be regulated in conformity with these precepts; and no man could attain to a degree, either in the juridical or theological faculties, who did not swear to maintain them. But the pope also was still possessed of a weapon. The authors of this declaration — the members of this assembly — were promoted and preferred by the king before all other candidates for episcopal offices; but Innocent refused to grant them spiritual institution. They might enjoy the revenues of those sees, but ordination they did not receive; nor could they venture to exercise one spiritual act of the episcopate. These complications were still further perplexed by the fact that Louis XIV. at that moment resolved on that relentless extirpation of the Huguenots, but too well known, and to which he proceeded chiefly for the purpose of proving his own perfect orthodoxy. He believed himself to be rendering a great service to the church. It has indeed been also affirmed that Innocent XI. was aware of his purpose and had approved it, but this was not the fact. The Roman court would not now hear of conversions effected by armed apostles. 'It was not of such methods that Christ availed himself: men must be led to the temple, not dragged into it.' New dissensions continually arose. In the year 1687, the French ambassador entered Rome with so imposing a retinue, certain squadrons of cavalry forming part of it, that the right of asylum, which the ambassadors claimed at that time, not only for their palace, but also for the adjacent streets, could by no means have been easily disputed with him, although the popes had solemnly abolished the usage. With an armed force the ambassador braved the pontiff in his own capital. 'They come with horses and chariots,' said Innocent, 'but we will walk in the name of the Lord.' He pronounced the censures of the church on the ambassador; and the church of St. Louis, in which the latter had attended a solemn high mass, was laid under interdict. The king also then proceeded to extreme measures. He appealed to a general council, took possession of Avignon, and caused the nuncio to be shut up in St. Olon: it was even believed that he had formed the design of creating for Harlai, archbishop of Paris, who, if he had not suggested these proceedings, had approved them, the appointment of patriarch of France. So far had matters proceeded: the French ambassador in Rome excommunicated; the papal nuncio in France detained by force; thirty-five French bishops deprived of canonical institution; a territory of the Holy See occupied by the king: it was, in fact, the actual breaking out of schism; yet did Pope Innocent refuse to yield a single step. If we ask to what he trusted for support on this occasion, we perceive that it was not to the effect of the ecclesiastical censures in France, nor to the influence of his apostolic dignity, but rather, and above all, to that universal resistance which had been aroused in Europe against those enterprises of Louis XIV. that were menacing the existence of its liberties. To this general opposition the pope now also attached himself. . . . If the pope had promoted the interests of Protestantism by his policy, the Protestants on their side, by maintaining the balance of Europe against the 'exorbitant Power,' also contributed to compel the latter into compliance with the spiritual claims of the papacy. It is true that when this result ensued, Innocent XI. was no longer in existence; but the first French ambassador who appeared in Rome after his death (10th of August, 1689) renounced the right of asylum: the deportment of the king was altered; he restored Avignon, and entered into negotiations. . . . After the early death of Alexander VIII., the French made all possible efforts to secure the choice of a pontiff disposed to measures of peace and conciliation; a purpose that was indeed effected by the elevation of Antonio Pignatelli, who assumed the tiara with the name of Innocent XII., on the 12th of July, 1691. . . . The negotiations continued for two years. Innocent more than once rejected the formulas proposed to him by the clergy of France, and they were, in fact, compelled at length to declare that all measures discussed and resolved on in the assembly of 1682 should be considered as not having been discussed or resolved on: 'casting ourselves at the feet of your holiness, we profess our unspeakable grief for what has been done.' It was not until they had made this unreserved recantation that Innocent accorded them canonical institution. Under these conditions only was peace restored. Louis XIV. wrote to the pope that he retracted his edict relating to the four articles. Thus we perceive that the Roman see once more maintained its prerogatives, even though opposed by the most powerful of monarchs."—L. Ranke, *Hist. of the Popes, bk.* 8, *sect.* 16 (*v.* 2).

A. D. 1691.—Election of Innocent XII.

A. D. 1700.—Election of Clement XI.

A. D. 1700-1790.—Effects of the War of the Spanish Succession. — Declining Powers. — The issue of the War of the Spanish Succession "will serve to show us that when the Pope was not, as in his contest with Louis XIV., favoured by political events, he could no longer laugh to scorn the edicts of European potentates. Charles II. of Spain, that wretched specimen of humanity, weak in body, and still weaker in mind, haunted by superstitious terrors which almost unsettled his reason, was now, in the year 1700, about to descend to a premature grave. He was without male issue, and was uncertain to whom he should bequeath the splendid inheritance transmitted to him by his ancestors. The Pope, Innocent XII., who was wholly in the interests of France, urged him to bequeath Spain, with its dependencies, to Philip, Duke of Anjou, the grandson of Louis XIV., who claimed through his grandmother, the eldest sister of Charles. He would thus pre-

vent the execution of the partition treaty concluded between France, England, and Holland, according to which the Archduke Charles . . . was to have Spain, the Indies, and the Netherlands, while France took the Milanese, or the Province of Lorraine. The Archbishop of Toledo seconded the exhortation of the Pope, and so worked on the superstitious terrors of the dying monarch that he signed a will in favour of the Duke of Anjou, which was the cause of lamentation, and mourning, and woe, for twelve years, throughout Europe, from the Vistula to the Atlantic Ocean [see SPAIN: A. D. 1701–1702; and ENGLAND: A. D. 1701–1702]. . . . The Duke of Marlborough's splendid victories of Blenheim and Ramillies . . . placed the Emperor Joseph (1705–11), the brother of the Archduke Charles, in possession of Germany and the Spanish Netherlands [see GERMANY: A. D. 1704; and NETHERLANDS: A. D. 1706–1707]; and the victory of Prince Eugene before Turin made him supreme in the north of Italy and the kingdom of Naples [see ITALY: A. D. 1701–1713]. The Pope, Clement XI., was now reduced to a most humiliating position. Political events had occurred . . . which served to show very plainly that the Pope, without a protector, could not, as in former days, bid defiance to the monarchs of Europe. His undutiful son, the Emperor, compelled him to resign part of his territories as a security for his peaceful demeanour, and to acknowledge the Archduke Charles, the Austrian claimant to the Spanish throne. The peace of Utrecht, concluded in 1713 [see UTRECHT: A. D. 1712–1714], which produced the dismemberment of the monarchy, but left Philip in the peaceful occupation of the throne of Spain, did indeed release him from that obligation; but it did not restore him to the 'high and palmy state' which he occupied before he was obliged to submit to the Imperial arms. It inflicted a degradation upon him, for it transferred to other sovereigns, without his consent, his fiefs of Sicily and Sardinia. Now, also, it became manifest that the Pope could no longer assert an indirect sovereignty over the Italian States; for, notwithstanding his opposition, it conferred a large extent of territory on the Duke of Savoy, which has, in our day, been expanded into a kingdom under the sceptre of Victor Emmanuel and his successor. We have a further evidence of the decline of the Papacy in the change in the relative position of the States of Europe as Papal and anti-Papal during the eighteenth century, after the death of Louis XIV. The Papal powers of Spain in the sixteenth century, and of France, Spain, and Austria, in the latter half of the seventeenth century, determined the policy of Europe. . . . On the other hand, England, Prussia, and Russia became, in the eighteenth century, the great leading powers in the world. . . . The Pope, then, no longer stood at the head of those powers which swayed the destinies of Europe. . . . The Papacy, from the death of Louis XIV. till the time of the French Revolution, led a very quiet and obscure life. It had no part in any of the great events which during the eighteenth century were agitating Europe, and gained no spiritual or political victories."— A. R. Pennington, *Epochs of the Papacy, ch.* 10.

A. D. 1808-1814. — Conflict of Pius VII. with Napoleon.—French seizure of Rome and the Papal States.—Captivity of the Pope at Savona and Fontainebleau.—The Concordat of 1813 and its retraction. — Napoleon "had long been quarrelling with Pius VII., to make a tool of whom he had imposed the concordat on France. The Pope resisted, as the Emperor might have expected, and, not obtaining the price of his compliance, hindered the latter's plans in every way that he could. He resisted as head of the Church and as temporal sovereign of Rome, refusing to close his dominions either to the English or to Neapolitan refugees of the Bourbon party. Napoleon would not allow the Pope to act as a monarch independent of the Empire, but insisted that he was amenable to the Emperor, as temporal prince, just as his predecessors were amenable to Charlemagne. They could not agree, and Napoleon, losing patience, took military possession of Rome and the Roman State."— H. Martin, *Popular Hist. of France, since* 1789, *v.* 2, *ch.* 12. — In February, 1808, "the French troops, who had already taken possession of the whole of Tuscany, in virtue of the resignation forced upon the Queen of Etruria, invaded

the Roman territories, and made themselves masters of the ancient capital of the world. They immediately occupied the castle of St. Angelo, and the gates of the city, and entirely dispossessed the papal troops. Two months afterwards, an imperial decree of Napoleon severed the provinces of Ancona, Urbino, Macerata, and Camerino, which had formed part of the ecclesiastical estates, under the gift of Charlemagne, for nearly a thousand years, and annexed them to the kingdom of Italy. The reason assigned for this spoliation was, 'That the actual sovereign of Rome has constantly declined to declare war against the English, and to coalesce with the Kings of Italy and Naples for the defence of the Italian peninsula. The interests of these two kingdoms, as well as of the armies of Naples and Italy, require that their communications should not be interrupted by a hostile power.'"—Sir A. Alison, *Hist. of Europe*, 1789–1815, *ch.* 51 (*v.* 11).—"The pope protested in vain against such violence. Napoleon paid no attention. . . . He confiscated the wealth of the cardinals who did not return to the place of their birth. He disarmed nearly all the guards of the Holy Father — the nobles of this guard were imprisoned. Finally, Miollis [the French commander] had Cardinal Gabrielle, pro-Secretary of State, carried off, and put seals upon his papers. On May 17, 1809, a decree was issued by Napoleon, dated from Vienna, proclaiming the union (in his quality of successor to Charlemagne) of the States of the pope with the French Empire, ordaining that the city of Rome should be a free and imperial city; that the pope should continue to have his seat there, and that he should enjoy a revenue of 2,000,000 francs. On June 10, he had this decree promulgated at Rome. On this same June 10, the pope protested against all these spoliations, refused all pensions, and recapitulating all the outrages of which he had cause to complain, issued the famous and imprudent bull of excommunication against the authors, favourers, and executors of the acts of violence against him and the Holy See, but without naming any one. Napoleon was incensed at it, and on the first impulse he wrote to the bishops of France a letter in which he spoke in almost revolutionary terms 'of him who wished,' said he, 'to make dependent upon a perishable temporal power the eternal interest of consciences, and that of all spiritual affairs.' On the 6th of July, 1809, Pius VII., taken from Rome, after he had been asked if he would renounce the temporal sovereignty of Rome and of the States of the Church, was conducted by General Radet as far as Savone, where he arrived alone, August 10, the cardinals having all been previously transported to Paris. And to complete the spoliation of the pope, Napoleon issued on the 17th of February, 1810, a senatus-consultum which bestowed upon the eldest son of the emperor the title of King of Rome, and even ordained that the emperor should be consecrated a second time at Rome, in the first ten years of his reign. It was while oppressed, captive and deprived of all council, that the pope refused the bulls to all the bishops named by the emperor, and then it was that all the discussions relative to the proper measures to put an end to the vidutty of the churches were commenced. . . . The year 1810, far from bringing any alleviation to the situation of the pope and giving him, according to the wishes and prayers of the ecclesiastic commission, a little more liberty, aggravated, on the contrary, this situation, and rendered his captivity harder. In effect, on February 17, 1810, appeared the senatus-consultum pronouncing the union of the Roman States with the French Empire; the independence of the imperial throne of all authority on earth, and annulling the temporal existence of the popes. This senatus-consultum assured a pension to the pope, but it ordained also that the pope should take oath to do nothing in opposition to the four articles of 1682. . . . The pope must have consoled himself, . . . even to rejoicing, that they made the insulting pension they offered him depend upon the taking of such an oath, and it is that which furnished him with a reply so nobly apostolic: that he had no need of this pension, and that he would live on the charity of the faithful. . . . The rigorous treatment to which the Holy Father was subjected at Savona was continued during the winter of 1811–1812, and in the following spring. At this time, it seems there was some fear, on the appearance of an English squadron, that it might carry off the pope; and the emperor gave the order to transfer him to Fontainebleau. This unhappy old man left Savona, June 10, and was forced to travel day and night. He fell quite ill at the hospice of Mont Cenis; but they forced him none the less to continue his journey. They had compelled him to wear such clothes . . . as not to betray who he was on the way they had to follow. They took great care also to conceal his journey from the public, and the secret was so profoundly kept, that on arriving at Fontainebleau, June 19, the concierge, who had not been advised of his arrival, and who had made no preparation, was obliged to receive him in his own lodgings. The Holy Father was a long time before recovering from the fatigue of this painful journey, and from the needlessly rigorous treatment to which they had subjected him. The cardinals not disgraced by Napoleon, who were in Paris, as well as the Archbishop of Tours, the Bishop of Nantes, the Bishop of Evreux, and the Bishop of Trèves, were ordered to go and see the pope. . . . The Russian campaign, marked by so many disasters, was getting to a close. The emperor on his return to Paris, December 18, 1812, still cherished chimerical hopes, and was meditating without doubt, more gigantic projects. Before carrying them out, he wished to take up again the affairs of the Church, either because he repented not having finished with them at Savona, or because he had the fancy to prove that he could do more in a two hours' tête-à-tête with the pope, than had been done by the council, its commissions, and its most able negotiators. He had beforehand, however, taken measures which were to facilitate his personal negotiation. The Holy Father had been surrounded for several months by cardinals and prelates, who, either from conviction or from submission to the emperor, depicted the Church as having arrived at a state of anarchy which put its existence in peril. They repeated incessantly to the pope, that if he did not get reconciled with the emperor and secure the aid of his power to arrest the evil, schism would be inevitable. Finally, the Sovereign pontiff overwhelmed by age, by infirmities, by the anxiety and cares with which his mind was worried,

found himself well prepared for the scene Napoleon had planned to play, and which was to assure him what he believed to be a success. On January 19, 1813, the emperor, accompanied by the Empress Marie Louise, entered the apartment of the Holy Father unexpectedly, rushed to him and embraced him with effusion. Pius VII., surprised and affected, allowed himself to be induced, after a few explanations, to give his approbation to the propositions that were imposed, rather than submitted to him. They were drawn up in eleven articles, which were not yet a compact, but which were to serve as the basis of a new act. On January 24, the emperor and the pope affixed their signatures to this strange paper, which was lacking in the usual diplomatic forms, since they were two sovereigns who had treated directly together. It was said in these articles, that the pope would exercise the pontificate in France, and in Italy; — that his ambassadors and those in authority near him, should enjoy all diplomatic privileges; — that such of his domains which were not disposed of should be free from taxes, and that those which were transferred should be replaced by an income of 2,000,000 francs; — that the pope should nominate, whether in France or in Italy, to episcopal sees which should be subsequently fixed; that the suburban sees should be re-established, and depend on the nomination of the pope, and that the unsold lands of these sees should be restored; that the pope should give bishoprics 'in partibus' to the Roman bishops absent from their diocese by force of circumstances, and that he should serve them a pension equal to their former revenue, until such time as they should be appointed to vacant sees; that the emperor and the pope should agree in opportune time as to the reduction to be made if it took place, in the bishoprics of Tuscany and of the country about Geneva, as well as to the institution of bishoprics in Holland, and in the Hanseatic departments; that the propaganda, the confessional, and the archives should be established in the place of sojourn of the Holy Father; finally, that His Imperial Majesty bestowed his good graces upon the cardinals, bishops, priests, and laymen, who had incurred his displeasure in connection with actual events. . . . The news of the signing of the treaty occasioned great joy among the people, but it appears that that of the pope was of short duration. The sacrifices he had been led to make were hardly consummated, than he experienced bitter grief; this could but be increased in proportion as the exiled and imprisoned cardinals, Consalvi, Pacca, di Pietro, on obtaining their liberty, received also the authorization to repair to Fontainebleau. What passed then between the Holy Father and these cardinals I do not pretend to know; but it must be that Napoleon had been warned by some symptoms of what was about to happen; for, in spite of the agreement he had made with the pope to consider the eleven articles only as preliminaries which were not to be published, he decided nevertheless to make them the object of a message that the arch-chancellor was charged to submit to the senate. This premature publicity given to an act which the pope so strongly regretted having signed must have hastened his retractation which he addressed to the emperor by a brief, on March 24, 1813. . . . This time, the emperor, although greatly irritated by the retractation, believed it was to his interest not to make any noise about it, and decided to take outwardly no notice of it. He had two decrees published: one of February 13, and the other of March 25, 1813. By the first, the new Concordat of January 25 was declared state law; by the second, he declared it obligatory upon archbishops, bishops, and chapters, and ordered, according to Article IV. of this Concordat that the archbishops should confirm the nominated bishops, and in case of refusal, ordained that they should be summoned before the tribunals. He restricted anew the liberty that had been given momentarily to the Holy Father, and Cardinal di Pietro returned to exile. Thereupon, Napoleon started, soon after, for that campaign of 1813 in Germany, the prelude to that which was to lead to his downfall. The decrees issued 'ab irato' were not executed, and during the vicissitudes of the campaign of 1813, the imperial government attempted several times to renew with the pope negotiations which failed. Matters dragged along thus, and no one could foresee any issue when, on January 23, 1814, it was suddenly learned that the pope had left Fontainebleau that very day, and returned to Rome. . . . Murat, who had abandoned the cause of the emperor, and who . . . had treated with the coalition, was then occupying the States of the Church, and it is evident that Napoleon in his indignation against Murat, preferred to allow the pope to re-enter his States, to seeing them in the hands of his brother-in-law. While Pius VII. was en route and the emperor was fighting in Champagne, a decree of March 10, 1814, announced that the pope was taking possession again of the part of his States which formed the departments of Rome and Trasmania. The lion, although vanquished, would not yet let go all the prey he hoped surely to retake. . . . The pope arrived on April 30, at Cesena, on May 12, at Ancona, and made his solemn entry into Rome on May 24, 1814."—Talleyrand, *Memoirs, pt.* 6 (*v.* 2).

A. D. 1850.—Restoration of the Roman Episcopate in England.—"The Reformation had deprived the Church of Rome of an official home on English soil. . . . But a few people had remained faithful to the Church of their forefathers, and a handful of priests had braved the risks

attendant on the discharge of their duties to it. Rome, moreover, succeeded in maintaining some sort of organisation in England. In the first instance her Church was placed under an archpriest. From 1623 to 1688 it was placed under a Vicar Apostolic, that is a Bishop, nominally appointed to some foreign see, with a brief enabling him to discharge episcopal duties in Great Britain. This policy was not very successful. Smith, the second Vicar Apostolic, was banished in 1629, and, though he lived till 1655, never returned to England. The Pope did not venture on appointing a successor to him for thirty years. . . . On the eve of the Revolution [in 1688] he divided England into four Vicariates. This arrangement endured till 1840. In that year Gregory XVI. doubled the vicariates, and appointed eight Vicars Apostolic. The Roman Church is a cautious but persistent suitor. She had made a fresh advance; she was awaiting a fresh opportunity. The eight Vicars Apostolic asked the Pope to promote the efficiency of their Church by restoring the hierarchy. The time seemed ripe for the change. . . . The Pope prepared Apostolic letters, distributing the eight vicariates into eight bishoprics. . . . The Revolution, occurring immediately afterwards, gave the Pope other things to think about than the re-establishment of the English hierarchy. For two years nothing more was heard of the conversion of vicariates into bishoprics. But the scheme had not been abandoned; and, in the autumn of 1850, the Pope, restored to the Vatican by French bayonets, issued a brief for 're-establishing and extending the Catholic faith in England.' England and Wales were divided into twelve sees. One of them, Westminster, was made into an archbishopric; and Wiseman, an Irishman by extraction, who had been Vicar Apostolic of the London District, and Bishop of Melipotamus, was promoted to it. Shortly afterwards a new distinction was conferred upon him, and the new archbishop was made a cardinal. The publication of the brief created a ferment in England. The effect of the Pope's language was increased by a pastoral from the new archbishop, in which he talked of governing, and continuing to govern, his see with episcopal jurisdiction; and by the declaration of an eminent convert that the people of England, who for so many years have been separated from the see of Rome, are about of their own free will to be added to the Holy Church. For the moment, High Churchmen and Low Churchmen forgot their differences in their eagerness to punish a usurpation of what was called the Queen's prerogative. The Prime Minister, instead of attempting to moderate the tempest, added violence to the storm by denouncing, in a letter to the Bishop of Durham, the late aggression of the Pope as 'insolent and insidious, . . . inconsistent with the Queen's supremacy, with the rights of our bishops and clergy, and with the spiritual independence of the nation.' . . . Amidst the excitement which was thus occasioned, Parliament met. The Speech from the Throne alluded to the strong feelings excited by 'the recent assumption of ecclesiastical titles conferred by a foreign Power.' . . . It declared that a measure would be introduced into Parliament to maintain 'under God's blessing, the religious liberty which is so justly prized by the people.' It hardly required such words as these to fan the spreading flame. In the debate on the Address, hardly any notice was taken of any subject except the 'triple tyrant's insolent pretension.' On the first Friday in the session, Russell introduced a measure forbidding the assumption of territorial titles by the priests and prelates of the Roman Catholic Church; declaring all gifts made to them, and all acts done by them, under those titles null and void; and forfeiting to the Crown all property bequeathed to them." Action on the Bill was interrupted in the House by a Ministerial crisis, which ended, however, in the return of Lord John Russell and his colleagues to the administration; but the Ecclesiastical Titles Bill, when it was again brought forward, was greatly changed. In its amended shape the bill merely made it illegal for Roman Catholic prelates to assume territorial titles. According to the criticism of one of the Conservatives, "the original bill . . . was milk and water; by some chemical process the Government had extracted all the milk." After much debate the emasculated bill became a law, but it was never put into execution.—S. Walpole, *Hist. of Eng. from* 1815, *ch.* 23 (*v.* 5).

A. D. 1854.—Promulgation of the Dogma of the Immaculate Conception of the Virgin Mary.—"The thought of defining dogmatically the belief of all ages and all Catholic nations in the Immaculate Conception of the Blessed Virgin dated back to the beginning of his [Pius IX.'s] pontificate. By an encyclical letter dated from his exile at Gaeta, he had asked the opinion of all the patriarchs, primates, archbishops and bishops of the universe as to the seasonableness of this definition. The holding of a general council is attended with many embarrassments, and cannot be freed from the intrigues and intervention of the so-called Catholic powers. Pius IX. has initiated a new course. All, even the most Gallican in ideas, acknowledge that a definition in matters of faith by the pope, sustained by the episcopate, is infallible. The rapid means of communication and correspondence in modern times, the more direct intercourse of the bishops with Rome, makes it easy now for the pope to hear the well-considered, deliberate opinion of a great majority of the bishops throughout the world. In this case the replies of the bishops coming from all parts of the world show that the universal Church, which has one God, one baptism, has also one faith. As to the dogma there was no dissension, a few doubted the expediency of making it an article of faith. These replies determined the Holy Father to proceed to the great act, so long demanded by [the] Catholic heart. . . . A number of bishops were convoked to Rome for the 8th of December, 1854; a still greater number hastened to the Eternal City. . . . That day the bishops assembled in the Vatican to the number of 170, and robed in white cape and mitre proceeded to the Sixtine Chapel, where the Holy Father soon appeared in their midst." There, after befitting ceremonies, the pontiff made formal proclamation of the dogma of the Immaculate Conception of Mary, in the following words: "'By the authority of Jesus Christ our Lord, of the blessed apostles, Peter and Paul, and our own, we declare, pronounce, and define that the doctrine which holds that the Blessed Virgin Mary, at the first instant of her

conception, by a singular privilege and grace of the Omnipotent God, in virtue of the merits of Jesus Christ, the Saviour of mankind, was preserved immaculate from all stain of original sin, has been revealed by God, and therefore should firmly and constantly be believed by all the faithful. Wherefore, if any shall dare — which God avert — to think otherwise than as it has been defined by us, let them know and understand that they are condemned by their own judgment, that they have suffered shipwreck of the faith, and have revolted from the unity of the Church; and besides, by their own act, they subject themselves to the penalties justly established, if what they think they should dare to signify by word, writing, or any other outward means.'. . . . The next day the sovereign pontiff assembled the sacred college and the bishops in the great consistorial hall of the Vatican, and pronounced the allocution which, subsequently published by all the bishops, announced to the Catholic world the act of December 8th."—A. de Montor, *The Lives and Times of the Roman Pontiffs, v. 2, pp.* 924–926.

A. D. 1860-1861.—First consequences of the Austro-Italian war.—Absorption of Papal States in the new Kingdom of Italy. See ITALY: A. D. 1859–1861.

A. D. 1864.—The Encyclical and the Syllabus.—"On the 8th of December 1864, Pius IX. issued his Encyclical [a circular letter addressed by the Pope to all the Patriarchs, Primates, Archbishops and Bishops of the Church throughout the world] 'Quanta cura,' accompanied by the Syllabus, or systematically arranged collection of errors, condemned from time to time, by himself and his predecessors. The Syllabus comprises 80 erroneous propositions. These are set forth under 10 distinct heads: viz. 1. Pantheism, Naturalism, and Absolute Rationalism; 2. Moderated Rationalism; 3. Indifferentism, Latitudinarianism; 4. Socialism, Communism, Secret Societies, Biblical Societies, Clerico-Liberal Societies; 5. Errors concerning the Church and her rights; 6. Errors concerning Civil Society, as well in itself as in its relations with the Church; 7. Errors concerning Natural and Christian Ethics; 8. Errors concerning Christian marriage; 9. Errors concerning the Civil Princedom of the Roman Pontiff; 10. Errors in relation with Modern Liberalism. Immediately under each error are given the two initial words, and the date, of the particular Papal Allocution, Encyclical, Letter Apostolic, or Epistle, in which it is condemned. Whilst, on the one hand, the publication of the Encyclical and Syllabus was hailed by many as the greatest act of the pontificate of Pius IX., on the other hand, their appearance excited the angry feelings, and intensified the hostility, of the enemies of the Church."—J. N. Murphy, *The Chair of Peter, ch.* 33.

The following is a translation of the text of the Encyclical, followed by that of the Syllabus or Catalogue of Errors:

To our venerable brethren all the Patriarchs, Primates, Archbishops, and Bishops in communion with the Apostolic See, we, Pius IX., Pope, send greeting, and our apostolic blessing: You know, venerable brethren, with what care and what pastoral vigilance the Roman Pontiffs, our predecessors — fulfilling the charge intrusted to them by our Lord Jesus Christ himself in the person of the blessed Peter, chief of the apostles — have unfailingly observed their duty in providing food for the sheep and the lambs, in assiduously nourishing the flock of the Lord with the words of faith, in imbuing them with salutary doctrine, and in turning them away from poisoned pastures; all this is known to you, and you have appreciated it. And certainly our predecessors, in affirming and in vindicating the august Catholic faith, truth, and justice, were never animated in their care for the salvation of souls by a more earnest desire than that of extinguishing and condemning by their letters and their constitutions all the heresies and errors which, as enemies of our divine faith, of the doctrines of the Catholic Church, of the purity of morals, and of the eternal salvation of man, have frequently excited serious storms, and precipitated civil and Christian society into the most deplorable misfortunes. For this reason our predecessors have opposed themselves with vigorous energy to the criminal enterprise of those wicked men, who, spreading their disturbing opinions like the waves of a raging sea, and promising liberty when they are slaves to corruption, endeavor by their pernicious writings to overturn the foundations of the Christian Catholic religion and of civil society; to destroy all virtue and justice; to deprave all minds and hearts; to turn away simple minds, and especially those of inexperienced youth, from the healthy discipline of morals; to corrupt it miserably, to draw it into the meshes of error, and finally to draw it from the bosom of the Catholic Church. But as you are aware, venerable brethren, we had scarcely been raised to the chair of St. Peter above our merits, by the mysterious designs of Divine Providence, than seeing with the most profound grief of our soul the horrible storm excited by evil doctrines, and the very grave and deplorable injury caused specially by so many errors to Christian people, in accordance with the duty of our apostolic ministry, and following in the glorious footsteps of our predecessors, we raised our voice, and by the publication of several encyclicals, consistorial letters, allocutions, and other apostolic letters, we have condemned the principal errors of our sad age, re-animated your utmost episcopal vigilance, warned and exhorted upon various occasions all our dear children in the Catholic Church to repel and absolutely avoid the contagion of so horrible a plague. More especially in our first encyclical of the 9th November, 1846, addressed to you, and in our two allocutions of the 9th December, 1854, and the 9th June, 1862, to the consistories, we condemned the monstrous opinions which particularly predominated in the present day, to the great prejudice of souls and to the detriment of civil society — doctrines which not only attack the Catholic Church, her salutary instruction, and her venerable rights, but also the natural, unalterable law inscribed by God upon the heart of man — that of sound reason. But although we have not hitherto omitted to proscribe and reprove the principal errors of this kind, yet the cause of the Catholic Church, the safety of the souls which have been confided to us, and the well-being of human society itself, absolutely demand that we should again exercise our pastoral solicitude to destroy new opinions which spring out of these same errors as from so many sources. These false and perverse opinions are

the more detestable as they especially tend to shackle and turn aside the salutary force that the Catholic Church, by the example of her Divine author and his order, ought freely to exercise until the end of time, not only with regard to each individual man, but with regard to nations, peoples, and their rulers, and to destroy that agreement and concord between the priesthood and the government which have always existed for the happiness and security of religious and civil society. For as you are well aware, venerable brethren, there are a great number of men in the present day who, applying to civil society the impious and absurd principle of naturalism, as it is called, dare to teach that the perfect right of public society and civil progress absolutely require a condition of human society constituted and governed without regard to all considerations of religion, as if it had no existence, or, at least, without making any distinction between true religion and heresy. And, contrary to the teaching of the Holy Scriptures, of the church, and of the fathers, they do not hesitate to affirm that the best condition of society is that in which the power of the laity is not compelled to inflict the penalties of law upon violators of the Catholic religion unless required by considerations of public safety. Actuated by an idea of social government so absolutely false, they do not hesitate further to propagate the erroneous opinion, very hurtful to the safety of the Catholic Church and of souls, and termed "delirium" by our predecessor, Gregory XVI., of excellent memory, namely: "Liberty of conscience and of worship is the right of every man — a right which ought to be proclaimed and established by law in every well-constituted State, and that citizens are entitled to make known and declare, with a liberty which neither the ecclesiastical nor the civil authority can limit, their convictions of whatever kind, either by word of mouth, or through the press, or by other means." But in making these rash assertions they do not reflect, they do not consider, that they preach the liberty of perdition (St. Augustine, Epistle 105, Al. 166), and that "if it is always free to human conviction to discuss, men will never be wanting who dare to struggle against the truth and to rely upon the loquacity of human wisdom, when we know by the example of our Lord Jesus Christ how faith and Christian sagacity ought to avoid this culpable vanity." (St. Leon, Epistle 164, Al. 133, sec. 2, Boll. Ed.) Since also religion has been banished from civil government, since the doctrine and authority of divine revelation have been repudiated, the idea intimately connected therewith of justice and human right is obscured by darkness and lost sight of, and in place of true justice and legitimate right brute force is substituted, which has permitted some, entirely oblivious of the plainest principles of sound reason, to dare to proclaim "that the will of the people, manifested by what is called public opinion or by other means, constitutes a supreme law superior to all divine and human right, and that accomplished facts in political affairs, by the mere fact of their having been accomplished, have the force of law." But who does not perfectly see and understand that human society, released from the ties of religion and true justice, can have no further object than to amass riches, and can follow no other law in its actions than the indomitable wickedness of a heart given up to pleasure and interest? For this reason, also, these same men persecute with so relentless a hatred the religious orders, who have deserved so well of religion, civil society, and letters. They loudly declare that the orders have no right to exist, and in so doing make common cause with the falsehoods of the heretics. For, as taught by our predecessor of illustrious memory, Pius VI., "the abolition of religious houses injures the state of public profession, and is contrary to the counsels of the Gospel, injures a mode of life recommended by the church and in conformity with the Apostolic doctrine, does wrong to the celebrated founders whom we venerate upon the altar, and who constituted these societies under the inspiration of God." (Epistle to Cardinal de la Rochefoucauld, March 10, 1791.) In their impiety these same persons pretend that citizens and the church should be deprived of the opportunity of openly "receiving alms from Christian charity," and that the law forbidding "servile labor on account of divine worship" upon certain fixed days should be abrogated, upon the fallacious pretext that this opportunity and this law are contrary to the principles of political economy. Not content with eradicating religion from public society, they desire further to banish it from families and private life. Teaching and professing these most fatal errors of Socialism and Communism, they declare that "domestic society, or the entire family, derives its right of existence solely from civil law, whence it is to be concluded that from civil law descend all the rights of parents over their children, and, above all, the right of instructing and educating them." By such impious opinions and machinations do these false spirits endeavor to eliminate the salutary teaching and influences of the Catholic Church from the instruction and education of youth, and to infect and miserably deprave by their pernicious errors and their vices the pliant minds of youth. All those who endeavor to trouble sacred and public things, to destroy the good order of society, and to annihilate all divine and human rights, have always concentrated their criminal schemes, attention, and efforts upon the manner in which they might above all deprave and delude unthinking youth, as we have already shown. It is upon the corruption of youth that they place all their hopes. Thus they never cease to attack the clergy, from whom have descended to us in so authentic manner the most certain records of history, and by whom such desirable benefit has been bestowed in abundance upon Christian and civil society and upon letters. They assail them in every shape, going so far as to say of the clergy in general — "that being the enemies of the useful sciences, of progress, and of civilization, they ought to be deprived of the charge of instructing and educating youth." Others, taking up wicked errors many times condemned, presume with notorious impudence to submit the authority of the church and of this Apostolic See, conferred upon it by God himself, to the judgment of civil authority, and to deny all the rights of this same church and this see with regard to exterior order. They do not blush to affirm that the laws of the church do not bind the conscience if they are not promulgated by the civil power; that the acts and decrees of the Roman Pontiffs concerning religion and the church require the sanction and approbation, or, at least,

the assent, of the civil power; and that the Apostolic constitutions condemning secret societies, whether these exact, or do not exact, an oath of secrecy, and branding with anathema their secretaries and promoters, have no force in those regions of the world where these associations are tolerated by the civil government. It is likewise affirmed that the excommunications launched by the Council of Trent and the Roman Pontiffs against those who invade the possessions of the church and usurp its rights, seek, in confounding the spiritual and temporal powers, to attain solely a terrestrial object; that the church can decide nothing which may bind the consciences of the faithful in a temporal order of things; that the law of the church does not demand that violations of sacred laws should be punished by temporal penalties; and that it is in accordance with sacred theology and the principles of public law to claim for the civil government the property possessed by the churches, the religious orders, and other pious establishments. And they have no shame in avowing openly and publicly the thesis, the principle of heretics from whom emanate so many errors and perverse opinions. They say: "That the ecclesiastical power is not of right divine, distinct and independent from the civil power; and that no distinction, no independence of this kind can be maintained without the church invading and usurping the essential rights of the civil power." Neither can we pass over in silence the audacity of those who, insulting sound doctrines, assert that "the judgments and decrees of the Holy See, whose object is declared to concern the general welfare of the church, its rights, and its discipline, do not claim the acquaintance and obedience under pain of sin and loss of the Catholic profession, if they do not treat of the dogmas of faith and manners." How contrary is this doctrine to the Catholic dogma of the full power divinely given to the sovereign Pontiff by our Lord Jesus Christ, to guide, to supervise, and govern the universal church, no one can fail to see and understand clearly and evidently. Amid so great a diversity of depraved opinions, we, remembering our apostolic duty, and solicitous before all things for our most holy religion, for sound doctrine, for the salvation of the souls confided to us, and for the welfare of human society itself, have considered the moment opportune to raise anew our apostolic voice. And therefore do we condemn and proscribe generally and particularly all the evil opinions and doctrines specially mentioned in this letter, and we wish that they may be held as rebuked, proscribed, and condemned by all the children of the Catholic Church. But you know further, venerable brothers, that in our time insulters of every truth and of all justice, and violent enemies of our religion, have spread abroad other impious doctrines by means of pestilent books, pamphlets, and journals which, distributed over the surface of the earth, deceive the people and wickedly lie. You are not ignorant that in our day men are found who, animated and excited by the spirit of Satan, have arrived at that excess of impiety as not to fear to deny our Lord and Master Jesus Christ, and to attack his divinity with scandalous persistence. We cannot abstain from awarding you well-merited eulogies, venerable brothers, for all the care and zeal with which you have raised your episcopal voice against so great an impiety.

Catalogue of the Principal Errors of Our Time Pointed Out in the Consistorial Allocutions, Encyclical and other Apostolical Letters of Pope Pius IX.

I.—PANTHEISM, NATURALISM, AND ABSOLUTE RATIONALISM.

1. There is no divine power, supreme being, wisdom, and providence distinct from the universality of things, and God is none other than the nature of things, and therefore immutable. In effect, God is in man, and in the world, and all things are God, and have the very substance of God. God is, therefore, one and the same thing with the world, and thence mind is confounded with matter, necessity with liberty of action, true with false, good with evil, just with unjust.—(See Allocution, "Maxima quidem," June 9, 1862.)

2. All action of God upon man and the world should be denied.—(See Alloc., "Maxima quidem," June 9, 1862.)

3. Human reason, without any regard to God, is the sole arbiter of true and false, good and evil; it is its own law in itself, and suffices by its natural force for the care of the welfare of men and nations.—(See Alloc., "Maxima quidem," June 9, 1862.)

4. All the truths of religion are derived from the native strength of human reason, whence reason is the principal rule by which man can and must arrive at the knowledge of all truths of every kind.—(See Encyclicals, "Qui pluribus," Nov. 9, 1846, and "Singulari quidem," March 17, 1856, and Alloc., "Maxima quidem," June 9, 1862.)

5. Divine revelation is imperfect, and therefore subject to the continual and indefinite progress corresponding to the progress of human reason.—(See Encyc., "Qui pluribus," Nov. 9, 1846, and Alloc., "Maxima quidem," June 9, 1862.)

6. Christian faith is in opposition to human reason, and divine revelation is not only useless but even injurious to the perfection of man.—(See Encyc., "Qui pluribus," Nov. 9, 1846, and Alloc., "Maxima quidem," June 9, 1862.)

7. The prophecies and miracles told and narrated in the sacred books are the fables of poets, and the mysteries of the Christian faith the sum of philosophical investigations. The books of the two Testaments contain fabulous fictions, and Jesus Christ is himself a myth.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Maxima quidem," June 9, 1862.)

II.—MODERATE RATIONALISM.

8. As human reason is rendered equal to religion itself, theological matters must be treated as philosophical matters.—(Alloc., "Singulari quidem perfusi.")

9. All the dogmas of the Christian religion are indistinctly the object of natural science or philosophy, and human reason, instructed solely by history, is able by its natural strength and principles to arrive at a comprehension of even the most abstract dogmas from the moment when they have been proposed as objective.—(Letter to Archbishop Frising, "Gravissimus," Dec. 4, 1862. Letter to the same, "Tuas libenter," Dec. 21, 1863.)

10. As the philosopher is one thing and philosophy is another, it is the right and duty of the

former to submit himself to the authority of which he shall have recognized the truth; but philosophy neither can nor ought to submit to authority.—(Letter to Archbishop Frising, "Gravissimus," Dec. 11, 1862; to the same, "Tuas libenter," Dec. 21, 1863.)

11. The church not only ought in no way to concern herself with philosophy, but ought further herself to tolerate the errors of philosophy, leaving to it the care of their correction.—(Letter to Archbishop Frising, Dec. 11, 1862.)

12. The decrees of the Apostolic See and of the Roman congregation fetter the free progress of science.—(Id., ibid.)

13. The methods and principles by which the old scholastic doctors cultivated theology are no longer suitable to the demands of the age and the progress of science.—(Id., "Tuas libenter," Dec. 21, 1863.)

14. Philosophy must be studied without taking any account of supernatural revelation.—(Id., ibid.)

N. B.—To the rationalistic system are due in great part the errors of Antony Gunther, condemned in the letter to the Cardinal Archbishop of Cologne "Eximiam tuam," June 15, 1847, and in that to the Bishop of Breslau, "Dolore haud mediocri," April 30, 1860.

III.—INDIFFERENTISM, TOLERATION.

15. Every man is free to embrace and profess the religion he shall believe true, guided by the light of reason.—(Apost. Let., "Multiplices inter," June 10, 1851; Alloc., "Maxima quidem," June 9, 1862.)

16. Men who have embraced any religion may find and obtain eternal salvation.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Ubi primum," Dec. 17, 1847; Encyc., "Singulari quidem," March 17, 1856.)

17. At least the eternal salvation may be hoped for of all who have never been in the true church of Christ.—(Alloc., "Singulari quidem," Dec. 9, 1865; Encyc., "Quanto conficiamur mœrore," Aug. 17, 1863.)

18. Protestantism is nothing more than another form of the same true religion in which it is possible to be equally pleasing to God, as in the Catholic church.—(Encyc., "Nescitis et vobiscum," Dec. 8, 1849.)

IV.—SOCIALISM, COMMUNISM, CLANDESTINE SOCIETIES, BIBLICAL SOCIETIES, CLERICO-LIBERAL SOCIETIES.

Pests of this description have been frequently rebuked in the severest terms in the Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Quibus, quantisque," Aug. 20, 1849; Encyc., "Nescitis et vobiscum," Dec. 8, 1849; Alloc., "Singulari quidem," Dec. 9, 1854; Encyc., "Quanto conficiamur mœrore," Aug. 10, 1863.

V.—ERRORS RESPECTING THE CHURCH AND HER RIGHTS.

19. The church is not a true and perfect entirely free association; she does not rest upon the peculiar and perpetual rights conferred upon her by her divine founder; but it appertains to the civil power to define what are the rights and limits within which the church may exercise authority.—(Alloc., "Singulari quidem," Dec. 9, 1854; "Multis gravibus," Dec. 17, 1860; "Maxima quidem," June, 1862.)

20. The ecclesiastical power must not exercise its authority without the toleration and assent of the civil government.—(Alloc., "Meminit unusquisque," Sept. 30, 1851.)

21. The church has not the power of disputing dogmatically that the religion of the Catholic church is the only true religion.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

22. The obligation which binds Catholic masters and writers does not apply to matters proposed for universal belief as articles of faith by the infallible judgment of the church.—(Let. to Archbishop Frising, "Tuas libenter," Dec. 21, 1863.)

23. The church has not the power of availing herself of force, or any direct or indirect temporal power.—(Lit. Apost., "Ad apostolicas," August 22, 1851.)

24. The Roman pontiffs and œcumenical councils have exceeded the limits of their power, have usurped the rights of princes, and have even committed errors in defining matter relating to dogma and morals.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

25. In addition to the authority inherent in the episcopate, further temporal power is granted to it by the civil power, either expressly or tacitly, but on that account also revocable by the civil power whenever it pleases.—(Lit. Apost., "Ad Apostolicas," August 22, 1851.)

26. The church has not the natural and legitimate right of acquisition and possession.—("Nunquam," December 18, 1856; Encyc., "Incredibili," September 17, 1862.)

27. The ministers of the church and the Roman pontiff ought to be absolutely excluded from all charge and dominion over temporal affairs.—(Alloc., "Maximum quidem," June 9, 1862.)

28. Bishops have not the right of promulgating their apostolical letters without the sanction of the government.—(Alloc., "Nunquam fore," December 15, 1856.)

29. Spiritual graces granted by the Roman pontiff must be considered null unless they have been requested by the civil government.—(Id., ibid.)

30. The immunity of the church and of ecclesiastical persons derives its origin from civil law.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

31. Ecclesiastical jurisdiction for temporal lawsuits, whether civil or criminal, of the clergy, should be abolished, even without the consent and against the desire of the Holy See.—(Alloc., "Acerbissimum," September 27, 1852; Id., "Nunquam fore," December 15, 1856.)

32. The personal immunity exonerating the clergy from military law may be abrogated without violation either of natural right or of equity. This abrogation is called for by civil progress, especially in a society modelled upon principles of liberal government.—(Let. to Bishop Montisregal, "Singularis nobilisque," September 29, 1864.)

33. It does not appertain to ecclesiastical jurisdiction, by any right, and inherent to its essence, to direct doctrine in matters of theology.—(Let. to Archbishop Frising, "Tuas libenter," Dec. 21, 1863.)

34. The doctrine of those who compare the sovereign pontiff to a free sovereign acting in the universal church is a doctrine which pre-

vailed in the middle ages.—(Lit. Apost., Aug. 22, 1851.)

35. There is no obstacle to the sentence of a general council, or the act of all the nation transferring the pontifical sovereign from the bishopric and city of Rome to some other bishopric in another city.—(Id., ibid.)

36. The definition of a national council does not admit of subsequent discussion, and the civil power can require that matters shall remain as they are.—(Id., ibid.)

37. National churches can be established without, and separated from, the Roman pontiff.—(Alloc., "Multis gravibusque," Dec. 17, 1860; "Jamdudum cernimus," March 18, 1861.)

38. Many Roman pontiffs have lent themselves to the division of the church in Eastern and Western churches.—(Lit. Apost., "Ad Apostolicas," August 22, 1851.)

VI.—ERRORS OF CIVIL SOCIETY, AS MUCH IN THEMSELVES AS CONSIDERED IN THEIR RELATIONS TO THE CHURCH.

39. The state of a republic, as being the origin and source of all rights, imposes itself by its rights, which is not circumscribed by any limit.—(Alloc., "Maxima quidem," June 9, 1862.)

40. The doctrine of the Catholic church is opposed to the laws and interests of society.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Quibus quantisque," April 20, 1849.)

41. The civil government, even when exercised by a heretic sovereign, possesses an indirect and negative power over religious affairs.—(Lit. Apost., August 22, 1851.)

42. In a legal conflict between the two powers, civil law ought to prevail.—(Id., ibid.)

43. The lay power has the authority to destroy, declare, and render null solemn conventions or concordats relating to the use of rights appertaining to ecclesiastical immunity, without the consent of the priesthood, and even against its will.—(Alloc., "In consistoriali," Nov. 1, 1850; "Multis gravibusque," Dec. 17, 1860.)

44. The civil authority may interfere in matters regarding religion, morality, and spiritual government, whence it has control over the instructions for the guidance of consciences issued, conformably with their mission, by the pastors of the church. Further, it possesses full power in the matter of administering the divine sacraments and the necessary arrangements for their reception.—("In consistoriali," Nov. 1, 1858; Alloc., "Maxima quidem," June 9, 1862.)

45. The entire direction of public schools in which the youth of Christian States are educated, save an exception in the case of Episcopal seminaries, may and must appertain to the civil power, and belong to it so far that no other authority shall be recognized as having any right to interfere in the discipline of the schools, the arrangement of the studies, the taking of degrees, or the choice and approval of teachers.—(Alloc., "In consistoriali," Nov. 1, 1850; "Quibus luctuosissimis," Sept. 5, 1861.)

46. Further, even in clerical seminaries the mode of study must be submitted to the civil authority.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

47. The most advantageous conditions of civil society require that popular schools open without distinction to all children of the people, and public establishments destined to teach young people letters and good discipline, and to impart to them education, should be freed from all ecclesiastical authority and interference, and should be fully subjected to the civil and political power for the teaching of masters and opinions common to the times.—(Letter to Archbishop of Friburg, "Quum none sine," July 14, 1864.)

48. This manner of instructing youth, which consists in separating it from the Catholic faith and from the power of the church, and in teaching it above all a knowledge of natural things and the objects of social life, may be perfectly approved by Catholics.—(Id., ibid.)

49. The civil power is entitled to prevent ministers of religion and the faithful from communicating freely and mutually with the Roman Pontiff.—(Alloc., "Maxima quidem," June 9, 1862.)

50. The lay authority possesses of itself the right of presenting bishops, and may require of them that they take possession of their diocese before having received canonical institution and the Apostolical letter of the Holy See.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

51. Further, the lay authority has the right of deposing bishops from their pastoral functions, and is not forced to obey the Roman Pontiff in matters affecting the filling of sees and the institution of bishops.—(Lit. Apost., "Multiplices inter," June 10, 1851; Alloc., "Acerbissimum.")

52. The government has a right to alter a period fixed by the church for the accomplishment of the religious duties of both sexes, and may enjoin upon all religious establishments to admit nobody to take solemn vows without permission.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

53. Laws respecting the protection, rights, and functions of religious establishments must be abrogated; further, the civil government may lend its assistance to all who desire to quit a religious life, and break their vows. The government may also deprive religious establishments of the right of patronage to collegiate churches and simple benefices, and submit their goods to civil competence and administration.—(Alloc., "Acerbissimum," Sept. 27, 1862; "Probe memineritis," Jan. 22, 1885; and "Quum sæpe," July 26, 1858.)

54. Kings and princes are not only free from the jurisdiction of the church, but are superior to the church even in litigious questions of jurisdiction.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

55. The church must be separated from the State and the State from the church.—(Alloc., "Acerbissimum," Sept. 27, 1862.)

VII.—ERRORS IN NATURAL AND CHRISTIAN MORALS.

56. Moral laws do not stand in need of the Divine sanction, and there is no necessity that human laws should be conformable to the laws of nature and receive their sanction from God.—(Alloc., "Maxima quidem," June 9, 1862.)

57. Knowledge of philosophical and moral things and civil laws may and must be free from Divine and ecclesiastical authority.—(Id., ibid.)

58. No other forces are recognized than those which reside in matter, and which, contrary to all discipline and all decency of morals, are summed up in the accumulation and increase of riches by every possible means and in the satisfaction of every pleasure.—(Id., ibid; Alloc.,

"Maxima quidem;" Encyc., "Quanto conficiamur," August 10, 1863.)

59. Right consists in material fact. All human duties are vain words, and all human facts have the force of right.—(Alloc., "Maxima quidem," June 9, 1862.)

60. Authority is nothing but the sum of numbers and material force.—(Id., ibid.)

61. The happy injustice of a fact inflicts no injury upon the sanctity of right.—(Alloc., "Jamdudum cernimus," March 18, 1861.)

62. The principle of non-intervention must be proclaimed and observed.—(Alloc., "Novos et ante," Sept. 27, 1860.)

63. It is allowable to withdraw from obedience to legitimate princes and to rise in insurrection against them.—(Encyc., "Qui pluribus," Nov. 9, 1846; Alloc., "Quisque vestrum," Oct. 4, 1847; Encyc., "Noscitis et nobiscum," Dec. 8, 1849; Lit. Apost., "Cum Catholica," March 25, 1860.)

64. The violation of a solemn oath, even every guilty and shameful action repugnant to the eternal law, is not only undeserving rebuke, but is even allowable and worthy of the highest praise when done for the love of country.—(Alloc., "Quibus quantisque," April 20, 1849.)

VIII.—ERRORS AS TO CHRISTIAN MARRIAGE.

65. It is not admissible, rationally, that Christ has raised marriage to the dignity of a sacrament.—(Lit. Apost., August 22, 1852.)

66. The sacrament of marriage is only an adjunct of the contract, from which it is separable, and the sacrament itself only consists in the nuptial benediction.—(Id., ibid.)

67. By the law of nature the marriage tie is not indissoluble, and in many cases divorce, properly so called, may be pronounced by the civil authority.—(Id., ibid.; Alloc., "Acerbissimum," Sept. 27, 1852.)

68. The church has not the power of pronouncing upon the impediments to marriage. This belongs to civil society, which can remove the existing hindrances.—(Lit. Apost., "Multiplices inter," June 10, 1851.)

69. It is only more recently that the church has begun to pronounce upon invalidating obstacles, availing herself, not of her own right, but of a right borrowed from the civil power.—(Lit. Apost., August 22, 1851.)

70. The canons of the Council of Trent, which invoke anathema against those who deny the church the right of pronouncing upon invalidating obstacles, are not dogmatic, and must be considered as emanating from borrowed power.—(Lit. Apost., ibid.)

71. The form of the said council, under the penalty of nullity, does not bind in cases where the civil law has appointed another form, and desires that this new form is to be used in marriage.—(Id., ibid.)

72. Boniface VIII. is the first who declared that the vow of chastity pronounced at ordination annuls nuptials.—(Id., ibid.)

73. A civil contract may very well, among Christians, take the place of true marriage, and it is false, either that the marriage contract between Christians must always be a sacrament, or that the contract is null if the sacrament does not exist.—(Id., ibid.; Let. to King of Sardinia, Sept. 9, 1852; Allocs., "Acerbissimum," Sept. 27, 1852; "Multis gravibusque," Dec. 17, 1860.)

74. Matrimonial or nuptial causes belong by their nature to civil jurisdiction.—(Lit. Apost., August 22, 1851; Alloc., "Acerbissimum," Sept. 27, 1852.)

N. B.—Two other errors are still current upon the abolition of the celibacy of priests and the preference due to the state of marriage over that of virginity. These have been refuted—the first in Encyc., "Qui pluribus," Nov. 9, 1846; the second in Lit. Apost., "Multiplices inter," June 10, 1851.

IX.—ERRORS REGARDING THE CIVIL POWER OF THE SOVEREIGN PONTIFF.

75. The children of the Christian and Catholic Church are not agreed upon the compatibility of the temporal with the spiritual power.—(Lit. Apost., August 22, 1852.)

76. The cessation of the temporal power, upon which the Apostolic See is based, would contribute to the happiness and liberty of the church.—(Alloc., "Quibus quantisque," April 20, 1849.)

N. B.—Besides these errors explicitly pointed out, still more, and those numerous, are rebuked by the certain doctrine which all Catholics are bound to respect touching the civil government of the Sovereign Pontiff. These doctrines are abundantly explained in Allocs., "Quantis quantumque," April 20, 1859, and "Si semper antea," May 20, 1850; Lit. Apost., "Quum Catholica Ecclesia," March 26, 1860; Allocs., "Novos," Sept. 28, 1860; "Jamdudum," March 18, 1861; and "Maxima quidem," June 9, 1862.

X.—ERRORS REFERRING TO MODERN LIBERALISM.

77. In the present day it is no longer necessary that the Catholic religion shall be held as the only religion of the State, to the exclusion of all other modes of worship.—(Alloc., "Nemo vestrum," July 26, 1855.)

78. Whence it has been wisely provided by law, in some countries called Catholic, that emigrants shall enjoy the free exercise of their own worship.—(Alloc., "Acerbissimum," Sept. 27, 1852.)

79. But it is false that the civil liberty of every mode of worship and the full power given to all of overtly and publicly displaying their opinions and their thoughts conduce more easily to corrupt the morals and minds of the people and to the propagation of the evil of indifference.—(Alloc., "Nunquam fore," Dec. 15, 1856.)

80. The Roman pontiff can and ought to reconcile himself to and agree with progress, liberalism, and modern civilization.—(Alloc., "Jamdudum cernimus," March 18, 1861.)

A. D. 1869-1870.—The Œcumenical Council of the Vatican.—Adoption and Promulgation of the Dogma of Papal Infallibility.—"More than 300 years after the close of the Council of Trent, Pope Pius IX., . . . resolved to convoke a new œcumenical Council. . . . He first intimated his intention, June 26, 1867, in an Allocution to 500 Bishops who were assembled at the 18th centenary of the martyrdom of St. Peter in Rome. . . . The call was issued by an Encyclical, commencing 'Æterni Patris Unigenitus Filius,' in the 23rd year of his Pontificate, on the feast of St. Peter and Paul, June 29, 1868. It created at once a universal commotion in the Christian world, and called forth a multitude of books and pamphlets even before the Council

convened. . . . It was even hoped that the Council might become a general feast of reconciliation of divided Christendom; and hence the Greek schismatics, and the Protestant heretics and other non-Catholics, were invited by two special letters of the Pope (Sept. 8, and Sept. 13, 1868) to return on this auspicious occasion to 'the only sheepfold of Christ.'. . . But the Eastern Patriarchs spurned the invitation. . . . The Protestant communions either ignored or respectfully declined it. Thus the Vatican Council, like that of Trent, turned out to be simply a general Roman Council, and apparently put the prospect of a reunion of Christendom farther off than ever before. While these sanguine expectations of Pius IX., were doomed to disappointment, the chief object of the Council was attained in spite of the strong opposition of the minority of liberal Catholics. This object . . . was nothing less than the proclamation of the personal Infallibility of the Pope, as a binding article of the Roman Catholic faith for all time to come. Herein lies the whole importance of the Council; all the rest dwindles into insignificance, and could never have justified its convocation. After extensive and careful preparations, the first (and perhaps the last) Vatican Council was solemnly opened amid the sound of innumerable bells and the cannon of St. Angelo, but under frowning skies and a pouring rain, on the festival of the Immaculate Conception of the Virgin Mary, Dec. 8, 1869, in the Basilica of the Vatican. It reached its height at the fourth public session, July 18, 1870, when the decree of Papal Infallibility was proclaimed. After this it dragged on a sickly existence till October 20, 1870, when it was adjourned till Nov. 11, 1870, but indefinitely postponed on account of the extraordinary change in the political situation of Europe. For on the second of September the French Empire, which had been the main support of the temporal power of the Pope, collapsed with the surrender of Napoleon III., at the old Huguenot stronghold of Sedan, to the Protestant King William of Prussia, and on the 20th of September the Italian troops, in the name of King Victor Emmanuel, took possession of Rome, as the future capital of United Italy. Whether the Council will ever be convened again to complete its vast labors, like the twice interrupted Council of Trent, remains to be seen. But, in proclaiming the personal Infallibility of the Pope, it made all future œcumenical Councils unnecessary for the definition of dogmas and the regulation of discipline. . . . The acts of the Vatican Council, as far as they go, are irrevocable. The attendance was larger than at any of its eighteen predecessors. . . . The whole number of prelates of the Roman Catholic Church, who are entitled to a seat in an œcumenical Council, is 1,037. Of these there were present at the opening of the Council 719, viz., 49 Cardinals, 9 Patriarchs, 4 Primates, 121 Archbishops, 479 Bishops, 57 Abbots and Generals of monastic orders. This number afterwards increased to 764, viz., 49 Cardinals, 10 Patriarchs, 4 Primates, 105 diocesan Archbishops, 22 Archbishops in partibus infidelium, 424 diocesan Bishops, 98 Bishops in partibus, and 52 Abbots, and Generals of monastic orders. Distributed according to continents, 541 of these belonged to Europe, 83 to Asia, 14 to Africa, 113 to America, 13 to Oceanica. At the proclamation of the decree of Papal Infallibility, July 18, 1870, the number was reduced to 535, and afterwards it dwindled down to 200 or 180. Among the many nations represented, the Italians had a vast majority of 276, of whom 143 belonged to the former Papal States alone. France with a much larger Catholic population, had only 84, Austria and Hungary 48, Spain 41, Great Britain 35, Germany 19, the United States 48, Mexico 10, Switzerland 8, Belgium 6, Holland 4, Portugal 2, Russia 1. The disproportion between the representatives of the different nations and the number of their constituents was overwhelmingly in favor of the Papal influence."—P. Schaff, *Hist. of the Vatican Council (app. to Gladstone's 'Vatican Decrees' Am. ed.).*—The vote taken in the Council on the affirmation of the dogma "showed 400 'placet,' 88 'non placet,' and 60 'placet juxta modum.' Fifty bishops absented themselves from the congregation, preferring that mode of intimating their dissent. . . . After the votes the Archbishop of Paris proposed that the dissentients should leave Rome in a body, so as not to be present at the public services of the 18th, when the dogma was formally to be promulgated. Cardinal Rauscher, on the other hand, advised that they should all attend, and have the courage to vote 'non placet' in the presence of the Pope. This bold counsel, however, was rejected. . . . The recalcitrant bishops stayed away to the number of 110. The Pope's partisans mustered 533. When the dogmatic constitution 'De Ecclesia Christi' was put in its entirety to the vote, two prelates alone exclaimed 'non placet.' These were Riccio, Bishop of Casazzo, and Fitzgerald, Bishop of Peticola, or Little Rock, in the United States. A violent thunderstorm burst over St. Peter's at the commencement of the proceedings, and lasted till the close. The Pope proclaimed himself infallible amidst its tumult. . . . The Bishops in opposition, after renewing their negative vote in writing, quitted Rome almost to a man. . . . Several of the German bishops who had taken part in the opposition thought that at this juncture it behoved them, for the peace of the Church, and the respect due to the Dogma once declared, to give way at the end of August. They assembled again at Fulda, and pronounced the acceptance of the decree. . . . Seventeen names were appended to the declaration. Among them was not that of Hefele [Bishop of Rottenburg] who, it was soon made known, was determined under no circumstances to submit to the decision of the Council. His chapter and the theological faculty of Tübingen, declared that they would unanimously support him. A meeting of the Catholic professors of theology, held at Nuremberg, also agreed upon a decided protest against the absolute power and personal infallibility of the Pope. The German opposition, evidently, was far from being quelled. And the Austrian opposition, led by Schwarzenberg, Rauscher and Strossmayer, remained unbroken. By the end of August the members of the Council remaining at Rome were reduced to 80. They continued, however, to sit on through that month and the month of September, discussing various 'Schemes' relative to the internal affairs of the Church."—*Annual Register*, 1870, *pt.* 1, *foreign hist., ch.* 5.—But on the 20th of October, after the Italian troops had taken possession of Rome, the Pope, by a Bull, suspended the sittings of the Œcumenical Coun-

cil. Most of the German bishops who had opposed the dogma of infallibility surrendered to it in the end; but Dr. Döllinger, the Bavarian theologian, held his ground. "He had now become the acknowledged leader of all those who, within the pale of the Romish Church, were disaffected towards the Holy See; but he was to pay for this position of eminence. The Old Catholic movement soon drew upon itself the hostility of the ecclesiastical authorities. On the 19th of April 1871 Dr. Döllinger was formally excommunicated by the Archbishop of Munich, on account of his refusal to retract his opposition to the dogma of infallibility. . . . A paper war of great magnitude followed the excommunication. Most of the doctor's colleagues in his own divinity school, together with not a few canons of his cathedral, a vast number of the Bavarian lower clergy, and nearly all the laity, testified their agreement with him. The young King of Bavaria, moreover, lent the support of his personal sympathies to Dr. Döllinger's movement. . . . A Congress of Old Catholics was held at Munich in September, when an Anti-Infallibility League was formed; and the cause soon afterwards experienced a triumph in the election of Dr. Döllinger to the Rectorship of the University of Munich by a majority of fifty-four votes against six. At Cologne in the following year an Old Catholic Congress assembled, and delegates attended from various foreign States. . . . Dr. Döllinger . . . was always glad to give the Old Catholic body the benefit of his advice, and he presided over the Congress, mainly of Old Catholics, which was held at Bonn in 1874 to promote the reunion of Christendom; but we believe he never formally joined the Communion, and, at the outset, at any rate, he strongly opposed its constitution as a distinct Church. From the day of his excommunication by the Archbishop of Munich he abstained from performing any ecclesiastical function. He always continued a strict observer of the disciplinary rules and commandments of the Roman Catholic Church. . . . The Old Catholic movement did not generally make that headway upon the Continent which its sanguine promoters had hoped speedily to witness, though it was helped in Germany by the passing of a Bill for transferring ecclesiastical property to a committee of the ratepayers and communicants in each parish of the empire. When the third synod of the Old Catholics was held at Bonn in June 1876 it was stated by Dr. von Schulte that there were then 35 communities in Prussia, 44 in Baden, 5 in Hesse, 2 in Birkenfeld, 31 in Bavaria, and 1 in Würtemberg. The whole number of persons belonging to the body of Old Catholics was — in Prussia, 17,203; Bavaria, 10,110; Hesse, 1,042; Oldenburg, 249; and Würtemberg, 223. The number of Old Catholic priests in Germany was sixty. Subsequently some advance was recorded over these numbers."—*Eminent Persons: Biographies reprinted from the Times, v. 4, pp.* 213–216.

Vitelleschi), *The Vatican Council.*—E. de Pressense, *Rome and Italy at the opening of the Œcumenical Council.*—W. E. Gladstone, *The Vatican Decrees.*

The following is a translation of the text of the Constitution "Pastor æternus" in which the Dogma of Infallibility was subsequently promulgated by the Pope:

"*Pius Bishop, Servant of the Servants of God, with the approval of the Sacred Council, for an everlasting remembrance.* The eternal Pastor and Bishop of our souls, in order to continue for all time the life-giving work of His Redemption, determined to build up the Holy Church, wherein, as in the House of the living God, all faithful men might be united in the bond of one faith and one charity. Wherefore, before he entered into His glory, He prayed unto the Father, not for the Apostles only, but for those also who through their preaching should come to believe in Him, that all might be one even as He the Son and the Father are one. As then the Apostles whom He had chosen to Himself from the world were sent by Him, not otherwise than He Himself had been sent by the Father; so did He will that there should ever be pastors and teachers in His Church to the end of the world. And in order that the Episcopate also might be one and undivided, and that by means of a closely united priesthood the body of the faithful might be kept secure in the oneness of faith and communion, He set Blessed Peter over the rest of the Apostles, and fixed in him the abiding principle of this twofold unity, and its visible foundation, in the strength of which the everlasting temple should arise, and the Church in the firmness of that faith should lift her majestic front to Heaven. And seeing that the gates of hell with daily increase of hatred are gathering their strength on every side to upheave the foundation laid by God's own hand, and so, if that might be, to overthrow the Church; We, therefore, for the preservation, safe-keeping, and increase of the Catholic flock, with the approval of the Sacred Council, do judge it to be necessary to propose to the belief and acceptance of all the faithful, in accordance with the ancient and constant faith of the universal Church, the doctrine touching the institution, perpetuity, and nature of the sacred Apostolic Primacy, in which is found the strength and sureness of the entire Church, and at the same time to inhibit and condemn the contrary errors, so hurtful to the flock of Christ.

Chapter I. *Of the institution of the apostolic primacy in Blessed Peter.* We, therefore, teach and declare that, according to the testimony of the Gospel, the primacy of jurisdiction was immediately and directly promised to Blessed Peter the Apostle, and on him conferred by Christ the Lord. For it had been said before to Simon: Thou shalt be called Cephas, and afterwards on occasion of the confession made by him: Thou art the Christ, the Son of the living God, it was to Simon alone that the Lord addressed the words: Blessed art thou, Simon Bar-Jona, because flesh and blood hath not revealed it to thee, but my Father who is in Heaven. And I say to thee that thou art Peter; and upon this rock I will build my Church, and the gates of hell shall not prevail against it. And I will give to thee the keys of the kingdom of Heaven. And whatsoever thou shalt bind upon earth, it shall be bound also in heaven, and whatsover thou shalt loose on earth it shall be loosed also in heaven. And it was upon Simon alone that Jesus after His resurrection bestowed the jurisdiction of Chief Pastor and Ruler over all His fold in the

words: Feed my lambs: feed my sheep. At open variance with this clear doctrine of Holy Scripture as it has been ever understood by the Catholic Church are the perverse opinions of those who, while they distort the form of government established by Christ the Lord in His Church, deny that Peter in his single person, preferably to all the other Apostles, whether taken separately or together, was endowed by Christ with a true and proper primacy of jurisdiction; or of those who assert that the same primacy was not bestowed immediately and directly upon Blessed Peter himself, but upon the Church, and through the Church on Peter as her Minister. If anyone, therefore, shall say that Blessed Peter the Apostle was not appointed the Prince of all the Apostles and the visible Head of the whole Church Militant; or that the same directly and immediately received from the same Our Lord Jesus Christ a Primacy of honour only, and not of true and proper jurisdiction; let him be anathema.

Chapter II. *On the perpetuation of the primacy of Peter in the Roman Pontiffs.* That which the Prince of Shepherds and great Shepherd of the sheep, Jesus Christ our Lord, established in the person of the Blessed Apostle Peter to secure the perpetual welfare and lasting good of the Church, must, by the same institution, necessarily remain unceasingly in the Church; which, being founded upon the Rock, will stand firm to the end of the world. For none can doubt, and it is known to all ages, that the holy and Blessed Peter, the Prince and Chief of the Apostles, the pillar of the faith and foundation of the Catholic Church, who received the keys of the kingdom from Our Lord Jesus Christ, the Saviour and Redeemer of the race of man, continues up to the present time, and ever continues, in his successors the Bishops of the Holy See of Rome, which was founded by Him, and consecrated by His blood, to live and preside and judge. Whence, whosoever succeeds to Peter in this See, does by the institution of Christ Himself obtain the Primacy of Peter over the whole Church. The disposition made by Incarnate Truth therefore remains, and Blessed Peter, abiding through the strength of the Rock in the power that he received, has not abandoned the direction of the Church. Wherefore it has at all times been necessary that every particular Church — that is to say, the faithful throughout the world — should agree with the Roman Church, on account of the greater authority of the princedom which this has received; that all being associated in the unity of that See whence the rights of communion spread to all, as members in the unity of the Head, might combine to form one connected body. If, then, any should deny that it is by the institution of Christ the Lord, or by divine right, that Blessed Peter should have a perpetual line of successors in the Primacy over the Universal Church, or that the Roman Pontiff is the successor of Blessed Peter in this Primacy; let him be anathema.

Chapter III. *On the force and character of the Primacy of the Roman Pontiff.* Wherefore, resting on plain testimonies of the Sacred Writings, and in agreement with both the plain and express decrees of our predecessors, the Roman Pontiffs, and of the General Councils, We renew the definition of the Œcumenical Council of Florence, in virtue of which all the faithful of Christ must believe that the Holy Apostolic See and the Roman Pontiff possesses the Primacy over the whole world, and that the Roman Pontiff is the successor of Blessed Peter, Prince of the Apostles, and is true Vicar of Christ, and Head of the whole Church, and Father and teacher of all Christians; and that full power was given to him in Blessed Peter to rule, feed, and govern the Universal Church by Jesus Christ our Lord: as is also contained in the acts of the General Councils and in the Sacred Canons. Further we teach and declare that by the appointment of our Lord the Roman Church possesses the chief ordinary jurisdiction over all other Churches, and that this power of jurisdiction possessed by the Roman Pontiff being truly episcopal is immediate; which all, both pastors and faithful, both individually and collectively, are bound, by their duty of hierarchical submission and true obedience, to obey, not merely in matters which belong to faith and morals, but also in those that appertain to the discipline and government of the Church throughout the world, so that the Church of Christ may be one flock under one supreme pastor through the preservation of unity both of communion and of profession of the same faith with the Roman Pontiff. This is the teaching of Catholic truth, from which no one can deviate without loss of faith and of salvation. But so far is this power of the Supreme Pontiff from being any prejudice to the ordinary power of episcopal jurisdiction, by which the Bishops who have been set by the Holy Spirit to succeed and hold the place of the Apostles feed and govern, each his own flock, as true Pastors, that this episcopal authority is really asserted, strengthened, and protected by the supreme and universal Pastor; in accordance with the words of S. Gregory the Great: My honour is the honour of the whole Church. My honour is the firm strength of my Brethren. I am then truly honoured, when due honour is not denied to each of their number. Further, from this supreme power possessed by the Roman Pontiff of governing the Universal Church, it follows that he has the right of free communication with the Pastors of the whole Church, and with their flocks, that these may be taught and directed by him in the way of salvation. Wherefore we condemn and reject the opinions of those who hold that the communication between this supreme Head and the Pastors and their flocks can lawfully be impeded; or who represent this communication as subject to the will of the secular power, so as to maintain that whatever is done by the Apostolic See, or by its authority, cannot have force or value, unless it be confirmed by the assent of the secular power. And since by the divine right of Apostolic primacy, the Roman Pontiff is placed over the Universal Church, we further teach and declare that he is the supreme judge of the faithful, and that in all causes, the decision of which belongs to the Church, recourse may be had to his tribunal; and that none may meddle with the judgment of the Apostolic See, the authority of which is greater than all other, nor can any lawfully depart from its judgment. Wherefore they depart from the right course who assert that it is lawful to appeal from the judgments of the Roman Pontiffs and an Œcumenical Council, as to an authority higher than that of the Roman Pontiff. If then any shall say that the Roman Pontiff has

the office merely of inspection or direction, and not full and supreme power of jurisdiction over the Universal Church, not alone in things which belong to faith and morals, but in those which relate to the discipline and government of the Church spread throughout the world; or who assert that he possesses merely the principal part, and not all the fulness of this supreme power; or that this power which he enjoys is not ordinary and immediate, both over each and all the Churches and over each and all the Pastors and the faithful; let him be anathema.

CHAPTER IV. *Concerning the infallible teaching of the Roman Pontiff.* Moreover that the supreme power of teaching is also included in the Apostolic Primacy, which the Roman Pontiff, as successor of Peter, Prince of the Apostles, enjoys over the whole Church, this Holy See has always held, the perpetual practice of the Church attests, and Œcumenical Councils themselves have declared, especially those in which the East with the West met in the union of faith and charity. For the Fathers of the Fourth Council of Constantinople, following in the footsteps of their predecessors, gave forth this solemn profession: The first condition of salvation is to keep the rule of the true faith. And because the sentence of our Lord Jesus Christ cannot be passed by, who said: Thou art Peter, and upon this Rock I will build my Church, these things which have been said are approved by events, because in the Apostolic See the Catholic Religion and her holy solemn doctrine has always been kept immaculate. Desiring, therefore, not to be in the least degree separated from the faith and doctrine of that See, we hope that we may deserve to be in the one communion, which the Apostolic See preaches, in which is the entire and true solidity of the Christian religion. And, with the approval of the Second Council of Lyons, the Greeks professed that the Holy Roman Church enjoy supreme and full Primacy and preeminence over the whole Catholic Church, which it truly and humbly acknowledges that it has received with the plenitude of power from our Lord Himself in the person of blessed Peter, Prince or Head of the Apostles, whose successor the Roman Pontiff is; and as the Apostolic See is bound before all others to defend the truth of faith, so also if any questions regarding faith shall arise, they must be defined by its judgment. Finally, the Council of Florence defined: That the Roman Pontiff is the true Vicar of Christ, and the Head of the whole Church, and the Father and Teacher of all Christians; and that to him in blessed Peter was delivered by our Lord Jesus Christ the full power of feeding, ruling, and governing the whole Church. To satisfy this pastoral duty our predecessors ever made unwearied efforts that the salutary doctrine of Christ might be propagated among all the nations of the earth, and with equal care watched that it might be preserved sincere and pure where it had been received. Therefore the Bishops of the whole world, now singly, now assembled in synod, following the long-established custom of Churches, and the form of the ancient rule, sent word to this Apostolic See of those dangers which sprang up in matters of faith, that there especially the losses of faith might be repaired where faith cannot feel any defect. And the Roman Pontiffs, according to the exigencies of times and circumstances, sometimes assembling Œcumenical Councils, or asking for the mind of the Church scattered throughout the world, sometimes by particular Synods, sometimes using other helps which Divine Providence supplied, defined as to be held those things which with the help of God they had recognised as conformable with the Sacred Scriptures and Apostolic Traditions. For the Holy Spirit was not promised to the successors of Peter that under His revelation they might make known new doctrine, but that under His assistance they might scrupulously keep and faithfully expound the revelation or deposit of faith delivered through the Apostles. And, indeed, all the venerable Fathers have embraced, and the holy orthodox Doctors have venerated and followed, their Apostolic doctrine; knowing most fully that this See of holy Peter remains ever free from all blemish of error, according to the divine promise of the Lord our Saviour made to the Prince of His disciples: I have prayed for thee that thy faith fail not, and thou, at length converted, confirm thy brethren. This gift, then, of truth and never-failing faith was conferred by Heaven upon Peter and his successors in this Chair, that they might perform their high office for the salvation of all; that the whole flock of Christ, kept away by them from the poisonous food of error, might be nourished with the pasture of heavenly doctrine; that the occasion of schism being removed the whole Church might be kept one, and, resting on its foundation, might stand firm against the gates of hell. But since in this very age, in which the salutary efficacy of the Apostolic office is even most of all required, not a few are found who take away from its authority, We judge it altogether necessary solemnly to assert the prerogative which the only-begotten Son of God vouchsafed to join with the supreme pastoral office. Therefore We, faithfully adhering to the tradition received from the beginning of the Christian faith, for the glory of God our Saviour, the exaltation of the Roman Catholic Religion, and the salvation of Christian people, with the approbation of the Sacred Council, teach and define that it is a dogma divinely revealed: that the Roman Pontiff, when he speaks ex cathedrâ, that is, when in discharge of the office of Pastor and Doctor of all Christians, by virtue of his supreme Apostolic authority he defines a doctrine regarding faith or morals to be held by the Universal Church, by the divine assistance promised to him in blessed Peter, enjoys that infallibility with which the divine Redeemer wished that His Church be provided for defining doctrine regarding faith or morals; and that therefore such definitions of the Roman Pontiff are irreformable of themselves, and not from the consent of the Church. But if anyone—which may God avert—presume to contradict this Our definition; let him be anathema."

A. D. 1870.—End of the Temporal Sovereignty.—Rome made the capital of the Kingdom of Italy.—The Law of the Papal Guarantees. — The events which extinguished the temporal sovereignty of the Pope and made Rome the capital of the Kingdom of Italy will be found narrated under ITALY: A. D. 1870. "The entry of the Italian troops into Rome, and its union to Italy . . . was acquiesced in by all the powers of Europe, both Protestant and Roman Catholic. The French Government of National Defence, which had succeeded to power after the

fall of the Second Empire, expressed through M. Jules Favre, the Minister of Foreign Affairs, its desire that the Italians should do what they liked, and avowed its sympathy with them. . . . The Austro-Hungarian Cabinet was asked by the Papal Court to protest against the occupation of Rome. To this the Imperial and Royal Government gave a direct refusal, alleging among other reasons that 'its excellent relations' with Italy, upon which it had 'cause to congratulate itself ever since reconciliation had been effected' prevented its acceding to the desire of the Vatican. . . . The Spanish Government of the Regency, which succeeded to that of Queen Isabella, adopted much the same line of conduct; it praised Signor Visconti-Venosta's circular, and spoke of the 'wise and prudent' measures it proposed to adopt with regard to the Pope. . . . Baron d'Anethan, at that time Prime Minister of Belgium, who was the leader of the conservative or clerical party in the country, admitted to the Italian Minister at Brussels: 'that speaking strictly, the temporal power was not, in truth, an indispensable necessity to the Holy See for the fulfilment of its mission in the world.' As to the course Belgium would take the Baron said —'If Italy has a territorial difficulty to discuss with the Holy See, that is a matter with which Belgium has nothing to do, and it would be to disown the principles on which our existence reposes if we expressed an opinion one way or the other on the subject.'. . . The Italian Chamber elected in March, 1867, was dissolved, and on the 5th December, 1870, the newly elected Parliament met in Florence for the last time. Among its members now sat those who represented Rome and the province, in which it is situated. The session of 1871 was occupied with the necessary arrangements for the transfer of the capital to Rome, and by the discussion of an act defining the position of the Pope in relation to the kingdom of Italy. The labours of Parliament resulted in the Law of the Papal Guarantees, which, after long and full debate in both Houses, received the royal assent on the 13th of May, 1871. Its provisions ran as follows:

Article I.—The person of the Sovereign Pontiff is sacred and inviolable.

Art. II.—An attack (attentato) directed against the person of the Sovereign Pontiff, and any instigation to commit such attack, is punishable by the same penalties as those established in the case of an attack directed against the person of the king, or any instigation to commit such an attack. Offences and public insults committed directly against the person of the Pontiff by discourses, acts, or by the means indicated in the 1st article of the law on the press, are punishable by the penalties established by the 19th article of the same law. These crimes are liable to public action, and are within the jurisdiction of the court of assizes. The discussion of religious subjects is completely free.

Art. III.—The Italian Government renders throughout the territory of the kingdom royal honours to the Sovereign Pontiff, and maintains that pre-eminence of honour recognised as belonging to him by Catholic princes. The Sovereign Pontiff has power to keep up the usual number of guards attached to his person, and to the custody of the palaces, without prejudice to the obligations and duties resulting to such guards from the actual laws of the kingdom.

Art. IV.—The endowment of 3,225,000 francs (lire italiane) of yearly rental is retained in favour of the Holy See. With this sum, which is equal to that inscribed in the Roman balance-sheet under the title, 'Sacred Apostolic Palaces, Sacred College, Ecclesiastical Congregations, Secretary of State, and Foreign Diplomatic Office,' it is intended to provide for the maintenance of the Sovereign Pontiff, and for the various ecclesiastical wants of the Holy See for ordinary and extraordinary maintenance, and for the keeping of the apostolic palaces and their dependencies; for the pay, gratifications, and pensions of the guards of whom mention is made in the preceding article, and for those attached to the Pontifical Court, and for eventual expenses; also for the ordinary maintenance and care of the annexed museums and library, and for the pay, stipends, and pensions of those employed for that purpose. The endowment mentioned above shall be inscribed in the Great Book of the public debt, in form of perpetual and inalienable revenue, in the name of the Holy See; and during the time that the See is vacant, it shall continue to be paid, in order to meet all the needs of the Roman Church during that interval of time. The endowment shall remain exempt from any species of government, communal, or provincial tax; and it cannot be diminished in future, even in the case of the Italian Government resolving ultimately itself to assume the expenses of the museums and library.

Art. V.—The Sovereign Pontiff, besides the endowment established in the preceding article, will continue to have the use of the apostolic palaces of the Vatican and Lateran with all the edifices, gardens, and grounds annexed to and dependent on them, as well as the Villa of Castel Gondolfo with all its belongings and dependencies. The said palaces, villa, and annexes, like the museums, the library, and the art and archæological collections there existing, are inalienable, are exempt from every tax or impost, and from all expropriation on the ground of public utility.

Art. VI.—During the time in which the Holy See is vacant, no judiciary or political authority shall be able for any reason whatever to place any impediment or limit to the personal liberty of the cardinals. The Government provides that the meetings of the Conclave and of the Œcumenical Councils shall not be disturbed by any external violence.

Art. VII.—No official of the public authority, nor agent of the public forces, can in the exercise of his peculiar office enter into the palaces or localities of habitual residence or temporary stay of the Sovereign Pontiff, or in those in which are assembled a Conclave or Œcumenical Council, unless authorised by the Sovereign Pontiff, by the Conclave, or by the Council.

Art. VIII.—It is forbidden to proceed with visits, perquisitions, or seizures of papers, documents, books, or registers in the offices and pontifical congregations invested with purely spiritual functions.

Art. IX.—The Sovereign Pontiff is completely free to fulfil all the functions of his spiritual ministry, and to have affixed to the doors of the basilicas and churches of Rome all the acts of the said ministry.

Art. X.—The ecclesiastics who, by reason of their office, participate in Rome in the sending

forth of the acts of the spiritual ministry of the Holy See, are not subject on account of those acts to any molestation, investigation, or act of magistracy, on the part of the public authorities. Every stranger invested with ecclesiastical office in Rome enjoys the personal guarantees belonging to Italian citizens in virtue of the laws of the kingdom.

Art. XI.—The envoys of foreign governments to the Holy See enjoy in the kingdom all the prerogatives and immunities which belong to diplomatic agents, according to international right. To offences against them are extended the penalties inflicted for offences against the envoys of foreign powers accredited to the Italian Government. To the envoys of the Holy See to foreign Governments are assured throughout the territory of the kingdom the accustomed prerogatives and immunities, according to the same (international) right, in going to and from the place of their mission.

Art. XII.—The Supreme Pontiff corresponds freely with the Episcopate and with all the Catholic world without any interference whatever on the part of the Italian Government. To such end he has the faculty of establishing in the Vatican, or any other of his residences, postal and telegraphic offices worked by clerks of his own appointment. The Pontifical post-office will be able to correspond directly, by means of sealed packets, with the post-offices of foreign administrations, or remit its own correspondence to the Italian post-offices. In both cases the transport of despatches or correspondence furnished with the official Pontifical stamp will be exempt from every tax or expense as regards Italian territory. The couriers sent out in the name of the Supreme Pontiff are placed on the same footing in the kingdom, as the cabinet couriers or those of foreign government. The Pontifical telegraphic office will be placed in communication with the network of telegraphic lines of the kingdom, at the expense of the State. Telegrams transmitted by the said office with the authorised designation of 'Pontifical' will be received and transmitted with the privileges established for telegrams of State, and with the exemption in the kingdom from every tax. The same advantages will be enjoyed by the telegrams of the Sovereign Pontiff or those which, signed by his order and furnished with the stamp of the Holy See, shall be presented to any telegraphic office in the kingdom. Telegrams directed to the Sovereign Pontiff shall be exempt from charges upon those who send them.

Art. XIII.—In the city of Rome and in the six suburban sees the seminaries, academies, colleges, and other Catholic institutions founded for the education and culture of ecclesiastics, shall continue to depend only on the Holy See, without any interference of the scholastic authorities of the kingdom.

Art. XIV.—Every special restriction of the exercise of the right of meeting on the part of the members of the Catholic clergy is abolished.

Art. XV. — The Government renounces its right of apostolic legateship (legazia apostolica) in Sicily, and also its right, throughout the kingdom, of nomination or presentation in the collation of the greater benefices. The bishops shall not be required to make oath of allegiance to the king. The greater and lesser benefices cannot be conferred except on citizens of the kingdom, save in the case of the city of Rome, and of the suburban sees. No innovation is made touching the presentation to benefices under royal patronage.

Art. XVI. — The royal 'exequatur' and 'placet,' and every other form of Government assent for the publication and execution of acts of ecclesiastical authority, are abolished. However, until such time as may be otherwise provided in the special law of which Art. XVIII. speaks, the acts of these (ecclesiastical) authorities which concern the destination of ecclesiastical property and the provisions of the major and minor benefices, excepting those of the city of Rome and the suburban sees, remain subject to the royal 'exequatur' and 'placet.' The enactments of the civil law with regard to the creation and to the modes of existence of ecclesiastical institutions and of their property remain unaltered.

Art. XVII.—In matters spiritual and of spiritual discipline, no appeal is admitted against acts of the ecclesiastical authorities, nor is any aid on the part of the civil authority recognised as due to such acts, nor is it accorded to them. The recognising of the judicial effects, in these as in every other act of these (ecclesiastical) authorities, rests with the civil jurisdiction. However, such acts are without effect if contrary to the laws of the State, or to public order, or if damaging to private rights, and are subjected to the penal laws if they constitute a crime.

Art. XVIII.—An ulterior law will provide for the reorganisation, the preservation, and the administration of the ecclesiastical property of the kingdom.

Art. XIX.—As regards all matters which form part of the present law, everything now existing, in so far as it may be contrary to this law, ceases to have effect.

The object of this law was to carry out still further than had yet been done the principle of a 'free Church in a free State,' by giving the Church unfettered power in all spiritual matters, while placing all temporal power in the hands of the State. . . . The Pope and his advisers simply protested against all that was done. Pius IX. shut himself up in the Vatican and declared himself a prisoner. In the meanwhile the practical transfer of the capital from Florence was effected."—J. W. Probyn, *Italy*, 1815 *to* 1878, *ch.* 11.—The attitude towards the Italian Government assumed by the Papal Court in 1870, and since maintained, is indicated by the following, quoted from a work written in sympathy with it: "Pius IX. had refused to treat with or in any way recognize the new masters of Rome. The Law of Guarantees adopted by the Italian Parliament granted him a revenue in compensation for the broad territories of which he had been despoiled. He refused to touch a single lira of it, and preferred to rely upon the generosity of his children in every land, rather than to become the pensioner of those who had stripped him of his civil sovereignty. His last years were spent within the boundaries of the Vatican palace. He could not have ventured to appear publicly in the city without exposing himself to the insults of the mob on the one hand, or on the other calling forth demonstrations of loyalty, which would have been made the pretext for stern military repression. Nor could he have accepted in the streets of Rome the protection of

the agents of that very power against whose presence in the city he had never ceased to protest. Thus it was that Pius IX. became, practically, a prisoner in his own palace of the Vatican. He had not long to wait for evidence of the utter hollowness of the so-called Law of Guarantees. The extension to Rome of the law suppressing the religious orders, the seizure of the Roman College, the project for the expropriation of the property of the Propaganda itself, were so many proofs of the spirit in which the new rulers of Rome interpreted their pledges, that the change of government should not in any way prejudice the Church or the Holy See in its administration of the Church. . . . The very misfortunes and difficulties of the Holy See drew closer the bonds that united the Catholic world to its centre. The Vatican became a centre of pilgrimage to an extent that it had never been before in all its long history, and this movement begun under Pius IX. has continued and gathered strength under Leo XIII., until at length it has provoked the actively hostile opposition of the intruded government. Twice during his last years Pius IX. found himself the centre of a world-wide demonstration of loyalty and affection, first on June 16th, 1871, when he celebrated the twenty-fifth anniversary of his coronation, the first of all the Popes who had ever reigned beyond the 'years of Peter;' and again on June 3rd, 1877, when, surrounded by the bishops and pilgrims of all nations, he kept the jubilee of his episcopal consecration. . . . Pius IX. was destined to outlive Victor Emmanuel, as he had outlived Napoleon III. . . . Victor Emmanuel died on January 9th, Pius IX. on February 6th [1879]. . . . It had been the hope of the Revolution that, however stubbornly Pius IX. might refuse truce or compromise with the new order of things, his successor would prove to be a man of more yielding disposition. The death of the Pope had occurred somewhat unexpectedly. Though he had been ill in the autumn of 1877, at the New Year he seemed to have recovered, and there was every expectation that his life would be prolonged for at least some months. The news of his death came at a moment when the Italian Government was fully occupied with the changes that followed the accession of a new king, and when the diplomatists of Europe were more interested in the settlement of the conditions of peace between France and Germany than in schemes for influencing the conclave. Before the enemies of the Church had time to concert any hostile plans of action, the cardinals had assembled at the Vatican and had chosen as Supreme Pontiff, Cardinal Pecci, the Archbishop of Perugia. He assumed the name of Leo XIII., a name now honoured not only within the Catholic Church, but throughout the whole civilized world. . . . The first public utterances of the new Pope shattered the hopes of the usurpers. He had taken up the standard of the Church's rights from the hands of his predecessor, and he showed himself as uncompromising as ever Pius IX. had been on the question of the independence of the Holy See, and its effective guarantee in the Civil Sovereignty of the Supreme Pontiff. The hope that the Roman Question would be solved by a surrender on the part of Leo XIII. of all that Pius IX. had contended for has been long since abandoned."—Chevalier O'Clery, *The Making of Italy, ch.* 26.

A. D. 1870-1874.—First Stages of the "Kulturkampf" in Germany.—The May Laws.—Speeches of Bismarck.—"For reasons relating to its own internal affairs the state, even though it took no special attitude to the dogma of infallibility in itself, could not avoid being drawn into the conflicts which that dogma was bound to call forth between its upholders and its opponents. . . . It was necessary for it to interfere and, by introducing civil marriages, to render marriage possible to those apostates who were not allowed to receive the sacraments; it was necessary for it to protect in the exercise of their office those of its public teachers who rejected the new dogma, even if their spiritual superiors should declare them unfit to hold such office. In cases, finally, where whole congregations, or majorities of them, remained true to the old teachings it was necessary for the state to protect them in the possession of their churches of which the bishops tried to deprive them. . . . The chancellor of the empire had now [1871] personally entered the lists. As his cool attitude already before the council had given reason to expect, the Vatican dogma did not much trouble him. All the more alarming seemed to him the agitation which the clergy were stirring up among the Polish nobles. . . . He [Bismarck] caused the announcement to be made in an article of the Kreuzzeitung that the government would not only continue on the defensive against the Centre, but in turn would proceed to attack it. The ultramontanes had better consider whether such a struggle could turn out to the advantage of the Roman Church. If, he concluded, three hundred years ago Teutonism in Germany was stronger than Romanism, how much stronger would it be now when Rome is no longer the capital of the world, but on the point of becoming the capital of Italy, and when the German imperial crown no longer rests on the head of a Spaniard but of a German prince. . . . In the Federal Council Lutz moved an amendment to the criminal code which should threaten any clergyman with imprisonment up to two years if he should misuse his office and discuss state affairs so as to disturb the peace. . . . This 'pulpit-paragraph' was accepted with 179 to 108 votes and became law December 14th, 1871. . . . The Prussian diet was opened on November 27, 1871, with the announcement of four new laws which should regulate marriages, the registration of civil personal matters, the withdrawal from existing churches, and the supervision of schools. . . . The conservative party was in wild excitement over these measures and the Kreuzzeitung became the organ of decided opposition, especially against the school-supervision law which was chosen as the first object of attack. The conservatives collected petitions from all parts of the land to kill this law which they prophesied would make the schools a tool of atheism, a hotbed of revolution, unnationality and immorality. They succeeded in getting together more than 300,000 signatures. . . . At the first reading in the House of Deputies the school-supervision law was passed, although by a majority of only 25 votes. . . . At the second reading the majority increased to 52. . . . The chief struggle was expected in the House of Lords. . . . The vote here was favorable beyond all hopes, resulting on March 8th in a majority in favor of the law almost as great as that in the House of Deputies.

. . . By no means calm was the attitude of the pope towards the increasing complications, and when, a few weeks later, on June 24th, 1872, he received the German 'Leseverein' in Rome he complained bitterly of the prime minister of a powerful government who, after marvellous successes in war, should have placed himself at the head of a long-planned persecution of the church; a step which would undoubtedly tarnish the glory of his former triumphs. 'Who knows if the little stone shall not soon be loosened from above that shall destroy the foot of the Colossus!' The chief cause of this embitterment lay in the expulsion of the Jesuits which had meanwhile been decreed by the diet. . . . The more the national opposition to the Roman claims increased, the more passionate did the frame of mind of the ultramontanes become; and also, in no small degree, of the pope. An allocution addressed to the cardinals on December 22, 1872, surpassed in violence anything that had yet been heard. . . . Even Reichensperger found it advisable in excusing a vehemence that thus went beyond all bounds to call to mind that the Latinized style of the papal chancery was not to be taken too literally. The German government, after such a demonstration, had no other alternative than to recall the last representative of its embassy to the papal court. . . . Already in November Minister Falk had laid before the House a draft of a law concerning the limits of ecclesiastical punishments and disciplinary measures; on January 9, 1873, followed the drafts of three new laws. . . . Still more passionately than in the debate concerning the change in the Constitution did Bismarck come forward in the discussion of April 24–28. . . . Windhorst and Schorlemer-Alst answered him back in kind. . . . With violent attacks on Bismarck they prophesied that these Draconic laws would rebound against the passive opposition of the people; that dawn was glimmering in men's minds and that the victory of the Church was near. To the great majority of the German people, who had followed the political-ecclesiastical debates with the liveliest interest, such assurances seemed almost laughable. They felt sure of victory now that Bismarck himself had seized the standard with such decision. The 'May Laws' which the king signed on May 11, 1873, were considered a weapon sure to be effectual, and even the advanced-liberals, who had followed many of the steps of the Government with hesitation and doubt, declared in an appeal to their electors on March 23 that the conflict had assumed the proportions of a great struggle for enlightenment (Kulturkampf) in which all mankind were concerned, and that they themselves, in junction with the other liberal parties, would accordingly support the Government. . . . On August 7 (1873) Pius IX. sent a letter to the emperor under pretext of having heard that the latter did not sympathize with the latest measures of his government. He declared that such measures seemed to aim at the annihilation of catholicism and warned him that their final result would be to undermine the throne. He deduced his right to issue this warning from the fact that he was bound to tell the truth to all, even to non-catholics: for in one way or another — exactly how this was not the place to make clear — every one who had received baptism belonged to the pope. The emperor answered on September 3rd in a most dignified tone. . . . 'We can not pass over in silence the remark that every one who has been baptized belongs to the pope. The evangelical faith which I, as your Holiness must know, like my forefathers and together with the majority of my subjects, confess, does not allow us to accept any other Mediator in our relations with God save our Lord Jesus Christ.'. . . Among protestants this royal answer was greeted with jubilant acclamations and even in foreign lands it found a loud echo. The aged Earl Russell organized a great meeting in London on January 27, 1874. . . . Soon after the opening of the Prussian diet Falk could bring forward the draft of a law which handed over to state-officials [Standesbeamte] all matters referring to the celebration of marriages and the registration of civil personal matters. This draft was sure from the first of a good majority. . . . On March 9th, 1874, the law could be proclaimed. In the same month still the deputies Hinschius and Völk made a motion in the diet to introduce civil marriages throughout the whole empire. . . . It furthermore seemed necessary to take stronger measures against bishops and priests unlawfully appointed and whom the state had either deposed or refused to recognize. The mildest measure was to remove them from their dioceses or parishes, to banish them to certain fixed places and, in the worst cases, to expel them altogether from the lands of the empire. . . . The draft of the law (to this effect) was warmly supported and at last, April 25, 1874, was accepted by a vote of 214 to 208. . . . On July 13th, 1874, as Prince Bismarck, who had gone to take the cure in Kissingen, was driving to the Saline, the twenty-one year old cooper's-apprentice Kullmann, of Magdeburg, fired a pistol at him, and wounded him in his right hand which he had just raised for the purpose of saluting. At once arrested, Kullmann declared to the chancellor, who visited him an hour later in his prison, that he had wished to murder him on account of the laws against the church. . . . The reading of ultramontane papers and the violent discourses of the catholic clergy had driven him to the deed. He atoned for it with fourteen years in the House of Correction. Not alone did public opinion make ultramontanism accountable for the deed, but Bismarck himself laid very strong emphasis on the fact that the criminal had spoken of the Centre as 'his party.' 'You may try as hard as you please to rid yourselves of this murderer,' he cried out in the diet of December 4th, 'he none the less holds fast to your coat-tails!'"—C. Bulle, *Geschichte der neuesten Zeit (trans. from the German), v.* 4, *pp.* 20–41.—At the Session of the Lower House of the Prussian Diet, January 30, 1872, Deputy Windthorst spoke in opposition to the royal order for the abolition of the separate Roman Catholic section of the department of worship and public instruction, and Prince Bismarck, in reply, said: "The party to which the gentleman belongs has contributed its share to the difficulty of obliterating the denominational standpoint in matters political. I have always considered it one of the most monstrous manifestations in politics, that a religious faction should convert itself into a political party. If all the other creeds were to adopt the same principle, it would bring theology into the parliamentary sessions and would make it a matter of public

debate. . . . It has always been one of my fundamental principles that every creed ought to have full liberty of development, perfect liberty of conscience. But for all that I did not think it was a necessary corollary that a census of each denomination be taken merely for the purpose of giving each its proportional share in the Civil Service. . . . Where will you stop? You begin with a Cabinet; then you count the Chiefs of Division. I do not know what your ratio is — I think you claim four to seven — nor do I care to know. The subordinates in the Civil Service follow next. It is a fact, moreover, that the Evangelicals are by no means united in one denomination. The contrast is not merely between Protestants and Catholics. The United Prussian Established Church, the Lutheran Church, the Reformed Church, all have claims analogous to those of the Catholics. As soon as we cut up the state into denominational sections, giving each creed its proportional share, then the large Jewish population will come in for its part, a majority of which, distinguished by its special capacity, skill and intelligence, is peculiarly fitted for the business of the State. . . . We cannot admit the claim of the ecclesiastical authorities to a further share in the administration and in the interest of peace we are obliged to restrict the share they already have; so that we may have room beside each other and be obliged, as little as possible, to trouble ourselves about theology in this place."—*Die politischen Reden des Fürsten Bismarck (trans. from the German), v. 5, pp.* 231–240.—In the German Parliament, May 14, 1872, on the question of a grant of 19,350 thalers for the German embassy at the See of Rome, Prince Bismarck spoke as follows: "I can easily understand how in considering this item of the estimates, the opinion may be held that the expenditure for this embassy was superfluous, as it does no longer consider the protection of German citizens in foreign parts. Still I am glad that no motion for the striking out of this post was made, which would be unpleasant to the Government. The duties of an embassy consist not merely in affording protection to their countrymen, but also in keeping up the political relations of the Government which it represents with that to which it is accredited. Now there is no foreign sovereign, who, in the present state of our laws, might be called upon to exercise, in accordance with those laws, prerogatives in the German empire like those of His Holiness, approaching almost to sovereignty, limited by no constitutional responsibility. There is therefore great importance for the German empire in the character that is given to our diplomatic relations with the head of the Roman Church, wielding, as he does, an influence in this country unusually extensive for a foreign potentate. I scarcely believe, considering the spirit dominant at present in the leading circles of the Catholic Church, that any ambassador of the German empire could succeed, by the most skilful diplomacy, or by persuasion (comminatory attitudes conceivable between secular powers are out of the question here) — I say no one could succeed by persuasion in exerting an influence to bring about a modification of the position assumed by His Holiness the Pope towards things secular. The dogmas of the Catholic Church recently announced and publicly promulgated make it impossible for any secular power to come to an understanding with the church without its own effacement, which the German empire, at least, cannot accept. Have no fear; we shall not go to Canossa, either in body or in spirit. Nevertheless it cannot be concealed that the state of the German empire (it is not my task here to investigate the motives and determine how much blame attaches to one party or the other; I am only defending an item in the Budget) — that the feeling within the German empire in regard to religious peace, is one of disquietude. The governments of the German empire are seeking, with all the solicitude they owe to their Catholic as well as Lutheran subjects for the best way, the most acceptable means, of changing the present unpleasant state of affairs in matters of religion to a more agreeable one, without disturbing to any degree the credal relations of the empire. This can only be done by way of legislation — of general imperial legislation — for which the governments have to rely upon the assistance of the Reichstag. That this legislation must not in the least infringe upon the liberty of conscience, — must proceed in the gentlest, most conciliatory manner; that the government must bend all its energies in order to prevent unnecessary retardation of its work, from incorrect recording or errors in form, you all will admit. That the governments must spare no efforts for the establishment of our internal peace, in a manner least offensive even to the religious sensitiveness of those whose creed we do not share, you will also admit. To this end, however, it is before all things needful that the Roman See be at all times well informed of the intentions of the German governments, much better than it has been hitherto. The reports made in the past to His Holiness, the Pope, on the state of affairs in Germany, and on the intentions of the German governments, I consider as one of the chief causes of the present disturbances of denominational relations; for those presentations were both incorrect and perverted, either by personal bias, or by baser motives. I had hoped that the choice of an ambassador, who had the full confidence of both parties, both on account of his love of truth and reliability, and on account of the nature of his views and his attitude — that the choice of such an ambassador as His Majesty had made in the person of a distinguished prince of the church [Cardinal Prince Hohenlohe] would be welcomed at Rome; that it would be taken as an earnest of our peaceable and conciliatory intentions; that it would be utilized as a means to our mutual understanding. I had hoped that it would afford the assurance that we would never ask anything of His Holiness, but what a prince of the church, sustaining the most intimate relations to the Pope, could present before him; that the forms with which one sacerdotal dignitary confers with another would continue to prevail and that all unnecessary friction in a matter so difficult in itself would be avoided. . . . All this we had hoped to attain. But alas! for reasons which have not yet been submitted to us, a curt refusal on the part of the Papal See frustrated the intentions of His Majesty. I dare say such an incident does not often occur. It is customary, when a sovereign has made choice of an ambassador, out of courtesy to make inquiry at the court to which the chosen

ambassador is to be accredited, whether he be persona grata or not. The case of a negative reply, however, is extremely rare, bringing about, as it must, a revocation of the appointment made not provisionally, but definitely, before the inquiry. Such a negative reply is equal to a demand to annul what has been done, to a declaration: 'You have chosen unwisely.' I have now been Foreign Minister for ten years; have been busy in matters of higher diplomacy for twenty-one years; and I can positively assert that this is the first and only case in my experience of such an inquiry receiving a negative reply." Deputy Windthorst, in reply, criticised the procedure of the German Government in this affair, and justified the position taken by the papal court, saying: "I believe, gentlemen, for my part, that it was the duty of the Cardinal to ask the permission of his master, the Pope, before accepting the post. The Cardinal was the servant of the Pope, and as such, could not accept an office from another government without previous inquiry. . . . The case would be the same if His Holiness had appointed an adjutant general of His Majesty as papal nuncio, only more flagrant, for you will admit that a Cardinal is quite a different person from an adjutant general." Prince Bismarck replied: "I do not wish to discuss here the personal criticism which the gentleman made on His Eminence, the Cardinal, but I would say a word about the expression 'master' which was used. The gentleman is certainly well versed in history, especially ecclesiastical history, and I wish to ask him, who was the master of Cardinal Richelieu or Cardinal Mazarin. Both of these dignitaries were engaged in controversies and had to settle important differences with the See of Rome, in the service of their sovereign, the king of France; and yet they were Cardinals. . . . If it should please His Holiness to appoint an adjutant general of His Majesty as papal nuncio, I should unconditionally advise His Majesty to accept him. . . . I am an enemy to all conjectural politics and all prophesies. That will take care of itself. But I can assure the gentleman that we will maintain the full integral sovereignty of the law with all means at our disposal, against assumptions of individual subjects of His Majesty, the king of Prussia, be they priests or laymen, that there could be laws of the land not binding upon them; and we are sure of the entire support of a great majority of the members of all religious confessions. The sovereignty can and must be one and integral, — the sovereignty of the law; and he who declares the laws of his country as not binding upon himself, places himself outside the pale of the law." — *Die politischen Reden des Fürsten Bismarck (trans. from the German), v. 5, pp. 337–344.*— The following is from a speech of Prince Bismarck in the Upper House, March 10, 1873, during the discussion of the May Laws: "The gentleman who spoke before me has entered on the same path which the opponents of these bills followed in the other house by ascribing to them a confessional, I might say, an ecclesiastical character. The question we are considering is, according to my view, misconstrued, and the light in which we consider it, a false light if we look upon it as a confessional, a church question. It is essentially a political one; it is not, as our catholic fellow citizens are made to believe, a contest of an evangelical dynasty against the Catholic Church; it is not a struggle between faith and unbelief; it is the perennial contest, as old as the human race, between royalty and priestcraft, older than the appearance of our Savior on earth. This contest was carried on by Agamemnon at Aulis, which cost him his daughter and hindered the Grecian fleet from going to sea. This contest has filled the German history of the Middle Ages even to the disintegration of the German Empire. It is known as the struggles of the popes with the emperors, closing for the Middle Ages when the last representative of the noble Suabian imperial dynasty died on the block beneath the axe of the French conqueror, that French conqueror being in league with the then ruling pope. We were very near an analogous solution of this question, translated into the manners of our own time. Had the French war of conquest been successful, the outbreak of which coincided with the publication of the Vatican Decrees, I know not what would have been narrated in Church circles of Germany of 'gestis Dei per Francos' ['Gesta Dei per Francos,' 'Deeds of God by the French' is the title of a collection by Bongars, containing the sources of the history of the crusades.—Footnote.]. . . . It is in my opinion a falsification of history and politics, this attitude of considering His Holiness, the Pope, exclusively as the high priest of a religious denomination, or the Catholic Church as the representative of Churchdom merely. The papacy has at all times been a political power, interfering in the most resolute manner and with the greatest success in the secular affairs of this world, which interference it contended for and made its program. These programs are well known. The aim which was constantly present in its mind's eye, the program which in the Middle Ages was near its realization, was the subjection of the secular powers to the Church, an eminently political aim, a striving as old as mankind itself. For there have always been either some wise men, or some real priests who set up the claim, that the will of God was better known to them than to their fellow beings and in consequence of this claim they had the right to rule over their fellowmen. And it cannot be denied that this proposition contains the basis of the papal claims for the exercise of sovereign rights. . . . The contention of priesthood against royalty, in our case, of the Pope against the German Emperor, . . . is to be judged like every other struggle; it has its alliances, its peace conventions, its pauses, its armistices. There have been peaceful popes, there have been popes militant, popes conquerors. There have been even peace-loving kings of France, though Louis XVI. was forced to carry on wars; so that even our French neighbors have had monarchs who preferred peace to war. Moreover, in the struggles of the papal power it has not always been the call that Catholic powers have been exclusively the allies of the pope; nor have the priests always sided with the pope. We have had cardinals as ministers of great powers at a time when those great powers followed an antipapal policy even to acts of violence. We have found bishops in the military retinue of the German emperors, when moving against the popes. This contest for power therefore is subject to the same condition as every other political contest, and it is a mis-

representation of the issue, calculated to impress people without judgment of their own, when it is characterized as aiming at the oppression of the church. Its object is the defense of the state, to determine the limits of priestly rule, of royal power, and this limit must secure the existence of the state. For in the kingdom of this world the rule and the precedence is the state's. . . . In the paragraphs of the constitution we have under consideration we found a 'modus vivendi,' an armistice, concluded at a time when the state was in need of help and thought to obtain this help or at least some support in the Catholic Church. This hope was based upon the fact that at the election for the national assembly of 1848 the districts in which the Catholic population preponderated elected, if not royalists, yet friends of order, — which was not the case in evangelical districts. Under this impression the compromise between the ecclesiastical and secular arms was concluded, though, as subsequent events proved, in miscalculation as to its practical effects. For it was not the support of the electors who had thus voted but the Brandenburg ministry and the royal army that restored order. In the end the state was obliged to help itself; the aid that might have been given by the different churches did not pull it through. But at that time originated the 'modus vivendi' under which we lived in peace for a number of years. To be sure, this peace was bought only by an uninterrupted yielding of the state. . . . When we were yet in Versailles I was somewhat surprised to learn, that Catholic members of parliamentary bodies were asked to declare whether they were ready to join a religious party, such as we have now in the Party of the Centre, and whether they would agree to vote and agitate for the insertion of the paragraphs we are at present considering into the constitution of the Empire. I was not much alarmed then at that program. . . . When I returned here I saw how strong was the organization of this party of the church militant against the state. . . . Its object was the introduction of a state dualism in Prussia, the erection of a state within the state to bring it about that all Catholics should follow the guidance of this Party of the Centre in their private as well as their political conduct, a dualism of the worst kind. . . . If this program were carried out, we were to have instead of the one formerly integral state of Prussia, instead of the German Empire then at the point of realization — we were to have two state organizations, running side by side in parallel lines; one with the Party of the Centre as its general staff, the other with its general staff in the guiding secular principle, in the government and the person of His Majesty the Emperor. This situation was absolutely unacceptable for the government whose very duty it was to defend the state against such a danger. It would have misunderstood and neglected this duty if it had looked on calmly at the astounding progress which a closer examination of the affair brought to light. . . . The Government was obliged to terminate the armistice, based upon the constitution of 1848, and create a new 'modus vivendi' between the secular and sacerdotal power. The state cannot allow this situation to continue without being driven into internal struggles that may endanger its very existence. The question is simply this: Are those paragraphs of the constitution [of 1848] dangerous to the state?" — *Die politischen Reden des Fürsten Bismarck (trans. from the German), v. 5, pp.* 384–391. PAPUANS, The. — "In contrast to the Polynesians, both in color of skin and shape of skull, are the crispy-haired black dolichocephalic Papuans, whose centre is in the large and little-known island of New Guinea, from whence they spread over the neighboring islands to the southeast, the Louisades, New Caledonia, New Britain, Solomon Islands, Queen Charlotte Islands, New Hebrides, Loyalty, and Fiji Islands. Turning now to the northward, a similar black race is found in the Eta or Ita of the Philippines (Negritos of the Spanish), whom Meyer, Semper, Peschel, and Hellwald believe to be closely allied to the true Papuan type; and in the interiors of Sumatra, Borneo, Celebes, and Gilolo, and in the mountains of Malacca, and at last in the Andaman Islands, we find peoples closely related; and following Peschel, we may divide the whole of the eastern blacks (excepting of course the Australians) into Asiatic and Australasian Papuans; the latter inhabiting New Guinea and the islands mentioned to the south and east. In other of the islands of the South Seas traces of a black race are to be found, but so mingled with Polynesian and Malay as to render them fit subjects for treatment under the chapters on those races. The name Papua comes from the Malay word papuwah, crispy-haired, and is the name

which the Malays apply to their black neighbors. In New Guinea, the centre of the Papuans, the name is not known, nor have the different tribes any common name for themselves. In body, conformation of skull, and in general appearance the Papuans present a very close resemblance to the African negroes, and afford a strong contrast to the neighboring Polynesians."—J. S. Kingsley, ed., *The Standard [now called The Riverside], Natural History, v. 6, p. 42.*

PARAGUAY: The name.—"De Azara tells us that the river Paraguay derives its name from the Payaguas tribe of Indians, who were the earliest navigators on its waters. Some writers deduce the origin of its title from an Indian cacique, called Paraguaio, but Azara says, this latter word has no signification in any known idiom of the Indians, and moreover there is no record of a cacique ever having borne that name."—T. J. Hutchinson, *The Parana, p. 44.*

A. D. 1515-1557.—Discovery and exploration of La Plata.—Settlement and early years of the peculiar colony.—The Rio de la Plata, or River of Silver, was discovered in 1515 by the Spanish explorer, Juan de Solis, who landed incautiously and was killed by the natives. In 1519 this "Sweet Sea," as Solis called it, was visited again by Magellan, in the course of the voyage which made known the great strait which bears his name. The first, however, to ascend the important river for any distance, and to attempt the establishing of Spanish settlements upon it, was Sebastian Cabot, in 1526, after he had become chief pilot to the king of Spain. He sailed up the majestic stream to the junction of the Paraguay and the Parana, and then explored both channels, in turn, for long distances beyond. "Cabot passed the following two years in friendly relations with the Guaranis, in whose silver ornaments originated the name of La Plata, and thence of the Argentine Republic, the name having been applied by Cabot to the stream now called the Paraguay. That able and sagacious man now sent to Spain two of his most trusted followers with an account of Paraguay and its resources, and to seek the authority and reinforcements requisite for their acquisition. Their request was favourably received, but so tardily acted on that in despair the distinguished navigator quitted the region of his discoveries after a delay of five years." In 1534, the enterprise abandoned by Cabot was taken up by a wealthy Spanish courtier, Don Pedro de Mendoza, who received large powers, and who fitted out an expedition of 2,000 men, with 100 horses, taking with him eight priests. Proceeding but a hundred miles up the Plata, Mendoza founded a town on its southwestern shore, which, in compliment to the fine climate of the region, he named Buenos Ayres. As long as they kept at peace with the natives, these adventurers fared well; but when war broke out, as it did ere long, they were reduced to great straits for food. Mendoza, broken down with disappointments and hardships, resigned his powers to his lieutenant, Ayolas, and sailed for home, but died on the way. Ayolas, with part of his followers, ascended to a point on the Paraguay some distance above its junction with the Parana, where he founded a new city, calling it Asuncion. This was in 1537; and Ayolas perished that same year in an attempt to make his way overland to Peru. The survivors of the colony were left in command of an officer named Irala, who proved to be a most capable man. The settlement at Buenos Ayres was abandoned and all concentrated at Asuncion, where they numbered 600 souls. In 1542 they were joined by a new party of 400 adventurers from Spain, who came out with Cabeza de Vaca—a hero of strange adventures in Florida—now appointed Adelantado of La Plata. Cabeza de Vaca had landed with part of his forces on the Brazilian coast, at a point eastward from Asuncion, and boldly marched across country, making an important exploration and establishing friendly relations with the Guaranis. But he was not successful in his government, and the discontented colonists summarily deposed him, shipping him off to Spain, with charges against him, and restoring Irala to the command of their affairs. This irregularity seems to have been winked at by the home authorities, and Irala was scarcely interfered with for a number of years. "The favourable reports which had reached Spain of the climate and capabilities of Paraguay were such as to divert thither many emigrants who would otherwise have turned their faces toward Mexico or Peru. It was the constant endeavour of Irala to level the distinctions which separated the Spaniards from the natives and to encourage intermarriages between them. This policy, in the course of time, led to a marked result,—namely, to that singular combination of outward civilization and of primitive simplicity which was to be found in the modern Paraguayan race until it was annihilated under the younger Lopez. . . . Irala, in fact, created a nation. The colony under his administration became numerous and wealthy. . . . He was the life and soul of the colony, and his death, which occurred in 1557 at the village of Ita, near Asuncion, when he had attained the age of 70 years, was lamented alike by Spaniards and Guaranis. . . . The Spaniards brought with them few if any women, and if a certain proportion of Spanish ladies arrived later they were not in sufficient numbers to affect the general rule, which was that the Spanish settlers were allied to Guarani wives. Thus was formed the modern mixed Paraguayan race. In a very short time, therefore, by means of the ties of relationship, a strong sympathy grew up between the Spaniards and the Guaranis, or those of Guarani blood, and a recognition of this fact formed the

basis of the plan of government founded by the great Irala. The lot of the natives of Paraguay, as compared with the natives of the other Spanish dominions in the New World, was far from being a hard one. There were no mines to work. The Spaniards came there to settle, rather than to amass fortunes with which to return to Europe. The country was abundantly fertile, and such wealth as the Spaniards might amass consisted in the produce of their fields or the increase of their herds, which were amply sufficient to support them. Consequently, all they required of the natives, for the most part, was a moderate amount of service as labourers or as herdsmen."—R. G. Watson, *Spanish and Portuguese South Am., v.* 1, *ch.* 5 *and* 16.

A. D. 1608-1873.—The rule of the Jesuits.—The Dictatorship of Dr. Francia and of Lopez I. and Lopez II.—Disastrous War with Brazil.—"Under Spanish rule, from the early part of the 16th century as a remote dependency of Peru, and subsequently of Buenos Ayres, Paraguay had been almost entirely abandoned to the Jesuits [see Jesuits: A. D. 1542–1649] as a virgin ground on which to try the experiment of their idea of a theocratic government. The Loyola Brethren, first brought in in 1608, baptized the Indian tribes, built towns, founded missions [and communities of converts called Reductions, meaning that they had been reduced into the Christian faith], gave the tamed savages pacific, industrious, and passively obedient habits, married them by wholesale, bidding the youth of the two sexes stand up in opposite rows, and saving them the trouble of a choice by pointing out to every Jack his Jenny; drilled and marshalled them to their daily tasks in processions and at the sound of the church bells, headed by holy images; and in their leisure hours amused them with Church ceremonies and any amount of music and dancing and merry-making. They allowed each family a patch of ground and a grove of banana and other fruit trees for their sustenance, while they claimed the whole bulk of the land for themselves as 'God's patrimony,' bidding those well-disciplined devotees save their souls by slaving with their bodies in behalf of their ghostly masters and instructors. With the whole labouring population under control, these holy men soon waxed so strong as to awe into subjection the few white settlers whose estates dated from the conquest; and by degrees, extending their sway from the country into the towns, and even into the capital, Asuncion, they set themselves above all civil and ecclesiastical authority, snubbing the intendente of the province and worrying the bishop of the diocese. Driven away by a fresh outburst of popular passions in 1731, and brought back four years later by the strong hand of the Spanish Government, they made common cause with it, truckled to the lay powers whom they had set at naught, and shared with them the good things which they had at first enjoyed undivided. All this till the time of the general crusade of the European powers against their order, when they had to depart from Paraguay as well as from all other Spanish dominions in 1767. In the early part of the present century, when the domestic calamities of Spain determined a general collapse of her power in the American colonies, Paraguay raised its cry for independence, and constituted itself into a separate Republic in 1811. But, although the party of emancipation was the strongest and seized the reins of government, there were still many among the citizens who clung to their connection with the mother country, and these were known as Peninsulares; and there were many more who favoured the scheme of a federal union of Paraguay with the Republics of the Plate, and these went by the name of Porteños, owing to the importance they attached to the dependence of their country on Buenos Ayres (the puerto or harbour), the only outlet as well as the natural head of the projected confederation [see Argentine Republic: A. D. 1580–1777]. All these dissenters were soon disposed of by the ruthless energy of one man, Juan Gaspar Rodriguez, known under the name of Dr. Francia. This man, the son of a Mamaluco, or Brazilian half-caste, with Indian blood in his veins, a man of stern, gloomy and truculent character, with a mixture of scepticism and stoicism, was one of those grim, yet grotesque, heroes according to Mr. Carlyle's heart whom it is now the fashion to call 'Saviours of society.' A Doctor of Divinity, issuing from the Jesuit seminary at Cordova, but practising law at Asuncion, he made his way from the Municipal Council to the Consular dignity of the New Republic, and assumed a Dictatorship, which laid the country at his discretion . . . (1814–1840), wielding the most unbounded power till his death, at the advanced age of 83. With a view, or under pretext of stifling discontent and baffling conspiracy within and warding off intrigue or aggression from without, he rid himself of his colleagues, rivals, and opponents, by wholesale executions, imprisonments, proscriptions, and confiscations, and raised a kind of Chinese wall all round the Paraguayan territory, depriving it of all trade or intercourse, and allowing no man to enter or quit his dominions without an express permission from himself. Francia's absolutism was a monomania, though there was something like method in his madness. There were faction and civil strife and military rule in Paraguay for about a twelvemonth after his death. In the end, a new Constitution, new Consuls—one of whom, Carlos Antonio Lopez, a lawyer, took upon himself to modify the Charter in a strictly despotic sense, had himself elected President, first for ten years, then for three, and again for ten more, managing thus to reign alone and supreme for 21 years (1841–1862). On his demise he bequeathed the Vice-Presidency to his son, Francisco Solano Lopez, whom he had already trusted with the command of all the forces, and who had no difficulty in having himself appointed President for life in an Assembly where there was only one negative vote. The rule of Francia in his later years, and that of the first Lopez throughout his reign, though tyrannical and economically improvident, had not been altogether unfavourable to the development of public prosperity. The population, which was only 97,480 in 1796 and 400,000 in 1825, had risen to 1,337,431 at the census of 1857. Paraguay had then a revenue of 12,441,323f., no debt, no paper money, and the treasury was so full as to enable Lopez II. to muster an army of

62,000 men, with 200 pieces of artillery, in the field and in his fortresses. Armed with this two-edged weapon, the new despot, whose perverse and violent temper bordered on insanity, corrupted by several years' dissipation in Paris, and swayed by the influence of a strong and evil-minded woman, flattered also by the skill he fancied he had shown when he played at soldiers as his father's general in early youth, had come to look upon himself as a second Napoleon, and allowed himself no rest till he had picked a quarrel with all his neighbours and engaged in a war with Brazil and with the Republics of the Plate, which lasted five years (1865–1870) [see BRAZIL: A. D. 1825–1865]. At the end of it nearly the whole of the male population had been led like sheep to the slaughter; and the tyrant himself died 'in the last ditch,' not indeed fighting like a man, but killed like a dog when his flight was cut off, and not before he had sacrificed 100,000 of his combatants, doomed to starvation, sickness, and unutterable hardship a great many of the scattered and houseless population (400,000, as it is calculated), and so ruined the country that the census of 1873 only gave 221,079 souls, of whom the females far more than doubled the males."—A. Gallenga, *South America, ch.* 16.

A. D. 1870-1894.—The Republic under a new Constitution.—Since the death of Lopez, the republic of Paraguay has enjoyed a peaceful, uneventful history and has made fair progress in recovery from its prostration. The Brazilian army of occupation was withdrawn in 1876. Under a new constitution, the executive authority is entrusted to a president, elected for four years, and the legislative to a congress of two houses, senate and deputies. Don Juan G. Gonzales entered, in 1890, upon a presidential term which expires in 1894.

PARALI, The. See ATHENS: B. C. 594.

PARALUS, The.—The official vessel of the ancient Athenian government, for the conveyance of despatches and other official service.

PARASANG, The.—The parasang was an ancient Persian measure of distance, about which there is no certain knowledge. Xenophon and Herodotus represented it as equivalent to 30 Greek stadia; but Strabo regarded it as being of variable length. Modern opinion seems to incline toward agreement with Strabo, and to conclude that the parasang was a merely rough estimate of distance, averaging, according to computations by Colonel Chesney and others, something less than three geographical miles. The modern farsang or farsakh of Persia is likewise an estimated distance, which generally, however, overruns three geographical miles.—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 10, *note B* (*v.* 1).

PARAWIANAS, The. See AMERICAN ABORIGINES: CARIBS AND THEIR KINDRED.

PARICANIANS, The.—The name given by Herodotus to a people who anciently occupied the territory of modern Baluchistan.—G. Rawlinson, *Five Great Monarchies, Persia, ch.* 1.

PARILIA, OR PULILIA, The.—The anniversary of the foundation of Rome, originally a shepherds' festival. It was celebrated on the 21st of April.—C. Merivale, *Hist. of the Romans, ch.* 21, *with foot-note.*

PARIS : The beginning.—A small island in the Seine, which now forms an almost insignificant part of the great French capital, was the site of a rude town called Lutetia, or Luketia, or Lucotecia, when Cæsar extended the dominion of Rome over that part of Gaul. It was the chief town or stronghold of the Parisii, one of the minor tribes of the Gallic people, who were under the protection of the more powerful Senones and who occupied but a small territory. They were engaged in river traffic on the Seine and seem to have been prosperous, then and afterwards. "Strabo calls this place Lucototia; Ptolemy, Lucotecia; Julian, Luketia; Ammianus calls it at first Lutetia, and afterward Parisii, from the name of the people. It is not known when nor why the designation was changed, but it is supposed to have been changed during the reign of Julian. Three laws in the Theodosian Code, referred to Valentinian and Valens, for the year 365, bear date at Parisii, and since then this name has been preserved in all the histories and public records."—P. Godwin, *Hist. of France: Ancient Gaul, bk.* 2, *ch.* 7, *note.*—See GAUL: B. C. 58–51.

Julian's residence.—Before Julian ("the Apostate") became emperor, while, as Cæsar (355–361), he governed Gaul, his favorite residence, when not in camp or in the field, was at the city of the Parisii, which he called his "dear Luketia." The change of name to Parisii (whence resulted the modern name of Paris) is supposed to have taken place during his subsequent reign. "Commanding the fruitful valleys of the Seine, the Marne, and the Oise, the earliest occupants were merchants and boatmen, who conducted the trade of the rivers, and as early as the reign of Tiberius had formed a powerful corporation. During the revolts of the Bagauds in the third century, it acquired an unhappy celebrity as the stronghold from which they harassed the peace of the surrounding region. Subsequently, when the advances of the Germans drove the government from Trèves, the emperors selected the town of the Parisii as a more secure position. They built a palace there, and an entrenched camp for the soldiers; and very soon afterward several of those aqueducts and amphitheatres which were inseparable accompaniments of Roman life. It was in that palace, which the traveller still regards with curiosity in those mouldering remains of it known as the 'Palais des Thermes,' that Julian found his favorite residence."—P. Godwin, *Hist. of France: Ancient Gaul, bk.* 2, *ch.* 7.

The capital of Clovis.—Clovis, the Frank conqueror—founder of the kingdom of the united Frank tribes in Gaul—fixed his residence first at Soissons [486], after he had overthrown Syagrius. "He afterwards chose Paris for his abode, where he built a church dedicated to the apostles St. Peter and St. Paul. But the epoch at which that town passed into his power is

uncertain."—J. C. L. de Sismondi, *The French under the Merovingians, ch.* 5.

A. D. 511-752.—Under the Merovingians. See FRANCE: A. D. 511–752.

A. D. 845.—Sacked by the Normans.—"France was heavily afflicted: a fearfully cold year was followed by another still colder and more inclement. The North wind blew incessantly all through the Winter, all through the pale and leafless Spring. The roots of the vines were perished by the frost—the wolves starved out of their forests, even in Aquitaine. . . . Meanwhile the Danish hosts were in bright activity. Regner Lodbrok and his fellows fitted out their fleet, ten times twelve dragons of the sea. Early in the bleak Spring they sailed, and the stout-built vessels ploughed cheerily through the crashing ice on the heaving Seine. . . . Rouen dared not offer any opposition. The Northmen quietly occupied the City: we apprehend that some knots or bands of the Northmen began even now to domicile themselves there, it being scarcely possible to account for the condition of Normandy under Rollo otherwise than by the supposition, that the country had long previously received a considerable Danish population. Paris, the point to which the Northmen were advancing by land and water, was the key of France, properly so called. Paris taken, the Seine would become a Danish river: Paris defended, the Danes might be restrained, perhaps expelled. The Capetian 'Duchy of France,' not yet created by any act of State, was beginning to be formed through the encreasing influence of the future Capital. . . . Fierce as the Northmen generally were, they exceeded their usual ferocity. . . . With such panic were the Franks stricken, that they gave themselves up for lost. Paris island, Paris river, Paris bridges, Paris towers, were singularly defensible: the Palais-des-Thermes, the monasteries, were as so many castles. Had the inhabitants, for their own sakes, co-operated with Charles-le-Chauve [who had stationed himself with a small army at Saint-Denis], the retreat of the Danes would have been entirely cut off; but they were palsied in mind and body; neither thought of resistance nor attempted resistance, and abandoned themselves to despair. On Easter Eve [March 28, 845] the Danes entered Paris. . . . The priests and clerks deserted their churches: the monks fled, bearing with them their shrines: soldiers, citizens and sailors abandoned their fortresses, dwellings and vessels: the great gate was left open, Paris emptied of her inhabitants, the city a solitude. The Danes hied at once to the untenanted monasteries: all valuable objects had been removed or concealed, but the Northmen employed themselves after their fashion. In the church of Saint-Germain-des-près, they swarmed up the pillars and galleries, and pulled the roof to pieces: the larchen beams being sought as excellent ship-timber. In the city, generally, they did not commit much devastation. They lodged themselves in the empty houses, and plundered all the moveables. . . . The Franks did not make any attempt to attack or dislodge the enemy, but a more efficient power compelled the Danes to retire from the city; disease raged among them, dysentery—a complaint frequently noticed, probably occasioned by their inordinate potations of the country-wine." Under these circumstances, Regner Lodbrok consented to quit Paris on receiving 7,000 pounds of silver,—a sum reckoned to be equivalent to 520,000 livres. "This was the first Danegeld paid by France, an unhappy precedent, and yet unavoidable: the pusillanimity of his subjects compelled Charles to adopt this disgraceful compromise."—Sir F. Palgrave, *Hist. of Normandy and England, bk.* 1, *ch.* 3 (*v.* 1).

ALSO IN: C. F. Keary, *The Vikings in Western Christendom, ch.* 9.

A. D. 857-861.—Twice ravaged by the Northmen.—"The Seine as well as the future Duchy of France being laid open to the Northmen [A. D. 857], Paris, partially recovered from Regner Lodbrok's invasion, was assailed with more fell intent. The surrounding districts were ravaged, and the great monasteries, heretofore sacked, were now destroyed. Only three churches were found standing—Saint-Denis, Saint-Germain-des-près, and Saint-Etienne or Notre-Dame—these having redeemed themselves by contributions to the enemy; but Saint-Denis made a bad bargain. The Northmen did not hold to their contract, or another company of pirates did not consider it as binding: the monastery was burnt to a shell, and a most heavy ransom paid for the liberation of Abbot Louis, Charlemagne's grandson by his daughter Rothaida. Sainte-Génévière suffered most severely amongst all; and the pristine beauty of the structure rendered the calamity more conspicuous and the distress more poignant. During three centuries the desolated grandeur of the shattered ruins continued to excite sorrow and dread. . . . Amongst the calamities of the times, the destruction of the Parisian monasteries seems to have worked peculiarly on the imagination." After this destructive visitation, the city had rest for only three years. In 861 a fresh horde of Danish pirates, first harrying the English coast and burning Winchester, swept then across the channel and swarmed over the country from Scheldt to Seine. Amiens, Nimeguen, Bayeux and Terouenne were all taken, on the way, and once more on Easter Day (April 6, 861) the ruthless savages of the North entered Paris. Saint-Germain-des-près, spared formerly, was now set on fire, and the city was stripped of its movable goods. King Charles the Bald met the enemy on this occasion, as before, with bribes, gave a fief to Jarl Welland, the Danish leader, and presently got him settled in the country as a baptized Christian and a vassal.—Sir F. Palgrave, *Hist. of Normandy and England, bk.* 1, *ch.* 3 (*v.* 1).

A. D. 885-886.—The great siege by the Northmen.—"In November, 885, under the reign of Charles the Fat, after having, for more than forty years, irregularly ravaged France, they [the Northmen] resolved to unite their forces in order at length to obtain possession of Paris, whose outskirts they had so often pillaged without having been able to enter the heart of the place, in the Ile de la Cité, which had originally been and still was the real Paris. Two bodies of troops were set in motion; one, under the command of Rollo, who was already famous amongst his comrades, marched on Rouen; the other went right up the course of the Seine, under the orders of Siegfried, whom the Northmen called their king. Rollo took Rouen, and pushed on at once for Paris. . . . On the 25th of November, 885, all the forces of the North-

men formed a junction before Paris; 700 huge barks covered two leagues of the Seine, bringing, it is said, more than 30,000 men. The chieftains were astonished at sight of the new fortifications of the city, a double wall of circumvallation, the bridges crowned with towers, and in the environs the ramparts of the abbeys of St. Denis and St. Germain solidly rebuilt. . . . Paris had for defenders two heroes, one of the Church and the other of the Empire [Bishop Gozlin, and Eudes, lately made Count of Paris]. . . . The siege lasted thirteen months, whiles pushed vigorously forward, with eight several assaults; whiles maintained by close investment. . . . The bishop, Gozlin, died during the siege. Count Eudes quitted Paris for a time to go and beg aid of the emperor; but the Parisians soon saw him reappear on the heights of Montmartre with three battalions of troops, and he re-entered the town, spurring on his horse and striking right and left with his battle-axe through the ranks of the dumfounded besiegers. The struggle was prolonged throughout the summer, and when, in November, 886, Charles the Fat at last appeared before Paris, 'with a large army of all nations,' it was to purchase the retreat of the Northmen at the cost of a heavy ransom, and by allowing them to go and winter in Burgundy, 'whereof the inhabitants obeyed not the emperor.'"—F. P. Guizot, *Popular Hist. of France, ch.* 12 (*v.* 1).

Also in: Sir F. Palgrave, *Hist. of Normandy and Eng., bk.* 1, *ch.* 5.—C. F. Keary, *The Vikings in Western Christendom, ch.* 15.

A. D. 987.—First becomes the capital of France.—"Nothing is more certain than that Paris never became the capital of France until after the accession of the third dynasty. Paris made the Capets, the Capets made Paris."—Sir F. Palgrave, *Hist. of Normandy and Eng., v.* 1, *p.* 280.

A. D. 1180-1199.—Improvement of the city by Philip Augustus.—"During the few short intervals of peace which had occurred in the hitherto troubled reign of Philip [A. D. 1180–1199], he had not been unmindful of the civil improvement of his people; and the inhabitants of his capital are indebted to his activity for the first attempts to rescue its foul, narrow, and mud-embedded streets from the reproach which its Latin name 'Lutetia' very justly implied. Philip expended much of the treasure, hitherto devoted solely to the revels of the court, in works of public utility, in the construction of paved causeways and aqueducts, in founding colleges and hospitals, in commencing a new city wall, and in the erection of the Cathedral of Nôtre-Dâme."—E. Smedley, *Hist. of France, pt.* 1, *ch.* 4.

A. D. 1381.—The Insurrection of the Maillotins.—At the beginning of the reign of Charles VI. a tumult broke out in Paris, caused by the imposition of a general tax on merchandise of all kinds. "The Parisians ran to the arsenal, where they found mallets of lead intended for the defence of the town, and under the blows from which the greater part of the collectors of the new tax perished. From the weapons used the insurgents took the name of Maillotins. Reims, Châlons, Orleans, Blois, and Rouen rose at the example of the capital. The States-General of the Langue d' Oil were then convoked at Compiègne, and separated without having granted anything. The Parisians were always in arms, and the dukes [regents during the minority of the young king], powerless to make them submit, treated with them, and contented themselves with the offer of 100,000 livres. The chastisement was put off for a time." The chastisement of Paris and of the other rebellious towns was inflicted in 1382 (see Flanders: A. D. 1382) after the king and his uncles had subdued the Flemings at Rosebecque.—E. de Bonnechose, *Hist. of France, epoch* 2, *bk.* 2, *ch.* 5.

PARLIAMENT, The English: Early stages of its evolution.—"There is no doubt that in the earliest Teutonic assemblies every freeman had his place. . . . But how as to the great assembly of all, the Assembly of the Wise, the Witenagemót of the whole realm [of early England]? No ancient record gives us any clear or formal account of the constitution of that body. It is commonly spoken of in a vague way as a gathering of the wise, the noble, the great men. But alongside of passages like these, we find other passages which speak of it in a way which implies a far more popular constitution. . . . It was in fact a body, democratic in ancient theory, aristocratic in ordinary practice, but to which any strong popular impulse could at any time restore its ancient democratic character. . . . Out of this body, whose constitution, by the time of the Norman Conquest, had become not a little anomalous, and not a little fluctuating, our Parliament directly grew. Of one House of that Parliament we may say more; we may say, not that it grew out of the ancient Assembly, but that it is absolutely the same by personal identity. The House of Lords not only springs out of, it actually is, the ancient Witenagemót. I can see no break between the two. . . . An assembly in which at first every freeman had a right to appear has, by the force of circumstances, step by step, without any one moment of sudden change, shrunk up into an Assembly wholly hereditary and official, an Assembly to which the Crown may summon any man, but to which, it is now strangely held, the Crown cannot refuse to summon the representatives of any man whom it has once summoned. As in most other things, the tendency to shrink up into a body of this kind began to show itself before the Norman Conquest, and was finally confirmed and established through the results of the Norman Conquest. But the special function of the body into which the old national Assembly has changed, the function of 'another House,' an Upper House, a House of Lords as opposed to a House of Commons, could not show itself till a second House of a more popular constitution had arisen by its side. Like everything else in our English polity, both Houses in some sort came of themselves. Neither of them was the creation of any ingenious theorist. . . . Our Constitution has no founder; but there is one man to whom we may give all but honours of a founder, one man to whose wisdom and self-devotion we owe that English history has taken the course which it has taken for the last 600 years. . . . That man, the man who finally gave to English freedom its second and more lasting shape, the hero and martyr of England in the greatest of her constitutional struggles, was Simon of Montfort, Earl of Leicester. If we may not call him the founder of the English Constitution, we may at least call him the founder of the House of Commons. . . . When we reach the 13th century, we may look on the old Teutonic constitution as having utterly passed away. Some faint traces of it indeed we may find here and there in the course of the 12th century; . . . but the regular Great Council, the lineal representatives of the ancient Mycel Gemót or Witenagemót, was shrinking up into a body not very unlike our House of Lords. . . . The Great Charter secures the rights of the nation and of the national Assembly as against arbitrary legislation and arbitrary taxation on the part of the Crown. But it makes no change in the constitution of the Assembly itself. . . . The Great Charter in short is a Bill of Rights; it is not what, in modern phrase, we understand by a Reform Bill. But, during the reigns of John and Henry III., a popular element was fast making its way into the national Councils in a more practical form. The right of the ordinary freeman to attend in person had long been a shadow; that of the ordinary tenant-in-chief was becoming hardly more practical; it now begins to be exchanged for what had by this time become the more practical right of choosing representatives to act in his name. Like all other things in England, this right has grown up by degrees and as the result of what we might almost call a series of happy accidents. Both in the reign of John and in the former part of the reign of Henry, we find several instances of knights from each county being summoned. Here we have the beginning of our county members and of the title which they still bear, of knights of the Shire. Here is the beginning of popular representation, as distinct from the gathering of the people in their own persons; but we need not think that those who first summoned them had any conscious theories of popular representation. The earliest object for which they were called together was probably a fiscal one; it was a safe and convenient way of getting money. The notion of summoning a small number of men to act on behalf of the whole was doubtless borrowed from the practice in judicial proceedings and in inquests and commissions of various kinds, in which it was usual for certain select men to swear on behalf of the whole shire or hundred. We must not forget . . . that our judicial and our parliamentary institutions are closely connected. . . . But now we come to that great change, that great measure of Parliamentary Reform, which has left to all later reformers nothing to do but to improve in detail. We come to that great act of the patriot Earl which made our popular Chamber really a popular Chamber. . . . When, after the fight of Lewes, Earl Simon, then master of the kingdom with the King in his safe keep-

ing, summoned his famous Parliament [A. D. 1264–5], he summoned, not only two knights from every county, but also two citizens from every city and two burgesses from every borough. . . . Thus was formed that newly developed Estate of the Realm which was, step by step, to grow into the most powerful of all, the Commons' House of Parliament."—E. A. Freeman, *Growth of the Eng. Constitution, ch.* 2.

Also in: W. Stubbs, *Const. Hist. of Eng., ch.* 6, 13–14.—R. Gneist, *The Eng. Parliament.*—T. P. Taswell-Langmead, *Eng. Const. Hist., ch.* 7.—A. Bissett, *Short Hist. of Eng. Parliament, ch.* 2–3.—See, also, Witenagemot; England: A. D. 1216–1274; and Knights of the Shire.

A. D. 1244.—Earliest use of the name.—In 1244, "as had happened just one hundred years previously in France, the name 'parliamentum' occurs for the first time [in England] (Chron. Dunst., 1244; Matth. Paris, 1246), and curiously enough, Henry III. himself, in a writ addressed to the Sheriff of Northampton, designates with this term the assembly which originated the Magna Charta: 'Parliamentum Runemede, quod fuit inter Dom. Joh., Regem patrem nostrum et barones suos Angliæ' (Rot. Claus., 28 Hen. III.). The name 'parliament' now occurs more frequently, but does not supplant the more indefinite terms 'concilium,' 'colloquium,' etc."—R. Gneist, *Hist. of the English Const., ch.* 19, *and foot-note,* 2*a* (*v.* 1).—"The name given to these sessions of Council [the national councils of the 12th century] was often expressed by the Latin 'colloquium': and it is by no means unlikely that the name of Parliament, which is used as early as 1175 by Jordan Fantosme, may have been in common use. But of this we have no distinct instance in the Latin Chroniclers for some years further, although when the term comes into use it is applied retrospectively."—W. Stubbs, *Const. Hist. of Eng., ch.* 13, *sect.* 159.

A. D. 1258.—The Mad Parliament.—An English Parliament, or Great Council, assembled at Oxford A. D. 1258, so-called by the party of King Henry III. from whom it extorted an important reorganization of the government, with much curtailment of the royal power.—W. Stubbs, *Const. Hist. of Eng., ch.* 14, *sect.* 176 (*v.* 2).—See England: A. D. 1216–1274.

A. D. 1264.—Simon de Montfort's Parliament. See England: A. D. 1216–1274; and Parliament, The English: Early stages in its Evolution.

A. D. 1376.—The Good Parliament.—The English parliament of 1376 was called the Good Parliament; although most of the good work it undertook to do was undone by its successor.—W. Stubbs, *Const. Hist. of Eng., ch.* 16 (*v.* 2).

A. D. 1388.—The Wonderful Parliament.—In 1387, King Richard II. was compelled by a great armed demonstration, headed by five powerful nobles, to discard his obnoxious favorites and advisers, and to summon a Parliament for dealing with the offenses alleged against them. "The doings of this Parliament [which came together in February, 1388] are without a parallel in English history,—so much so that the name 'Wonderful Parliament' came afterwards to be applied to it. With equal truth it was also called 'the Merciless Parliament.'" It was occupied for four months in the impeachment and trial of ministers, judges, officers of the courts, and other persons, bringing a large number to the block.—J. Gairdner, *Houses of Lancaster and York, ch.* 2, *sect.* 5.

Also in: C. H. Pearson, *Eng. Hist. in the* 14*th Century, ch.* 11.

A. D. 1404.—The Unlearned Parliament.—"This assembly [A. D. 1404, reign of Edward IV.] acquired its ominous name from the fact that in the writ of summons the king, acting upon the ordinance issued by Edward III in 1372, directed that no lawyers should be returned as members. He had complained more than once that the members of the House of Commons spent more time on private suits than on public business."—W. Stubbs, *Const. Hist. of Eng., ch.* 18, *sect.* 634 (*v.* 3).

PARLIAMENT OF PARIS.—"When the Carlovingian Monarchy had given place, first to Anarchy and then to Feudalism, the mallums, and the Champs de Mai, and (except in some southern cities) the municipal curiæ also disappeared. But in their stead there came into existence the feudal courts. Each tenant in capite of the crown held within his fief a Parliament of his own free vassals. . . . There was administered the seigneur's 'justice,' whether haute, moyenne, or basse. There were discussed all questions immediately affecting the seigneurie or the tenants of it. There especially were adopted all general regulations which the exigencies of the lordship were supposed to dictate, and especially all such as related to the raising tailles or other imposts. What was thus done on a small scale in a minor fief, was also done, though on a larger scale, in each of the feudal provinces, and on a scale yet more extensive in the court or Parliament holden by the king as a seigneur of the royal domain. . . . This royal court or Parliament was, however, not a Legislature in our modern sense of that word. It was rather a convention, in which, by a voluntary compact between the king as supreme suzerain and the greater seigneurs as his feudatories, an ordonnance or an impost was established, either throughout the entire kingdom, or in some seigneuries apart from the rest. From any such compact any seigneur might dissent on behalf of himself and his immediate vassals or, by simply absenting himself, might render the extension of it to his own fief impossible. . . . Subject to the many corrections which would be requisite to reduce to perfect accuracy this slight sketch of the origin of the great council or Parliament of the kings of France, such was, in substance, the constitution of it at the time of the accession of Louis IX. [A. D. 1226]. Before the close of his eventful reign, that monarch had acquired the character and was in full exercise of the powers of a law-giver, and was habitually making laws, not with the advice and consent of his council or Parliament, but in the exercise of the inherent prerogative which even now they began to ascribe to the French crown. . . . With our English prepossessions, it is impossible to repress the wonder, and even the incredulity, with which we at first listen to the statement that the supreme judicial tribunal of the kingdom could be otherwise than the zealous and effectual antagonist of so momentous an encroachment." The explanation is found in a change which had taken place in the character of the Parliament, through which its function and authority became distinctly judicial and quite apart from those of a council or a legislature. When Philip Augustus went to the Holy Land, he provided for the decision of complaints against officers of the crown by directing the queen-mother and the archbishop of Rheims, who acted as regents, to hold an annual assembly of the greater barons. "This practice had become habitual by the time of Louis IX. For the confirmation and improvement of it, that monarch ordered that, before the day of any such assemblage, citations should be issued, commanding the attendance, not, as before, of the greater barons exclusively, but of twenty-four members of the royal council or Parliament. Of those twenty-four, three only were to be great barons, three were to be bishops, and the remaining eighteen were to be knights. But as these members of the royal council did not appear to St. Louis to possess all the qualifications requisite for the right discharge of the judicial office, he directed that thirty-seven other persons should be associated to them. Of those associates, seventeen were to be clerks in holy orders, and twenty légistes, that is, men bred to the study of the law. The function assigned to the légistes was that of drawing up in proper form the decrees and other written acts of the collective body. To this body, when thus constituted, was given the distinctive title of the Parliament of Paris." By virtue of their superior education and training, the légistes soon gathered the business of the Parliament into their own hands; the knights and barons found attendance a bore and an absurdity. "Ennui and ridicule . . . proved in the Parliament of Paris a purge quite as effectual as that which Colonel Pride administered to the English House of Commons. The conseiller clercs were soon left to themselves, in due time to found, and to enjoy, what began to be called 'La Noblesse de la Robe.' [See FRANCE: A. D. 1226–1270.] Having thus assumed the government of the court, the légistes next proceeded to enlarge its jurisdiction. . . . The Parliament had, in the beginning of the 14th century, become the supreme legal tribunal within the whole of that part of France which was at that time attached to the crown." In the reign of Philip the Long (1316–1322) the Parliament and the royal council became practically distinct bodies; the former became sedentary at Paris, meeting nowhere else, and its members were required to be constantly resident in Paris. By 1345 the parliamentary

counselors, as they were now called, had acquired life appointments, and in the reign of Charles VI. (1380–1422) the seats in the Parliament of Paris became hereditary. "At the period when the Parliament of Paris was acquiring its peculiar character as a court of justice, the meetings of the great vassals of the crown, to co-operate with the king in legislation, were falling into disuse. The king . . . had begun to originate laws without their sanction; and the Parliament, not without some show of reason, assumed that the right of remonstrance, formerly enjoyed by the great vassals, had now passed to themselves. . . . If their remonstrance was disregarded, their next step was to request that the projected law might be withdrawn. If that request was unheeded, they at length formally declined to register it among their records. Such refusals were sometimes but were not usually successful. In most instances they provoked from the king a peremptory order for the immediate registration of his ordinance. To such orders the Parliament generally submitted."—Sir J. Stephen, *Lect's on the Hist. of France, lect.* 8.—"It appears that the opinion is unfounded which ascribes to the States [the 'States-General'] and the Parliaments a different origin. Both arose out of the National Assemblies held at stated periods in the earliest times of the monarchy [the 'Champs de Mars' and 'Champs de Mai']. . . . Certainly in the earliest part of [the 13th] century there existed no longer two bodies, but only one, which had then acquired the name of Parliament. The stated meetings under the First race were called by the name of Mallum or Mallus, sometimes Placitum [also Plaid], sometimes Synod. Under the Second race they were called Colloquium also. The translation of this term (and it is said also of Mallum) into Parliament occurs not before the time of Louis VI. (le Gros); but in that of Louis VIII., at the beginning of the 13th century, it became the usual appellation. There were then eleven Parliaments, besides that of Paris, and all those bodies had become merely judicial, that of Paris exercising a superintending power over the other tribunals. . . . After [1334] . . . the Parliament was only called upon to register the Ordinances. This gave a considerable influence to the Parliament of Paris, which had a right of remonstrance before registry; the Provincial Parliaments only could remonstrate after registry. . . . The Parliament of Paris, besides remonstrating, might refuse to register; and though compellable by the King holding a Bed of Justice, which was a more solemn meeting of the Parliament attended by the King's Court in great state [see BED OF JUSTICE], yet it cannot be doubted that many Ordinances were prevented and many modified in consequence of this power of refusal."—Lord Brougham, *Hist. of England and France under the House of Lancaster, note* 66.—For an account of the conflict between the Parliament of Paris and the crown which immediately preceded the French Revolution, see FRANCE: A. D. 1787–1789.

A. D. 1545-1592.—Alienation from the Holy See and erection, with Placentia, into a duchy, for the House of Farnese.—"Paul III. was the last of those ambitious popes who rendered the interests of the holy see subordinate to the aggrandizement of their families. The designs of Paul, himself the representative of the noble Roman house of Farnése, were ultimately successful; since, although partially defeated during his life, they led to the establishment of his descendants on the throne of Parma and Placentia for nearly 200 years. . . . He gained the consent of the sacred college to alienate those states from the holy see in 1545, that he might erect them into a duchy for his natural son, Pietro Luigi Farnése; and the Emperor Charles V. had already, some years before, to secure the support of the papacy against France, bestowed the hand of his natural daughter, Margaret, widow of Alessandro de' Medici, upon Ottavio, son of Pietro Luigi, and grandson of Paul III. Notwithstanding this measure, Charles V. was not subsequently, however, the more disposed to confirm to the house of Farnése the investiture of their new possessions, which he claimed as part of the Milanese duchy; and he soon evinced no friendly disposition towards his own son-in-law, Ottavio. Pietro Luigi, the first duke of Parma, proved himself, by his extortions, his cruelties, and his debaucheries, scarcely less detestable than any of the ancient tyrants of Lombardy. He thus provoked a conspiracy and insurrection of the nobles of Placentia, where he resided; and he was assassinated by them at that place in 1547, after a reign of only two years. The city was immediately seized in the imperial name by Gonzaga, governor of Milan. . . . To deter the emperor from appropriating Parma also to himself, [Paul III.] could devise no other expedient than altogether to retract his grant from his family, and to reoccupy that city for the holy see, whose rights he conceived that the emperor would not venture to invade." But after the death of Paul III., the Farnése party, commanding a majority in the conclave, "by raising Julius III. to the tiara [1550], obtained the restitution of Parma to Ottavio from the gratitude of the new pope. The prosperity of the ducal house of Farnése was not yet securely established. The emperor still retained Placentia, and Julius III. soon forgot the services of that family. In 1551, the pope leagued with Charles V. to deprive the duke Ottavio of the fief which he had restored to him. Farnése was thus reduced . . . to place himself under the protection of the French; and this measure, and the indecisive war which followed, became his salvation. He still preserved his throne when Charles V. terminated his reign; and one of the first acts of Philip II., when Italy was menaced by the invasion of the duke de Guise [1556], was to win him

over from the French alliance, and to secure his gratitude, by yielding Placentia again to him. But a Spanish garrison was still left in the citadel of that place; and it was only the brilliant military career of Alessandro Farnése, the celebrated prince of Parma, son of duke Ottavio, which finally consummated the greatness of his family. Entering the service of Philip II., Alessandro gradually won the respect and favour of that gloomy monarch; and at length, in 1585, as a reward for his achievements, the Spanish troops were withdrawn from his father's territories. The duke Ottavio closed his life in the following year; but Alessandro never took possession of his throne. He died at the head of the Spanish armies in the Low Countries in 1592; and his son Ranuccio quietly commenced his reign over the duchy of Parma and Placentia under the double protection of the holy see and the monarchy of Spain."—G. Procter, *Hist. of Italy, ch.* 9.

PARSEES, The.—"On the western coast of India, from the Gulf of Cambay to Bombay, we find from one hundred to one hundred and fifty thousand families whose ancestors migrated thither from Iran. The tradition among them is, that at the time when the Arabs, after conquering Iran and becoming sovereigns there, persecuted and eradicated the old religion [of the Avesta], faithful adherents of the creed fled to the mountains of Kerman. Driven from these by the Arabs (in Kerman and Yezd a few hundred families are still found who maintain the ancient faith), they retired to the island of Hormuz (a small island close by the southern coast, at the entrance to the Persian Gulf). From hence they migrated to Din (on the coast of Guzerat), and then passed over to the opposite shore. In the neighbourhood of Bombay and in the south of India inscriptions have been found which prove that these settlers reached the coast in the tenth century of our era. At the present time their descendants form a considerable part of the population of Surat, Bombay, and Ahmadabad; they call themselves, after their ancient home, Parsees, and speak the later Middle Persian."—M. Duncker, *Hist. of Antiquity, bk.* 7, *ch.* 2 (*v.* 5).—See, also, ZOROASTRIANS.

PARSONS' CAUSE, The. See VIRGINIA: A. D. 1763.

PARTHENII, The.—This name was given among the Spartans to a class of young men, sons of Spartan women who had married outside the exclusive circle of the Spartiatæ. The latter refused, even when Sparta was most pressingly in need of soldiers, to admit these "sons of maidens," as they stigmatized them, to the military body. The Parthenii, becoming numerous, were finally driven to emigrate, and found a home at Tarentum, Italy.—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 1.—See TARENTUM.

PARTHENON AT ATHENS, The.—"Pericles had occasion to erect on the highest point of the Acropolis, in place of the ancient Hecatompedon, a new festive edifice and treasure-house, which, by blending intimately together the fulfilment of political and religious ends, was to serve to represent the piety and artistic culture, the wealth and the festive splendour—in fine, all the glories which Athens had achieved by her valour and her wisdom [see ATHENS: B. C. 445–431]. . . . The architect from whose design, sanctioned by Pericles and Phidias, the new Hecatompedon was erected, was Ictinus, who was seconded by Callicrates, the experienced architect of the double line of walls. It was not intended to build an edifice which should attract attention by the colossal nature of its proportions or the novelty of its style. The traditions of the earlier building were followed, and its dimensions were not exceeded by more than 50 feet. In a breadth of 100 feet the edifice extended in the form of a temple, 226 feet from east to west; and the height, from the lowest stair to the apex of the pediment, amounted only to 65 feet. . . . The Hecatompedon, or Parthenon (for it went by this name also as the house of Athene Parthenos), was very closely connected with the festival of the Panathenæa, whose splendour and dignity had gradually risen by degrees together with those of the state. . . . The festival commenced with the performances in the Odeum, where the masters of song and recitation, and the cither and flute-players, exhibited their skill, the choral songs being produced in the theatre. Hereupon followed the gymnastic games, which, besides the usual contests in the stadium, foot-race, wrestling-matches, &c., also included the

torch-race, which was held in the Ceramicus outside the Dipylum, when no moon shone in the heavens; and which formed one of the chief attractions of the whole festival."—E. Curtius, *Hist. of Greece, bk.* 3, *ch.* 3.—See, also, Acropolis of Athens.

PARTHIA, AND THE PARTHIAN EMPIRE.—"The mountain chain, which running southward of the Caspian, skirts the great plateau of Iran, or Persia, on the north, broadens out after it passes the south-eastern corner of the sea, into a valuable and productive mountain-region. Four or five distinct ranges here run parallel to one another, having between them latitudinal valleys, with glens transverse to their courses. The sides of the valleys are often well wooded; the flat ground at the foot of the hills is fertile; water abounds; and the streams gradually collect into rivers of a considerable size. The fertile territory in this quarter is further increased by the extension of cultivation to a considerable distance from the base of the most southern of the ranges, in the direction of the Great Iranic desert. . . . It was undoubtedly in the region which has been thus briefly described that the ancient home of the Parthians lay. . . . Parthia Proper, however, was at no time coextensive with the region described. A portion of that region formed the district called Hyrcania; and it is not altogether easy to determine what were the limits between the two. The evidence goes, on the whole, to show that while Hyrcania lay towards the west and north, the Parthian country was that towards the south and east, the valleys of the Ettrek and Gurghan constituting the main portions of the former, while the tracts east and south of those valleys, as far as the sixty-first degree of E. longitude, constituted the latter. If the limits of Parthia Proper be thus defined, it will have nearly corresponded to the modern Persian province of Khorasan. . . . The Turanian character of the Parthians, though not absolutely proved, appears to be in the highest degree probable. If it be accepted, we must regard them as in race closely allied to the vast hordes which from a remote antiquity have roamed over the steppe region of Upper Asia, from time to time bursting upon the south and harassing or subjugating the comparatively unwarlike inhabitants of the warmer countries. We must view them as the congeners of the Huns, Bulgarians and Comans of the ancient world; of the Kalmucks, Ouigurs, Usbegs, Eleuts, &c., of the present day. . . .The Parthians probably maintained their independence from the time of their settlement in the district called after their name until the sudden arrival in their country of the great Persian conqueror, Cyrus, [about 554 B. C.]. . . . When the Persian empire was organised by Darius Hystaspis into satrapies, Parthia was at first united in the same government with Chorasmia, Sogdiana and Aria. Subsequently, however, when satrapies were made more numerous, it was detached from these extensive countries, and made to form a distinct government, with the mere addition of the comparatively small district of Hyrcania." The conquests of Alexander included Parthia within their range, and, under the new political arrangements which followed Alexander's death, that country became for a time part of the wide empire of the Seleucidæ, founded by Seleucus Nicator, — the kingdom of Syria as it was called. But about 250 B. C. a successful revolt occurred in Parthia, led by one Arsaces, who founded an independent kingdom and a dynasty called the Arsacid (see Seleucidæ: B. C. 281–224, and 224–187). Under succeeding kings, especially under the sixth of the line, Mithridates I. (not to be confused with the Mithridatic dynasty in Pontus), the kingdom of Parthia was swollen by conquest to a great empire, covering almost the whole territory of the earlier Persian empire, excepting in Asia Minor and Syria. On the rise of the Roman power, the Parthians successfully disputed with it the domination of the east, in several wars (see Rome: B. C. 57–52), none of which were advantageous to the Romans, until the time of Trajan.—G. Rawlinson, *Sixth Great Oriental Monarchy: Parthia.*—Trajan (A. D. 115–117—see Rome: A. D. 96–138) "undertook an expedition against the nations of the East. . . . The success of Trajan, however transient, was rapid and specious. The degenerate Parthians, broken by intestine discord, fled before his arms. He descended the river Tigris in triumph, from the mountains of Armenia to the Persian gulf. He enjoyed the honour of being the first, as he was the last, of the Roman generals who ever navigated that remote sea. His fleets ravaged the coasts of Arabia. . . . Every day the astonished senate received the intelligence of new names and new nations that acknowledged his sway. . . . But the death of Trajan soon clouded the splendid prospect. . . . The resignation of all the eastern conquests of Trajan was the first measure of his [successor Hadrian's] reign. He [Hadrian] restored to the Parthians the election of an independent sovereign, withdrew the Roman garrisons from the provinces of Armenia, Mesopotamia and Assyria; and, in compliance with the precept of Augustus, once more established the Euphrates as the frontier of the empire."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 1.—In the reign of Marcus Aurelius Antoninus at Rome, the Parthian king Vologeses III. (or Arsaces XXVII.) provoked the Roman power anew by invading Armenia and Syria. In the war which followed, the Parthians were driven from Syria and Armenia; Mesopotamia was occupied; Seleucia, Ctesiphon and Babylon taken; and the royal palace at Ctesiphon burned (A. D. 165). Parthia then sued for peace, and obtained it by ceding Mesopotamia, and allowing Armenia to return to the position of a Roman dependency. Half a century later the final conflict of Rome and Parthia occurred. "The battle of Nisibis [A. D. 217], which terminated the long contest between Rome and Parthia, was the fiercest and best contested which was ever fought between the rival powers. It lasted for the space of three days. . . . Macrinus [the Roman emperor, who commanded] took to flight among the first; and his hasty retreat discouraged his troops, who soon afterwards acknowledged themselves beaten and retired within the lines of their camp. Both armies had suffered severely. Herodian describes the heaps of dead as piled to

such a height that the manœuvres of the troops were impeded by them, and at last the two contending hosts could scarcely see one another. Both armies, therefore, desired peace." But the peace was purchased by Rome at a heavy price. After this, the Parthian monarchy was rapidly undermined by internal dissensions and corruptions, and in A. D. 226 it was overthrown by a revolt of the Persians, who claimed and secured again, after five centuries and a half of subjugation, their ancient leadership among the races of the East. The new Persian Empire, or Sassanian monarchy, was founded by Artaxerxes I. on the ruins of the Parthian throne.—G. Rawlinson, *The Sixth Great Oriental Monarchy, ch.* 3–21.

PARTHIAN HORSE.—PARTHIAN ARROWS.—"Fleet and active coursers, with scarcely any caparison but a headstall and a single rein, were mounted by riders clad only in a tunic and trousers, and armed with nothing but a strong bow and a quiver full of arrows. A training begun in early boyhood made the rider almost one with his steed; and he could use his weapons with equal ease and effect whether his horse was stationary or at full gallop, and whether he was advancing towards or hurriedly retreating from his enemy. . . . It was his ordinary plan to keep constantly in motion when in the presence of an enemy, to gallop backwards and forwards, or round and round his square or column, . . . at a moderate interval plying it with his keen and barbed shafts."—G. Rawlinson, *Sixth Great Oriental Monarchy, ch.* 11.

PATARENES.—PATERINI.—About the middle of the 11th century, there appeared at Milan a young priest named Ariald who caused a great commotion by attacking the corruptions of clergy and people and preaching repentance and reform. The whole of Milan became "separated into two hotly contending parties. This controversy divided families; it was the one object which commanded universal participation. The popular party, devoted to Ariald and Landulph [a deacon who supported Ariald], was nicknamed 'Pataria', which in the dialect of Milan signified a popular faction; and as a heretical tendency might easily grow out of, or attach itself to, this spirit of separatism so zealously opposed to the corruption of the clergy, it came about that, in the following centuries, the name Patarenes was applied in Italy as a general appellation to denote sects contending against the dominant church and clergy — sects which, for the most part, met with great favour from the people."—A. Neander, *General Hist. of the Christian Religion and Church (Bohn's ed.), v. 6, p. 67.*—"The name Patarini is derived from the quarter of the rag-gatherers, Pataria."—W. Moeller, *Hist. of the Christian Church in the Middle Ages, p. 253, foot-note.*—During the fierce controversy of the 11th century over the question of celibacy for the clergy (see PAPACY: A. D. 1056–1122), the party in Milan which supported Pope Gregory VII. (Hildebrand) in his inflexible warfare against the marriage of priests were called by their opponents Patarines.—H. H. PATCHINAKS. — UZES. — COMANS.—The Patchinaks, or Patzinaks, Uzes and Comans were successive swarms of Turkish nomads which came into southeastern Europe during the 10th, 11th and 12th centuries, following and driving each other into the long and often devastated Danubian provinces of the Byzantine empire, and across the Balkans. The Comans are said to have been Turcomans, with the first part of their true name dropped off.—E. Pears, *The Fall of Constantinople, ch. 3.*—See, also, RUSSIANS: A. D. 865–900.

PATRIARCH OF THE WEST, The.—"It was not long after the dissolution of the Jewish state [consequent on the revolt suppressed by Titus] that it revived again in appearance, under the form of two separate communities mostly dependent upon each other: one under a sovereignty purely spiritual, the other partly temporal and partly spiritual,—but each comprehending all the Jewish families in the two great divisions of the world. At the head of the Jews on this side of the Euphrates appeared the Patriarch of the West; the chief of the Mesopotamian community assumed the striking but more temporal title of 'Resch-Glutha,' or Prince of the Captivity. The origin of both these dignities, especially of the Western patriarchate, is involved in much obscurity."—H. H. Milman, *Hist. of the Jews, bk. 18.*—See, also, JEWS: A. D. 200–400.

PATRICIAN, The class. See COMITIA CURIATA; also, PLEBEIANS.

PATRICIAN, The Later Roman Title.—"Introduced by Constantine at a time when its original meaning had been long forgotten, it was designed to be, and for a while remained, the name not of an office but of a rank, the highest after those of emperor and consul. As such, it was usually conferred upon provincial governors of the first class, and in time also upon barbarian potentates whose vanity the Roman court might wish to flatter. Thus Odoacer, Theodoric, the Burgundian king Sigismund, Clovis himself, had all received it from the Eastern emperor; so too in still later times it was given to Saracenic and Bulgarian princes. In the sixth and seventh centuries an invariable practice seems to have attached it to the Byzantine viceroys of Italy, and thus, as we may conjecture, a natural confusion of ideas had made men take it to be, in some sense, an official title, conveying an extensive though undefined authority, and implying in particular the duty of overseeing the Church and promoting her temporal interests. It was doubtless with such a meaning that the Romans and their bishop bestowed it upon the Frankish kings, acting quite without legal right, for it could emanate from the emperor alone, but choosing it as the title which bound its possessor to render to the church support and defence against her Lombard foes."—J. Bryce, *The Holy Roman Empire, ch. 4.*

PAULETTE, The. See FRANCE: A. D. 1647–1648.

PAULICIANS, The.—"After a pretty long obscurity the Manichean theory revived with some modification in the western parts of Armenia, and was propagated in the 8th and 9th centuries by a sect denominated Paulicians. Their tenets are not to be collected with absolute certainty from the mouths of their adversaries, and no apology of their own survives. There seems however to be sufficient evidence that the Paulicians, though professing to acknowledge and even to study the apostolical writings, ascribed the creation of the world to an evil deity, whom they supposed also to be the author of the Jewish law, and consequently rejected all the Old Testament. . . . Petrus Siculus enumerates six Paulician heresies. 1. They maintained the existence of two deities, the one evil, and the creator of this world; the other good, . . . the author of that which is to come. 2. They refused to worship the Virgin, and asserted that Christ brought his body from heaven. 3. They rejected the Lord's Supper. 4. And the adoration of the cross. 5. They denied the authority of the Old Testament, but admitted the New, except the epistles of St. Peter, and, perhaps, the Apocalypse. 6. They did not acknowledge the order of priests. There seems every reason to suppose that the Paulicians, notwithstanding their mistakes, were endowed with sincere and zealous piety, and studious of the Scriptures. . . . These errors exposed them to a long and cruel persecution, during which a colony of exiles was planted by one of the Greek emperors in Bulgaria. From this settlement they silently promulgated their Manichean creed over the western regions of Christendom. A large part of the commerce of those countries with Constantinople was carried on for several centuries by the channel of the Danube. This opened an immediate intercourse with the Paulicians, who may be traced up that river through Hungary and Bavaria, or sometimes taking the route of Lombardy, into Switzerland and France. In the last country, and especially in its southern and eastern provinces, they became conspicuous under a variety of names; such as Catharists, Picards, Paterins, but, above all, Albigenses. It is beyond a doubt that many of these sectaries owed their origin to the Paulicians; the appellation of Bulgarians was distinctively bestowed upon them; and, according to some writers, they acknowledged a primate or patriarch resident in that country. . . . It is generally agreed that the Manicheans from Bulgaria did not penetrate into the west of Europe before the year 1000; and they seem to have been in small numbers till about 1140. . . . I will only add, in order to obviate cavilling, that I use the word Albigenses for the Manichean sects, without pretending to assert that their doctrines prevailed more in the neighbourhood of Albi than elsewhere. The main position is that a large part of the Languedocian heretics against whom the crusade was directed had imbibed the Paulician opinions. If any one chooses rather to call them Catharists, it will not be material."—H. Hallam, *Middle Ages, ch. 9, pt. 2, and foot-notes.*

PELAGIANISM.—"Pelagianism was . . . the great intellectual controversy of the church in the fifth century, as Arianism had been in the fourth. . . . Every one is aware that this controversy turned upon the question of free-will and of grace, that is to say, of the relations between the liberty of man and the Divine power, of the influence of God upon the moral activity of men. . . . About the year 405, a British monk, Pelagius (this is the name given him by the Greek and Latin writers; his real name, it appears, was Morgan), was residing at Rome. There has been infinite discussion as to his origin, his moral character, his capacity, his learning; and, under these various heads, much abuse has been lavished upon him; but this abuse would appear to be unfounded, for judging from the most authoritative testimony, from that of St. Augustin himself, Pelagius was a man of good birth, of excellent education, of pure life. A resident, as I have said, at Rome, and now a man of mature age, without laying down any distinct doctrines, without having written any book on the subject, Pelagius began, about the year I have mentioned, 405, to talk much about free-will, to insist urgently upon this moral fact, to expound it. There is no indication that he attacked any person about the matter, or that he sought controversy; he appears to have acted simply upon the belief that human liberty was not held in sufficient account, had not its due share in the religious doctrines of the period. These ideas excited no trouble in Rome, scarcely any debate. Pelagius spoke freely; they listened to him quietly. His principal disciple was Celestius, like him a monk, or so it is thought at least, but younger. . . . In 411 Pelagius and Celestius are no longer at Rome; we find them in Africa, at Hippo and at Carthage. . . . Their doctrines spread. . . . The bishop of Hippo began to be alarmed; he saw in these new ideas error and peril. . . . Saint Augustin was the chief of the doctors of the church, called upon more than any other to maintain the general system of her doctrines. . . . You see, from that time, what a serious aspect the quarrel took: everything was engaged in it, philosophy, politics, and religion, the opinions of Saint Augustin and his business, his self-love and his duty. He entirely abandoned himself to it." In the end, Saint Augustin and his opinions prevailed. The doctrines of Pelagius were condemned by three successive councils of the church, by three successive emperors and by two popes—one of whom was forced to reverse his first decision. His partisans were persecuted and banished. "After the year 418, we discover in history no trace of Pelagius. The name of Celestius is sometimes met with until the year 427; it then disappears. These two men once off the scene, their school rapidly declined."—F. Guizot, *Hist. of Civilization* (*trans. by Hazlitt*), *v.* 2, *lect.* 5.

PELASGIANS, The.—Under this name we have vague knowledge of a people whom the Greeks of historic times refer to as having preceded them in the occupancy of the Hellenic

peninsula and Asia Minor, and whom they looked upon as being kindred to themselves in race. "Such information as the Hellenes . . . possessed about the Pelasgi, was in truth very scanty. They did not look upon them as a mythical people of huge giants — as, for example, in the popular tales of the modern Greeks the ancestors of the latter are represented as mighty warriors, towering to the height of poplar trees. There exist no Pelasgian myths, no Pelasgian gods, to be contrasted with the Greeks. . . . Thucydides, in whom the historic consciousness of the Hellenes finds its clearest expression, also regards the inhabitants of Hellas from the most ancient times, Pelasgi as well as Hellenes, as one nation. . . . And furthermore, according to his opinion genuine sons of these ancient Pelasgi continued through all times to dwell in different regions, and especially in Attica."—E. Curtius, *Hist. of Greece, bk.* 1, *ch.* 1.— "It is inevitable that modern historians should take widely divergent views of a nation concerning which tradition is so uncertain. Some writers, among whom is Kiepert, think that the Pelasgi were a Semitic tribe, who immigrated into Greece. This theory, though it explains their presence on the coast, fails to account for their position at Dodona and in Thessaly. . . . In another view, which has received the assent of Thirlwall and Duncker, Pelasgian is nothing more than the name of the ancient inhabitants of the country, which subsequently gave way to the title Achaean, as this in its turn was supplanted by the term Hellenes. . . . We have no evidence to support the idea of a Pelasgic Age as a period of simple habits and agricultural occupations, which slowly gave way before the more martial age of the Achaeans. The civilization of the 'Achaean Age' exists only in the epic poems, and the 'Pelasgic Age' is but another name for the prehistoric Greeks, of whose agriculture we know nothing."—E. Abbott, *Hist. of Greece, pt.* 1, *ch.* 2.

PELOPIDS.—PELOPONNESUS.—"Among the ancient legendary genealogies, there was none which figured with greater splendour, or which attracted to itself a higher degree of poetical interest and pathos, than that of the Pelopids: — Tantalus, Pelops, Atreus and Thyestes, Agamemnon and Menelaus and Ægisthus, Helen and Klytaemnestra, Orestes and Elektra and Hermione. Each of these characters is a star of the first magnitude in the Grecian hemisphere. . . . Pelops is the eponym or name-giver of the Peloponnesus: to find an eponym for every conspicuous local name was the invariable turn of Grecian retrospective fancy. The name Peloponnesus is not to be found either in the Iliad or the Odyssey, nor any other denomination which can be attached distinctly and specially to the entire peninsula. But we meet with the name in one of the most ancient post-Homeric poems of which any fragments have been preserved — the Cyprian Verses. . . . The attributes by which the Pelopid Agamemnon and his house are marked out and distinguished from the other heroes of the Iliad, are precisely those which Grecian imagination would naturally seek in an eponymus — superior wealth, power, splendour and regality."— G. Grote, *Hist. of Greece, pt.* 1, *ch.* 7. — "Of the . . . family of myths . . . that of Pelops [is] especially remarkable as attaching itself more manifestly and decisively than any other Heroic myth to Ionia and Lydia. We remember the royal house of Tantalus enthroned on the banks of the Sipylus, and intimately associated with the worship of the Phrygian Mother of the Gods. Members of this royal house emigrate and cross to Hellas from the Ionian ports; they bring with them bands of adventurous companions, a treasure of rich culture and knowledge of the world, arms and ornaments, and splendid implements of furniture, and gain a following among the natives, hitherto combined in no political union. . . . This was the notion formed by men like Thucydides as to the epoch occasioned by the appearance of the Pelopidæ in the earliest ages of the nation; and what element in this notion is either improbable or untenable. Do not all the traditions connected with Achæan princes of the house of Pelops point with one consent over the sea to Lydia?"—E. Curtius, *Hist. of Greece, bk.* 1, *ch.* 3.

PELUSIUM.—"Behind, as we enter Egypt [from the east] is the treacherous Lake Serbonis; in front the great marsh broadening towards the west; on the right the level melancholy shore of the almost tideless Mediterranean. At the very point of the angle stood of old the great stronghold Pelusium, Sin, in Ezekiel's days, 'the strength of Egypt' (xxx. 15). The most eastward Nile-stream flowed behind the city, and on the north was a port commodious enough to hold an ancient fleet. . . . As the Egyptian monarchy waned, Pelusium grew in importance, for it was the strongest city of the border. Here the last king of the Saïte line, Psammeticus III, son of Amasis, awaited Cambyses. The battle of Pelusium, which crushed the native power, may almost take rank among the decisive battles of the world. Had the Persians failed, they might never have won the command of the Mediterranean, without which they could scarcely have invaded Greece. Of the details of the action we know nothing."— R. S. Poole, *Cities of Egypt, ch.* 11.— It was at Pelusium that Pompey, defeated and flying from Cæsar, was assassinated.

A. D. 1681.—The Proprietary grant to William Penn.—"William Penn was descended from a long line of sailor ancestors. His father, an admiral in the British navy, had held various important naval commands, and in recognition of his services had been honored by knighthood. A member of Parliament, and possessed of a considerable fortune, the path of worldly advancement seemed open and easy for the feet of his son, who had received a liberal education at Oxford, continued in the schools of the Continent. Beautiful in person, engaging in manner, accomplished in manly exercises and the use of the sword, fortune and preferment seemed to wait the acceptance of William Penn. But at the very outset of his career the Divine voice fell upon his ears as upon those of St. Paul." He became a follower of George Fox, and one of the people known as Quakers or Friends. "Many trials awaited the youthful convert. His father cast him off. He underwent a considerable imprisonment in the Tower for 'urging the cause of freedom with importunity.' . . . In time these afflictions abated. The influence of his family saved him from the heavier penalties which fell upon many of his co-religionists. His father on his death-bed reinstated him as his heir. 'Son William,' said the dying man, 'if you and your friends keep to your plain way of preaching and living, you will make an end of the priests.' Some years later we find him exerting an influence at Court which almost amounted to popularity. It is evident that, with all his boldness of opinion and speech, Penn possessed a tact and address which gave him the advantage over most of his sect in dealings with worldly people. . . . In 1680 his influence at Court and with moneyed men enabled him to purchase a large tract of land in east New Jersey, on which to settle a colony of Quakers, a previous colony having been sent out three years before to west New Jersey. Meanwhile a larger project filled his mind. His father had bequeathed to him a claim on the Crown for £16,000. Colonial property was then held in light esteem, and, with the help of some powerful friends, Penn was enabled so to press his claim as to secure the charter for that valuable grant which afterward became the State of Pennsylvania, and which included three degrees of latitude by five of longitude, west from the Delaware. 'This day,' writes Penn, Jan. 5, 1681, 'my country was confirmed to me by the name of Pennsylvania, a name the king [Charles II.] would give it in honour of my father. I chose New Wales, being as this a pretty hilly country. I proposed (when the Secretary, a Welshman, refused to have it called New Wales) Sylvania, and they added Penn to it, and though I much opposed it, and went to the King to have it struck out and altered, he said 'twas past, and he would take it upon him. . . . I feared lest it should be looked upon as a vanity in me, and not as a respect of the King, as it truly was, to my father, whom he often mentions with praise.' 'In return for this

grant of 26,000,000 of acres of the best land in the universe, William Penn, it was agreed, was to deliver annually at Windsor Castle two beaver-skins, pay into the King's treasury one fifth of the gold and silver which the province might yield, and govern the province in conformity with the laws of England and as became a liege of England's King. He was to appoint judges and magistrates, could pardon all crimes except murder and treason, and whatsoever things he could lawfully do himself, he could appoint a deputy to do, he and his heirs forever.' The original grant was fantastically limited by a circle drawn twelve miles distant from Newcastle, northward and westward, to the beginning of the 40th degree of latitude. This was done to accommodate the Duke of York, who wished to retain the three lower counties as an appanage to the State of New York. A few months later he was persuaded to renounce this claim, and the charter of Penn was extended to include the western and southern shores of the Delaware Bay and River from the 43d degree of latitude to the Atlantic. . . . The charter confirmed, a brief account of the country was published, and lands offered for sale on the easy terms of 40 shillings a hundred acres, and one shilling's rent a year in perpetuity. Numerous adventurers, many of them men of wealth and respectability, offered. The articles of agreement included a provision as to 'just and friendly conduct toward the natives.'. . . In April, 1681, he sent forward 'young Mr. Markham,' his relative, with a small party of colonists to take possession of the grant, and prepare for his own coming during the following year. . . . In August, 1682, Penn himself embarked."—Susan Coolidge (S. C. Woolsey), *Short Hist. of Philadelphia, ch.* 2.—"The charter [to Penn], which is given complete in Hazard's Annals, consists of 23 articles, with a preamble. . . . The grant comprises all that part of America, islands included, which is bounded on the east by the Delaware River from a point on a circle twelve miles northward of New Castle town to the 43° north latitude if the Delaware extends so far; if not, as far as it does extend, and thence to the 43° by a meridian line. From this point westward five degrees of longitude on the 43° parallel; the western boundary to the 40th parallel, and thence by a straight line to the place of beginning. . . . Grants Penn rights to and use of rivers, harbors, fisheries, etc. . . . Creates and constitutes him Lord Proprietary of the Province, saving only his allegiance to the King, Penn to hold directly of the kings of England, 'as of our castle of Windsor in the county of Berks, in free and common socage, by fealty only, for all services, and not in capite, or by Knight's service, yielding and paying therefore to us, our heirs and successors, two beaver-skins.'. . . Grants Penn and his successors, his deputies and lieutenants, 'free, full, and absolute power' to make laws for raising money for the public uses of the Province, and for other public purposes at their discretion, by and with the advice and consent of the people or their representatives in assembly. . . . Grants power to appoint officers, judges, magistrates, etc., to pardon offenders."—J. T. Scharf and T. Westcott, *Hist. of Philadelphia, ch.* 7 (*v.* 1).

Also in: T. Clarkson, *Memoirs of Wm. Penn, v.* 1, *ch.* 16-17.—S. Hazard, *Annals of Penn., pp.* 485-504.

A. D. 1681-1682.—Penn's Frame of Government.—Before the departure from England of the first company of colonists, Penn drew up a Frame of Government which he submitted to them, and to which they gave their assent and approval by their signatures, he signing the instrument likewise. The next year this Frame of Government was published by Penn, with a preface, "containing his own thoughts upon the origin, nature, object, and modes of Government. . . . The Frame, which followed this preface, consisted of twenty-four articles; and the Laws, which were annexed to the latter, were forty. By the Frame the government was placed in the Governor and Freemen of the province, out of whom were to be formed two bodies; namely, a Provincial Council and a General Assembly. These were to be chosen by the Freemen; and though the Governor or his Deputy was to be perpetual President, he was to have but a treble vote. The Provincial Council was to consist of seventy-two members. One third part, that is, twenty-four of them, were to serve for three years, one third for two, and the other third for one; so that there might be an annual succession of twenty-four new members, each third part thus continuing for three years and no longer. It was the office of this Council to prepare and propose bills, to see that the laws were executed, to take care of the peace and safety of the province, to settle the situation of ports, cities, market towns, roads, and other public places, to inspect the public treasury, to erect courts of justice, institute schools, and reward the authors of useful discovery. Not less than two thirds of these were necessary to make a quorum; and the consent of not less than two thirds of such quorum in all matters of moment. The General Assembly was to consist the first year of all the freemen, and the next of two hundred. These were to be increased afterwards according to the increase of the population of the province. They were to have no deliberative power; but, when bills were brought to them from the Governor and Provincial Council, to pass or reject them by a plain Yes or No. They were to present sheriffs and justices of the peace to the Governor, a double number for his choice of half. They were to be elected annually. All elections of members, whether to the Provincial Council or General Assembly, were to be by ballot. And this Charter or Frame of Government was not to be altered, changed, or diminished in any part or clause of it, without the consent of the Governor, or his heirs or assigns, and six parts out of seven of the Freemen both in the Provincial Council and General Assembly. With respect to the Laws, which I said before were forty in number, I shall only at present observe of them that they related to whatever may be included under the term 'Good Government of the Province'; some of them to liberty of conscience; others to civil officers and their qualifications; others to offences; others to legal proceedings, such as pleadings, processes, fines, imprisonments, and arrests; others to the natural servants and poor of the province. With respect to all of them it may be observed, that, like the Frame itself, they could not be altered but by the consent of the Governor, or his heirs, and the consent of six parts out of seven of the two bodies before mentioned."—T. Clarkson, *Memoirs of William Penn, v.* 1, *ch.* 18.

ALSO IN: S. Hazard, *Annals of Penn., pp.* 558–574.

A. D. 1682.—Acquisition by Penn of the claims of the Duke of York to Delaware.—"During the negotiations between New Netherland and Maryland in 1659, the Dutch insisted that, as Lord Baltimore's patent covered only savage or uninhabited territory, it could not affect their own possession of the Delaware region. Accordingly, they held it against Maryland until it was taken from them by the Duke of York in 1664. But James's title by conquest had never been confirmed to him by a grant from the king; and Cecilius Calvert, the second Lord Baltimore, insisted that Delaware belonged to Maryland. To quiet controversy, the duke had offered to buy off Baltimore's claim, to which he would not agree. Penn afterward refused a large offer by Fenwick 'to get of the duke his interest in Newcastle and those parts' for West Jersey. Thus stood the matter when the Pennsylvania charter was sealed. Its proprietor soon found that his province, wholly inland, wanted a front on the sea. As Delaware was 'necessary' to Pennsylvania, Penn 'endeavored to get it' from the duke by maintaining that Baltimore's pretension 'was against law, civil and common.' Charles Calvert, the third Lord Baltimore, was 'very free' in talking against the Duke of York's rights; but he could not circumvent Penn. The astute Quaker readily got from James a quit-claim of all his interest in the territory included within the proper bounds of Pennsylvania. After a struggle, Penn also gained the more important conveyances [August, 1682] to himself of the duke's interest in all the region within a circle of twelve miles [radius] around Newcastle, and extending southward as far as Cape Henlopen. The triumphant Penn set sail the next week. At Newcastle he received from James's agents formal possession of the surrounding territory, and of the region farther south."—J. R. Brodhead, *Hist. of N. Y., v.* 2, *ch.* 7.

A. D. 1682-1685.—Penn's arrival in his province.—His treaty with the Indians.—The founding of Philadelphia.—Penn sailed, in person, for his province on the 1st of September, 1682, on the ship "Welcome," with 100 fellow passengers, mostly Friends, and landed at Newcastle after a dreary voyage, during which thirty of his companions had died of smallpox. "Next day he called the people together in the Dutch court-house, when he went through the legal forms of taking possession. . . . Penn's great powers being legally established, he addressed the people in profoundest silence. He spoke of the reasons for his coming—the great idea which he had nursed from his youth upwards—his desire to found a free and virtuous state, in which the people should rule themselves. . . . He spoke of the constitution he had published for Pennsylvania as containing his theory of government; and promised the settlers on the lower reaches of the Delaware, that the same principles should be adopted in their territory. Every man in his provinces, he said, should enjoy liberty of conscience and his share of political power. . . . The people listened to this speech with wonder and delight. . . . They had but one request to make in answer; that he would stay amongst them and reign over them in person. They besought him to annex their territory to Pennsylvania, in order that the white settlers might have one country, one parliament, and one ruler. He promised, at their desire, to take the question of a union of the two provinces into consideration, and submit it to an assembly then about to meet at Upland. So he took his leave. Ascending the Delaware . . . the adventurers soon arrived at the Swedish town of Upland, then the place of chief importance in the province. . . . Penn changed the name from Upland to Chester, and as Chester it is known. Markham and the three commissioners had done their work so well that in a short time after Penn's arrival, the first General Assembly, elected by universal suffrage, was ready to meet. . . . As soon as Penn had given them assurances similar to those which he had made in Newcastle, they proceeded to discuss, amend, and accept the Frame of Government and the Provisional Laws. The settlers on the Delaware sent representatives to this Assembly, and one of their first acts was to declare the two provinces united. The constitution was adopted without important alteration; and to the forty laws were added twenty-one others, and the infant code was passed in form. . . . Penn paid some visits to the neighbouring seats of government in New York, Maryland, and the Jerseys. At West River, Lord Baltimore came forth to meet him with a retinue of the chief persons in the province. . . . It was impossible to adjust the boundary, and the two proprietors separated with the resolution to maintain their several rights. . . . The lands already bought from the Redmen were now put up for sale at four-pence an acre, with a reserve of one shilling for every hundred acres as quit-rent; the latter sum intended to form a state revenue for the Governor's support. Amidst these sales and settlements he recollected George Fox, for whose use and profit he set aside a thousand acres of the best land in the province. . . . Penn was no less careful for the Redskins. Laying on one side all ceremonial manners, he won their hearts by his easy confidence and familiar speech. He walked with them alone into the forests. He sat with them on the ground to watch the young men dance. He joined in their feasts, and ate their roasted hominy and acorns. . . . Having now become intimate with Taminent and other of the native kings, who had approved these treaties, seeing great advantages in them for their people, he proposed to hold a conference with the chiefs and warriors, to confirm the former treaties and form a lasting league of peace. On the banks of the Delaware, in the suburbs of the rising city of Philadelphia, lay a natural amphitheatre, used from time immemorial as a place of meeting for the native tribes. The name of Sakimaxing—now corrupted by the white men into Shackamaxon—means the place of kings. At this spot stood an aged elm-tree, one of those glorious elms which mark the forests of the New World. It was a hundred and fifty-five years old; under its spreading branches friendly nations had been wont to meet; and here the Redskins smoked the calumet of peace long before the pale-faces landed on those shores. Markham had appointed this locality for his first conference, and the land commissioners wisely followed his example. Old traditions had made the place sacred to one of the contracting parties,—and when Penn

proposed his solemn conference, he named Sakimaxing [or Shackamaxon] as a place of meeting with the Indian kings. Artists have painted, poets sung, philosophers praised this meeting of the white men and the red [October 14, 1682]. . . . All being seated, the old king announced to the Governor that the natives were prepared to hear and consider his words. Penn then rose to address them. . . . He and his children, he went on to say, never fired the rifle, never trusted to the sword; they met the red men on the broad path of good faith and good will. They meant no harm, and had no fear. He read the treaty of friendship, and explained its clauses. It recited that from that day the children of Onas and the nations of the Lenni Lenapé should be brothers to each other,—that all paths should be free and open—that the doors of the white men should be open to the red men, and the lodges of the red men should be open to the white men,—that the children of Onas should not believe any false reports of the Lenni Lenapé, nor the Lenni Lenapé of the children of Onas, but should come and see for themselves, . . . that if any son of Onas were to do any harm to any Redskin, or any Redskin were to do harm to a son of Onas, the sufferer should not offer to right himself, but should complain to the chiefs and to Onas, that justice might be declared by twelve honest men, and the wrong buried in a pit with no bottom,—that the Lenni Lenapé should assist the white men, and the white men should assist the Lenni Lenapé, against all such as would disturb them or do them hurt; and, lastly, that both Christians and Indians should tell their children of this league and chain of friendship, that it might grow stronger and stronger, and be kept bright and clean, without rust or spot, while the waters ran down the creeks and rivers, and while the sun and moon and stars endured. He laid the scroll on the ground. The sachems received his proposal for themselves and for their children. No oaths, no seals, no mummeries, were used; the treaty was ratified on both sides with yea,—and, unlike treaties which are sworn and sealed, was kept. When Penn had sailed, he held a note in his mind of six things to be done on landing: (1) to organize his government; (2) to visit Friends in Delaware, Pennsylvania and New Jersey; (3) to conciliate the Indians; (4) to see the Governor of New York, who had previously governed his province; (5) to fix the site for his capital city; (6) to arrange his differences with Lord Baltimore. The subject of his chief city occupied his anxious thought, and Markham had collected information for his use. Some people wished to see Chester made his capital; but the surveyor, Thomas Holme, agreed with Penn that the best locality in almost every respect was the neck of land lying at the junction of the Delaware and the Skuylkill rivers. . . . The point was known as Wicocoa. . . . The land was owned by three Swedes, from whom Penn purchased it on their own terms; and then, with the assistance of Holme, he drew his plan. . . . Not content to begin humbly, and allow house to be added to house, and street to street, as people wanted them, he formed the whole scheme of his city—its name, its form, its streets, its docks, and open spaces—fair and perfect in his mind, before a single stone was laid. According to his original design, Philadelphia was to cover with its houses, squares, and gardens, twelve square miles. . . . One year from the date of Penn's landing in the New World, a hundred houses had been built; two years later there were six hundred houses."—W. H. Dixon, *Hist. of William Penn, ch.* 24–25.

Also in: J. T. Scharf and T. Westcott, *Hist. of Philadelphia, v.* 1, *ch.* 9.—*Memoirs of the Penn. Hist. Soc., v.* 6 (*The Belt of Wampum, &c.*).—W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S., v.* 2, *ch.* 20.

A. D. 1685.—The Maryland Boundary question.—Points in dispute with Lord Baltimore.—"The grant to Penn confused the old controversy between Virginia and Lord Baltimore as to their boundary, and led to fresh controversies. The question soon arose: What do the descriptions, 'the beginning of the fortieth,' and 'the beginning of the three and fortieth degree of northern latitude,' mean? If they meant the 40th and 43d parallels of north latitude, as most historians have held, Penn's province was the zone, three degrees of latitude in width, that leaves Philadelphia a little to the south and Syracuse a little to the north; but if those descriptions meant the belts lying between 39° and 40°, and 42° and 43°, as some authors have held, then Penn's southern and northern boundaries were 39° and 42° north. A glance at the map of Pennsylvania will show the reader how different the territorial dispositions would have been if either one of these constructions had been carried out. The first construction would avoid disputes on the south, unless with Virginia west of the mountains; on the north it would not conflict with New York, but would most seriously conflict with Connecticut and Massachusetts west of the Delaware. The second construction involved disputes with the two southern colonies concerning the degree 39–40 to the farthest limit of Pennsylvania, and it also overlapped Connecticut's claim to the degree 41–42. Perhaps we cannot certainly say what was the intention of the king, or Penn's first understanding; but the Quaker proprietary and his successors adopted substantially the second construction, and thus involved their province in the most bitter disputes. The first quarrel was with Lord Baltimore. It has been well said that this 'notable quarrel' 'continued more than eighty years; was the cause of endless trouble between individuals; occupied the attention not only of the proprietors of the respective provinces, but of the Lords of Trade and Plantations, of the High Court of Chancery, and of the Privy Councils of at least three monarchs; it greatly retarded the settlement and development of a beautiful and fertile country, and brought about numerous tumults, which sometimes ended in bloodshed.'"—B. A. Hinsdale, *The Old Northwest, ch.* 7.—"As the Duke of York claimed, by right of conquest, the settlements on the western shores of the Bay of Delaware, and had, by his deed of 1682, transferred to William Penn his title to that country, embracing the town of Newcastle and twelve miles around it (as a reasonable portion of land attached to it), and as far down as what was then called Cape Henlopen; an important subject of controversy was the true situation of that cape, and the ascertainment of the southern and western boundaries of the country along the bay, as transferred by the Duke's deed. . . . After two personal interviews in America, the Proprietaries

separated without coming to any arrangement and with mutual recriminations and dissatisfaction. And they each wrote to the Lords of Plantations excusing themselves and blaming the other. . . . At length, in 1685, one important step was taken toward the decision of the conflicting claims of Maryland and Pennsylvania, by a decree of King James' Council, which ordered, 'that for avoiding further differences, the tract of land lying between the Bay of Delaware and the eastern sea, on the one side, and the Chesapeake Bay on the other, be divided into equal parts, by a line from the latitude of Cape Henlopen to the 40th degree of north latitude, the southern boundary of Pennsylvania by Charter; and that the one half thereof, lying towards the Bay of Delaware and the eastern sea, be adjudged to belong to his majesty, and the other half to Lord Baltimore, as comprised in his charter.' . . . This decree of King James, which evidently exhibits a partiality towards the claims of Penn, in decreeing the eastern half of the peninsula to his majesty, with whom Lord Baltimore could not presume, and indeed had declined to dispute, instead of to the Proprietary himself, by no means removed the difficulties which hung over this tedious, expensive, and vexatious litigation. For . . . there existed as much uncertainty with respect to the true situation of Cape Henlopen and the ascertainment of the middle of the Peninsula, as any points in contest."—J. Dunlop, *Memoir on the Controversy between William Penn and Lord Baltimore* (*Penn. Hist. Soc. Memoirs, v.* 1).—See, below: 1760–1767.

A. D. 1692-1696.—Keith's schism.—Penn deprived of his government, but restored.—Early resistance to the proprietary yoke.—"While New England and New York were suffering from war, superstition, and the bitterness of faction, Pennsylvania was not without internal troubles. These troubles originated with George Keith, a Scotch Quaker, formerly surveyor-general of East Jersey, and at this time master of the Quaker school at Philadelphia, and champion of the Quakers against Cotton Mather and the Boston ministers. Pressing the doctrines of non-resistance to their logical conclusion, Keith advanced the opinion that Quaker principles were not consistent with the exercise of political authority. He also attacked negro slavery as inconsistent with those principles. There is no surer way of giving mortal offense to a sect or party than to call upon it to be consistent with its own professed doctrines. Keith was disowned by the yearly meeting, but he forthwith instituted a meeting of his own, to which he gave the name of Christian Quakers. In reply to a 'Testimony of Denial' put forth against him, he published an 'Address,' in which he handled his adversaries with very little ceremony. He was fined by the Quaker magistrates for insolence, and Bradford, the only printer in the colony, was called to account for having published Keith's address. Though he obtained a discharge, Bradford, however, judged it expedient to remove with his types to New York, which now [1692] first obtained a printing press. The Episcopalians and other non-Quakers professed great sympathy for Keith, and raised a loud outcry against Quaker intolerance. Keith himself presently embraced Episcopacy, went to England, and took orders there. The Quaker magistrates were accused of hostility to the Church of England, and in the alleged maladministration of his agents, joined with his own suspected loyalty, a pretense was found for depriving Penn of the government—a step taken by the Privy Council without any of the forms, or, indeed, any authority of law, though justified by the opinions of some of the leading Whig lawyers of that day." Governor Fletcher of New York was now authorized for a time to administer the government of Pennsylvania and Delaware. "He accordingly visited Philadelphia, and called an Assembly in which deputies from both provinces were present. Penn's frame of government was disregarded, the Assembly being modeled after that of New York. Fletcher hoped to obtain a salary for himself and some contributions toward the defense of the northern frontier. The Quakers, very reluctant to vote money at all, had special scruples about the lawfulness of war. They were also very suspicious of designs against their liberties, and refused to enter on any business until the existing laws and liberties of the province had been first expressly confirmed. This concession reluctantly made, Fletcher obtained the grant of a small sum of money, not, however, without stipulating that it 'should not be dipped in blood.' . . . The suspicions against Penn soon dying away, the administration of his province was restored to him [1694]. But the pressure of his private affairs—for he was very much in debt—detained him in England, and he sent a commission to Markham [his relative and representative in Pennsylvania] to act as his deputy. An Assembly called by Markham refused to recognize the binding force of Penn's frame of government, which, indeed, had been totally disregarded by Fletcher. To the restrictions on their authority imposed by that frame they would not submit. A second Assembly [1696] proved equally obstinate, and, as the only means of obtaining a vote of the money required of the province toward the defense of New York, Markham was obliged to agree to a new act of settlement, securing to the Assembly the right of originating laws. A power of disapproval was reserved, however, to the proprietary, and this act never received Penn's sanction."—R. Hildreth, *Hist. of the U. S., ch.* 21 (*v.* 2).

A. D. 1696-1749.—Suppression of colonial manufactures. See UNITED STATES OF AM.: A. D. 1696–1749.

A. D. 1701-1718.—The new Charter of Privileges and the city charter of Philadelphia.—The divorcing of Delaware.—Differences with the Proprietary.—The death of Penn.—It was not until 1699 that Penn returned to his domain after an absence of fifteen years, and his brief stay of two years was not made wholly agreeable to him. Between him and his colonists there were many points of friction, as was inevitable under the relationship in which they stood to one another. The assembly of the province would not be persuaded to contribute to the fortification of the northern frontier of the king's dominions (in New York) against the French and Indians. Penn's influence, however, prevailed upon that body to adopt measures for suppres-

sing both piracy and illicit trade. With much difficulty, moreover, he settled with his subjects the terms of a new constitution of government, or Charter of Privileges, as it was called. The old Frame of Government was formally abandoned and the government of Pennsylvania was now organized upon an entirely new footing. "The new charter for the province and territories, signed by Penn, October 25, 1701, was more republican in character than those of the neighboring colonies. It not only provided for an assembly of the people with great powers, including those of creating courts, but to a certain extent it submitted to the choice of the people the nomination of some of the county officers. The section concerning liberty of conscience did not discriminate against the members of the Church of Rome. The closing section fulfilled the promise already made by Penn, that in case the representatives of the two territorial districts [Pennsylvania proper, held under Penn's original grant, and the Lower Counties, afterwards constituting Delaware, which he acquired from the Duke of York] could not agree within three years to join in legislative business, the Lower Counties should be separated from Pennsylvania. On the same day Penn established by letters-patent a council of state for the province, 'to consult and assist the proprietary himself or his deputy with the best of their advice and council in public affairs and matters relating to the government and the peace and well-being of the people; and in the absence of the proprietary, or upon the deputy's absence out of the province, his death, or other incapacity, to exercise all and singular the powers of government.' The original town and borough of Philadelphia, having by this time 'become near equal to the city of New York in trade and riches,' was raised, by patent of the 25th of October, 1701, to the rank of a city, and, like the province, could boast of having a more liberal charter than her neighbors; for the municipal officers were to be elected by the representatives of the people of the city, and not appointed by the governor, as in New York. The government of the province had been entrusted by Penn to Andrew Hamilton, also governor for the proprietors in New Jersey, with James Logan as provincial secretary, to whom was likewise confided the management of the proprietary estates, thus making him in reality the representative of Penn and the leader of his party. Hamilton died in December, 1702; but before his death he had endeavored in vain to bring the representatives of the two sections of his government together again. The Delaware members remained obstinate, and finally, while Edward Shippen, a member of the council and first mayor of Philadelphia, was acting as president, it was settled that they should have separate assemblies, entirely independent of each other. The first separate assembly for Pennsylvania proper met at Philadelphia, in October, 1703, and by its first resolution showed that the Quakers, so dominant in the province, were beginning to acquire a taste for authority, and meant to color their religion with the hue of political power." In December, 1703, John Evans, a young Welshman, appointed deputy-governor by Penn, arrived at Philadelphia, and was soon involved in quarrels with the assemblies. "At one time they had for ground the refusal of the Quakers to support the war which was waging against the French and Indians on the frontiers. At another they disagreed upon the establishment of a judiciary. These disturbances produced financial disruptions, and Penn himself suffered therefrom to such an extent that he was thrown into a London prison, and had finally to mortgage his province for £6,600. The recall of Evans in 1709, and the appointment of Charles Gookin in his stead, did not mend matters. Logan, Penn's intimate friend and representative, was finally compelled to leave the country; and, going to England (1710), he induced Penn to write a letter to the Pennsylvania assembly, in which he threatened to sell the province to the crown, a surrender by which he was to receive £12,000. The transfer was in fact prevented by an attack of apoplexy from which Penn suffered in 1712. The epistle, however, brought the refractory assembly to terms." In 1717 Gookin involved himself in fresh troubles and was recalled. Sir William Keith was then appointed — "the last governor commissioned by Penn himself; for the great founder of Pennsylvania died in 1718. . . . After Penn's death his heirs went to law among themselves about the government and proprietary rights in Pennsylvania."—B. Fernow, *Middle Colonies* (*Narrative and Critical Hist. of Am., v. 5, ch. 3*).

A. D. 1753-1799. — Connecticut claims and settlements in the Wyoming Valley. — The Pennamite and Yankee War. — "The charter bounds [of Connecticut] extended west to the Pacific Ocean [see Connecticut: A. D. 1662–1664]: this would have carried Connecticut over a strip covering the northern two fifths of the present State of Pennsylvania. Stuart faithlessness interfered with this doubly. Almost immediately after the grant of the charter, Charles granted to his brother James the Dutch colony of New Netherland, thus interrupting the continuity of Connecticut. Rather than resist the king's brother, Connecticut agreed and ratified the interruption. In 1681 a more serious interference took place. Charles granted to Penn the province of Pennsylvania, extending westward five degrees between the 40th and 43d parallels of north latitude." Under the final compromise of Penn's boundary dispute with Lord Baltimore the northern line of Pennsylvania was moved southward to latitude 42° instead of 43°; but it still absorbed five degrees in length of the Connecticut western belt. "The territory taken from Connecticut by the Penn grant would be

bounded southerly on the present map by a straight line entering Pennsylvania about Stroudsburg, just north of the Delaware Water Gap, and running west through Hazelton, Catawissa, Clearfield, and New Castle, taking in all the northern coal, iron, and oil fields. It was a royal heritage, but the Penns made no attempt to settle it, and Connecticut until the middle of the 18th century had no energy to spare from the task of winning her home territory 'out of the fire, as it were, by hard blows and for small recompense.' This task had been fairly well done by 1750, and in 1753 a movement to colonize in the Wyoming country was set on foot in Windham county. It spread by degrees until the Susquehanna Company was formed the next year, with nearly 700 members, of whom 638 were of Connecticut. Their agents made a treaty with the Five Nations July 11, 1754, by which they bought for £2,000 a tract of land beginning at the 41st degree of latitude, the southerly boundary of Connecticut; thence running north, following the line of the Susquehanna at a distance of ten miles from it, to the present northern boundary of Pennsylvania; thence 120 miles west; thence south to the 41st degree and back to the point of beginning. In May, 1755, the Connecticut general assembly expressed its acquiescence in the scheme, if the king should approve it; and it approved also a plan of Samuel Hazard, of Philadelphia, for another colony, to be placed west of Pennsylvania, and within the chartered limits of Connecticut. The court might have taken stronger ground than this; for, at the meeting of commissioners from the various colonies at Albany, in 1754, the representatives of Pennsylvania being present, no opposition was made to a resolution that Connecticut and Massachusetts, by charter right, extended west to the South Sea. The formation of the Susquehanna Company brought out objections from Pennsylvania, but the company sent out surveyors and plotted its tract. Settlement was begun on the Delaware River in 1757, and in the Susquehanna purchase in 1762. This was a temporary settlement, the settlers going home for the winter. A permanent venture was made the next year on the flats below Wilkes Barre, but it was destroyed by the Indians the same year. In 1768 the company marked out five townships, and sent out forty settlers for the first, Kingston. Most of them, including the famous Captain Zebulon Butler, had served in the French and Indian War; and their first step was to build the 'Forty Fort.' The Penns, after their usual policy, had refused to sell lands, but had leased plots to a number of men on condition of their 'defending the lands from the Connecticut claimants.' The forty Connecticut men found these in possession when they arrived in February, 1769, and a war of writs and arrests followed for the remainder of the year. The Pennsylvania men had one too powerful argument, in the shape of a four-pounder gun, and they retained possession at the end of the year. Early in 1770 the forty reappeared, captured the four-pounder, and secured possession. For a time in 1771 the Pennsylvania men returned, put up a fort of their own, and engaged in a partisan warfare; but the numbers of the Connecticut men were rapidly increasing, and they remained masters until the opening of the Revolution, when they numbered some 3,000. . . . But for the Revolution, the check occasioned by the massacre [of 1778 — see UNITED STATES OF AM.: A. D. 1778 (JULY)], and the appearance of a popular government in place of the Penns, nothing could have prevented the establishment of Connecticut's authority over all the regions embraced in her western claims. . . . The articles of confederation went into force early in 1781. One of their provisions empowered congress to appoint courts of arbitration to decide disputes between States as to boundaries. Pennsylvania at once availed herself of this, and applied for a court to decide the Wyoming dispute. Connecticut asked for time, in order to get papers from England; but congress overruled the motion, and ordered the court to meet at Trenton in November, 1782. After forty-one days of argument, the court came to the unanimous conclusion that Wyoming, or the Susquehanna district, belonged to Pennsylvania and not to Connecticut." Connecticut yielded to the decision at once; but, in 1786, when, following New York and Virginia, she was called upon to make a cession of her western territorial claims to congress (see UNITED STATES OF AM.: A. D. 1781–1786) she compensated herself for the loss of the Susquehanna district by reserving from the cession "a tract of about the same length and width as the Wyoming grant, west of Pennsylvania, in northeastern Ohio . . . ; and this was the tract known as the Western Reserve of Connecticut. It contained about 3,500,000 acres. . . . The unfortunate Wyoming settlers, deserted by their own State, and left to the mercy of rival claimants, had a hard time of it for years. The militia of the neighboring counties of Pennsylvania was mustered to enforce the writs of Pennsylvania courts; the property of the Connecticut men was destroyed, their fences were cast down, and their rights ignored; and the 'Pennamite and Yankee War' began. . . . The old Susquehanna Company was reorganized in 1785–86, and made ready to support its settlers by force. New Yankee faces came crowding into the disputed territory. Among them was Ethan Allen, and with him came some Green Mountain Boys." It was not until 1799 that the controversy came to an end, by the passage of an act which confirmed the title of the actual settlers.—A. Johnston, *Connecticut, ch.* 15.

A. D. 1757-1762.—The question of taxation in dispute with the proprietaries.—Franklin's mission to England.—"For a long while past the relationship between the Penns, unworthy sons of the great William, and now the proprie-

taries, on the one side, and their quasi subjects, the people of the Province, upon the other, had been steadily becoming more and more strained, until something very like a crisis had [in 1757] been reached. As usual in English and Anglo-American communities, it was a quarrel over dollars, or rather over pounds sterling, a question of taxation, which was producing the alienation. At bottom, there was the trouble which always pertains to absenteeism; the proprietaries lived in England, and regarded their vast American estate, with about 200,000 white inhabitants, only as a source of revenue. . . . The chief point in dispute was, whether or not the waste lands, still directly owned by the proprietaries, and other lands let by them at quitrents, should be taxed in the same manner as like property of other owners. They refused to submit to such taxation; the Assembly of Burgesses insisted. In ordinary times the proprietaries prevailed; for the governor was their nominee and removable at their pleasure; they gave him general instructions to assent to no law taxing their holdings, and he naturally obeyed his masters. But since governors got their salaries only by virtue of a vote of the Assembly, it seems that they sometimes disregarded instructions, in the sacred cause of their own interests. After a while, therefore, the proprietaries, made shrewd by experience, devised the scheme of placing their unfortunate sub-rulers under bonds. This went far towards settling the matter. Yet in such a crisis and stress as were now present in the colony . . . it certainly seemed that the rich and idle proprietaries might stand on the same footing with their poor and laboring subjects. They lived comfortably in England upon revenues estimated to amount to the then enormous sum of £20,000 sterling; while the colonists were struggling under unusual losses, as well as enormous expenses, growing out of the war and Indian ravages. At such a time their parsimony, their 'incredible meanness,' as Franklin called it, was cruel as well as stupid. At last the Assembly flatly refused to raise any money unless the proprietaries should be burdened like the rest. All should pay together, or all should go to destruction together. The Penns too stood obstinate, facing the not less resolute Assembly. It was indeed a deadlock! Yet the times were such that neither party could afford to maintain its ground indefinitely. So a temporary arrangement was made, whereby of £60,000 sterling to be raised the proprietaries agreed to contribute £5,000, and the Assembly agreed to accept the same in lieu or commutation for their tax. But neither side abandoned its principle. Before long more money was needed, and the dispute was as fierce as ever. The burgesses now thought that it would be well to carry a statement of their case before the king in council and the lords of trade. In February, 1757, they named their speaker, Isaac Norris, and Franklin to be their emissaries 'to represent in England the unhappy situation of the Province,' and to seek redress by an act of Parliament. Norris, an aged man, begged to be excused; Franklin accepted. . . . A portion of his business also was to endeavor to induce the king to resume the Province of Pennsylvania as his own. A clause in the charter had reserved this right, which could be exercised on payment of a certain sum of money. The colonists now preferred to be an appanage of the crown rather than a fief of the Penns." In this latter object of his mission Franklin did not succeed; but he accomplished its main purpose, procuring, after long delays, from the board of trade, a decision which subjected the proprietary estate to its fair share of taxation. He returned home after an absence of five years.—J. T. Morse, Jr., *Benjamin Franklin, ch.* 3.

Also in: J. Parton, *Life of Franklin, pt.* 3 (*v.* 1).

A. D. 1760-1767.—Settlement of the Maryland boundary dispute.—Mason and Dixon's line.—The decision of 1685 (see above), in the boundary dispute between the proprietaries of Pennsylvania and Maryland, "formed the basis of a settlement between the respective heirs of the two proprietaries in 1732. Three years afterward, the subject became a question in chancery; in 1750 the present boundaries were decreed by Lord Hardwicke; ten years later, they were, by agreement, more accurately defined; and, in 1761, commissioners began to designate the limit of Maryland on the side of Pennsylvania and Delaware. In 1763, Charles Mason and Jeremiah Dixon, two mathematicians and surveyors [sent over from England by the proprietaries], were engaged to mark the lines. In 1764, they entered upon their task, with good instruments and a corps of axemen; by the middle of June, 1765, they had traced the parallel of latitude to the Susquehannah; a year later, they climbed the Little Alleghany; in 1767, they carried forward their work, under an escort from the Six Nations, to an Indian war-path, 244 miles from the Delaware River. Others continued Mason and Dixon's line to the bound of Pennsylvania on the south-west."—G. Bancroft, *Hist. of the U. S.* (*Author's last rev.*), *pt.* 2, *ch.* 16.—"The east and west line which they [Mason and Dixon] ran and marked . . . is the Mason and Dixon's line of history, so long the boundary between the free and the slave States. Its precise latitude is 39° 43′ 26.3″ north. The Penns did not, therefore, gain the degree 39–40, but they did gain a zone one-fourth of a degree in width, south of the 40th degree, to their western limit, because the decision of 1760 controlled that of 1779, made with Virginia. . . . Pennsylvania is narrower by nearly three-fourths of a degree than the charter of 1681 contemplated. No doubt, however, the Penns considered the narrow strip gained at the south more valuable than the broad one lost at the north."—B. A. Hinsdale, *The Old Northwest, ch.* 7.

A. D. 1776.—The end of royal and proprietary government.—Adoption of a State Constitution.—"Congress, on the 15th of May, 1776, recommended . . . 'the respective Assemblies and conventions of the United Colonies, where no government sufficient to the exigencies of their affairs has been hitherto established, to adopt such government as shall, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents in particular, and America in general.' A diversity of opinion existed in the Province upon this resolution. . . . The Assembly referred the resolve of Congress to a committee, but took no further action, nor did the committee ever make a report. 'The old Assembly,' says Westcott, 'which had adjourned on the 14th of June, to meet on the 14th of August, could not obtain a quorum, and adjourned again to the 23d of September. It then interposed a feeble remonstrance against the invasion of its prerogatives by the Convention, but it was a dying protest. The Declaration of Independence had given the old State Government a mortal blow, and it soon expired without a sigh—thus ending forever the Proprietary and royal authority in Pennsylvania.' In the meantime, the Committee of Correspondence for Philadelphia issued a circular to all the county committees for a conference in that city on Tuesday, the 18th day of June. . . . The Conference at once unanimously resolved, 'That the present government of this Province is not competent to the exigencies of our affairs, and that it is necessary that a Provincial Convention be called by this Conference for the express purpose of forming a new government in this Province on the authority of the people only.' Acting upon these resolves, preparations were immediately taken to secure a proper representation in the Convention. . . . Every voter was obliged to take an oath of renunciation of the authority of George III., and one of allegiance to the State of Pennsylvania, and a religious test was prescribed for all members of the Convention. . . . The delegates to the Convention to frame a constitution for the new government consisted of the representative men of the State—men selected for their ability, patriotism, and personal popularity. They met at Philadelphia, on the 15th of July, . . . and organized by the selection of Benjamin Franklin, president, George Ross, vice-president, and John Morris and Jacob Garrigues, secretaries. . . . On the 28th of September, the Convention completed its labors by adopting the first State Constitution, which went into immediate effect, without a vote of the people. . . . The legislative power of the frame of government was vested in a General Assembly of one House, elected annually. The supreme executive power was vested in a President, chosen annually by the Assembly and Council, by joint ballot—the Council consisting of twelve persons, elected in classes, for a term of three years. A Council of Censors, consisting of two persons from each city and county, was to be elected in 1783, and in every seventh year thereafter, whose duty it was to make inquiry as to whether the Constitution had been preserved inviolate during the last septennary, and whether the executive or legislative branches of the government had performed their duties."—W. A. D. 1794.—The Whiskey Insurrection.—"In every part of the United States except Pennsylvania, and in by far the larger number of the counties of that state, the officers of the Federal Government had been able to carry the excise law [passed in March, 1791, on the recommendation of Hamilton], unpopular as it generally was, into execution; but resistance having been made in a few of the western counties, and their defiance of law increasing with the forbearance of the Government in that State, prosecutions had been ordered against the offenders. In July, the Marshal of the District, Lenox, who was serving the process, and General Neville, the Inspector, were attacked by a body of armed men, and compelled to desist from the execution of their official duties. The next day, a much larger number, amounting to 500 men, assembled, and endeavored to seize the person of General Neville. Failing in that, they exacted a promise from the Marshal that he would serve no more process on the west side of the Alleghany; and attacking the Inspector's house, they set fire to it, and destroyed it with its contents. On this occasion, the leader of the assailants was killed, and several of them wounded. Both the Inspector and Marshal were required to

resign; but they refused, and sought safety in flight. A meeting was held a few days later, at Mingo Creek meeting-house, which recommended to all the townships in the four western counties of Pennsylvania, and the neighboring counties of Virginia, to meet, by their delegates, at Parkinson's ferry, on the Monongahela, on the 14th of August, 'to take into consideration the situation of the western country.' Three days after this meeting, a party of the malcontents seized the mail, carried it to Canonsburg, seven miles distant, and there opened the letters from Pittsburg to Philadelphia, to discover who were hostile to them. They then addressed a circular letter to the officers of the militia in the disaffected counties, informing them of the intercepted letters, and calling on them to rendezvous at Braddock's Field on the 1st of August, with arms in good order, and four days' provision. . . . This circular was signed by seven persons, but the prime mover was David Bradford, a lawyer, who was the prosecuting attorney of Washington County. In consequence of this summons, a large body of men, which has been estimated at from five to seven thousand, assembled at Braddock's Field on the day appointed. . . . Bradford took upon himself the military command, which was readily yielded to him. . . . Bradford proposed the expulsion from Pittsburg of several persons whose hostility had been discovered by the letters they had intercepted; but his motion was carried only as to two persons, Gibson and Neville, son of the Inspector. They then decided to proceed to Pittsburg. Some assented to this, to prevent the mischief which others meditated. But for this, and the liberal refreshments furnished by the people of Pittsburg, it was thought that the town would have been burnt. . . . The President issued a proclamation reciting the acts of treason, commanding the insurgents to disperse, and warning others against abetting them. He, at the same time, wishing to try lenient measures, appointed three Commissioners to repair to the scene of the insurrection, to confer with the insurgents, and to offer them pardon on condition of a satisfactory assurance of their future obedience to the laws. . . . Governor Mifflin followed the example of the President in appointing Commissioners to confer with the insurgents, with power to grant pardons, and he issued an admonitory proclamation, after which he convened the Legislature to meet on the 3d of November. The Federal and the State Commissioners reached the insurgent district while the convention at Parkinson's ferry was in session. It assembled on the 14th of August, and consisted of 226 delegates, all from the western counties of Pennsylvania, except six from Ohio County in Virginia. They appointed Cook their Chairman, and Albert Gallatin, Secretary, though he at first declined the appointment. . . . The Commissioners required . . . an explicit assurance of submission to the laws; a recommendation to their associates of a like submission; and meetings of the citizens to be held to confirm these assurances. All public prosecutions were to be suspended until the following July, when, if there had been no violation of the law in the interval, there should be a general amnesty. These terms were deemed reasonable by the subcommittee: but before the meeting of sixty took place, a body of armed men entered Brownsville, the place appointed for the meeting, and so alarmed the friends of accommodation, that they seemed to be driven from their purpose. Gallatin, however, was an exception; and the next day, he addressed the committee of sixty in favor of acceding to the proposals of the Commissioners; but nothing more could be effected than to pass a resolution that it would be to the interest of the people to accept those terms, without any promise or pledge of submission. . . . On the whole, it was the opinion of the well-disposed part of the population, that the inspection laws could not be executed in that part of the State; and that the interposition of the militia was indispensable. The Commissioners returned to Philadelphia, and on their report the President issued a second proclamation, on the 25th of September, in which he announced the march of the militia, and again commanded obedience to the laws. The order requiring the militia to march was promptly obeyed in all the States except Pennsylvania, in which some pleaded defects in the militia law; but even in that State, after the Legislature met, the Governor was authorised to accept the services of volunteers. . . . The news that the militia were on the march increased the numbers of the moderate party. . . . Bradford, who was foremost in urging resistance to the law, was the first to seek safety in flight. He sought refuge in New Orleans. A second convention was called to meet at Parkinson's ferry on the second of October. A resolution of submission was passed, and a committee of two was appointed to convey it to the President at Carlisle. . . . On the return of the committee, the Parkinson ferry convention met for the third time, and resolutions were passed, declaring the sufficiency of the civil authorities to execute the laws; affirming that the excise duties would be paid, and recommending all delinquents to surrender themselves. . . . Lee, then, as Commander-in-chief, issued a proclamation granting an amnesty to all who had submitted to the laws; and calling upon the inhabitants to take the oath of allegiance to the United States. Orders were issued and executed to seize those offenders who had not signed the declaration of submission, and send them to Philadelphia; and thus was this purpose of resisting the execution of the excise law completely defeated, and entire order restored in less than four months from the time of the burning of Neville's house, which was the first overt act of resistance. It was, however, deemed prudent to retain a force of 2,500 militia during the winter, under General Morgan, to prevent a return of that spirit of disaffection which had so long prevailed in Pennsylvania."—Geo. Tucker, *Hist. of the U. S., v.* 1, *ch.* 7.

PENNSYLVANIA GERMANS.—"When 'the news spread through the Old World that William Penn, the Quaker, had opened an asylum to the good and the oppressed of every nation, and Humanity went through Europe gathering up the children of misfortune,' our forefathers came out from their hiding places in the forest depths and the mountain valleys which the sun never penetrated, clad in homespun, their feet shod with wood, their dialects ofttimes unintelligible to each other. There was scarcely a family among them which could not be traced to some ancestor burned at the stake for conscience sake. Judge Pennypacker says: 'Beside a record like theirs the sufferings of Pilgrim and Quaker seem trivial.'. . . The thousands of Germans, Swiss and Dutch who migrated here on the invitation of Penn, came without ability to speak the English language, and without any knowledge, except that derived from general report, of the customs and habits of thought of the English people. They went vigorously to work to clear the wilderness and establish homes. They were sober, religious, orderly, industrious and thrifty. The reports the earlier settlers made to their friends at home of the prosperity and liberty they enjoyed in their new homes, induced from year to year many others to come. Their numbers increased so much as to alarm the proprietary officials. Logan wanted their immigration prevented by Act of Parliament, 'for fear the colony would in time be lost to the crown.' He wrote a letter in which he says: 'The numbers from Germany at this rate will soon produce a German colony here, and perhaps such a one as Britain received from Saxony in the 5th Century.' As early as 1747, one of the proprietary Governors attributed the prosperity of the Pennsylvania colony to the thrift, sobriety and good characters of the Germans. Numerous as they were, because this was in its government a purely English colony, the part they took in its public affairs was necessarily limited. The Government officials and the vast majority of the members of the Assembly were all English. During the long struggle in the Colonies to adjust the strained relations with Great Britain, the Germans were seemingly indifferent. They saw no practical gain in surrendering the Penn Charter, and Proprietary Government, under which they had obtained their homes, for the direct rule of the British King. They could not understand the distinction between King and Parliament. . . . When, therefore, in 1776, the issue was suddenly enlarged into a broad demand for final separation from Great Britain, and the creation of a Republic, all their traditional love of freedom was fully aroused. Under the Proprietary rule, although constituting nearly one-half the population of the colony, they were practically without representation in the General Assembly, and without voice in the Government. The right of 'electing or being elected' to the Assembly was confined to natural born subjects of England, or persons naturalized in England or in the province, who were 21 years old, and freeholders of the province owning fifty acres of seated land, and at least twelve acres improved, or worth clear fifty pounds and a resident for two years. Naturalization was not the simple thing it now is. The conditions were exceptionally severe, and comparatively few Germans qualified themselves to vote. The delegates to the Colonial Congress were selected by the General Assembly. In November, 1775, the Assembly instructed the Pennsylvania delegates not to vote for separation from Great Britain. The majority of the delegates were against separation. . . . At the election for new members in May, 1776, in Philadelphia, three out of four of those elected were opposed to separation. The situation was most critical. Independence and union were not possible without Pennsylvania. Geographically, she was midway between the Colonies. She was one of the wealthiest and strongest. Her government was in the hands of those opposed to separation. One course only remained. Peaceful efforts in the Assembly to enfranchise the Germans, by repealing the naturalization laws and oath of allegiance, had failed, and now this must be accomplished by revolution, because their enfranchisement would give the friends of liberty and union an overwhelming and aggressive majority. This was the course resolved on. The Philadelphia Committee called a conference of committees of the Counties. On the 18th of June, 1776, this provincial conference, numbering 104, met in Philadelphia. The German counties were represented no longer by English Tories. There were leading Germans in the delegations from Philadelphia, Lancaster, Northampton, York, Bucks and Berks. In Berks, the loyalist Biddle gives place to eight prominent Germans, headed by Gov. Heister, Cols. Hunter, Eckert and Lutz. The proprietary government of Pennsylvania, with its Tory Assembly, was overthrown — foundation, pillar and dome. This conference called a Provincial Convention to frame a new Government. On the petition of the Germans, the members of that Convention were to be elected by persons qualified to vote for Assembly, and by the military associators (volunteers), being freemen 21 years of age, resident in the province one year. This gave the Germans the right to vote. Thus says Bancroft: 'The Germans were incorporated into the people and made one with them.' The 19th of June, 1776, enfranchised the Germans, and made the Declaration of Independence possible. . . . It is absolutely true, that, as the English people of the province were divided in 1776, the Germans were the potential factors in securing the essential vote of Pennsylvania for the Declaration of Independence. . . . Throughout the Revolution, these Germans . . . were the steadfast defenders of the new Republic. Dr. Stillé, in his recent admirable 'Life of Dickinson,' concedes that 'no portion of the population was more ready to defend its homes, or took up arms more willingly in support of the American cause.' Washington, when in Philadelphia after the war, testified his high appreciation of the hearty support the Germans gave him, and the cause he represented, by worshiping with his family in the old German church on Race street. The descendants of the Pennsylvania-Germans have settled all over the West, contributing to Ohio, Illinois and other Western States; the same sturdy, honest population that characterizes Pennsylvania."—E. K. Martin and G. F. Baer, *Addresses* (*Proceedings, Pennsylvania-German Convention, Apr.* 15, 1891).

PERDUELLIO, The Crime of.—"'Perduellis,' derived from 'duellum' e. q. 'bellum,' properly speaking signifies 'a public enemy,' and hence Perduellio was employed [among the Romans] in legal phraseology to denote the crime of hostility to one's native country, and is usually represented as corresponding, in a general sense, to our term High Treason."—W. Ramsay, *Manual of Roman Antiq., ch.* 9.—See Majestas.

PERED, Battle of (1849). See Austria: A. D. 1848–1849.

PEREGRINI.—"The term 'Peregrinus,' with which in early times 'Hostis' (i. e. stranger) was synonymous, embraced, in its widest acceptation, every one possessed of personal freedom who was not a Civis Romanus. Generally, however, Peregrinus was not applied to all foreigners indiscriminately, but to those persons only, who, although not Cives, were connected with Rome."—W. Ramsay, *Manual of Roman Antiq., ch.* 3.—See, also, Cives Romani.

PERGAMUM, OR PERGAMUS.—This ancient city in northwestern Asia Minor, within the province of Mysia, on the north of the river Caïcus, became, during the troubled century that followed the death of Alexander, first the seat of an important principality, and then the capital of a rich and flourishing kingdom, to which it gave its name. It seems to have owed its fortunes to a great deposit of treasures—part of the plunder of Asia—which Lysimachus, one of the generals and successors of Alexander, left for safe keeping within its walls, under the care of an eunuch, named Philetærus. This Philetærus found excuses, after a time, for renouncing allegiance to Lysimachus, appropriating the treasures and using them to make himself lord of Pergamum. He was succeeded by a nephew, Eumenes, and he in turn by his cousin Attalus. The latter, "who had succeeded to the possession of Pergamum in 241 [B. C.], met and vanquished the Galatians in a great battle, which gave him such popularity that he was able to assume the title of king, and extend his influence far beyond his inherited dominion. . . . The court of Pergamum continued to flourish till it controlled the larger part of Asia Minor. In his long reign this king represented almost as much as the King of Egypt the art and culture of Hellenism. His great victory over the Galatians was celebrated by the dedication of so many splendid offerings to various shrines, that the Pergamene school made a distinct impression upon the world's taste. Critics have enumerated seventeen remaining types, which appear to have come from statues of that time—the best known is the so-called 'Dying Gladiator,' who is really a dying Galatian. . . . Perhaps the literature of the court was even more remarkable. Starting on the model of Alexandria, with a great library, Attalus was far more fortunate than the Ptolemies in making his university the home of Stoic philosophy."—J. P. Mahaffy, *Story of Alexander's Empire, ch.* 20.—From the assumption of the crown by Attalus I. the kingdom of Pergamus existed about a century. Its last king bequeathed it to the Romans in 133 B. C. and it became a Roman province. Its splendid library of 200,000 volumes was given to Cleopatra a century later by Antony, and was added to that of Alexandria. The name of the city is perpetuated in the word parchment, which is derived therefrom. Its ruins are found at a place called Bergamah. See, also, Seleucidæ: B. C. 224–187; Alexandria: B. C. 282–246; and Rome: B. C. 47–46.

PERSEIDÆ, The. See ARGOS.—ARGOLIS.

PERSEPOLIS: Origin. See PERSIA, ANCIENT PEOPLE.

B. C. 330.—Destruction by Alexander.—Although Persepolis was surrendered to him on his approach to it (B. C. 331), Alexander the Great determined to destroy the city. "In this their home the Persian kings had accumulated their national edifices, their regal sepulchres, the inscriptions commemorative of their religious or legendary sentiment, with many trophies and acquisitions arising out of their conquests. For the purposes of the Great King's empire, Babylon, or Susa, or Ekbatana, were more central and convenient residences; but Persepolis was still regarded as the heart of Persian nationality. It was the chief magazine, though not the only one, of those annual accumulations from the imperial revenue, which each king successively increased, and which none seems to have ever diminished. . . . After appropriating the regal treasure—to the alleged amount of 120,000 talents in gold and silver (=£27,600,000 sterling)—Alexander set fire to the citadel. . . . The persons and property of the inhabitants were abandoned to the licence of the soldiers, who obtained an immense booty, not merely in gold and silver, but also in rich clothing, furniture, and ostentatious ornaments of every kind. The male inhabitants were slain, the females dragged into servitude; except such as obtained safety by flight, or burned themselves with their property in their own houses."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 93.

PERSIA: Ancient people and country.—"Persia Proper seems to have corresponded nearly to that province of the modern Iran which still bears the ancient name slightly modified, being called Farsistan or Fars. . . . Persia Proper lay upon the gulf to which it has given name, extending from the mouth of the Tab (Oroatis) to the point where the gulf joins the Indian Ocean. It was bounded on the west by Susiana, on the north by Media Magna, on the east by Mycia, and on the south by the sea. Its length seems to have been about 450, and its average width about 250 miles. . . . The earliest known capital of the region was Pasargadæ, or Persagadæ, as the name is sometimes written, of which the ruins still exist near Murgab, in lat. 30° 15′, long. 53° 17′. Here is the famous tomb of Cyrus. . . . At the distance of thirty miles from Pasargadæ, or of more than forty by the ordinary road, grew up the second capital, Persepolis. . . . The Empire, which, commencing from Persia Proper, spread itself, toward the close of the sixth century before Christ, over the surrounding tracts, [extended from the Caspian Sea and the Indian Desert to the Mediterranean and the Propontis]. . . . The earliest appearance of the Persians in history is in the inscriptions of the Assyrian kings, which begin to notice them about the middle of the ninth century, B. C. At this time Shalmanezer II. [the Assyrian king] found them in south-western Armenia, where they were in close contact with the Medes, of whom, however, they seem to have been wholly independent. . . . It is not until the reign of Sennacherib that we once more find them brought into contact with the power which aspired to be mistress of Asia. At the time of their re-appearance they are no longer in Armenia, but have descended the line of Zagros and reached the districts which lie north and north-east of Susiana. . . . It is probable that they did not settle into an organized monarchy much before the fall of Nineveh. . . . The history of the Persian 'Empire' dates from the conquest of Astyages [the Median king] by Cyrus, and therefore commences with the year B. C. 558 [or, according to Sayce, B. C. 549—see below]."—G. Rawlinson, *Five Great Monarchies: Persia, ch.* 1 *and* 7.

The ancient religion. See ZOROASTRIANS.

B. C. 549-521.—The founding of the empire by Cyrus the Great, King of Elam.—His conquest of Media, Persia, Lydia, and Babylonia.—The restoration of the Jews.—Conquest of Egypt by Kambyses.—"It was in B. C. 549 that Astyages was overthrown [see MEDIA]. On his march against Kyros [Cyrus] his own soldiers, drawn probably from his Aryan subjects, revolted against him and gave him into the hands of his enemy. 'The land of Ekbatana and the royal city' were ravaged and plundered by the conqueror; the Aryan Medes at once acknowledged the supremacy of Kyros, and the empire of Kyaxares was destroyed. Some time, however, was still needed to complete the conquest; the older Medic population still held out in the more distant regions of the empire, and probably received encouragement and promises of help from Babylonia. In B. C. 546, however, Kyros marched from Arbela, crossed the Tigris, and destroyed the last relics of Median independence. . . . The following year saw the opening of the campaign against Babylonia [see BABYLONIA: B. C. 625–539]. But the Babylonian army, encamped near Sippara, formed a barrier which the Persians were unable to overcome; and trusting, therefore, to undermine the power of Nabonidos by secret intrigues with his subjects, Kyros proceeded against Krœsos. A single campaign sufficed to capture Sardes and its monarch, and to add Asia Minor to the Persian dominions [see LYDIANS, and ASIA MINOR: B. C. 724–539]. The Persian conqueror was now free to attack Babylonia. Here his intrigues were already bearing fruit. The Jewish exiles were anxiously expecting him to redeem them from captivity, and the tribes on the sea coast were ready to welcome a new master. In B. C. 538 the blow was struck. The Persian army entered Babylonia from the south. The army of Nabonidos was defeated at Rata in June; on the 14th of that month Sippara opened its gates, and two days later Gobryas, the Persian general, marched into Babylon itself 'without battle and fighting.' . . . In October Kyros himself entered his new capital in triumph."—A. H. Sayce, *The Ancient Empires of the East: Herodotus* 1–3. *Appendix* 5.—"The history of the downfall of the great Babylonian Empire, and of the causes, humanly speaking, which brought about a restoration of the Jews, has recently been revealed to us by the progress of Assyrian discovery. We now possess the account given by Cyrus himself, of the overthrow of Nabonidos, the Babylonian king, and of the conqueror's permission to the captives in Babylonia to return to their homes. The account is contained in two documents, written, like most other Assyrian and Babylonian records, upon clay, and lately brought from Babylonia to England by Mr. Rassam. One of these documents is a tablet which chronicles the events of each year in the reign of Nabonidos, the last Babylonian monarch, and continues the history into the first year of Cyrus, as king of Babylon. The other is a cylinder, on which Cyrus glorifies himself and his son Kambyses, and professes his adherence to the worship of Bel-Merodach, the patron-god of Babylon. The tablet-inscription is, unfortunately, somewhat mutilated, especially at the beginning and the end, and little can be made out of the annals of the first five years of Nabonidos, except that he was occupied with disturbances in Syria. In the sixth year the record becomes clear and continuous. . . . The inscriptions . . . present us with an account of the overthrow of the Babylonian Empire, which is in many important respects very different from that handed down to us by classical writers. We possess in them the contemporaneous account of one who was the chief actor in the events he records, and have ceased to be dependent upon Greek and Latin writers, who could not read a single cuneiform character, and were separated by a long lapse of time from the age of Nabonidos and Cyrus. Perhaps the first fact which will strike the mind of the reader with astonishment is that Cyrus does not call himself and his ancestors kings of Persia, but of Elam. The word used is Anzan or Ansan, which an old Babylonian geographical tablet explains as the native name of the country which the Assyrians and Hebrews called Elam. This statement is verified by early inscriptions found at Susa and other places in the neighbourhood, and belonging to the ancient monarchs of Elam, who contended on equal terms with Babylonia and Assyria until they were at last conquered by the Assyrian king Assur-bani-pal, and their country made an Assyrian province. In these inscriptions they take the imperial title of 'king of Anzan.' The annalistic tablet lets us see when Cyrus first became king of Persia. In the sixth year of Nabonidos (B. C. 549) Cyrus is still king of Elam; in the ninth year he has become king of Persia. Between these two years, therefore, he must have gained possession of Persia either by conquest or in some peaceable way. When he overthrew Astyages his rule did not as yet extend so far. At the same time Cyrus must have been of Persian descent, since he traces his ancestry back to Teispes, whom Darius, the son of Hystaspes, in his great inscription on the sacred rock of Behistun, claims as his own forefather. . . . The fact that Susa or Shushan was the original capital of Cyrus explains why it remained the leading city of the Persian Empire; and we can also now understand why it is that in Isaiah xxi. 2, the prophet bids Elam and Media, and not Persia and Media, 'go up' against Babylon. That Cyrus was an Elamite, however, is not the only startling revelation which the newly-discovered inscriptions have made to us. We learn from them that he was a polytheist who worshipped Bel-Merodach and Nebo, and paid public homage to the deities of Babylon. We have learned a similar fact in regard to his son Kambyses from the Egyptian monuments. These have shown us that the account of the murder of the sacred bull Apis by Kambyses given by Herodotus is a fiction; a tablet accompanying the huge granite sarcophagus of the very bull he was supposed to have wounded has been found with the image of Kambyses sculptured upon it kneeling before the Egyptian god. The belief that Cyrus was a monotheist grew out of the belief that he was a Persian, and, like other Persians, a follower of the Zoroastrian faith; there is nothing in Scripture to warrant it. Cyrus was God's shepherd only because he was His chosen instrument in bringing about the restoration of Israel. . . . The first work of Cyrus was to ingratiate himself with the conquered population by affecting a show of zeal and piety towards their gods, and with the nations which had been kept in captivity in Babylonia, by sending them and their deities back to their homes.

Among these nations were the Jews, who had perhaps assisted the king of Elam in his attack upon Nabonidos. Experience had taught Cyrus the danger of allowing a disaffected people to live in the country of their conquerors. He therefore reversed the old policy of the Assyrian and Babylonian kings, which consisted in transporting the larger portion of a conquered population to another country, and sought instead to win their gratitude and affection by allowing them to return to their native lands. He saw, moreover, that the Jews, if restored from exile, would not only protect the southwestern corner of his empire from the Egyptians, but would form a base for his intended invasion of Egypt itself. . . . The number of exiles who took advantage of the edict of Cyrus, and accompanied Zerubbabel to Jerusalem, amounted to 42,360. It is probable, however, that this means only the heads of families; if so, the whole body of those who left Babylon, including women and children, would have been about 200,000. . . . The conquest of Babylonia by Cyrus took place in the year 538 B. C. He was already master of Persia, Media, and Lydia; and the overthrow of the empire of Nebuchadnezzar extended his dominions from the mountains of the Hindu Kush on the east to the shores of the Mediterranean on the west. Egypt alone of the older empires of the Oriental world remained independent, but its doom could not be long delayed. The career of Cyrus had indeed been marvellous. He had begun as the king only of Anzan or Elam, whose power seemed but 'small' and contemptible to his neighbour the great Babylonian monarch. But his victory over the Median king Astyages and the destruction of the Median Empire made him at once one of the most formidable princes in Western Asia. Henceforth the seat of his power was moved from Susa or Shushan to Ekbatana, called Achmetha in Scripture, Hagmatan in Persian, the capital of Media. . . . The conquest of Media was quickly followed by that of Persia, which appears to have been under the government of a collateral branch of the family of Cyrus. Henceforward the king of Elam becomes also the king of Persia. The empire of Lydia, which extended over the greater part of Asia Minor, fell before the army of Cyrus about B. C. 540. . . . The latter years of the life of Cyrus were spent in extending and consolidating his power among the wild tribes and unknown regions of the Far East. When he died, all was ready for the threatened invasion of Egypt. This was carried out by his son and successor Kambyses, who had been made 'king of Babylon' three years before his father's death, Cyrus reserving to himself the imperial title of 'King of the world.' . . . As soon as Kambyses became sole sovereign, Babylon necessarily took rank with Shushan and Ekbatana. It was the third centre of the great empire, and in later days the Persian monarchs were accustomed to make it their official residence during the winter season. . . . Kambyses was so fascinated by his new province that he refused to leave it. The greater part of his reign was spent in Egypt, where he so thoroughly established his power and influence that it was the only part of the empire which did not rise in revolt at his death. . . . Soon after his father's death he stained his hands with the blood of his brother Bardes, called Smerdis by Herodotus, to whom Cyrus had assigned the eastern part of his empire. Bardes was put to death secretly at Susa, it is said. . . . A Magian, Gaumata or Gomates by name, who resembled Bardes in appearance, came forward to personate the murdered prince, and Persia, Media, and other provinces at once broke into rebellion against their long-absent king. When the news of this revolt reached Kambyses he appointed Aryandes satrap of Egypt, and, if we may believe the Greek accounts, set out to oppose the usurper. He had not proceeded far, however, before he fell by his own hand. The false Bardes was now master of the empire. Darius, in his inscription on the rock of Behistun, tells us that 'he put to death many people who had known Bardes, to prevent its being known that he was not Bardes, son of Cyrus.' At the same time he remitted the taxes paid by the provinces, and proclaimed freedom for three years from military service. But he had not reigned more than seven months before a conspiracy was formed against him. Darius, son of Hystaspes, attacked him at the head of the conspirators, in the land of Nisæa in Media, and there slew him, on the 10th day of April, B. C. 521. Darius, like Kambyses, belonged to the royal Persian race of Akhæmenes." —A. H. Sayce, *Introduction to the Books of Ezra, Nehemiah and Esther, ch.* 1 *and* 3.

B. C. 521-493.—The reign of Darius I.—His Indian and Scythian expeditions.—The Ionian revolt and its suppression.—Aid given to the insurgents by Athens.—"Darius I., the son of Hystaspes, is rightly regarded as the second founder of the Persian empire. His reign is dated from the first day of the year answering to B. C. 521; and it lasted 36 years, to Dec. 23, B. C. 486. . . . Throughout the Behistun Inscription Darius represents himself as the hereditary champion of the Achaemenids, against Gomates and all other rebels. . . . It is 'by the grace of Ormazd' that he does everything. . . . This restoration of the Zoroastrian worship, and the putting down of several rebellions, are the matters recorded in the great trilingual inscription at Behistun, which Sir Henry Rawlinson dates, from internal evidence, in the sixth year of Darius (B. C. 516). . . . The empire of which Darius became king embraced, as he says, the following provinces: 'Persia, Susiana, Babylonia, Assyria, Arabia, Egypt; those which are of the sea (the islands), Saparda, Ionia, Media, Armenia, Cappadocia, Parthia, Zarangia, Aria, Chorasmia, Bactria, Sogdiana, Gandaria, the Sacae, Sattagydia, Arachotia, and Mecia: in all twenty-three provinces.' . . . All the central provinces constituting the original empire, from the mountains of Armenia to the head of the Persian Gulf, as well as several of those of the Iranian table-land, had to be reconquered. . . . Having thus restored the empire, Darius pursued new military expeditions and conquests in the true spirit of its founder. To the energy of youth was added the fear that quiet might breed new revolts; and by such motives, if we may believe Herodotus, he was urged by Queen Atossa —at the instigation of the Greek physician, Democedes — to the conquest of Greece; while he himself was minded to construct a bridge which should join Asia to Europe, and so to carry war into Scythia. It seems to have been

according to an Oriental idea of right, and not as a mere pretext, that he claimed to punish the Scythians for their invasion of Media in the time of Cyaxares. So he contented himself, for the present, with sending spies to Greece under the guidance of Democedes, and with the reduction of Samos. The Scythian expedition, however, appears to have been preceded by the extension of the empire eastward from the mountains of Afghanistan — the limit reached by Cyrus — over the valley of the Indus. . . . The part of India thus added to the empire, including the Punjab and apparently Scinde, yielded a tribute exceeding that of any other province. . . . The Scythian Expedition of Darius occupies the greater part of the Fourth Book of Herodotus. . . . The great result of the expedition, in which the king and his army narrowly escaped destruction, was the gaining of a permanent footing in Europe by the conquest of Thrace and the submission of Macedonia. . . . It was probably in B. C. 508 that Darius, having collected a fleet of 600 ships from the Greeks of Asia, and an army of 700,000 or 800,000 men from all the nations of his empire, crossed the Hellespont by a bridge of boats, and marched to the Danube, conquering on his way the Thracians within, and the Getæ beyond, the Great Balkan. The Danube was crossed by a bridge formed of the vessels of the Ionians, just above the apex of its Delta. The confusion in the geography of Herodotus makes it as difficult as it is unprofitable to trace the direction and extent of the march, which Herodotus carries beyond the Tanais (Don), and probably as far north as 50° lat. The Scythians retreated before Darius, avoiding a pitched battle, and using every stratagem to detain the Persians in the country till they should perish from famine." Darius retreated in time to save his army. "Leaving his sick behind, with the campfires lighted and the asses tethered, to make the enemy believe that he was still in their front, he retreated in the night. The pursuing Scythians missed his line of march, and came first to the place where the Ionian ships bridged the Danube. Failing to persuade the Greek generals to break by the same act both the bridge and the yoke of Darius, they marched back to encounter the Persian army. But their own previous destruction of the wells led them into a different route; and Darius got safe, but with difficulty, to the Danube. . . . The Hellespont was crossed by means of the fleet with which the strait had been guarded by Megabazus, or, more probably, Megabyzus; and the second opportunity was barred against a rising of the Greek colonies. . . . He left Megabazus in Europe with 80,000 troops to complete the reduction of all Thrace." Megabazus not only executed this commission, but reduced the kingdom of Macedonia to vassalage before returning to his master, in B. C. 506.—P. Smith, *Ancient Hist. of the East, bk.* 3, *ch.* 27.—"Darius returned to Susa, leaving the western provinces in profound peace under the government of his brother Artaphernes. A trifling incident lighted the flame of rebellion. One of those political conflicts, which we have seen occurring throughout Greece, broke out in Naxos, an island of the Cyclades (B. C. 502). The exiles of the oligarchical party applied for aid to Aristagoras, the tyrant of Miletus, who persuaded Artaphernes to send an expedition against Naxos. The Persian commander, incensed by the interference of Aristagoras on a point of discipline, warned the Naxians, and so caused the failure of the expedition and ruined the credit of Aristagoras, who saw no course open to him but revolt. . . . With the consent of the Milesian citizens, Aristagoras seized the tyrants who were on board of the fleet that had returned from Naxos; he laid down his own power; popular governments were proclaimed in all the cities and islands; and Ionia revolted from Darius (B. C. 501). Aristagoras went to Sparta . . . and tried to tempt the king, Cleomenes, by displaying the greatness of the Persian empire; but his admission that Susa was three months' journey from the sea ruined his cause. He had better success at Athens; for the Athenians knew that Artaphernes had been made their enemy by Hippias. They voted twenty ships in aid of the Ionians, and the squadron was increased by five ships of the Eretrians. Having united with the Ionian fleet, they disembarked at Ephesus, marched up the country, and surprised Sardis, which was accidentally burnt during the pillage. Their forces were utterly inadequate to hold the city; and their return was not effected without a severe defeat by the pursuing army. The Athenians reembarked and sailed home, while the Ionians dispersed to their cities to make those preparations which should have preceded the attack. Their powerful fleet gained for them the adhesion of the Hellespontine cities as far as Byzantium, of Caria, Caunus, and Cyprus; but this island was recovered by the Persians within a year. The Ionians protracted the insurrection for six years. Their cause was early abandoned by Aristagoras, who fled to the coast of Thrace and there perished. . . . The fate of the revolt turned at last on the siege of Miletus. The city was protected by the Ionian fleet, for which the Phoenician navy of Artaphernes was no match. But there was fatal disunion and want of discipline on board, and the defection of the Samians gave the Persians an easy victory off Ladé (B. C. 495). Miletus suffered the worst horrors of a storm, and the other cities and islands were treated with scarcely less severity. This third subjugation of Ionia inflicted the most lasting blow on the prosperity of the colonies (B. C. 493). Throughout his narrative of these events, Herodotus declares his opinion of the impolicy of the interference of the Athenians. The ships they voted, he says, were the beginning of evils both to the Greeks and the barbarians. When the news of the burning of Sardis was brought to Darius, he called for his bow, and shot an arrow towards the sky, with a prayer to Auramazda for help to revenge himself on the Athenians. Then he bade one of his servants repeat to him thrice, as he sat down to dinner, the words, 'Master, remember the Athenians.' Upon the suppression of the Ionian revolt, he appointed his son-in-law Mardonius to succeed Artaphernes, enjoining him to bring these insolent Athenians and Eretrians to Susa."—P. Smith, *Hist. of the World: Ancient, ch.* 13 (*v.* 1).

B. C. 486-405.—From Xerxes I. to Artaxerxes II.—The disastrous invasion of Greece.—Loss of Egypt.—Recovery of Asia Minor.—Decay of the empire.—"Xerxes I, who succeeded Darius, B. C. 486, commenced his reign by the reduction of Egypt, B. C. 485, which he entrusted to his brother, Achæmenes. He then provoked and chastised a rebellion of the Babylonians, enriching himself with the plunder of their temples. After this he turned his attention to the invasion of Greece [where he experienced the disastrous defeats of Salamis, Platæa and Mycale—see GREECE: B. C. 480, to B. C. 479]. . . . It was now the turn of the Greeks to retaliate on their prostrate foe. First under the lead of Sparta and then under that of Athens they freed the islands of the Ægean from the Persian yoke, expelled the Persian garrisons from Europe, and even ravaged the Asiatic coast and made descents on it at their pleasure. For twelve years no Persian fleet ventured to dispute with them the sovereignty of the seas; and when at last, in B. C. 466, a naval force was collected to protect Cilicia and Cyprus, it was defeated and destroyed by Cimon at the Eurymedon [see ATHENS: B. C. 470–466]. Soon after this Xerxes' reign came to an end. This weak prince, . . . on his return to Asia, found consolation for his military failure in the delights of the seraglio, and ceased to trouble himself much about affairs of State. . . . The bloody and licentious deeds which stain the whole of the later Persian history commence with Xerxes, who suffered the natural penalty of his follies and his crimes when, after reigning twenty years, he was murdered by the captain of his guard, Artabanus, and Aspamitres, his chamberlain. . . . Artabanus placed on the throne the youngest son of Xerxes, Artaxerxes I [B. C. 465]. . . . The eldest son, Darius, accused by Artabanus of his father's assassination, was executed; the second, Hystaspes, who was satrap of Bactria, claimed the crown; and, attempting to enforce his claim, was defeated and slain in battle. About the same time the crimes of Artabanus were discovered, and he was put to death. Artaxerxes then reigned quietly for nearly forty years. He was a mild prince, possessed of several good qualities; but the weakness of his character caused a rapid declension of the empire under his sway. The revolt of Egypt [B. C. 460–455] was indeed suppressed after a while, through the vigorous measures of the satrap of Syria, Megabyzus; and the Athenians, who had fomented it, were punished by the complete destruction of their fleet, and the loss of almost all their men [see ATHENS: B. C. 460–449]. . . . Bent on recovering her prestige, Athens, in B. C. 449, despatched a fleet to the Levant, under Cimon, which sailed to Cyprus and laid siege to Citium. There Cimon died; but the fleet, which had been under his orders, attacked and completely defeated a large Persian armament off Salamis, besides detaching a squadron to assist Amyrtæus, who still held out in the Delta. Persia, dreading the loss of Cyprus and Egypt, consented to an inglorious peace [the much disputed 'Peace of Cimon,' or 'Peace of Callias'—see ATHENS: B. C. 460–449]. . . . Scarcely less damaging to Persia was the revolt of Megabyzus, which followed. This powerful noble . . . excited a rebellion in Syria [B. C. 447], and so alarmed Artaxerxes that he was allowed to dictate the terms on which he would consent to be reconciled to his sovereign. An example was thus set of successful rebellion on the part of a satrap, which could not but have disastrous consequences. . . . The disorders of the court continued, and indeed increased, under Artaxerxes I, who allowed his mother Amestris, and his sister Amytis, who was married to Megabyzus, to indulge freely the cruelty and licentiousness of their dispositions. Artaxerxes died B. C. 425, and left his crown to his only legitimate son, Xerxes II. Revolutions in the government now succeeded each other with great rapidity. Xerxes II, after reigning forty-five days, was assassinated by his half-brother, Secydianus, or Sogdianus, an illegitimate son of Artaxerxes, who seized the throne, but was murdered in his turn, after a reign of six months and a half, by another brother, Ochus. Ochus, on ascending the throne, took the name of Darius, and is known in history as Darius Nothus. He was married to Parysatis, his aunt, a daughter of Xerxes I, and reigned nineteen years, B. C. 424–405, under her tutelage. His reign . . . was on the whole disastrous. Revolt succeeded to revolt; and, though most of the insurrections were quelled, it was at the cost of what remained of Persian honour and self-respect. Corruption was used instead of force against the rebellious armies. . . . The revolts of satraps were followed by national outbreaks, which, though sometimes quelled, were in other instances successful. In B. C. 408, the Medes, who had patiently acquiesced in Persian rule for more than a century, made an effort to shake off the yoke, but were defeated and reduced to subjection. Three years later, B. C. 405, Egypt once more rebelled, under Nepherites, and succeeded in establishing its independence. The Persians were expelled from Africa, and a native prince seated himself on the throne of the Pharaohs. It was some compensation for this loss, and perhaps for others towards the north and north-east of the empire, that in Asia Minor the authority of the Great King was once more established over the Greek cities. It was the Peloponnesian War, rather than the Peace of Callias, which had prevented any collision between the great powers of Europe and Asia for 37 years. Both Athens and Sparta had their hands full; and though it might have been expected that Persia would have at once taken advantage of the quarrel to reclaim at least her lost continental dominion, yet she seems to have refrained, through moderation or fear, until the Athenian disasters in Sicily encouraged her to make an effort. She then invited the Spartans to Asia, and by the treaties which she concluded with them, and the aid which she gave them, reacquired without a struggle all the Greek cities of the coast [B. C. 412]. . . . Darius Nothus died B. C. 405, and was succeeded by his eldest son, Arsaces, who on his accession took the name of Artaxerxes. Artaxerxes II, called by the Greeks Mnemon, on account of the excellence of his memory, had from the very first a rival in his brother Cyrus."—G. Rawlinson, *Manual of Ancient Hist., bk. 2, sect. 24–39.*

B. C. 401-400.—The expedition of Cyrus the Younger, and the Retreat of the Ten Thousand.—Cyrus the Younger, so called to distinguish him from the great founder of the Persian empire, was the second son of Darius Nothus, king of Persia, and expected to succeed his father on the throne through the influence of his mother, Parysatis. During his father's life he was appointed satrap of Lydia, Phrygia and Cappadocia, with supreme military command in all Asia Minor. On the death of Darius, B. C. 404, Cyrus found himself thwarted in his hopes of the succession, and laid plans at once for overthrowing the elder brother, Artaxerxes, who had been placed on the throne. He had acquired an extensive acquaintance with the Greeks and had had much to do with them, in his administration of Asia Minor, during the Peloponnesian War. That acquaintance had produced in his mind a great opinion of their invincible qualities in war, and had shown him the practicability of forming, with the means which he commanded, a compact army of Greek mercenaries which no Persian force could withstand. He executed his plan of gathering such a column of Greek soldiers, without awakening his brother's suspicions, and set out upon his expedition from Sardes to Susa, in March B. C. 401. As he advanced, finding himself unopposed, the troops of Artaxerxes retreating before him, he and his Asiatic followers grew rash in their confidence, and careless of discipline and order. Hence it happened that when the threatened Persian monarch did confront them, with a great army, at Cunaxa, on the Euphrates, in Babylonia, they were taken by surprise and routed, and the pretender, Cyrus, was slain on the field. The Greeks—who numbered about 13,000, but whose ranks were soon thinned and who are famous in history as the Ten Thousand,—stood unshaken, and felt still equal to the conquest of the Persian capital, if any object in advancing upon it had remained to them. But the death of Cyrus left them in a strange situation,—deserted by every Asiatic ally, without supplies, without knowledge of the country, in the midst of a hostile population. Their own commander, moreover, had been slain, and no one held authority over them. But they possessed what no other people of their time could claim—the capacity for self-control. They chose from their ranks a general, the Athenian Xenophon, and endowed him with all necessary powers. Then they set their faces homewards, in a long retreat from the lower Euphrates to the Euxine, from the Euxine to the Bosporus, and so into Greece. "Although this eight months' military expedition possesses no immediate significance for political history, yet it is of high importance, not only for our knowledge of the East, but also for that of the Greek character; and the accurate description which we owe to Xenophon is therefore one of the most valuable documents of antiquity. . . . This army is a typical chart, in many colours, of the Greek population—a picture, on a small scale, of the whole people, with all its virtues and faults, its qualities of strength and its qualities of weakness, a wandering political community which, according to home usage, holds its assemblies and passes its resolutions, and at the same time a wild and not easily manageable band of free-lances. . . . And how very remarkable it is, that in this mixed multitude of Greeks it is an Athenian who by his qualities towers above all the rest, and becomes the real preserver of the entire army! The Athenian Xenophon had only accompanied the expedition as a volunteer, having been introduced by Proxenus to Cyrus, and thereupon moved by his sense of honour to abide with the man whose great talents he admired. . . . The Athenian alone possessed that superiority of culture which was necessary for giving order and self-control to the band of warriors, barbarized by their selfish life, and for enabling him to serve them in the greatest variety of situations as spokesman, as general, and as negotiator; and to him it was essentially due that, in spite of their unspeakable trials, through hostile tribes and desolate snow-ranges, 8,000 Greeks after all, by wanderings many and devious, in the end reached the coast. They fancied themselves safe when, at the beginning of March, they had reached the sea at Trapezus. But their greatest difficulties were only to begin here, where they first again came into contact with Greeks." Sparta, then supreme in Greece, feared to offend the Great King by showing any friendliness to this fugitive remnant of the unfortunate expedition of Cyrus. The gates of her cities were coldly shut against them, and they were driven to enter the service of a Thracian prince, in order to obtain subsistence. But another year found Sparta involved in war with Persia, and the surviving Cyreans, as they came to be called, were then summoned to Asia Minor for a new campaign against the enemy they hated most.—E. Curtius, *Hist. of Greece, bk. 5, ch. 3.*

B. C. 150-A. D. 226.—Embraced in the Parthian empire.—Recovery of national independence.—Rise of the Sassanian monarchy.—"About B. C. 163, an energetic [Parthian] prince, Mithridates I., commenced a series of conquests towards the West, which terminated (about B. C. 150) in the transference from the Syro-Macedonian to the Parthian rule of Media Magna, Susiana, Persia, Babylonia, and Assyria Proper. It would seem that the Persians offered no resistance to the progress of the new conqueror. . . . The treatment of the Persians by their Parthian lords seems, on the whole, to have been marked by moderation. . . . It was a principle of the Parthian governmental system to allow the subject peoples, to a large extent,

to govern themselves. These people generally, and notably the Persians, were ruled by native kings, who succeeded to the throne by hereditary right, had the full power of life and death, and ruled very much as they pleased, so long as they paid regularly the tribute imposed upon them by the 'King of Kings,' and sent him a respectable contingent when he was about to engage in a military expedition."—G. Rawlinson, *The Seventh Great Oriental Monarchy, ch.* 1.—"The formidable power of the Parthians . . . was in its turn subverted by Ardshir, or Artaxerxes, the founder of a new dynasty, which, under the name of Sassanides [see SASSANIAN DYNASTY], governed Persia till the invasion of the Arabs. This great revolution, whose fatal influence was soon experienced by the Romans, happened in the fourth year of Alexander Severus [A. D. 226]. . . . Artaxerxes had served with great reputation in the armies of Artaban, the last king of the Parthians; and it appears that he was driven into exile and rebellion by royal ingratitude, the customary reward for superior merit. His birth was obscure, and the obscurity equally gave room to the aspersions of his enemies and the flattery of his adherents. If we credit the scandal of the former, Artaxerxes sprang from the illegitimate commerce of a tanner's wife with a common soldier. The latter represents him as descended from a branch of the ancient kings of Persia. . . . As the lineal heir of the monarchy, he asserted his right to the throne, and challenged the noble task of delivering the Persians from the oppression under which they groaned above five centuries, since the death of Darius. The Parthians were defeated in three great battles. In the last of these their king Artaban was slain, and the spirit of the nation was for ever broken. The authority of Artaxerxes was solemnly acknowledged in a great assembly held at Balkh in Khorasan."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 8 (*v.* 1).

A. D. 226-627.—Wars with the Romans.—The revolution in Asia which subverted the Parthian empire and brought into existence a new Persian monarchy—the monarchy of the Sassanides—occurred A. D. 226. The founder of the new throne, Artaxerxes, no sooner felt firm in his seat than he sent an imposing embassy to bear to the Roman emperor—then Alexander Severus—his haughty demand that all Asia should be yielded to him and that Roman arms and Roman authority should be withdrawn to the western shores of the Ægean and the Propontis. This was the beginning of a series of wars, extending through four centuries and ending only with the Mahometan conquests which swept Roman and Persian power, alike, out of the contested field. The first campaigns of the Romans against Artaxerxes were of doubtful result. In the reign of Sapor, son of Artaxerxes, the war was renewed, with unprecedented humiliation and disaster to the Roman arms. Valerian, the emperor, was surrounded and taken prisoner, after a bloody battle fought near Edessa (A. D. 260),—remaining until his death a captive in the hands of his insolent conqueror and subjected to every indignity (see ROME: A. D. 192–284). Syria was overrun by the Persian armies, and its splendid capital, Antioch, surprised, pillaged, and savagely wrecked, while the inhabitants were mostly slain or reduced to slavery. Cilicia and Cappadocia were next devastated in like manner. Cæsarea, the Cappadocian capital, being taken after an obstinate siege, suffered pillage and unmerciful massacre. The victorious career of Sapor, which Rome failed to arrest, was checked by the rising power of Palmyra (see PALMYRA). Fifteen years later, Aurelian, who had destroyed Palmyra, was marching to attack Persia when he fell by the hands of domestic enemies and traitors. It was not until A. D. 283, in the reign of Carus, that Rome and Persia crossed swords again. Carus ravaged Mesopotamia, captured Seleucia and Ctesiphon and passed beyond the Tigris, when he met with a mysterious death and his victorious army retreated. A dozen years passed before the quarrel was taken up again, by Diocletian (see ROME: A. D. 284–305). That vigorous monarch sent one of his Cæsars—Galerius—into the field, while he stationed himself at Antioch to direct the war. In his first campaign (A. D. 297), Galerius was defeated, on the old fatal field of Carrhæ. In his second campaign (A. D. 297–298) he won a decisive victory and forced on the Persian king, Narses, a humiliating treaty, which renounced Mesopotamia, ceded five provinces beyond the Tigris, made the Araxes, or Aboras, the boundary between the two empires, and gave other advantages to the Romans. There was peace, then, for forty years, until another Sapor, grandson of Narses, had mounted the Persian throne. Constantine the Great was dead and his divided empire seemed less formidable to the neighboring power. "During the long period of the reign of Constantius [A. D. 337–361] the provinces of the East were afflicted by the calamities of the Persian war. . . . The armies of Rome and Persia encountered each other in nine bloody fields, in two of which Constantius himself commanded in person. The event of the day was most commonly adverse to the Romans." In the great battle of Singara, fought A. D. 348, the Romans were victors at first, but allowed themselves to be surprised at night, while plundering the enemy's camp, and were routed with great slaughter. Three sieges of Nisibis, in Mesopotamia—the bulwark of Roman power in the East—were among the memorable incidents of these wars. In 338, in 346, and again in 350, it repulsed the Persian king with shame and loss. Less fortunate was the city of Amida [modern Diarbekir], in Armenia, besieged by Sapor, in 359. It was taken, at the last, by storm, and the inhabitants put to the sword. On the accession of Julian, the Persian war was welcomed by the ambitious young emperor as an opportunity for emulating the glory of Alexander, after rivalling that of Cæsar in Gaul. In the early spring of 363, he led forth a great army from Antioch, and traversed the sandy plains of Mesopotamia to the Persian capital of Ctesiphon, reducing and destroying the strong cities of Perisabor and Maogamalcha on his march. Finding Ctesiphon too strong in its fortifications to encourage a siege, he crossed the Tigris, burned his fleet and advanced boldly into the hostile country beyond. It was a fatal expedition. Led astray by perfidious guides, harassed by a swarm of enemies, and scantily supplied with provisions, the Romans were soon forced to an almost desperate retreat. If Julian had lived, he might possibly have sustained the courage of his men and rescued them from their situation; but he fell, mortally wounded, in repelling one of the incessant attacks of the Persian

cavalry. An officer named Jovian was then hastily proclaimed emperor, and by his agency an ignominious treaty was arranged with the Persian king. It gave up all the conquests of Galerius, together with Nisibis, Singara and other Roman strongholds in Mesopotamia; on which hard terms the Roman army was permitted to recross the Tigris and find a refuge in regions of its own. The peace thus shamefully purchased endured for more than half-a-century. Religious fanaticism kindled war afresh, A. D. 422, between Persia and the eastern empire; but the events are little known. It seems to have resulted, practically, in the division of Armenia which gave Lesser Armenia to the Romans as a province and made the Greater Armenia, soon afterwards, a Persian satrapy, called Persarmenia. The truce which ensued was respected for eighty years. In the year 502, while Anastasius reigned at Constantinople and Kobad was king of Persia, there was a recurrence of war, which ended, however, in 505, without any territorial changes. The unhappy city of Amida was again captured in this war, after a siege of three months, and 80,000 of its inhabitants perished under the Persian swords. Preparatory to future conflicts, Anastasius now founded and Justinian afterwards strengthened the powerfully fortified city of Dara, near Nisibis. The value of the new outpost was put to the proof in 526, when hostilities again broke out. The last great Roman general, Belisarius, was in command at Dara during the first years of this war, and finally held the general command. In 529 he fought a great battle in front of Dara and won a decisive victory. The next year he suffered a defeat at Sura and in 532 the two powers arranged a treaty of peace which they vauntingly called "The Endless Peace"; but Justinian (who was now emperor) paid 11,000 pounds of gold for it. "The Endless Peace" was so quickly ended that the year 540 found the Persian king Chosroes, or Nushirvan, at the head of an army in Syria ravaging the country and despoiling the cities. Antioch, just restored by Justinian, after an earthquake which, in 526, had nearly levelled it with the ground, was stormed, pillaged, half burned, and its streets drenched with blood. The seat of war was soon transferred to the Caucasian region of Colchis, or Lazica (modern Mingrelia), and became what is known in history as the Lazic War [see LAZICA], which was protracted until 561, when Justinian consented to a treaty which pledged the empire to pay 30,000 pieces of gold annually to the Persian king, while the latter surrendered his claim to Colchis. But war broke out afresh in 572 and continued till 591, when the armies of the Romans restored to the Persian throne another Chosroes, grandson of the first, who had fled to them from a rebellion which deposed and destroyed his unworthy father. Twelve years later this Chosroes became the most formidable enemy to the empire that it had encountered in the East. In successive campaigns he stripped from it Syria and Palestine, Egypt, Cyrenaica, and the greater part of Asia Minor, even to the shores of the Bosphorus. Taking the city of Chalcedon in 616, after a lengthy siege, he established a camp and army at that post, within sight of Constantinople, and held it for ten years, insulting and threatening the imperial capital. But he found a worthy antagonist in Heraclius, who became emperor of the Roman East in 610, and who proved himself to be one of the greatest of soldiers. It was twelve years after the beginning of his reign before Heraclius could gather in hand, from the shrunken and exhausted empire, such resources as would enable him to turn aggressively upon the Persian enemy. Then, in three campaigns, between 622 and 627, he completely reversed the situation. After a decisive battle, fought December 1, A. D. 627, on the very site of ancient Nineveh, the royal city of Dastagerd was taken and spoiled, and the king, stripped of all his conquests and his glory, was a fugitive (see ROME: A. D. 565–628). A conspiracy and an assassination soon ended his career and his son made peace. It was a lasting peace, as between Romans and Persians; for eight years afterwards the Persians were in their death struggle with the warriors of Mahomet.—G. Rawlinson, *The Seventh Great Oriental Monarchy.*

A. D. 1220-1226.—Conquest by Jingiz Khan. See MONGOLS: A. D. 1153–1227; and KHORASSAN: A. D. 1220–1221.

A. D. 1258-1393.—The Mongol empire of the Ilkhans.—Khulagu, or Houlagou, grandson of Jingis Khan, who extinguished the caliphate at Bagdad, A. D. 1258, and completed the Mongol conquest of Persia and Mesopotamia (see BAGDAD: A. D. 1258), "received the investiture of his conquests and of the country south of the Oxus. He founded an empire there, known as that of the Ilkhans. Like the Khans of the Golden Horde, the successors of Batu, they for a long time acknowledged the suzereignty of the Khakan of the Mongols in the East."—H. H. Howorth, *Hist. of the Mongols, pt.* 1, *p.* 211.—Khulagu "fixed his residence at Maragha, in Aderbijan, a beautiful town, situated on a fine plain watered by a small but pure stream, which, rising in the high mountains of Sahund, flows past the walls of the city, and empties itself in the neighbouring lake of Oormia. . . . At this delightful spot Hulakoo [or Khulagu] appears to have employed his last years in a manner worthy of a great monarch. Philosophers and astronomers were assembled from every part of his dominions, who laboured in works of science under the direction of his favourite, Nasser-u-deen." The title of the Ilkhans, given to Khulagu and his successors, signified simply the lords or chiefs (the Khans). Their empire was extinguished in 1393 by the conquests of Timour.—Sir J. Malcolm, *Hist. of Persia, ch.* 10 (*v.* 1).—"It was under Sultan Ghazan, who reigned from 1294 to 1303, that Mahometanism again became the established religion of Persia. In the second year of his reign, Ghazan Khan publicly declared his conversion to the faith of the Koran.

. . . After Sultan Ghazan the power of the Mongolian dynasty in Persia rapidly declined. The empire soon began to break in pieces. . . . The royal house became extinct, while another branch of the descendants of Hulaku established themselves at Bagdad. At last Persia became a mere scene of anarchy and confusion, utterly incapable of offering any serious resistance to the greatest of Mussulman conquerors, the invincible and merciless Timour."—E. A. Freeman, *Hist. and Conq. of the Saracens, lect.* 6.

A. D. 1499-1887.—The founding of the Sefavean dynasty.—Triumph of the Sheahs.—Subjugation by the Afghans.—Deliverance by Nadir Shah.—The Khajar dynasty.—"At an early period in the rise of Islamism, the followers of Mohammed became divided on the question of the succession to the caliphate, or leadership, vacated by the death of Mohammed. Some, who were in majority, believed that it lay with the descendants of the caliph, Moawiyeh, while others as firmly clung to the opinion that the succession lay with the sons of Alee and Fatimeh, the daughter of the prophet, Hassan and Houssein, and their descendants. In a desperate conflict on the banks of the Euphrates, nearly all the male descendants of the prophet were slain [see MAHOMETAN CONQUEST &c.: A. D. 680], and almost the entire Mohammedan peoples, from India to Spain, thenceforward became Sunnees—that is, they embraced belief in the succession of the line of the house of Moawiyeh, called the Ommiades. But there was an exception to this uniformity of belief. The Persians, as has been seen, were a people deeply given to religious beliefs and mystical speculations to the point of fanaticism. Without any apparent reason many of them became Sheahs [or Shiahs], or believers in the claims of the house of Alee and Fatimeh [see ISLAM]. . . . Naturally for centuries the Sheahs suffered much persecution from the Sunnees, as the rulers of Persia, until the 15th century, were generally Sunnees. But this only stimulated the burning zeal of the Sheahs, and in the end resulted in bringing about the independence of Persia under a dynasty of her own race. In the 14th century there resided at Ardebil a priest named the Sheikh Saifus, who was held in the highest repute for his holy life. He was a lineal descendant of Musa, the seventh Holy Imam. His son, Sadr-ud-Deen, not only enjoyed a similar fame for piety, but used it to such good account as to become chieftain of the province where he lived. Junaid, the grandson of Sadr-ud-Deen, had three sons, of whom the youngest, named Ismail, was born about the year 1480. When only eighteen years of age, the young Ismail entered the province of Ghilan, on the shores of the Caspian, and by the sheer force of genius raised a small army, with which he captured Baku. His success brought recruits to his standard, and at the head of 16,000 men he defeated the chieftain of Alamut, the general sent against him, and, marching on Tabreez, seized it without a blow. In 1499 Ismail, the founder of the Sefavean dynasty, was proclaimed Shah of Persia. Since that period, with the exception of the brief invasion of Mahmood the Afghan, Persia has been an independent and at times a very powerful nation. The establishment of the Sefavean dynasty also brought about the existence of a Sheah government, and gave great strength to that sect of the Mohammedans, between whom and other Islamites there was always great bitterness and much bloodshed. Ismail speedily carried his sway as far as the Tigris in the southwest and to Kharism and Candahar in the north and east. He lost one great battle with the Turks under Selim II. at Tabreez [or Chaldiran—see TURKS: A. D. 1481–1520], but with honor, as the Persians were outnumbered; but it is said he was so cast down by that event he never was seen to smile again. He died in 1524, leaving the record of a glorious reign. His three immediate successors, Tahmasp, Ismail II., and Mohammed Khudabenda, did little to sustain the fame and power of their country, and the new empire must soon have yielded to the attacks of its enemies at home and abroad, if a prince of extraordinary ability had not succeeded to the throne when the new dynasty seemed on the verge of ruin. Shah Abbass, called the Great, was crowned in the year 1586, and died in 1628, at the age of seventy, after a reign of forty-two years [see TURKS: A. D. 1623–1640]. This monarch was one of the greatest sovereigns who ever sat on the throne of Persia. . . . It was the misfortune of Persia that the Sefavean line rapidly degenerated after the death of Shah Abbass. . . . Taking advantage of the low state of the Sefavean dynasty, Mahmood, an Afghan chieftain, invaded Persia in 1722 with an army of 50,000 men. Such was the condition of the empire that he had little difficulty in capturing Ispahan, although it had a population of 600,000. He slaughtered every male member of the royal family except Houssein the weak sovereign, his son Tahmasp, and two grandchildren; all the artists of Ispahan and scores of thousands besides were slain. That magnificent capital has never recovered from the blow. Mahmood died in 1725, and was succeeded by his cousin Ashraf. But the brief rule of the Afghans terminated in 1727. Nadir Kuli, a Persian soldier of fortune, or in other words a brigand of extraordinary ability, joined Tahmasp II., who had escaped and collected a small force in the north of Persia. Nadir marched on Ispahan and defeated the Afghans in several battles; Ashraf was slain and Tahmasp II. was crowned. But Nadir dethroned Tahmasp II. in 1732, being a man of vast ambition as well as desire to increase the renown of Persia; and he caused that unfortunate sovereign to be made way with some years later. Soon after Nadir Kuli proclaimed himself king of Persia with the title of Nadir Kuli Khan. Nadir was a man of ability equal to his ambition. He not only beat the Turks with comparative ease, but he organized an expedition that conquered Afghanistan and proceeded eastward until Delhi fell into his hands, with immense slaughter [see INDIA: A. D. 1662–1748]. . . . He was assassinated in 1747. Nadir Kuli Khan was a man of great genius, but he died too soon to establish an enduring dynasty, and after his death civil wars rapidly succeeded each other until the rise of the present or Khajar dynasty, which succeeded the reign of the good Kerim Khan the Zend, who reigned twenty years at Shiraz. Aga Mohammed Khan, the founder of the Khajar dynasty, succeeded in 1794 in crushing the last pretender to the throne, after a terrible civil war, and once more

reunited the provinces of Persia under one sceptre. . . . Aga Mohammed Khan was succeeded, after his assassination, by his nephew Feth Alee Shah, a monarch of good disposition and some ability. It was his misfortune to be drawn into two wars with Russia, who stripped Persia of her Circassian provinces, notwithstanding the stout resistance made by the Persian armies. Feth Alee Shah was succeeded by his grandson Mohammed Shah, a sovereign of moderate talents. No events of unusual interest mark his reign, excepting the siege of Herat which was captured in the present reign from the Afghans. He died in 1848, and was succeeded by his son Nasr-ed-Deen Shah, the present [1887] sovereign of Persia."—S. G. W. Benjamin, *The Story of Persia, ch.* 20.

PERU: Origin of the name. — "There was a chief in the territory to the south of the Gulf of San Miguel, on the Pacific coast, named Biru, and this country was visited by Gaspar de Morales and Francisco Pizarro in 1515. For the next ten years Biru was the most southern land known to the Spaniards; and the consequence was that the unknown regions farther south, including the rumored empire abounding in gold, came to be designated as Biru, or Peru. It was thus that the land of the Yncas got the name of Peru from the Spaniards, some years before it was actually discovered."—C. R. Markham, *Narrative and Critical Hist. of Am., v.* 2, *ch.* 8.

Also in: A. Helps, *Spanish Conquest in America, bk.* 6, *ch.* 2.

The aboriginal inhabitants and their civilization.—The extraordinary paternal despotism of the Incas.—"The bulk of the population [of Peru] is composed of the aboriginal Indians, the natives who had been there from time immemorial when America was discovered. The central tribe of these Indians was that of the Yncas, inhabiting the region in the Sierra which has already been described as the Cuzco section. Such a country was well adapted for the cradle of an imperial tribe. . . . The Ynca race was originally divided into six tribes, whose lands are indicated by the rivers which formed their limits. Of these tribes the Yncas themselves had their original seat between the rivers Apurimac and Paucartampu, with the lovely valley of the Vilcamayu bisecting it. The Canas dwelt in the upper part of that valley up to the Vilcañota Pass, and on the mountains on either side. The Quichuas were in the valleys round the head waters of the Apurimac and Abancay. The Chancas extended from the neighbourhood of Ayacucho (Guamanga) to the Apurimac. The Huancas occupied the valley of the Xauxa up to the saddle of the Cerro Pasco, and the Rucanas were in the mountainous region between the central and western cordilleras. These six tribes eventually formed the conquering Ynca race. Their language was introduced into every conquered province, and was carefully taught to the people, so that the Spaniards correctly called it the 'Lengua General' of Peru. This language was called Quichua, after the tribe inhabiting the upper part of the valleys of the Pachachaca and Apurimac. Their territory consisted chiefly of uplands covered with long grass, and the name has been derived from the abundance of straw in this region. 'Quehuani' is to twist; 'quehuasca' is the participle; and 'ychu' is straw. Together, 'Quchuasca-Ychu,' or twisted straw, abbreviated into Quichua. The name was given to the language by Friar San Tomas in his grammar published in 1560, who perhaps first collected words among the Quichuas and so gave it their name, which was adopted by all subsequent grammarians. But the proper name would have been the Ynca language. The aboriginal people in the basin of Lake Titicaca were called Collas, and they spoke a language which is closely allied to the Quichua. . . . The Collas were conquered by the Yncas in very remote times, and their language, now incorrectly called Aymara, received many Quichua additions; for it originally contained few words to express abstract ideas, and none for many things which are indispensable in the first beginnings of civilized life. One branch of the Collas (now called Aymaras) was a savage tribe inhabiting the shores and islands of Lake Titicaca, called Urus. . . . The Ynca and Colla (Aymara) tribes eventually combined to form the great armies which spread the rule of Ynca sovereigns over a much larger extent of country. . . . In the happy days of the Yncas they cultivated many of the arts, and had some practical knowledge of astronomy. They had domesticated all the animals in their country capable of domestication, understood mining and the working of metals, excelled as masons, weavers, dyers, and potters, and were good farmers. They brought the science of administration to a high pitch of perfection, and composed imaginative songs and dramas of considerable merit. . . . The coast of Peru was inhabited by a people entirely different from the Indians of the Sierra. There are some slight indications of the aborigines having been a diminutive race of fishermen who were driven out by the more civilized people, called Yuncas. . . . The Yncas conquered the coast valleys about a century before the discovery of America, and the Spaniards completed the destruction of the Yunca people."—C. R. Markham, *Peru, ch.* 3.—"In the minuter mechanical arts, both [the Aztecs of Mexico and the Incas of Peru] showed considerable skill; but in the construction of important public works, of roads, aqueducts, canals, and in agriculture in all its details, the Peruvians were much superior.

Strange that they should have fallen so far below their rivals in their efforts after a higher intellectual culture, in astronomical science, more especially, and in the art of communicating thought by visible symbols. . . . We shall look in vain in the history of the East for a parallel to the absolute control exercised by the Incas over their subjects. . . . It was a theocracy more potent in its operation than that of the Jews; for, though the sanction of the law might be as great among the latter, the law was expounded by a human lawgiver, the servant and representative of Divinity. But the Inca was both the lawgiver and the law. He was not merely the representative of Divinity, or, like the Pope, its vicegerent, but he was Divinity itself. The violation of his ordinance was sacrilege. Never was there a scheme of government enforced by such terrible sanctions, or which bore so oppressively on the subjects of it. For it reached not only to the visible acts, but to the private conduct, the words, the very thoughts of its vassals. . . . Under this extraordinary polity, a people advanced in many of the social refinements, well skilled in manufactures and agriculture, were unacquainted . . . with money. They had nothing that deserved to be called property. They could follow no craft, could engage in no labor, no amusement, but such as was specially provided by law. They could not change their residence or their dress without a license from the government. They could not even exercise the freedom which is conceded to the most abject in other countries, that of selecting their own wives. The imperative spirit of despotism would not allow them to be happy or miserable in any way but that established by law. The power of free agency — the inestimable and inborn right of every human being — was annihilated in Peru."—W. H. Prescott, *Hist. of the Conquest of Peru, bk.* 1, *ch.* 5 (*v.* 1).

Also in: *The Standard Natural Hist.* (*J. S. Kingsley, ed.*), *v.* 6, *pp.* 215–226.—J. Fiske, *The Discovery of America, ch.* 9 (*v.* 2).—E. J. Payne, *Hist. of the New World called America, bk.* 2 (*v.* 1).—See, also, American Aborigines, Andesians.

The empire of the Incas.—"The Inca empire had attained its greatest extension and power precisely at the period of the discovery by Columbus, under the reign of Huayna Capac, who, rather than Huascar or Atahualpa, should be called the last of the Incas. His father, the Inca Tupac Yupanqui, had pushed his conquests on the south, beyond the great desert of Atacama, to the river Maule in Chili; while, at the same time, Huayna Capac himself had reduced the powerful and refined kingdom of the Sciris of Quito [see Ecuador], on the north. From their great dominating central plateau, the Incas had pressed down to the Pacific, on the one hand, and to the dense forests of the Amazonian valleys on the other. Throughout this wide region and over all its nations, principalities, and tribes, Huayna Capac at the beginning of the 16th century ruled supreme. His empire extended from four degrees above the equator to the 34th southern parallel of latitude, a distance of not far from 3,000 miles; while from east to west it spread, with varying width, from the Pacific to the valleys of Paucartambo and Chuquisaca, an average distance of not far from 400 miles, covering an area, therefore, of more than one million square miles, equal to about one-third of the total area of the United States, or to the whole of the United States to the eastward of the Mississippi River. . . . In the islands of Lake Titicaca, if tradition be our guide, were developed the germs of Inca civilization. Thence, it is said, went the founders of the Inca dynasty, past the high divide between the waters flowing into the lake and those falling into the Amazon, and skirting the valley of the river Vilcanota for more than 200 miles, they established their seat in the bolson [valley] of Cuzco. . . . It is not only central in position, salubrious and productive, but the barriers which separate it from the neighboring valleys are relatively low, with passes which may be traversed with comparative ease; while they are, at the same time, readily defensible. The rule of the first Inca seems not to have extended beyond this valley, and the passes leading into it are strongly fortified, showing the direction whence hostilities were anticipated in the early days of the empire, before the chiefs of Cuzco began their career of conquest and aggregation, reducing the people of the bolson of Anta in the north, and that of Urcos in the south. . . . The survey of the monuments of Peru brings the conviction that the ancient population was not nearly so numerous as the accounts of the chroniclers would lead us to suppose. From what I have said, it will be clear that but a small portion of the country is inhabitable, or capable of supporting a considerable number of people. The rich and productive valleys and bolsones are hardly more than specks on the map; and although there is every evidence that their capacities of production were taxed to the very utmost, still their capacities were limited. The ancient inhabitants built their dwellings among rough rocks, on arid slopes of hills, and walled up their dead in caves and clefts, or buried them among irreclaimable sands, in order to utilize the scanty cultivable soil for agriculture. They excavated great areas in the deserts until they reached moisture enough to support vegetation, and then brought guano from the islands to fertilize these sunken gardens. They terraced up every hill and mountain-side, and gathered the soil from the crevices of the rocks to fill the narrow platforms, until not a foot of surface, on which could grow a single stalk of maize or a single handful of quinoa, was left unimproved. China, perhaps Japan and some portions of India, may afford a parallel to the extreme utilization of the soil which was effected in Peru at the time of the Inca Empire. No doubt the Indian population lived, as it still lives, on the scantiest fare, on the very minimum of food; but it had not then, as now, the ox, the hog, the goat, and the sheep, nor yet many of the grains and fruits which contribute most to the support of dense populations. . . . The present population of the three states which were wholly or in part included in the Inca Empire — namely, Equador, Peru and Bolivia — does not exceed five millions. I think it would be safe to estimate the population under the Inca rule at about double that number, or perhaps somewhere between ten and twelve millions; notwithstanding Las Casas, the good, but not very accurate, Bishop of Chiapa tells us that, 'in the Province of Peru alone the Spaniards killed above forty millions of people.'"—E. G. Squier, *Peru, ch.* 1.

A. D. 1527-1528.—Discovery by the Spaniards. See America: A. D. 1524–1528.

A. D. 1528-1531.—The commission and the preparations of Pizarro.—"In the spring of 1528, Pizarro and one of his comrades, taking with them some natives of Peru and some products of that country, set out [from Panama] to tell their tale at the court of Castile. Pizarro . . . found the Emperor Charles V. at Toledo, and met with a gracious reception. . . . His tales of the wealth which he had witnessed were the more readily believed in consequence of the experiences of another Spaniard whom he now met at court, the famous conqueror of Mexico. Yet affairs in Spain progressed with proverbial slowness, and it was not until the expiry of a year from the date of his arrival in the country that the capitulation was signed defining the powers of Pizarro. By this agreement he was granted the right of discovery and conquest in Peru, or New Castile, with the titles of Captain-general of the province and Adelantado, or lieutenant-governor. He was likewise to enjoy a considerable salary, and to have the right to erect certain fortresses under his government, and, in short, to exercise the prerogatives of a viceroy. Almagro was merely appointed commander of the fortress of Tumbez, with the rank of Hidalgo; whilst Father Luque became bishop of the same place. . . . Pizarro, on his part, was bound to raise within six months a force of 250 men; whilst the government on theirs engaged to furnish some assistance in the purchase of artillery and stores." Thus commissioned, Pizarro left Seville in January, 1530, hastening back to Panama, accompanied or followed by four half-brothers, who were destined to stormy careers in Peru. Naturally, his comrade and partner Almagro was ill pleased with the provision made for him, and the partnership came near to wreck; but some sort of reconciliation was brought about, and the two adventurers joined hands again in preparations for a second visit to Peru, with intentions boding evil to the unhappy natives of that too bountiful land. It was early in January 1531 that Pizarro sailed southward from the Isthmus for the third and last time.—R. G. Watson, *Spanish and Portuguese South Am., v.* 1, *ch.* 6–7.

A. D. 1531-1533.—Pizarro's conquest.—Treacherous murder of Atahualpa.—"Pizarro sailed from Panama on the 28th of December, 1531, with three small vessels carrying one hundred and eighty-three men and thirty-seven horses. In thirteen days he arrived at the bay of San Mateo, where he landed the horses and soldiers to march along the shore, sending back the ships to get more men and horses at Panama and Nicaragua. They returned with twenty-six horses and thirty more men. With this force Pizarro continued his march along the sea-coast, which was well peopled; and on arriving at the bay of Guayaquil, he crossed over in the ships to the island of Puna. Here a devastating war was waged with the unfortunate natives, and from Puna the conqueror proceeded again in his ships to the Peruvian town of Tumbez. The country was in a state of confusion, owing to a long and desolating war of succession between Huascar and Atahualpa, the two sons of the great Ynca Huayna Capac, and was thus an easy prey to the invaders. Huascar had been defeated and made prisoner by the generals of his brother, and Atahualpa was on his way from Quito to Cusco, the capital of the empire, to enjoy the fruits of his victory. He was reported to be at Caxamarca, on the eastern side of the mountain; and Pizarro, with his small force, set out from Tumbez on the 18th of May, 1532. . . . The first part of Pizarro's march was southward from Tumbez, in the rainless coast region. After crossing a vast desert he came to Tangarara, in the fertile valleys of the Chira, where he founded the city of San Miguel, the site of which was afterwards removed to the valley of Piura. The accountant Antonio Navarro and the royal treasurer Riquelme were left in command at San Miguel, and Pizarro resumed his march in search of the Ynca Atahualpa on the 24th of September, 1532. He detached the gallant cavalier, Hernando de Soto, into the sierra of Huancabamba, to reconnoitre, and pacify the country. De Soto rejoined the main body after an absence of about ten days. The brother of Atahualpa, named Titu Atauchi, arrived as an envoy, with presents, and a message to the effect that the Ynca desired friendship with the strangers. Crossing the vast desert of Sechura, Pizarro reached the fertile valley of Motupe, and marched thence to the foot of the cordilleras in the valley of the Jequetepeque. Here he rested for a day or two, to arrange the order for the ascent. He took with him forty horses and sixty foot, instructing Hernando de Soto to follow him with the main body and the baggage. News arrived that the Ynca Atahualpa had reached the neighborhood of Caxamarca about three days before, and that he desired peace. Pizarro pressed forward, crossed the cordillera, and on Friday, the 15th of November, 1532, he entered Caxamarca with his whole force. Here he found excellent accommodation in the large masonry buildings, and was well satisfied with the strategic position. Atahualpa was established in a large camp outside, where Hernando de Soto had an interview with him. Atahualpa announced his intention of visiting the Christian commander, and Pizarro arranged and perpetrated a black act of treachery. He kept all his men under arms. The Ynca, suspecting nothing, came into the great square of Cusco in grand regal procession. He was suddenly attacked and made prisoner, and his people were massacred. The Ynca offered a ransom, which he described as gold enough to fill a room twenty-two feet long and seventeen wide, to a height equal to a man's stature and a half. He undertook to do this in two months, and sent orders for the collection of golden vases and ornaments in all parts of the empire. Soon the treasure began to arrive, while Atahualpa was deceived by false promises; and he beguiled his captivity by acquiring Spanish and learning to play at chess and cards. Meanwhile Pizarro sent an expedition under his brother Hernando, to visit the famous temple of Pachacamac on the coast; and three soldiers were also despatched to Cusco, the capital of the empire, to hurry forward the treasure. They set out in February, 1533, but behaved with so much imprudence and insolence at Cusco as to endanger their own lives and the success of their mission. Pizarro therefore ordered two officers of distinction, Hernando de Soto and Pedro del Barco, to follow them and remedy the mischief which they were doing. On Easter eve, being the 14th of April, 1533, Almagro arrived at Caxamarca with a reinforcement of 150 Spaniards and 84 horses. On the 3rd of May it was ordered

that the gold already arrived should be melted down for distribution; but another large instalment came on the 14th of June. An immense quantity consisted of slabs, with holes at the corners, which had been torn off the walls of temples and palaces; and there were vessels and ornaments of all shapes and sizes. After the royal fifth had been deducted, the rest was divided among the conquerors. The total sum of 4,605,670 ducats would be equal to about £3,500,000 of modern money. After the partition of the treasure, the murder of the Ynca was seriously proposed as a measure of good policy. The crime was committed by order of Pizarro, and with the concurrence of Almagro and the friar Valverde. It was expected that the sovereign's death would be followed by the dispersion of his army, and the submission of the people. This judicial murder was committed in the square of Caxamarca on the 29th of August, 1533. Hernando de Soto was absent at the time, and on his return he expressed the warmest indignation. Several other honorable cavaliers protested against the execution. Their names are even more worthy of being remembered than those of the heroic sixteen who crossed the line on the sea-shore at Gallo."—C. R. Markham, *Pizarro and the Conquest and Settlement of Peru and Chili* (*Narrative and Critical Hist. of Am., v. 2, ch. 8*).

Also in: W. H. Prescott, *Hist. of the Conquest of Peru, bk. 3, ch. 1-8 (v. 1).*—J. Fiske, *The Discovery of America, ch. 10 (v. 2).*

A. D. 1533-1548.—The fighting of the Spanish conquerors over the spoils.—"The feud between the Pizarros and the Almagros, which forms the next great series of events in American history, is one of the most memorable quarrels in the world. . . . This dire contest in America destroyed almost every person of any note who came within its influence, desolated the country where it originated, prevented the growth of colonization, and changed for the worse the whole course of legislation for the Spanish colonies. Its effects were distinctly visible for a century afterward. . . . There were no signs, however, of the depth and fatality of this feud between the Pizarros and Almagros at the period immediately succeeding the execution of Atahuallpa. That act of injustice having been perpetrated, Pizarro gave the royal borla [a peculiar head-dress worn by the reigning Incas, described as a tassel of fine crimson wool] to a brother of the late Inca [who died two months later, of shame and rage at his helpless position], and set out from Cassamarca on his way to Cusco. It was now time to extend his conquests and to make himself master of the chief city in Peru." After a slight resistance, the Spaniards entered "the great and holy city of Cusco," the capital of the Incas, on the 15th of November, 1533. According to the Spanish descriptions it was a remarkable city, constructed with great regularity, having paved streets, with a stone conduit of water running through the middle of each, with grand squares and many splendid palaces and temples. "In Cusco and its environs, including the whole valley which could be seen from the top of the tower, it is said that there were 'a hundred thousand' houses. Among these were shops, and store-houses, and places for the reception of tribute. . . . The great Temple of the Sun had, before the Spaniards rifled Cusco, been a building of singular gorgeousness. The interior was plated with gold; and on each side of the central image of the Sun were ranged the embalmed bodies of the Incas, sitting upon their golden thrones raised upon pedestals of gold. All round the outside of the building, at the top of the walls, ran a coronal of gold about three feet in depth." For three years the Spaniards held undisturbed possession of Cusco, reducing it to the forms of a Spanish municipality, converting the great Temple of the Sun into a Dominican monastery and turning many palaces into cathedrals and churches. In the meantime, Fernando Pizarro, one of the four brothers of the conqueror, returned from his mission to Spain, whither he had been sent with full accounts of the conquest and with the king's fifth of its spoils. He brought back the title of Marquis for Francisco, and a governor's commission, the province placed under him to be called New Castile. For Pizarro's associate and partner, Almagro, there was also a governorship, but it was one which remained to be conquered. He was authorized to take possession and govern a province, which should be called New Toledo, beginning at the southern boundary of Pizarro's government and extending southward 200 leagues. This was the beginning of quarrels, which Pizarro's brothers were accused of embittering by their insolence. Almagro claimed Cusco, as lying within the limits of his province. Pizarro was engaged in founding a new capital city near the coast, which he began to build in 1535, calling it Los Reyes, but which afterwards received the name of Lima; he would not, however, give up Cusco. The dispute was adjusted in the end, and Almagro set out for the conquest of his province (Chile), much of which had formed part of the dominions of the Inca, and for the subduing of which he commanded the aid of a large army of Peruvians, under two chiefs of the royal family. A few months after this, in the spring of 1536, the nominally reigning Inca, Manco, escaped from his Spanish masters at Cusco, into the mountains, and organized a furious and formidable rising, which brought the Spaniards, both at Cusco and Los Reyes, into great peril, for many months. Before the revolt had been overcome, Almagro returned, unsuccessful and disappointed, from his expedition into Chile, and freshly determined to assert and enforce his claim to Cusco. It is said that he endeavored, at first, to make common cause with the Inca Manco; but his overtures were rejected. He then attacked the Inca and defeated him; marched rapidly on Cusco, arriving before the city April 18, 1537; surprised the garrison while negotiations were going on and gained full possession of the town. Fernando and Gonzalo, two brothers of the Marquis Pizarro, were placed in prison. The latter sent a force of 500 men, under his lieutenant, Alvarado, against the intruder; but Alvarado was encountered on the way and badly beaten. In November there was a meeting brought about, between Pizarro and Almagro, in the hope of some compromise, but they parted from it in sharper enmity than before. Meantime, the younger Pizarro had escaped from his captivity at Cusco, and Fernando had been released. In the spring of 1538 Fernando led an army against the Almagristas, defeated them (April 6, 1538) in a desperate battle near Cusco and entered the city in triumph. Almagro

was taken prisoner, subjected to a formal trial, condemned and executed. The Pizarros were now completely masters of the country and maintained their domination for a few years, extending the Spanish conquests into Chile under Pedro de Valdivia, and exploring and occupying other regions. But in 1541, old hatreds and fresh discontents came to a head in a plot which bore fruit in the assassination of the governor, the Marquis Pizarro, now past 70 years of age. A young half-caste son of old Almagro was installed in the governorship by the conspirators, and when, the next year, a new royally commissioned governor, Vaca de Castro, arrived from Spain, young Almagro was mad enough to resist him. His rebellion was overcome speedily and he suffered death. Vaca de Castro was superseded in 1544 by a viceroy, Blasco Nuñez Vela, sent out by the emperor, Charles V., to enforce the "New Laws," lately framed in Spain, under the influence of Las Casas, to protect the natives, by a gradual abolition of the "repartimientos" and "encomiendas." A rebellion occurred, in which Gonzalo Pizarro took the lead, and the Spanish government was forced to annul the "New Laws." Pizarro, however, still refused to submit, and was only overcome after a civil war of two years, which ended in his defeat and death. This closed the turbulent career of the Pizarro brothers in Peru; but the country did not settle into peace until after some years.—Sir A. Helps, *The Spanish Conquest in Am., bk.* 17–18 (*v.* 4).

A. D. 1550-1816.—Under the Spanish Viceroys.—"When the President la Gasca had conquered Gonsalo Pizarro and returned to Spain, a peaceful viceroy arrived in Peru, sprung from one of the noblest families of the peninsula. This was Don Antonio de Mendoza. . . . Don Antonio died in 1551, after a very brief enjoyment of his power; but from this date, during the whole period of the rule of kings of the Austrian House, the Peruvian Viceroyalty was always filled by members of the greatest families of Spain. . . . At an immense distance from the mother country, and ruling at one time nearly the whole of South America, including the present republics of Venezuela, New Granada, Ecuador, Peru, Chilé, Bolivia, and La Plata, the court of the Viceroys was surrounded by regal pomp and magnificence. . . . The archbishop of Lima ranked next to the viceroy, and filled his post during his absence from the capital. . . . It was not long after the conquest before the inquisition, that fearful engine of the despotic power of Spain, was established in Peru. . . . The Indians were exempted from its jurisdiction in theory, but whether, in practice, this unfortunate and persecuted people always escaped may be considered as doubtful. It was only in the beginning of the present century, and shortly before the commencement of the war of independence, that this fearful tribunal was abolished." Under the senseless government of Philip II. the seeds of decay and ruin were planted in every part of the Spanish empire. "Though receiving from the silver mines of Peru and Mexico the largest revenue of any sovereign in Europe, his coffers were always empty, and of $35,000,000 received from America in 1595, not one rial remained in Spain in 1596. . . . Then followed the reigns of his worthless descendants and their profligate ministers; and fast and heedlessly did they drive this unfortunate country on the high road to ruin and poverty. On the establishment of the Bourbon kings of Spain in 1714, a more enlightened policy began to show itself in the various measures of government; and the trade to the colonies, which had hitherto been confined by the strictest monopoly, was slightly opened. At this time, the commerce of Peru and Mexico was carried on by what was called the 'flota,' consisting of three men-of-war and about fifteen merchant-vessels, of from 400 to 1,000 tons. Every kind of manufactured article of merchandise was embarked on board this fleet, so that all the trading ports of Europe were interested in its cargo, and Spain itself sent out little more than wines and brandy. The flota sailed from Cadiz, and was not allowed to break bulk on any account during the voyage. Arriving at Vera Cruz, it took in, for the return voyage, cargoes of silver, cocoa, indigo, cochineal, tobacco, and sugar; and sailed to the rendezvous at Havannah, where it awaited the galleons from Porto Bello, with all the riches of Peru. The galleons were vessels of about 500 tons; and an immense fair, which collected merchants from all parts of South America, was commenced at Porto Bello on their arrival." About the middle of the 18th century, "a marked change appears to have come over the colonial policy of Spain; and the enlightened government of the good Count Florida Blanca, who was prime minister for 20 years, introduced a few attempts at administrative reform, not before they were needed, into the colonial government. The enormous viceroyalty of Peru, long found to be too large for a single command, was divided; and viceroys were appointed in La Plata and New Granada, while another royal audience was established at Quito. The haughty grandees of Spain also ceased to come out to Peru; and in their places practical men, who had done good service as captains-general of Chilé, were appointed viceroys, such as Don Manuel Amat, in 1761, and Don Agustin Jaurequi, in 1780. At last, Don Ambrosio O'Higgins, whose father was a poor Irish adventurer, who kept a little retail shop in the square at Lima, became viceroy of Peru, and was created Marquis of Osorno. . . . His son, the famous General O'Higgins, was one of the liberators of Chilé. O'Higgins was followed in the viceroyalty by the Marquis of Aviles, and in 1806, Don José Abascal, an excellent ruler, assumed the reins of government. . . . But the rule of Spain was drawing to a close. The successor of Abascal, General Pezuela, was the last viceroy who peacefully succeeded. . . . Many things had tended to prepare the minds of the Creole population for revolt. The partial opening of foreign trade by Florida Blanca; the knowledge of their own enslaved condition, obtained through the medium of their increasing intercourse with independent states; and, finally, the invasion of the mother country by Napoleon's armies, brought popular excitement in South America to such a height that it required but a spark to ignite the inflammable materials."—C. R. Mark-

ham, *Cuzco, and Lima, ch.* 9. — The natives of Spanish descent had received heroic examples of revolt from the Inca Peruvians. "In November, 1780, a chief named Tupac Amaru rose in rebellion. His original object was to obtain guarantees for the due observance of the laws and their just administration. But when his moderate demands were only answered by cruel taunts and brutal menaces, he saw that independence or death were the only alternatives. He was a descendant of the ancient sovereigns, and he was proclaimed Ynca of Peru. A vast army joined him, as if by magic, and the Spanish dominion was shaken to its foundations. The insurrection all but succeeded, and a doubtful war was maintained for two years and a half. It lasted until July, 1783, and the cruelties which followed its suppression were due to the cowardly terror of panic-stricken tyrants. Tupac Amaru did not suffer in vain. . . . From the cruel death of the Ynca date the feelings which resulted in the independence of Peru. In 1814, another native chief, named Pumacagua, raised the cry of independence at Cuzco, and the sons of those who fell with Tupac Amaru flocked in thousands to his standard. The patriot army entered Arequipa in triumph, and was joined by many Spanish Americans, including the enthusiastic young poet, Melgar. Untrained valor succumbed to discipline, and in March, 1815, the insurrection was stamped out, but with less cruelty than disgraced the Spanish name in 1783."—The same, *Peru, p.* 150.

A. D. 1820-1826.—The Struggle for Independence.—Help from Chile and Colombia.—San Martin and Bolivar, the Liberators.—The decisive battle of Ayacucho.—"The great struggle for independence in the Spanish provinces of South America had been elsewhere, for the most part, crowned with success before Peru became the theatre for important action. Here the Spaniards maintained possession of their last stronghold upon the continent, and, but for assistance from the neighbouring independent provinces, there would hardly have appeared a prospect of overthrowing the viceroyal government. . . . In the month of August, 1820, independence having been established in Chili [see CHILE: A. D. 1810–1818], an army of between 4,000 and 5,000 men was assembled at Valparaiso for the purpose of breaking up the royalist strongholds of Peru, and of freeing that province from the dominion of Spain. The command was held by General Jose de San Martin, the emancipator of Chili, to whose exertions the expedition was mainly attributable. Such vessels of war as could be procured were fitted out and placed under command of Lord Cochrane. In the month following, the whole force was landed and quartered at Pisco, on the Peruvian coast, without opposition from the royalist forces, which retreated to Lima, about 100 miles northward. An attempt at negotiation having failed, the army of invasion was again in motion in the month of October. The naval force anchored off Callao, where, on the night of November 5th, Lord Cochrane [afterwards Lord Dundonald], commanding in person, succeeded in cutting out and capturing the Spanish frigate Esmerelda, which lay under the protection of the guns of the fort, and in company with a number of smaller armed vessels. This exploit is considered as one of the most brilliant achievements of the kind on record. The main body of the Chilian troops was transported to Huara, about 75 miles north of the capital. . . . As San Martin, after some months' delay at Huara, advanced upon Lima, the city was thrown into the utmost confusion. The Spanish authorities found it necessary to evacuate the place. . . . The general [San Martin] entered the city on the 12th of July, 1821, unaccompanied by his army, and experienced little difficulty in satisfying the terrified inhabitants as to his good faith and the honesty of his intentions. All went on prosperously for the cause, and on the 28th the independence of Peru was formally proclaimed, amid the greatest exhibition of enthusiasm on the part of the populace. On the 3d of the ensuing month San Martin assumed the title of Protector of Peru. No important military movements took place during a considerable subsequent period. The fortress at Callao remained in possession of the royalists" until the 21st of September, when it capitulated. "The independent army remained at Lima, for the most part unemployed, during a number of months subsequent to these events, and their presence began to be felt as a burden by the inhabitants. In April, 1822, a severe reverse was felt in the surprise and capture, by Canterac [the viceroy], of a very considerable body of the revolutionary forces, at Ica. . . . An interview took place in the month of July, of this year [1821], between the Protector and the great champion of freedom in South America, Bolivar, then in the full pride of success in the northern provinces. The result of the meeting was the augmentation of the force at Lima by 2,000 Columbian troops. During San Martin's absence the tyranny of his minister, Monteagudo, who made the deputy protector, the Marquis of Truxillo, a mere tool for the execution of his private projects, excited an outbreak, which was only quelled by the arrest and removal of the offending party. In the succeeding month the first independent congress was assembled at the capital, and San Martin, having resigned his authority, soon after took his departure for Chili. Congress appointed a junta of three persons to discharge the duties of the executive. Under this administration the affairs of the new republic fell into great disorder." In June, 1823, the Spanish viceroy regained possession of Lima, but withdrew his troops from it again a month later. Nevertheless, "all hopes of success in the enterprise of the revolution now seemed to rest upon the arrival of foreign assistance, and this was fortunately at hand. Simon Bolivar, the liberator of Venezuela, and the most distinguished of the champions of freedom in South America, had so far reduced the affairs of the recently constituted northern states [see COLOMBIAN STATES: A. D. 1810–1819; and 1819–1830] to order and security, that he was enabled to turn his attention to the distressed condition of the Peruvian patriots. He proceeded at once to the scene of action, and entered Lima on the 1st of September, 1823. . . . He was received with great rejoicing, and was at once invested with supreme power, both civil and military. . . . In February, 1824, an insurrection of the garrison at Callao resulted

in the recapture of this important stronghold by the Spaniards, and a few weeks later the capital shared the same fate. The revolutionary congress broke up, after declaring its own dissolution and the confirmation of Bolivar's authority as supreme dictator. This gloomy state of affairs only served to call forth the full energies of the great general. He had under his command about 10,000 troops, the majority of whom were Columbians, stationed near Patavilca. The available forces of the royalists were at this period numerically far superior to those of the patriots." An action which did not become general took place on the plains of Junin, but no decisive engagement occurred until the 9th of December, 1824, "when the decisive battle of Ayacucho, one of the most remarkable in its details and important in its results ever fought in South America, gave a deathblow to Spanish power in Peru. The attack was commenced by the royalists, under command of the viceroy. Their numbers very considerably exceeded those of the patriots, being set down at over 9,000, while those of the latter fell short of 6,000. . . . After a single hour's hard fighting, the assailants were routed and driven back to the heights of Condorcanqui, where, previous to the battle, they had taken a position. Their loss was 1,400 in killed and 700 wounded. The patriots lost in killed and wounded a little less than 1,000." Before the day closed, Canterac, the viceroy, entered the patriot camp and arranged the terms of a capitulation with General Sucre — who had commanded in the battle and won its honors, Bolivar not being present. "His whole remaining army became prisoners of war, and by the terms of the capitulation all the Spanish forces in Peru were also bound to surrender." A strong body of Spanish troops held out, however, in Upper Peru (afterwards Bolivia) until April, 1825, and the royalists who had taken refuge at Callao endured with desperate obstinacy a siege which was protracted until January, 1826, when most of them had perished of hunger and disease. "Bolivar was still clothed with the powers of a dictator in Peru. . . . He was anxious to bring about the adoption by the Peruvians of the civil code known as the Bolivian constitution, but it proved generally unsatisfactory. While he remained in the country, it is said, 'the people overwhelmed him with professions of gratitude, and addressed him in language unsuitable to any being below the Deity.' A reaction took place notwithstanding, and numbers were found ready to accuse this truly great man of selfish personal ambition." — H. Brownell, *North and South America: Peru, ch.* 12–13.

Also in: Earl of Dundonald, *Autobiog. of a Seaman, Sequel, ch.* 3.—J. Miller, *Memoirs of General Miller, ch.* 12–27 (*v.* 1–2).—T. Sutcliffe, *Sixteen Years in Chile and Peru, ch.* 2–3.

A. D. 1825-1826.—The founding of the Republic of Bolivia in upper Peru.—The Bolivian Constitution.—"Bolivar reassembled the deputies of the Congress of Lower Peru, February 10, 1825, and in his message to that body resigned the dictatorship, adding, 'I felicitate Peru on her being delivered from whatever is most dreadful on earth; from war by the victory of Ayacucho, and from despotism by my resignation. Proscribe for ever, I entreat you, this tremendous authority, which was the sepulchre of Rome.' On the same occasion he also said; 'My continuance in this republic is an absurd and monstrous phenomenon; it is the approbrium of Peru;' with other expressions equally strong; while at the same time, at the pressing solicitation of the Congress, he consented, notwithstanding his many declarations of reluctance, to remain at the head of the republic. Nothing could exceed the blind submissiveness of this Congress to Bolivar. After investing him with dictatorial authority for another year, they voted him a grant of a million of dollars, which he twice refused, with a disinterestedness that does him the greatest honor. . . . Liberality of feeling, and entire freedom from rapacity of spirit, must be admitted as prominent traits in his character. After continuing in session about a month, the Congress came to a resolution, that as they had granted absolute and unconditional power to Bolivar, in regard to all subjects, whether legislative or executive, it was unnecessary, and incompatible with his authority, that they should continue to exercise their functions; and they accordingly separated. Bolivar, being left without check or control in the government, after issuing a decree for installing a new Congress at Lima the ensuing year, departed from Lima in April, for the purpose of visiting the interior provinces of Upper and Lower Peru. . . . There is reason to believe, that the flattering reception, with which he was greeted on this tour, largely contributed to foster those views of ambition respecting Peru, which he betrayed in the sequel. Certain it is, at least, that the extravagant gratitude of the inhabitants of Peru, gave him occasion to assume the task of a legislator, and thus to bring his political principles more directly before the world. When the victory of Ayacucho left the provinces of Upper Peru free to act, the great question presented to their consideration was, whether Upper Peru should be united to Lower Peru, or reannexed to Buenos Ayres, or constitute an independent state. Under the auspices of the Liberator and of Sucre [Bolivar's chief of staff], a general assembly was convened at Chuquisaco in August, 1825, which declared the will of the people to be, that Upper Peru should become a separate republic, and decreed that it should be called Bolivia in honor of the Liberator. Here their functions should properly have ceased, with the fulfilment of the object for which they met. Regardless, however, of the limited extent of their powers, they proceeded to exercise the authority of a general Congress. They conferred the supreme executive powers on Bolivar, so long as he should reside within the territory of the republic. Sucre was made captain-general of the army, with the title of Grand Marshal of Ayacucho, and his name was bestowed upon the capital. Medals, statues, and pictures were bountifully and profusely decreed, in honor of both Sucre and Bolivar. To the latter was voted a million of dollars, as an acknowledgment of his preeminent services to the country. With the same characteristic magnanimity, which he displayed on a like occasion in Lower Peru, he refused to accept the grant for his own benefit, but desired that it might be appropriated to purchasing the emancipation of about a thousand negroes held in servitude in Bolivia. Finally, they solicited Bolivar to prepare for the new republic a fundamental code, that should perpetuate his political principles in the very frame and constitution of the state.

Captivated by the idea of creating a nation, from its very foundation, Bolivar consented to undertake the task, if, indeed, which has been confidently asserted to be the case, he did not himself procure the request to be made. The Liberator left Chuquisaca in January, 1826, and returned to Lima, to assist at the installation of the Congress summoned to meet there in February. He transmitted the form of a constitution for Bolivia from Lima, accompanied with an address, bearing date May 25, 1826. Of this extraordinary instrument, we feel at a loss to decide in what terms to speak. Bolivar has again and again declared, that it contains his confession of political faith. He gave all the powers of his mind to its preparation; he proclaimed it as the well-weighed result of his anxious meditations. . . . This constitution proposes a consolidated or central, not a federal, form of government; and thus far it is unobjectionable. Every ten citizens are to name an elector, whose tenure of office is four years. The Legislative power is to be vested in three branches, called tribunes, senators, and censors. Tribunes are to be elected for four years, senators for eight, and censors for life. So complicated is the arrangement proposed for the enactment of laws by means of this novel legislature, and so arbitrary and unnatural the distribution of powers among the several branches, that it would be impracticable for any people, having just notions of legislative proceedings, to conduct public business in the projected mode; and much more impracticable for men, like the South Americans, not at all familiar with the business of orderly legislation. But the most odious feature in the constitution relates to the nature and appointment of the executive authority. It is placed in the hands of a president, elected in the first instance by the legislative body, holding his office for life, without responsibility for the acts of his administration, and having the appointment of his successor. The whole patronage of the state, every appointment of any importance, from the vice-president and secretaries of state down to the officers of the revenue, belongs to him; in him is placed the absolute control of all the military force of the nation, it being at the same time specially provided, that a permanent armed force shall be constantly maintained. For the mighty power, the irresistible influence, which this plan imparts to the executive, the only corresponding security, assured to the people, is the inviolability of persons and property. The constituent Congress of Bolivia assembled at Chuquisaca, May 25, 1826, and passively adopted the proposed constitution to the letter, as if it had been a charter granted by a sovereign prince to his subjects, instead of a plan of government submitted to a deliberative assembly for their consideration. It took effect accordingly, as the constitution of Bolivia, and was sworn to by the people; and General Sucre was elected president for life under it, although one of its provisions expressly required, that the president should be a native of Bolivia."—C. Cushing, *Bolivar and the Bolivian Constitution* (*N. A. Rev., Jan.* 1830).

A. D. 1826-1876.—Retirement of Bolivar.—Attempted confederation with Bolivia and war with Chile.—The succession of military presidents.—Abolition of Slavery.—War with Spain.—"As Bolivar . . . was again prevailed upon [1826] by the Peruvians to accept the dictatorship of the northern republic, and was at the same time President of the United States of Colombia, he was by far the most powerful man on the continent of America. For a time it was supposed that the balance of power on the southern continent was falling into Colombian hands. . . . But the power of Bolivar, even in his own country, rested on a tottering basis. Much more was this the case in the greater Viceroyalty. The Peruvian generals, who ruled the opinion of the country, were incurably jealous of him and his army, and got rid of the latter as soon as they could clear off the arrears of pay. They looked upon the Code Bolivar itself as a badge of servitude, and were not sorry when the domestic disturbances of Colombia summoned the Dictator from among them [September, 1826]. The Peruvians, who owed a heavy debt, both in money and gratitude, to Colombia, now altogether repudiated Bolivar, his code, and his government; and the Bolivians followed their example by expelling Sucre and his Colombian troops (1828). The revolution which expelled the Colombian element was mainly a national and military one: but it was no doubt assisted by whatever of liberalism existed in the country. Bolivar had now shown himself in Colombia to be the apostle of military tyranny, and he was not likely to assume another character in Peru. The ascendency of Colombia in the Perus was thus of short duration; but the people of the two Perus only exchanged Colombian dictatorship for that of the generals of their own nation." —E. J. Payne, *Hist. of European Colonies, pp.* 290–291.—"A Peruvian Congress met in 1827, after General Bolivar had returned to Colombia, and elected Don José Lamar, the leader of the Peruvian infantry at Ayacucho, as President of the Republic; but his defeat in an attempt to wrest Guayaquil from Colombia led to his fall, and Agustin Gamarra, an Ynca Indian of Cuzco, succeeded him in 1829. Although successful soldiers secured the presidential chair, the administration in the early days of the Republic contained men of rank, and others of integrity and talent. . . . General Gamarra served his regular term of office, and after a discreditable display of sedition he was succeeded in 1834 by Don Luis José Orbegoso. Then followed an attempt to unite Peru and Bolivia in a confederation. The plan was conceived by Don Andres Santa Cruz, an Ynca Indian of high descent, who had been President of Bolivia since 1829. Orbegoso concurred, and the scheme, which had in it some elements of hopefulness and success, was carried out, but not without deplorable bloodshed. The Peru-Bolivian Confederation was divided into three States—North Peru, South Peru, and Bolivia. During the ascendancy of Santa Cruz, Peru enjoyed a period of peace and prosperity. But his power excited the jealousy of Chile, and that Republic united with Peruvian malcontents, headed by General Gamarra, to destroy it. A Chilian army landed, and Santa Cruz was hopelessly defeated in the battle of Yungay, which was fought in the Callejon de Huaylas, on the banks of the river Santa, on January 20th, 1839. A Congress assembled at the little town of Huancayo, in the Sierra, which acknowledged Gamarra as President of the Republic, and proclaimed a new Constitution on November 16th, 1839. But the new state of things was of short duration. On the

pretext of danger from the party of Santa Cruz, war was declared upon Bolivia, which resulted in the defeat of the Peruvians at the battle of Yngavi, near the banks of Lake Titicaca, on November 20th, 1841, and the death of Gamarra. A very discreditable period of anarchy ensued, during which Gamarra's generals fought with each other for supremacy, which was ended by the success of another Indian, and on April 19th, 1845, General Don Ramon Castilla was proclaimed Constitutional President of Peru. . . . Uneducated and ignorant, his administrative merits were small, but his firm and vigorous grasp of power secured for Peru long periods of peace. . . . At the end of Castilla's term of office General Echenique succeeded him; but in 1854 Castilla placed himself at the head of a revolution, and again found himself in power. A new Constitution was promulgated in 1856; the tribute of the Indians and negro slavery were abolished, and a grant of $1,710,000 was voted as compensation to the owners of slaves. The mass of the people ceased to be taxed. The revenue was entirely derived from sales of guano, customs duties, licences, and stamps. . . . When Castilla retired from office in 1862, he was succeeded by General San Roman, an old Ynca Indian of Puno, whose father had fought under Pumacagua. The Republic had then existed for 40 years, during which time it had been torn by civil or external wars for nine years and had enjoyed 31 years of peace and order. Very great advances had been made in prosperity during the years of peace. . . . General San Roman died in 1863, his Vice President, General Pezet, was replaced [through a revolution] by Colonel Don Mariano Ignacio Prado, and a war with Spain practically ended with the repulse of the Spanish fleet from Callao on May 2nd, 1866. The war was unjust, the pretext being the alleged ill-treatment of some Spanish immigrants at an estate called Talambo, in the coast valley of Jequetepeque, which might easily have been arranged by arbitration. But the success at Callao aroused the enthusiasm of the people and excited strong patriotic feelings. Colonel Don José Balta was elected President of Peru on August 2nd, 1868, the present Constitution having been proclaimed on August 31st, 1867. The Senate is composed of Deputies of the Provinces, with a property qualification, and the House of Representatives of members nominated by electoral colleges of provinces and districts, one member for every 20,000 inhabitants. The district colleges choose deputies to the provincial colleges, who elect the representatives to Congress. There are 44 senators and 110 representatives. Executive power is in the hands of a President and Vice-President, elected for four years, with a Cabinet of five Ministers. . . . The government of Colonel Balta entered upon a career of wild extravagance, and pushed forward the execution of railways and other public works with feverish haste, bringing ruin upon the country. . . . It is sad that a wretched military outbreak, in which the President was killed on July 26th, 1872, should have given it a tragic termination. . . . On August 2nd, 1872, Don Manuel Pardo became Constitutional President of Peru. He was the first civilian that had been elected. . . . He came to the helm at a period of great financial difficulty, and he undertook a thankless but patriotic task. . . . He was the best President that Peru has ever known. When his term of office came to an end, he was peacefully succeeded, on August 2nd, 1876, by General Don Mariano Ignacio Prado."—C. R. Markham, *Peru, ch.* 8.

A. D. 1886-1894.—Slow recovery.— Since the close of the war with Chile, Peru has been slowly recovering from its destructive effects. General Caceres became President in 1886, and was succeeded in 1890 by General Remigio Morales Bermudez, whose term expires in 1894.

PERUGIA, Early history of. See PERUSIA.

Under the domination of the Baglioni. See BAGLIONI.

PERUS, The Two.— Upper Peru and Lower Peru of the older Spanish viceroyalty are represented, at the present time, the former by the Republic of Bolivia, the latter by the Republic of Peru.

PERUSIA, The war of.— In the second year of the triumvirate of Octavius, Antony and Lepidus, Antony being in the east, his wife Fulvia and his brother fomented a revolt in Italy against Octavius, which forced the latter for a time to quit Rome. But his coolness, with the energy and ability of his friend Agrippa, overcame the conspiracy. The army of the insurgents was blockaded in Perusia (modern Perugia) and sustained a siege of several months, so obstinate that the whole affair came to be called the war of Perusia. The siege was distinguished by a peculiar horror; for the slaves of the city were deliberately starved to death, being denied food and also denied escape, lest the besiegers should learn of the scarcity within the walls.—C. Merivale, *Hist. of Rome, ch.* 27.

PETER'S PENCE.—King Offa, of the old English kingdom of Mercia, procured, by a liberal tribute to Rome, a new archbishopric for Lichfield, thus dividing the province of Canterbury. "This payment . . . is probably the origin of the Rom-feoh, or Peter's pence, a tax of a penny on every hearth, which was collected [in England] and sent to Rome from the beginning of the tenth century, and was a subject of frequent legislation. But the archiepiscopate of Lichfield scarcely survived its founder."—W. Stubbs, *Const. Hist. of Eng., ch.* 8, *sect.* 86 (*v.* 1).

PETROBRUSIANS.—HENRICIANS.—"The heretic who, for above twenty years, attempted a restoration of a simple religion in Southern France, the well-known Pierre de Bruys, a native of Gap or Embrun, . . . warred against images and all other visible emblems of worship; he questioned the expediency of infant baptism, the soundness of the doctrine of transubstantiation, and opposed prayers for the dead; but he professed poverty for himself, and would have equally enforced it upon all the ministers of the altar. He protested against the payment of tithes; and it was, most probably, owing to this last, the most heinous of all offences, that he was, towards 1130, burnt with slow fire by a populace maddened by the priests, at St. Gilles, on the Rhone. . . . His followers rallied . . . and changed their name of Petrobrusians into that of Henricians, when the mantle of their first master rested on the shoulders of Henry, supposed by Mosheim [Eccles. Hist., v. 2] to have been an Italian Eremite monk."—L. Mariotti (A. Gallenga), *Frà Dolcino and his Times, ch.* 1.

PEUCINI, The.—"The Peucini derived their name from the little island Peuce (Piczino) at the mouth of the Danube. Pliny (iv. 14) speaks of them as a German people bordering on the Daci. They would thus stretch through Moldavia from the Carpathian Mountains to the Black Sea. Under the name Bastarnæ they are mentioned by Livy (xl. 57, 58) as a powerful people, who helped Philip, king of Macedonia, in his wars with the Romans. Plutarch ('Life of Paullus Æmilius,' ch. ix.) says they were the same as the Galatæ, who dwelt round the Ister (Danube). If so, they were Gauls, which Livy also implies."—Church and Brodribb, *Geog. Notes to The Germany of Tacitus.*

PEUKETIANS, The. See ŒNOTRIANS.

PEUTINGERIAN TABLE, The.—This is the name given to the only copy which has survived of a Roman official road-chart. "Tables of this kind were not maps in the proper sense of the term, but were rather diagrams drawn purposely out of proportion, on which the public roads were projected in a panoramic view. The latitude and longitude and the positions of rivers and mountains were disregarded so far as they might interfere with the display of the provinces, the outlines being flattened out to suit the shape of a roll of parchment; but the distances between the stations were inserted in numerals, so that an extract from the record might be used as a supplement to the table of mileage in the road-book. The copy now remaining derives its name from Conrad Peutinger of Augsburg, in whose library it was found on his death in 1547. It is supposed to have been brought to Europe from a monastery in the Latin kingdom of Jerusalem, and to have been a copy taken by some thirteenth century scribe from an original assigned to the beginning of the fourth century or the end of the third."—C. Elton, *Origins of English Hist., ch.* 11 *and plate* 7.

PHACUSEH. See JEWS: THE ROUTE OF THE EXODUS.

PHÆACIANS, The.—"We are wholly at a loss to explain the reasons that led the Greeks in early times . . . to treat the Phæacians [of Homer's Odyssey] as a historical people, and to identify the Homeric Scheria with the island of Corcyra [modern Corfu]. . . . We must . . . be content to banish the kindly and hospitable Phæacians, as well as the barbarous Cyclopes and Læstrygones, to that outer zone of the Homeric world, in which everything was still shrouded in a veil of marvel and mystery."—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 3, *sect.* 3 (*v.* 1).

PHALANGITES, The.—The soldiers of the Macedonian phalanx.

PHALANX, The Macedonian.—"The main body, the phalanx—or quadruple phalanx, as it was sometimes called, to mark that it was formed of four divisions, each bearing

the same name—presented a mass of 18,000 men, which was distributed, at least by Alexander, into six brigades of 3,000 each, formidable in its aspect, and, on ground suited to its operations, irresistible in its attacks. The phalangite soldier wore the usual defensive armour of the Greek heavy infantry, helmet, breast-plate, and greaves; and almost the whole front of his person was covered with the long shield called the aspis. His weapons were a sword, long enough to enable a man in the second rank to reach an enemy who had come to close quarters with the comrade who stood before him, and the celebrated spear, known by the Macedonian name sarissa, four and twenty feet long. The sarissa, when couched, projected eighteen feet in front of the soldier, and the space between the ranks was such that those of the second rank were fifteen, those of the third twelve, those of the fourth nine, those of the fifth six, and those of the sixth three feet in advance of the first line; so that the man at the head of the file was guarded on each side by the points of six spears. The ordinary depth of the phalanx was of sixteen ranks. The men who stood too far behind to use their sarissas, and who therefore kept them raised until they advanced to fill a vacant place, still added to the pressure of the mass. As the efficacy of the phalanx depended on its compactness, and this again on the uniformity of its movements, the greatest care was taken to select the best soldiers for the foremost and hindmost ranks—the frames, as it were, of the engine. The bulk and core of the phalanx consisted of Macedonians; but it was composed in part of foreign troops."—C. Thirlwall, *Hist. of Greece, ch.* 48.

PHALARIS, Brazen bull of.—Epistles of.—Phalaris is said to have been a rich man who made himself tyrant of the Greek city of Agrigentum in Sicily, about 570 B. C., and who distinguished himself above all others of his kind by his cruelties. He seems to have been especially infamous in early times on account of his brazen bull. "This piece of mechanism was hollow, and sufficiently capacious to contain one or more victims enclosed within it, to perish in tortures when the metal was heated: the cries of these suffering prisoners passed for the roarings of the animal. The artist was named Perillus, and is said to have been himself the first person burnt in it by order of the despot."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 43.—At a later time Phalaris was represented as having been a man of culture and letters, and certain Epistles were ascribed to him which most scholars now regard as forgeries. The famous treatise of Bentley is thought to have settled the question.

PHALERUM. See Piræus.

PHANARIOTS, The.—"The reduction of Constantinople, in 1453, was mainly achieved by the extraordinary exploit of Mahomet II. in transporting his galleys from the Bosphorus to the interior of the harbour, by dragging them over land from Dolma Bactche, and again launching them opposite to the quarter denominated the Phanar, from a lantern suspended over the gate which there communicates with the city. The inhabitants of this district, either from terror or treachery, are said to have subsequently thrown open a passage to the conqueror; and Mahomet, as a remuneration, assigned them for their residence this portion of Constantinople, which has since continued to be occupied by the Patriarch and the most distinguished families of the Greeks. It is only, however, within the last century and a half that the Phanariots have attained any distinction beyond that of merchants and bankers, or that their name, from merely designating their residence, has been used to indicate their diplomatic employments."—Sir J. E. Tennent, *Hist. of Modern Greece, ch.* 12 (*v.* 2).

PHERÆ.—A town in ancient Thessaly which acquired an evil fame in Greek history, during the fourth century, B. C., by the power and the cruelty of the tyrants who ruled it and who extended their sway for a time over the greater part of Thessaly. Jason and Alexander were the most notorious of the brood.

PHILADELPHIA, Asia Minor.—The city of Philadelphia, founded by Attalus Philadelphus of Pergamum, in eastern Lydia, not far from Sardes, was one in which Christianity flourished at an early day, and which prospered for several centuries, notwithstanding repeated calamities of earthquake. It was the last community of Greeks in Asia Minor which retained its independence of the Turks. It stood out for two generations in the midst of the Seljouk Turks, after all around it had succumbed. The brave city was finally taken by the Ottoman sultan, Bayezid, or Bajazet, about 1390. The Turks then gave it the name Alashehr.—G. Finlay, *Hist. of the Byzantine and Greek Empires, bk.* 4, *ch.* 2, *sect.* 4 (*v.* 2).

A. D. 1777-1778.—The gay winter with the British in the city.—The Battle of the Kegs. —The Mischianza.—"The year 1778 found the British at Philadelphia in snug quarters, unembarrassed by the cares of the field, and, except for occasional detachments, free from other military duties than the necessary details of garrison life. The trifling affairs that occurred during the remainder of the season served rather as a zest to the pleasures which engaged them than as a serious occupation. . . . No sooner were they settled in their winter-quarters than the English set on foot scenes of gayety that were long remembered, and often with regret, by the younger part of the local gentry. . . . Of all the band, no one seems to have created such a pleasing impression or to have been so long admiringly remembered as André. His name in our own days lingered on the lips of every aged woman whose youth had seen her a belle in the royal lines. . . . The military feats about Philadelphia, in the earlier part of 1778, were neither numerous or important. Howe aimed at little more than keeping a passage clear for the country-people, within certain bounds, to come in with marketing. The incident known as the Battle of the Kegs was celebrated by Hopkinson in a very amusing song that, wedded to the air of Maggy Lander, was long the favorite of the American military vocalists; but it hardly seems to have been noticed at Philadelphia until the whig version came in. The local newspapers say that, in January, 1778, a barrel floating down the Delaware being taken up by some boys exploded in their hands, and killed or maimed one of them. A few days after, some of the transports fired a few guns at several other kegs that appeared on the tide; but no particular notice of the occurrence was taken. These torpedoes were sent down in the hope that they would damage the shipping." When Howe was displaced from the command and recalled, his officers, among whom he was very popular, resolved "to commemorate their esteem for him by an entertainment not less novel than splendid. This was the famous Mischianza [or Meschianza] of the 18th of May, 1778; the various nature of which is expressed by its name, while its conception is evidently taken from Lord Derby's fête champêtre at The Oaks, June 9th, 1774, on occasion of Lord Stanley's marriage to the Duke of Hamilton's daughter. . . . The regatta, or aquatic procession, in the Mischianza was suggested by a like pageant on the Thames, June 23rd, 1775. . . . A mock tournament—perhaps the first in America—was a part of the play."—W. Sargent, *Life of Major John André, ch.* 9.

PHILIPPI.—Founded by Philip of Macedonia, in 356 B. C., in the district of Pangaeus.

PHILIPPINE ISLANDS.—The archipelago known as the Philippine Islands (named in honor of Philip II. of Spain), stretching, between the China Sea and the Pacific Ocean, through 16 degrees of latitude and 9 of longitude, almost from Formosa to Borneo and the Moluccas, contains, according to Spanish accounts, 408 habitable islands, besides many hundreds of small and worthless rocky islets. Luzon and Mindanao, each larger than Ireland, are the most considerable in size. The land area of the whole archipelago is said to be about 114,000 square miles. The archipelago was discovered by Magellan (or Magalhaes) in 1521, and Spanish conquest and settlement was begun in 1565. Manila, the capital, on the island of Luzon, was founded in 1571. It cannot be said that the supremacy of Spain was ever made complete, especially if the Sulu group of islands, at the southern extremity of the archipelago, is considered to belong to it. The Mohammedan Sultan of Sulu appears to be a quite substantial sovereign, though the Spaniards claim tribute from him. In those islands, as throughout the archipelago, the natives are mostly of the Malayan race. Great tribal variations, however, appear. The Tagals of Luzon and the Visayas or Bisayans of several other islands, both Malayan in origin, are quite distinct peoples. These are the largest divisions of the Malay stock; but there are several others, besides mountaineer tribes of Negrito origin, and

a considerable immigrant population of Chinese. More extensively than in other regions of the eastern world, the natives have accepted the Christian religion. Of the mode in which the Spaniards established their rule, and in which they have exercised it, Dr. Jagor, who published an account of travels in the Philippines, in 1875, has this to say: "The character of the people, as well as their political disposition, favoured the occupancy. There was no mighty power, no old dynasty, no influential priestly domination to overcome, no traditions of national pride to suppress. The natives were either heathens, or recently proselytized superficially to Islamism, and lived under numerous petty chiefs, who ruled them despotically, made war upon one another, and were easily subdued. . . . The Spaniards limited the power of the petty chiefs, upheld slavery, and abolished hereditary nobility and dignity, substituting in its place an aristocracy created by themselves for services rendered to the state; but they carried out all these changes very gradually and cautiously. The old usages and laws, so long as they did not interfere with the natural course of government, remained untouched." In its early days, Dr. Jagor believes that "the Spanish rule in these islands was always a mild one, not because the laws, which treated the Indians like children, were wonderfully gentle, but because the causes did not exist which caused such scandalous cruelties in Spanish America and in the colonies of other nations. It was fortunate for the natives that their islands possessed no wealth, in the shape of precious stones or costly spices. In the earlier days of maritime traffic there was little possibility of exporting the numerous agricultural productions of the colony; and it was scarcely worth while, therefore, to make the most of the land. The few Spaniards who resided in the colony found such an easy method of making money in the commerce with China and Mexico, that they held themselves aloof from all economic enterprises. . . . Taking into consideration the wearisome and dangerous navigation of the time, it was, moreover, impossible for the Spaniards, upon whom their too large possessions in America already imposed an exhausting man-tax, to maintain a strong armed force in the Philippines. The subjection . . . was chiefly accomplished by the assistance of the monastic orders, whose missionaries were taught to employ extreme prudence and patience. The Philippines were thus principally won by a peaceful conquest. The taxes laid upon the natives were so trifling that they did not suffice for the administration of the colony. The difference was covered by yearly contributions from Mexico. The extortions of unconscientious officials were by no means conspicuous by their absence. Cruelties, however, such as were practised in the American mining districts, or in the manufactures of Quito, never occurred in the Philippines. . . . The only tax which the Indians pay is the poll-tax, known as the 'Tributo,' which originally, 300 years ago, amounted to one dollar for every pair of adults. . . . By degrees the tax has been raised to two and one-sixteenth dollars. . . . Besides this, every man has to give forty days' labour every year to the state. . . . The little use, however, that is made of these services is shown by the fact that any one can obtain release from them for a sum which at most is not more than three dollars. No personal service is required of women." The writer found, however, a most wicked and cruel oppression of the native peasantry being exercised, at the period of his sojourn, in the management of the monopoly of tobacco culture which the Spanish government maintains. By seizure of their fields, by compulsion of their labour, by defrauding them of payments for the product, even at prices which are pittances, arbitrarily fixed, the wretched peasants were heartlessly abused. There have been many revolts, but none "of any great danger to the Spanish rule. The discontent has always been confined to a single district, as the natives do not form a united nation; neither the bond of a common speech nor a general interest binding the different tribes together. . . . Half-castes and creoles . . . are not, as they formerly were in America, excluded from all official appointments; but they feel hurt and injured through the crowds of place-hunters which the frequent changes of Ministers send to Manilla." "The influence, also," wrote Dr. Jagor, "of the American element, is is at least visible on the horizon, and will be more noticeable when the relations increase between the two countries. At present they are very slender. . . . In proportion as the navigation of the west coast of America extends the influence of the American element over the South Sea, the captivating, magic power which the great republic exercises over the Spanish colonies will not fail to make itself felt also in the Philippines. The Americans are evidently destined to bring to a full development the germs originated by the Spaniards." All things considered, it is the opinion of this careful observer and candid writer, that "credit is certainly due to Spain for having bettered the condition of a people who, though comparatively speaking highly civilized, yet, being continually distracted by petty wars, had sunk into a disordered and uncultivated state. The inhabitants of these beautiful islands, upon the whole, may well be considered to have lived as comfortably during the last hundred years, protected from all external enemies and governed by mild laws, as those of any other tropical country under native or European sway. . . . The monks . . . have certainly had an essential part in the production of the results."—F. Jagor, *Travels in the Philippines, ch.* 4, 25, *and* 27.

PHILISTINES, The.—"One small nation alone, of all which dwelt on the land claimed by

Israel, permanently refused to amalgamate itself with the circumcised peoples, — namely the uncircumcised Philistines. They occupied the lots which ought to have been conquered by Dan and Simeon, and had five principal cities, Gaza, Askelon, Ashdod, Gath and Ekron, of which the three first are on the sea-coast. Ashdod and Gaza were places of great strength, capable of long resisting the efforts of Egyptian and Greek warfare. The Philistines cannot have been a populous nation, but they were far more advanced in the arts of peace and war than the Hebrews. Their position commanded the land-traffic between Egypt and Canaan, and gave them access to the sea; hence perhaps their wealth and comparatively advanced civilization. Some learned men give credit to an account in Sanchoniathon, that they came from Crete." They gave their name to Palestine. — F. W. Newman, *Hist. of the Hebrew Monarchy, ch.* 2.— "Where the Philistines came from, and what they originally were, is not clear. That they moved up the coast from Egypt is certain; that they came from Kaphtor is also certain. But it by no means follows, as some argue, that Kaphtor and Egypt are the same region. . . . It appears more safe to identify Kaphtor with" Crete. "But to have traced the Philistines to Crete is not to have cleared up their origin, for early Crete was full of tribes from both east and west. . . . Take them as a whole, and the Philistines appear a Semitic people."—George Adam Smith, *Historical Geog. of the Holy Land, ch.* 9.

PHLIUS, Siege of.—Phlius, the chief city of the small mountain state of Phliasia, in the northeastern corner of Peloponnesus, adjoining Argos and Arcadia, made an heroic effort, B. C. 380, to maintain its liberties against Sparta. Under a valiant leader, Delphion, it endured a siege which lasted more than an entire year. When forced to surrender, in the end, it was treated with terrible severity by the Spartan king, Agesilaus.—E. Curtius, *Hist. of Greece, bk.* 5, *ch.* 5.

PHOCÆANS, OR PHOKÆANS, The.— "The citizens of Phocæa had been the last on the coast-line of Ionia [see Asia Minor: The Greek Colonies] to settle down to a condition of tranquillity. They had no building-ground but a rocky peninsula, where they found so little space over which to spread at their ease that this very circumstance made them a thorough people of sailors. In accordance with their local situation they had turned to the waters of the Pontus, established settlements on the Dardanelles and the Black Sea, and taken part in the trade with Egypt. Here however they were unable to hold their own by the side of the Milesians, . . . and the Phocæans accordingly saw themselves obliged to look westward and to follow the direction of Chalcidian navigation. . . . It was thus that the Ionian Phocæans came into the western sea. Being forced from the first to accustom themselves to long and distant voyages, instead of the easy summer trips of the other maritime cities, they became notably bold and heroic sailors. They began where the rest left off; they made voyages of discovery into regions avoided by others; they remained at sea even when the skies already showed signs of approaching winter and the observation of the stars became difficult. They built their ships long and slim, in order to increase their agility; their merchant vessels were at the same time men-of-war. . . . They entered those parts of the Adriatic which most abound in rocks, and circumnavigated the islands of the Tyrrhenian sea in spite of the Carthaginian guard-ships; they sought out the bays of Campania and the mouths of the Tiber and Arnus; they proceeded farther, past the Alpine ranges, along the coast as far as the mouth of the Rhodanus, and finally reached Iberia, with whose rich treasures of precious metals they had first become acquainted on the coast of Italy. . . . During the period when Ionia began to be hard pressed by the Lydians, the Phocæans, who had hitherto contented themselves with small commercial settlements, in their turn proceeded to the foundation of cities in Gaul and Iberia. The mouth of the Rhodanus [the Rhone] was of especial importance to them for the purposes of land and sea trade. . . . Massalia [modern Marseilles], from the forty-fifth Olympiad [B. C. 600] became a fixed seat of Hellenic culture in the land of the Celts, despite the hostility of the piratical tribes of Liguria and the Punic fleet. Large fisheries were established on the shore; and the stony soil in the immediate vicinity of the city itself was converted into vine and olive plantations. The roads leading inland were made level, which brought the products of the country to the mouth of the Rhone; and in the Celtic towns were set up mercantile establishments, which collected at Massalia the loads of British tin, of inestimable value for the manufacture of copper, while wine and oil, as well as works of art, particularly copper utensils, were supplied to the interior. A totally new horizon opened for Hellenic inquiry."—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 3.—See, also, Asia Minor: B. C. 724–539.

PHŒNICIANS: Origin and early history. —Commerce.—Colonies.— "The traditions of the Phœnicians collected at Tyre itself by Herodotus . . . ; those of the inhabitants of Southern Arabia preserved by Strabo; and, finally, those still current in Babylonia during the first centuries of the Christian era, when the Syro-Chaldee original of the book of 'Nabathæan Agriculture' was revised — all agree in stating that the Canaanites at first lived near the Cushites, their brethren in race, on the banks of the Erythræan Sea, or Persian Gulf, on that portion of the coast of Bahrein designated El Katif on our modern maps of Arabia. Pliny speaks of a land of Canaan in this neighbourhood, in his time. . . . According to Trogus Pompeius, the Canaanites were driven from their first settlements by earthquakes, and then journeyed to-

wards Southern Syria. The traditions preserved in 'Nabathæan Agriculture' state, on the contrary, that they were violently expelled, in consequence of a quarrel with the Cushite monarchs of Babylon of the dynasty of Nimrod; and this is also the account given by the Arabian historians. . . . The entry of the Canaanites into Palestine, and their settlement in the entire country situated between the sea and the valley of Jordan, must . . . be placed between the period when the twelfth dynasty governed Egypt and that when the Elamite king, Chedorlaomer, reigned as suzerain over all the Tigro-Euphrates basin. This brings us approximately between 2400 and 2300 B. C. . . . The Sidonians formed the first settlement, and always remained at the head of the Phœnician nation, which, at all periods of its history, even when joined by other peoples of the same race, called itself both 'Canaanite' and 'Sidonian.' . . . The Greek name, Phœnicians, of unknown origin, must not be applied to the whole of the nations of the race of Canaan who settled in Southern Syria; it belongs to the Canaanites of the sea coast only, who were always widely separated from the others. Phœnicia, in both classical history and geography, is merely that very narrow tract of land, hemmed in by mountains and sea, extending from Aradus on the north to the town of Acco on the south."—F. Lenormant, *Manual of Ancient Hist. of the East, bk.* 6, *ch.* 1.—"Renan sums up the evidence when he says: 'The greater number of modern critics admit it as demonstrated, that the primitive abode of the Phœnicians must be placed on the Lower Euphrates, in the centre of the great commercial and maritime establishments of the Persian Gulf, conformably to the unanimous witness of antiquity.' The date, the causes, and the circumstances of the migration are involved in equal obscurity. The motive for it assigned by Justin is absurd, since no nation ever undertook a long and difficult migration on account of an earthquake. If we may resort to conjecture we should be inclined to suggest that the spirit of adventure gave the first impulse, and that afterwards the unexampled facilities for trade, which the Mediterranean coast was found to possess, attracted a continuous flow of immigrants from the sea of the Rising to that of the Setting Sun."—G. Rawlinson, *The Story of Phœnicia, ch.* 2.—The same, *Hist. of Phœnicia, ch.* 3.—"The campaigns which the Pharaohs undertook against Syria and the land of the Euphrates after the expulsion of the Shepherds could not leave these cities [Sidon and others] unmoved. If the Zemar of the inscriptions of Tuthmosis III. is Zemar (Simyra) near Aradus, and Arathutu is Aradus itself, the territories of these cities were laid waste by this king in his sixth campaign (about the year 1580 B. C.); if Arkatu is Arka, south of Aradus, this place must have been destroyed in his fifteenth campaign (about the year 1570 B. C.). Sethos I. (1440–1400 B. C.) subdued the land of Limanon (i. e. the region of Lebanon), and caused cedars to be felled there. One of his inscriptions mentions Zor, i. e. Tyre, among the cities conquered by him. The son and successor of Sethos I., Ramses II., also forced his way in the first decades of the fourteenth century as far as the coasts of the Phenicians. At the mouth of the Nahr el Kelb, between Sidon and Berytus, the rocks on the coast display the memorial which he caused to be set up in the second and third year of his reign in honour of the successes obtained in this region. In the fifth year of his reign Ramses, with the king of the Cheta, defeats the king of Arathu in the neighbourhood of Kadeshu on the Orontes, and Ramses III., about the year 1310 B. C., mentions beside the Cheta who attack Egypt the people of Arathu, by which name in the one case as in the other, may be meant the warriors of Aradus. If Arathu, like Arathutu, is Aradus, it follows, from the position which Ramses II. and III. give to the princes of Arathu, that beside the power to which the kingdom of the Hittites had risen about the middle of the fifteenth century B. C., and which it maintained to the end of the fourteenth, the Phenician cities had assumed an independent position. The successes of the Pharaohs in Syria come to an end in the first decades of the fourteenth century. Egypt makes peace and enters into a contract of marriage with the royal house of the Cheta. . . . The overthrow of the kingdom of the Hittites, which succumbed to the attack of the Amorites soon after the year 1300 B. C., must have had a reaction on the cities of the Phenicians. Expelled Hittites must have been driven to the coast-land, or have fled thither, and in the middle of the thirteenth century the successes gained by the Hebrews who broke in from the East, over the Amorites, the settlement of the Hebrews on the mountains of the Amorites [see JEWS: CONQUEST OF CANAAN], must again have thrown the vanquished, i. e. the fugitives of this nation, towards the coast. With this retirement of the older strata of the population of Canaan to the coast is connected the movement which from this period emanates from the coasts of the Phenicians, and is directed towards the islands of the Mediterranean and the Ægean. It is true that on this subject only the most scanty statements and traces, only the most legendary traditions have come down to us, so that we can ascertain these advances only in the most wavering outlines. One hundred miles to the west off the coast of Phenicia lies the island of Cyprus. . . . The western writers state that before the time of the Trojan war Belus had conquered and subjugated the island of Cyprus, and that Citium belonged to Belus. The victorious Belus is the Baal of the Phenicians. The date of the Trojan war is of no importance for the settlement of the Phenicians in Cyprus, for this statement is found in Virgil only. More important is the fact that the settlers brought the Babylonian cuneiform writing to Cyprus. . . . The settlement of the Sidonians in Cyprus must therefore have taken place before the time in which the alphabetic writing, i. e. the writing specially known as Phenician, was in use in Syria, and hence at the latest before 1100 B. C. . . . In the beginning of the tenth century B. C. the cities of Cyprus stood under the supremacy of the king of Tyre. The island was of extraordinary fertility. The forests furnished wood for shipbuilding; the mountains concealed rich veins of the metal which has obtained the name of copper from this island. Hence it was a very valuable acquisition, an essential strengthening of the power of Sidon in the older, and Tyre in the later period. . . . As early as the fifteenth century B. C., we may regard the Phenician cities as the central points of a trade branching east and

west, which must have been augmented by the fact that they conveyed not only products of the Syrian land to the Euphrates and the Nile, but could also carry the goods which they obtained in exchange in Egypt to Babylonia, and what they obtained beyond the Euphrates to Egypt. At the same time the fabrics of Babylon and Egypt roused them to emulation, and called forth an industry among the Phenicians which we see producing woven stuffs, vessels of clay and metal, ornaments and weapons, and becoming pre-eminent in the colouring of stuffs with the liquor of the purple-fish which are found on the Phenician coasts. This industry required above all things metals, of which Babylonia and Egypt were no less in need, and when the purple-fish of their own coasts were no longer sufficient for their extensive dyeing, colouring-matter had to be obtained. Large quantities of these fish produced a proportionately small amount of the dye. Copper-ore was found in Cyprus, gold in the island of Thasos, and purple-fish on the coasts of Hellas. When the fall of the kingdom of the Hittites and the overthrow of the Amorite princes in the south of Canaan augmented the numbers of the population on the coast, these cities were no longer content to obtain those possessions of the islands by merely landing and making exchanges with the inhabitants. Intercourse with semi-barbarous tribes must be protected by the sword. Good harbours were needed. . . . Thus arose protecting forts on the distant islands and coasts, which received the ships of the native land. . . . In order to obtain the raw material necessary for their industry no less than to carry off the surplus of population, the Phenicians were brought to colonise Cyprus, Rhodes, Crete, Thera, Melos, Oliarus, Samothrace, Imbros, Lemnos and Thasos. In the bays of Laconia and Argos, in the straits of Eubœa, purple-fish were found in extraordinary quantities. . . . We may conclude that the Phenicians must have set foot on Cyprus about the year 1250 B. C., and on the islands and coasts of Hellas about the year 1200 B. C. Thucydides observes that in ancient times the Phenicians had occupied the promontories of Sicily and the small islands lying around Sicily, in order to carry on trade with the Sicels. Diodorus Siculus tells us that when the Phenicians extended their trade to the western ocean they settled in the island of Melite (Malta), owing to its situation in the middle of the sea and excellent harbours, in order to have a refuge for their ships. . . . On Sardinia also, as Diodorus tells us, the Phenicians planted many colonies. The mountains of Sardinia contained iron, silver, and lead. . . . The legend of the Greeks makes Heracles, i. e. Baal Melkarth, lord of the whole West. As a fact, the colonies of the Phenicians went beyond Sardinia in this direction. Their first colonies on the north coast of Africa appear to have been planted where the shore runs out nearest Sicily; Hippo was apparently regarded as the oldest colony. In the legends of the coins mentioned above Hippo is named beside Tyre and Citium as a daughter of Sidon. . . . Ityke (atak, settlement, Utica), on the mouth of the Bagradas (Medsherda), takes the next place after this Hippo, if indeed it was not founded before it. Aristotle tells us that the Phenicians stated that Ityke was built 287 years before Carthage, and Pliny maintains that Ityke was founded 1,178 years before his time. As Carthage was founded in the year 846 B. C. [see CARTHAGE] Ityke, according to Aristotle's statement, was built in the year 1133 B. C. With this the statement of Pliny agrees. He wrote in the years 52–77 A. D., and therefore he places the foundation of Ityke in the year 1126 or 1100 B. C. About the same time, i. e. about the year 1100 B. C., the Phenicians had already reached much further to the west. . . . When their undertakings succeeded according to their desire and they had collected great treasures, they resolved to traverse the sea beyond the pillars of Heracles, which is called Oceanus. First of all, on their passage through these pillars, they founded upon a peninsula of Europe a city which they called Gadeira. . . . This foundation of Gades, which on the coins is called Gadir and Agadir, i. e. wall, fortification, the modern Cadiz, and without doubt the most ancient city in Europe which has preserved its name, is said to have taken place in the year 1100 B. C. If Ityke was founded before 1100 B. C. or about that time, we have no reason to doubt the founding of Gades soon after that date. Hence the ships of the Phenicians would have reached the ocean about the time when Tiglath Pilesar I. left the Tigris with his army, trod the north of Syria, and looked on the Mediterranean."—M. Duncker, *The History of Antiquity, bk.* 3, *ch.* 3 (*v.* 3).—"The typical Phœnician colony was only a trading station, inhabited by dealers, who had not ceased to be counted as citizens of the parent State. . . . In Phœnicia itself the chief object of public interest was the maintenance and extension of foreign trade. The wealth of the country depended on the profits of the merchants, and it was therefore the interest of the Government to encourage and protect the adventures of the citizens. Unlike the treasures or curiosities imported by the fleets of royal adventurers, Phœnician imports were not intended to be consumed within the country, but to be exchanged for the most part for other commodities. The products of all lands were brought to market there, and the market people, after supplying all their own wants in kind, still had commodities to sell at a profit to the rest of the world. The Government did not seek to retain a monopoly of this profit; on the contrary, private enterprise seems to have been more untrammelled than at any time before the present century. But individuals and the State were agreed in desiring to retain a monopoly of foreign traffic as against the rest of the world, hence the invention of 'Phœnician lies' about the dangers of the sea, and the real dangers which 'Tyrian seas' came to possess for navigators of any other nation. . . . Phœnician traders were everywhere first in the field, and it was easy for them to persuade their barbarous customers that foreigners of any other stock were dangerous and should be treated as enemies. They themselves relied more on stratagem than on open warfare to keep the seas, which they considered their own, free from other navigators. . . . Silver and gold, wool and purple, couches inlaid with ivory, Babylonish garments and carpets, unguents of all sorts, female slaves and musicians, are indicated by the comic poets as forming part of the typical cargo of a Phœnician merchantman, the value of which in many cases would reach a far higher figure than a small ship-owner or captain could command.

As a consequence, a good deal of banking or money-lending business was done by the wealthy members of the great Corporation of Merchants and Ship-owners. The Phœnicians had an evil reputation with the other nations of the Mediterranean for sharp practices, and the custom of lending money at interest was considered, of course wrongly, a Phœnician invention, though it is possible that they led the way in the general substitution of loans at interest for the more primitive use of antichretic pledges. . . . To the Greeks the name Phœnician seems to have called up the same sort of association as those which still cling to the name of Jew in circles which make no boast of tolerance; and it is probable enough that the first, like the second, great race of wandering traders was less scrupulous in its dealings with aliens than compatriots. . . . So far as the Punic race may be supposed to have merited its evil reputation, one is tempted to account for the fact by the character of its principal staples. All the products of all the countries of the world circulated in Phœnician merchantmen, but the two most considerable, and most profitable articles of trade in which they dealt were human beings and the precious metals. The Phœnicians were the slave-dealers and the money-changers of the Old World. And it is evident that a branch of trade, which necessarily follows the methods of piracy, is less favourable to the growth of the social virtues than the cultivation of the ground, the domestication of animals, or the arts and manufactures by which the products of nature are applied to new and varied uses. Compared with the trade in slaves, that in metals — gold, silver, copper and tin — must seem innocent and meritorious; yet the experience of ages seems to show that, somehow or other, mining is not a moralizing industry. . . . Sidon was famous in Homer's time for copper or bronze, and Tyre in Solomon's for bronze (the 'brass' of the Authorized Version); and the Phœnicians retailed the work of all other metallurgists as well as their own, as they retailed the manufactures of Egypt and Babylonia, and the gums and spices of Arabia. . . . Two things are certain with regard to the continental commerce of Europe before the written history of its northern countries begins. Tin and amber were conveyed by more than one route from Cornwall and the North Sea to Mediterranean ports. In the latter case the traders proceeded up the Rhine and the Aar, along the Jura to the Rhone, and thence down to Marseilles; and also across the Alps, by a track forking off, perhaps at Grenoble, into the valley of the Po, and so to the Adriatic. . . . Apart from the Phœnician sea trade, Cornish tin was conveyed partly by water to Armorica and to Marseilles through the west of France; but also to the east of England (partly overland by the route known later as the Pilgrims' Way), and from the east of Kent, possibly to the seat of the amber trade, as well as to a route through the east of France, starting from the short Dover crossing."—E. J. Simcox, *Primitive Civilizations*, *v.* 1, *pp.* 397–402.—"The epigraphic texts left us by the Phœnicians are too short and dry to give us any of those vivid glimpses into the past that the historian loves. When we wish to make the men of Tyre and Sidon live again, when we try to see them as they moved in those seven or eight centuries during which they were supreme in the Mediterranean, we have to turn to the Greeks, to Herodotus and Homer, for the details of our picture; it is in their pages that we are told how these eastern traders made themselves indispensable to the half-savage races of Europe. . . . The Phœnicians carried on their trade in a leisurely way. It consisted for the most part in exchanging their manufactured wares for the natural produce of the countries they visited; it was in conformity with the spirit of the time, and, although it inspired distrust, it was regular enough in its methods. Stories told by both Homer and Herodotus show them to us as abductors of women and children, but in the then state of the world even deeds like those described would soon be forgotten, and after a time the faithless traders would be readmitted for the sake of the wares they brought. . . . Seeing how great their services were to the civilization of Greece and Rome, and how admirable were those virtues of industry, activity, and splendid courage that they brought to their work, how is it that the classic writers speak of the Phœnicians with so little sympathy? and why does the modern historian, in spite of his breadth and freedom from bias, find it difficult to treat them even with justice? It is because, in spite of their long relations with them, the peoples of Greece and Italy never learnt to really know the Phœnicians or to understand their language, and, to answer the second question, because our modern historians are hardly better informed. Between Greece and Rome on the one hand and Phœnicia and Carthage on the other, there was a barrier which was never beaten down. They traded and fought, but they never concluded a lasting and cordial peace; they made no effort to comprehend each other's nature, but retained their mutual, ignorant antipathy to the very end. . . . That full justice has never been done to the Phœnicians is partly their own fault. They were moved neither by the passion for truth nor by that for beauty; they cared only for gain, and thanks to the condition of the world at the time they entered upon the scene, they could satisfy that lust to the full. In the barter trade they carried on for so many centuries the advantage must always have been for the more civilized, and the Phœnicians used and abused that advantage. Tyre and Sidon acquired prodigious wealth; the minds of their people were exclusively occupied with the useful; they were thinking always of the immediate profit to themselves in every transaction; and to such a people the world readily denies justice, to say nothing of indulgence. . . . No doubt it may be said that it was quite without their goodwill that the Phœnicians helped other nations to shake off barbarism and to supply themselves with the material of civilized life. That, of course, is true, but it does not diminish the importance of the results obtained through their means. Phœnicia appropriated for herself all the inventions and recipes of the old eastern civilizations and by more than one happy discovery, and especially by the invention of the alphabet, she added to the value of the treasure thus accumulated. Whether she meant it or not, she did, as a fact, devote her energies to the dissemination of all this precious knowledge from the very day on which she entered into relations with those tribes on the Grecian islands and on the continent of Europe which were as yet strangers to political life.

. . . At the time of their greatest expansion, the true Phœnicians numbered, at the very most, a few hundreds of thousands. It was with such scanty numbers that they contrived to be present everywhere, to construct ports of refuge for their ships, factories for their merchants and warehouses for their goods. These 'English of antiquity,' as they have been so well called, upheld their power by means very similar to those employed by England, who has succeeded for two centuries in holding together her vast colonial empire by a handful of soldiers and a huge fleet of ships. The great difference lies in the fact that Tyre made no attempt to subjugate and govern the nations she traded with."—G. Perrot and C. Chipiez, *Hist. of Art in Phœnicia, v.* 2, *ch.* 6.—The ascendancy among Phœnician cities passed at some early day from Sidon to Tyre, and the decline of the former has been ascribed to an attack from the Philistines of Ascalon, which occurred about 1250 or 1200 B. C.—G. Rawlinson, *Hist. of Phœnicia, ch.* 14.—See TYRE and TRADE, ANCIENT.

Coinage and Money. See MONEY AND BANKING: PHŒNICIA.

B. C. 850-538.—Subjection to Assyria and Babylonia.—About 850 B. C. "the military expeditions of the Assyrians began to reach Southern Syria, and Phœnician independence seems to have been lost. We cannot be sure that the submission was continuous; but from the middle of the ninth till past the middle of the eighth century there occur in the contemporary monuments of Assyria plain indications of Phœnician subjection, while there is no evidence of resistance or revolt. . . . About B. C. 743 the passive submission of Phœnicia to the Assyrian yoke began to be exchanged for an impatience of it, and frequent efforts were made, from this date till Nineveh fell, to re-establish Phœnician independence. These efforts for the most part failed; but it is not improbable that finally, amid the troubles under which the Assyrian empire succumbed, success crowned the nation's patriotic exertions, and autonomy was recovered. . . . Scarcely, however, had Assyria fallen when a new enemy appeared upon the scene. Nechoh of Egypt, about B. C. 608, conquered the whole tract between his own borders and the Euphrates. Phœnicia submitted or was reduced, and remained for three years an Egyptian dependency. Nebuchadnezzar, in B. C. 605, after his defeat of Nechoh at Carchemish, added Phœnicia to Babylon; and, though Tyre revolted from him eight years later, B. C. 598, and resisted for thirteen years all his attempts to reduce her, yet at length she was compelled to submit, and the Babylonian yoke was firmly fixed on the entire Phœnician people. It is not quite certain that they did not shake it off upon the death of the great Babylonian king; but, on the whole, probability is in favour of their having remained subject till the conquest of Babylon by Cyrus, B. C. 538."—G. Rawlinson, *Manual of Ancient Hist., bk.* 1, *pt.* 1, *sect.* 6.—"It appears to have been only a few years after Nebuchadnezzar's triumphant campaign against Neco that renewed troubles broke out in Syria. Phœnicia revolted under the leadership of Tyre; and about the same time Jehoiakim, the Jewish king, having obtained a promise of aid from the Egyptians, renounced his allegiance. Upon this, in his seventh year (B. C. 598), Nebuchadnezzar proceeded once more into Palestine at the head of a vast army, composed partly of his allies, the Medes, partly of his own subjects. He first invested Tyre; but finding that city too strong to be taken by assault, he left a portion of his army to continue the siege, while he himself pressed forward against Jerusalem. . . . The siege of Tyre was still being pressed at the date of the second investment of Jerusalem. . . . Tyre, if it fell at the end of its thirteen years' siege, must have been taken in the very year which followed the capture of Jerusalem, B. C. 585. . . . It has been questioned whether the real Tyre, the island city, actually fell on this occasion (Heeren, As. Nat. vol. ii. p. 11, E. T.; Kenrick, Phœnicia, p. 390), chiefly because Ezekiel says, about B. C. 570, that Nebuchadnezzar had 'received no wages for the service that he served against it.' (Ezek. xxix. 18.) But this passage may be understood to mean that he had had no sufficient wages. Berosus expressly stated that Nebuchadnezzar reduced all Phœnicia."—The same, *Five Great Monarchies: Babylonia, ch.* 8, *and footnote.*

Later commerce.—"The commerce of Phœnicia appears to have reached its greatest height about the time of the rise of the Chaldæan power at Babylon. Its monopoly may have been more complete in earlier times, but the range of its traffic was more confined. Nebuchadnezzar was impelled to attempt its conquest by a double motive—to possess himself of its riches and to become master of its harbours and its navy. The prophet Ezekiel (ch. 27), foretelling his siege of Tyre, has drawn a picture of its commerce, which is the most valuable document for its commercial history that has come down to us. . . . Directly or indirectly, the commerce of Tyre, in the beginning of the sixth century before Christ, thus embraced the whole known world. By means of the Arabian and the Persian gulfs it communicated with India and the coast of Africa towards the equator. On the north its vessels found their way along the Euxine to the frozen borders of Scythia. Beyond the Straits of Gibraltar, its ships, or those of its colony of Gades, visited the British isles for tin, if they did not penetrate into the Baltic to bring back amber. Ezekiel says nothing of the voyages of the Tyrians in the Atlantic ocean, which lay beyond the limits of Jewish geography; but it is probable that they had several centuries before passed the limits of the Desert on the western coast of Africa, and by the discovery of one of the Canaries had given rise to the Greek fable of the Islands of the Blessed."—J. PHOKIANS, The.—"The Phokians [in ancient Greece] were bounded on the north by the little territories called Doris and Dryopis, which separated them from the Malians,—on the north-

east, east and south-west by the different branches of Lokrians,—and on the south-east by the Bœotians. They touched the Eubœan sea . . . at Daphnus, the point where it approaches nearest to their chief town, Elateia; their territory also comprised most part of the lofty and bleak range of Parnassus, as far as its southerly termination, where a lower portion of it, called Kirphis, projects into the Corinthian Gulf, between the two bays of Antikyra and Krissa; the latter, with its once fertile plain, was in proximity to the sacred rock of the Delphian Apollo. Both Delphi and Krissa originally belonged to the Phokian race. But the sanctity of the temple, together with Lacedæmonian aid, enabled the Delphians to set up for themselves, disavowing their connexion with the Phokian brotherhood. Territorially speaking, the most valuable part of Phokis consisted in the valley of the river Kephisus. . . . It was on the projecting mountain ledges and rocks on each side of this river that the numerous little Phokian towns were situated. Twenty-two of them were destroyed and broken up into villages by the Amphiktyonic order, after the second Sacred War."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 3.—See Sacred Wars.

PHRYGIANS.—MYSIANS.—"When the Assyrians in the thirteenth century [B. C.] advanced past the springs of the Euphrates into the western peninsula [of Asia Minor], they found, on the central table-land, a mighty body of native population—the Phrygians. The remains of their language tend to show them to have been the central link between the Greeks and the elder Aryans. They called their Zeus Bagalus ('baga' in ancient Persian signifying God; 'bhaga,' in Sanscrit, fortune), or Sabazius, from a verb common to Indian and Greek, and signifying 'to adore.' They possessed the vowels of the Greeks, and in the terminations of words changed the 'm' into 'n.' Kept off from the sea, they, it is true, lagged behind the coast tribes in civilization, and were regarded by these as men slow of understanding and only suited for inferior duties in human society. Yet they too had a great and independent post of their own, which is mirrored in the native myths of their kings. The home of these myths is especially in the northern regions of Phrygia, on the banks of the springs which feed the Sangarius, flowing in mighty curves through Bithynia into Pontus. Here traditions survived of the ancient kings of the land, of Gordius and Midas."—E. Curtius, *Hist. of Greece, v.* 1, *bk.* 1, *ch.* 3.—"As far as any positive opinion can be formed respecting nations of whom we know so little, it would appear that the Mysians and Phrygians are a sort of connecting link between Lydians and Karians on one side, and Thracians (European as well as Asiatic) on the other—a remote ethnical affinity pervading the whole. Ancient migrations are spoken of in both directions across the Hellespont and the Thracian Bosphorus. It was the opinion of some that Phrygians, Mysians and Thracians had immigrated into Asia from Europe. . . . On the other hand, Herodotus speaks of a vast body of Teukrians and Mysians who, before the Trojan war, had crossed the strait from Asia into Europe. . . . The Phrygians also are supposed by some to have originally occupied an European soil on the borders of Macedonia, . . . while the Mysians are said to have come from the north-eastern portions of European Thrace south of the Danube, known under the Roman empire by the name of Mœsia. But with respect to the Mysians there was also another story, according to which they were described as colonists emanating from the Lydians. . . . And this last opinion was supported by the character of the Mysian language, half Lydian and half Phrygian."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 16.—The Mysians occupied the north-western corner of Asia Minor, including the region of the Troad. "In the works of the great Greek writers which have come down to us, notably, in the histories of Herodotus and Thucydides, the Phrygians figure but little. To the Greeks generally they were known but as the race whence most of their slaves were drawn, as a people branded with the qualities of slaves, idleness, cowardice, effeminacy. . . . From the Phrygians came those orgiastic forms of religious cult which were connected with the worship of Dionysus and of the Mother of the Gods, orgies which led alike to sensual excess and to hideous self-mutilations, to semi-religious frenzy and bestial immoralities, against which the strong good-sense of the better Greeks set itself at all periods, though it could not deprive them of their attractions for the lowest of the people. And yet it was to this race sunk in corruption, except when roused by frenzy, that the warlike Trojan stock belonged. Hector and Aeneas were Phrygians; and the most manly race of the ancient world, the Romans, were proud of their supposed descent from shepherds of Phrygia."—P. Gardner, *New Chapters in Greek History, ch.* 2.

PHUT. See Libyans.

PHYLÆ.—PHRATRIÆ.—GENTES.—"In all Greek states, without exception, the people was divided into tribes or Phylæ, and those again into the smaller subdivisions of Phratriæ and gentes, and the distribution so made was employed to a greater or less extent for the common organisation of the State."—G. F. Schömann, *Antiquities of Greece: The State, pt.* 2, *ch.* 4.—The four Attic tribes were called, during the later period of that division, the Geleontes, Hopletes, Ægikoreis, and Argadeis. "It is affirmed, and with some etymological plausibility, that the denominations of these four tribes must originally have had reference to the occupations of those who bore them,—the Hopletes being the warriour-class, the Ægikoreis goatherds, the Argadeis artisans, and the Geleontes (Teleontes or Gedeontes) cultivators. Hence some authors have ascribed to the ancient inhabitants of Attica an actual primitive distribution into hereditary professions or castes, similar to that which prevailed in India and Egypt. If we should even grant that such a division into castes might originally have prevailed, it must have grown obsolete long before the time of Solon; but there seem no sufficient grounds for believing that it ever did prevail. . . . The four tribes, and the four names (allowing for some variations of reading), are therefore historically verified. But neither the time of their introduction, nor

their primitive import, are ascertainable matters. . . . These four tribes may be looked at either as religious and social aggregates, in which capacity each of them comprised three Phratries and ninety Gentes; or as political aggregates, in which point of view each included three Trittyes and twelve Naukraries. Each Phratry contained thirty Gentes; each Trittys comprised four Naukraries: the total numbers were thus 360 Gentes and 48 Naukraries. Moreover, each gens is said to have contained thirty heads of families, of whom therefore there would be a total of 10,800. . . . That every Phratry contained an equal number of Gentes, and every Gens an equal number of families, is a supposition hardly admissible without better evidence than we possess. But apart from this questionable precision of numerical scale, the Phratries and Gentes themselves were real, ancient and durable associations among the Athenian people, highly important to be understood. The basis of the whole was the house, hearth or family,— a number of which, greater or less, composed the Gens, or Genos. This Gens was therefore a clan, sept, or enlarged, and partly factitious, brotherhood. . . . All these phratric and gentile associations, the larger as well as the smaller, were founded upon the same principles and tendencies of the Grecian mind — a coalescence of the idea of worship with that of ancestry, or of communion in certain special religious rites with communion of blood, real or supposed. The god, or hero, to whom the assembled members offered their sacrifices, was conceived as the primitive ancestor, to whom they owed their origin. . . . The revolution of Kleisthenes in 509 B. C. abolished the old tribes for civil purposes, and created ten new tribes,— leaving the Phratries and Gentes unaltered, but introducing the local distribution according to demes or cantons, as the foundation of his new political tribes. A certain number of demes belonged to each of the ten Kleisthenean tribes (the demes in the same tribes were not usually contiguous, so that the tribe was not coincident with a definite circumscription), and the deme, in which every individual was then registered, continued to be that in which his descendants were also registered. . . . The different Gentes were very unequal in dignity, arising chiefly from the religious ceremonies of which each possessed the hereditary and exclusive administration, and which, being in some cases considered as of pre-eminent sanctity in reference to the whole city, were therefore nationalized. Thus the Eumolpidæ and Kerykes, who supplied the Hierophant and superintended the mysteries of the Eleusinian Demeter — and the Butadæ, who furnished the priestess of Athene Polias as well as the priest of Poseidon Erechtheus in the acropolis — seem to have been reverenced above all the other Gentes. When the name Butadæ was selected in the Kleisthenean arrangement as the name of a deme, the holy Gens so called adopted the distinctive denomination of Eteobutadæ, or 'The true Butadæ.'"—G. Grote, *Hist. of Greece, pt. 2, ch. 10.*

PIRÆUS, The.—This was the important harbor of Athens, constructed and fortified during and after the Persian wars; a work which the Athenians owed to the genius and energy of Themistocles. The name was sometimes applied to the whole peninsula in which the Piræus is situated, and which contained two other harbors—Munychia and Zea. Phalerum, which had previously been the harbor of Athens, lay to the east. The walls built by Themistocles "were carried round the whole of the peninsula in a circumference of seven miles, following the bend of its rocky rim, and including the three harbour-bays. At the mouths of each of the harbours a pair of towers rose opposite to one another at so short a distance that it was possible to connect them by means of chains: these were the locks of the Piræus. The walls, about 16 feet thick, were built without mortar, of rectangular blocks throughout, and were raised to a height of 30 feet by Themistocles, who is said to have originally intended to give them double that height."—E. Curtius, *Hist. of Greece, bk.* 3, *ch.* 2.

PISA, Greece. See ELIS; and OLYMPIC GAMES.

PISA, Italy: Origin of the city.—Early growth of its commerce and naval power.—Conquest of Sardinia.—Strabo and others have given Pisa a Grecian origin. "Situated near the sea upon the triangle formed in past ages, by the confluence of the two rivers, the Arno and the Serchio; she was highly adapted to commerce and navigation; particularly in times when these were carried on with small vessels. We consequently find that she was rich and mercantile in early times, and frequented by all the barbarous nations. . . . Down to the end of the fifteenth century, almost all the navigation of the nations of Europe, as well as those of Asia and Africa, which kept a correspondence and commerce with the former, was limited to the Mediterranean, Adriatic, Archipelago, and Euxine seas; and the first three Italian republics, Pisa, Genoa, and Venice, were for a long time mistresses of it. Pisa, as far back as the year 925, was the principal city of Tuscany, according to Luitprand. In the beginning of the eleventh century, that is, in the year 1004, we find in the Pisan annals, that the latter waged war with the Lucchese and beat them; this is the first enterprise of one Italian city against another, which proves that she already acted for herself, and was in great part, if not wholly, liberated from the dominion

of the Duke of Tuscany. In the Pisan annals, and in other authors, we meet with a series of enterprises, many of which are obscurely related, or perhaps exaggerated. Thus we find that in the year 1005, in an expedition of the Pisans against the maritime city of Reggio, Pisa being left unprovided with defenders, Musetto, king, or head, of the Saracens, who occupied Sardinia, seized the opportunity of making an invasion; and having sacked the city, departed, or was driven out of it. . . . It was very natural for the Pisans and Genoese, who must have been in continual fear of the piracies and invasions of the barbarians as long as they occupied Sardinia, to think seriously of exterminating them from that country: the pope himself sent the Bishop of Ostia in haste to the Pisans as legate, to encourage them to the enterprise: who, joining with the Genoese, conquered Sardinia [1017] by driving out the Saracens; and the pope, by the right he thought he possessed over all the kingdoms of the earth, invested the Pisans with the dominion; not however without exciting the jealousy of the Genoese, who, as they were less powerful in those times, were obliged to yield to force. The mutual necessity of defence from the common enemy kept them united; the barbarians having disembarked in the year 1020 in Sardinia under the same leader, they were again repulsed, and all their treasure which remained a booty of the conquerors, was conceded to the Genoese as an indemnity for the expense."—L. Pignotti, *Hist. of Tuscany*, *v.* 1, *ch.* 7.

A. D. 1063-1293.—Architectural development.—Disastrous war with Genoa.—The great defeat at Meloria.—Count Ugolino and his fate.—War with Florence and Lucca.—"The republic of Pisa was one of the first to make known to the world the riches and power which a small state might acquire by the aid of commerce and liberty. Pisa had astonished the shores of the Mediterranean by the number of vessels and galleys that sailed under her flag, by the succor she had given the crusaders, by the fear she had inspired at Constantinople, and by the conquest of Sardinia and the Balearic Isles. Pisa was the first to introduce into Tuscany the arts that ennoble wealth: her dome, her baptistery, her leaning tower, and her Campo Santo, which the traveller's eye embraces at one glance, but does not weary of beholding, had been successively built from the year 1063 to the end of the 12th century. These chefs-d'œuvre had animated the genius of the Pisans; the great architects of the 13th century were, for the most part, pupils of Nicolas di Pisa. But the moment was come in which the ruin of this glorious republic was at hand; a deep-rooted jealousy, to be dated from the conquest of Sardinia, had frequently, during the last two centuries, armed against each other the republics of Genoa and Pisa: a new war between them broke out in 1282. It is difficult to comprehend how two simple cities could put to sea such prodigious fleets as those of Pisa and Genoa. In 1282, Ginicel Sismondi commanded 30 Pisan galleys, of which he lost the half in a tempest, on the 9th of September; the following year, Rosso Sismondi commanded 64; in 1284, Guido Jacia commanded 24, and was vanquished. The Pisans had recourse the same year to a Venetian admiral, Alberto Morosini, to whom they intrusted 103 galleys: but whatever efforts they made, the Genoese constantly opposed a superior fleet. This year [1284], however, all the male population of the two republics seemed assembled on their vessels; they met on the 6th of August, 1284, once more before the Isle of Meloria, rendered famous 43 years before by the victory of the Pisans over the same enemies [when the Ghibelline friendship of Pisa for the Emperor Frederick II. induced her to intercept and attack, on the 3d of May, 1241, a Genoese fleet which conveyed many prelates to a great council called by Pope Gregory IX. with hostile intentions towards the Emperor, and which the latter desired to prevent]. Valor was still the same, but fortune had changed sides; and a terrible disaster effaced the memory of an ancient victory. While the two fleets, almost equal in number, were engaged, a reinforcement of 30 Genoese galleys, driven impetuously by the wind, struck the Pisan fleet in flank: 7 of their vessels were instantly sunk, 28 taken. 5,000 citizens perished in the battle, and 11,000 who were taken prisoners to Genoa preferred death in captivity rather than their republic should ransom them, by giving up Sardinia to the Genoese. This prodigious loss ruined the maritime power of Pisa; the same nautical knowledge, the same spirit of enterprise, were not transmitted to the next generation. All the fishermen of the coast quitted the Pisan galleys for those of Genoa. The vessels diminished in number, with the means of manning them; and Pisa could no longer pretend to be more than the third maritime power in Italy. While the republic was thus exhausted by this great reverse of fortune, it was attacked by the league of the Tuscan Guelphs; and a powerful citizen, to whom it had intrusted itself, betrayed his country to enslave it. Ugolino was count of the Gherardesca, a mountainous country situated along the coast, between Leghorn and Piombino: he was of Ghibeline origin, but had married his sister to Giovan di Gallura, chief of the Guelphs of Pisa and of Sardinia. From that time he artfully opposed the Guelphs to the Ghibelines." The Pisans, thinking him to be the person best able to reconcile Pisa with the Guelph league "named Ugolino captain-general for ten years: and the new commander did, indeed, obtain peace with the Guelph league; but not till he had caused all the fortresses of the Pisan territory to be opened by his creatures to the Lucchese and Florentines. . . . From that time he sought only to strengthen his own despotism." In July, 1288, there was a rising of the Pisans against him; his palace was stormed and burned; and he, his two sons and two grandsons, were dragged out of the flames, to be locked in a tower and starved to death—as told in the verse of Dante. "The victory over count Ugolino, achieved by the most ardent of the Ghibelines, redoubled the enthusiasm and audacity of that party; and soon determined them to renew the war with the Guelphs of Tuscany. . . . Guido de Montefeltro was named captain. He had acquired a high reputation in defending Forli against the French forces of Charles of Anjou; and the republic had not to repent of its choice. He recovered by force of arms all the fortresses which Ugolino had given up to the Lucchese and Florentines. The Pisan militia, whom Montefeltro armed with cross-bows, which he had trained them to use with precision, became the terror of Tuscany. The Guelphs of Florence

and Lucca were glad to make peace in 1293."—J. C. L. de Sismondi, *Hist. of the Italian Republics, ch.* 5.—In 1290, when Pisa was in her greatest distress, Genoa suddenly joined again in the attack on her ancient rival. She sent an expedition under Conrad d'Oria which entered the harbor of Pisa, pulled down its towers, its bridge and its forts, and carried away the chain which locked the harbor entrance. The latter trophy was only restored to Pisa in recent years.—J. T. Bent, *Genoa, ch.* 4.

A. D. 1494-1509.—Delivered by the French.—The faithlessness of Charles VIII.—Thirteen years of struggle against Florence.—Final surrender.—"The Florentine conquest was the beginning of 90 years of slavery for Pisa—a terrible slavery, heavy with exaggerated imports, bitter with the tolerated plunder of private Florentines, humiliating with continual espionage. . . . Pisa was the Ireland of Florence, captive and yet unvanquished. . . . At last a favourable chance was offered to the Pisans. . . . In the autumn of 1494, the armies of Charles VIII. poured into Italy [see Italy: A. D. 1494–1496]. It had been the custom of the Florentines, in times of war and danger, to call the heads of every Pisan household into Florence, as hostages for the good behaviour of their families and fellow citizens. But in the autumn of 1494, Piero de' Medici who forgot everything, who had forgotten to garrison his frontier, forgot to call the Pisan hostages to Florence, although the French were steadily advancing on Tuscany, and the Pisans eager to rebel. . . . The French army and the hope of liberty entered the unhappy city hand in hand [November 8, 1494]. . . . That night the Florentines in Pisa—men in office, judges, merchants, and soldiers of the garrison—were driven at the sword's point out of the rebellious city. . . . Twenty-four hours after the entry of the French, Pisa was a free republic, governed by a Gonfalonier, six Priors, and a Balia of Ten, with a new militia of its own, and, for the first time in eight and eighty years, a Pisan garrison in the ancient citadel." All this was done with the assent of the King of France and the promise of his protection. But when he passed on to Florence, and was faced there by the resolute Capponi, he signed a treaty in which he promised to give back Pisa to Florence when he returned from Naples. He returned from Naples the next summer (1495), hard pressed and retreating from his recent triumphs, and halted with his army at Pisa. There the tears and distress of the friendly Pisans moved even his soldiers to cry out in protestation against the surrender of the city to its former bondage. Charles compromised by a new treaty with the Florentines, again agreeing to deliver Pisa to them, but stipulating that they should place their old rivals on equal terms with themselves, in commerce and in civil rights. But Entragues, the French governor whom Charles had left in command at Pisa, with a small garrison, refused to carry out the treaty. He assisted the Pisans in expelling a force with which the Duke of Milan attempted to secure the city, and then, on the 1st of January, 1496, he delivered the citadel which he held into the hands of the Pisan signory. "During thirteen years from this date the shifting fortunes, the greeds and jealousies of the great Italian cities, fostered an artificial liberty in Pisa. Thrown like a ball from Milan to Venice, Venice to Maximilian, Max again to Venice, and thence to Cæsar Borgia, the unhappy Republic described the whole circle of desperate hope, agonized courage, misery, poverty, cunning, and betrayal."—A. M. F. Robinson, *The End of the Middle Ages: The French at Pisa.*—In 1509 the Pisans, reduced to the last extremity by the obstinate siege which the Florentines had maintained, and sold by the French and Spaniards, who took pay from Florence (see Venice: A. D. 1508–1509) for abandoning their cause, opened their gates to the Florentine army.—H. E. Napier, *Florentine History, bk.* 2, *ch.* 8 (*v.* 4).

B. C. 405–375.—Repeated ravages among the Carthaginians.—"Within the space of less than thirty years [from B. C. 405] we read of four distinct epidemic distempers, each of frightful severity, as having afflicted Carthage and her armies in Sicily, without touching either Syracuse or the Sicilian Greeks. Such epidemics were the most irresistible of all enemies to the Carthaginians," G. Grote, *Hist. of Greece, pt.* 2, *ch.* 83.

A. D. 78-266.—Plague after the destruction of Herculaneum and Pompeii.—Plagues of Orosius, Antoninus, and Cyprian.—"On the cessation of the eruption of Vesuvius, which began on the 23d of August, A. D. 78, and which buried Herculaneum, Stabiæ and Pompeii in ashes, there arose . . . a destructive plague, which for many days in succession slew 10,000 men daily." The plague of Orosius (so called because Orosius, who wrote in the 5th century, described it most fully) began in the year A. D. 125. It was attributed to immense masses of grasshoppers which were swept by the winds, that year, from Africa into the Mediterranean Sea, and which were cast back by the waves to putrefy in heaps on the shore. "'In Numidia, where at that time Micipsa was king, 800,000 men perished, while in the region which lies most contiguous to the sea-shore of Carthage and Utica, more than 200,000 are said to have been cut down. In the city of Utica itself, 30,000 soldiers, who had been ordered here for the defence of all Africa, were destroyed.' . . . The plague of Antoninus (A. D. 164–180) visited the whole Roman Empire, from its most eastern to its extreme western boundaries, beginning at the former, and spreading thence by means of the troops who returned from putting down a rebellion in Syria. In the year 166 it broke out for the first time in Rome, and returned again in the year 168. . . . The plague depopulated entire cities and districts, so that forests sprung up in places before inhabited. . . . In its last year it appears to have raged again with especial fury, so that in Rome . . . 2,000 men often died in a single day. With regard to the character of this plague, it has been considered sometimes smallpox, sometimes petechial typhus, and again the bubo-plague. The third so-called plague, that of Cyprian, raged about A. D. 251–266. . . . For a long time 500 died a day in Rome. . . . After its disappearance Italy was almost deserted. . . . It has been assumed that this plague should be considered either a true bubo-plague, or smallpox."—J. H. Baas, *Outlines of the History of Medicine, pp.* 189–190.—"Niebuhr has expressed the opinion that 'the ancient world never recovered from the blow inflicted upon it by the plague which visited it in the reign of M. Aurelius.'"—C. Merivale, *Hist. of the Romans, ch.* 68, *footnote.*

ALSO IN: P. B. Watson, *Marcus Aurelius Antoninus, ch.* 4.

A. D. 542-594.—During the reign of Justinian.—"The fatal disease which depopulated the earth in the time of Justinian and his successors first appeared in the neighbourhood of Pelusium, between the Serbonian bog and the eastern chan-

nel of the Nile. From thence, tracing as it were a double path, it spread to the east, over Syria, Persia, and the Indies, and penetrated to the west, along the coast of Africa, and over the continent of Europe. In the spring of the second year, Constantinople, during three or four months, was visited by the pestilence; and Procopius, who observed its progress and symptoms with the eyes of a physician, has emulated the skill and diligence of Thucydides in the description of the plague of Athens. . . . The fever was often accompanied with lethargy or delirium; the bodies of the sick were covered with black pustules or carbuncles, the symptoms of immediate death; and in the constitutions too feeble to produce an eruption, the vomiting of blood was followed by a mortification of the bowels. . . . Youth was the most perilous season; and the female sex was less susceptible than the male. . . . It was not till the end of a calamitous period of fifty-two years [A. D. 542–594] that mankind recovered their health, or the air resumed its pure and salubrious quality. . . . During three months, five and at length ten thousand persons died each day at Constantinople; . . . many cities of the east were left vacant; . . . in several districts of Italy the harvest and the vintage withered on the ground. The triple scourge of war, pestilence, and famine, afflicted the subjects of Justinian; and his reign is disgraced by a visible decrease of the human species, which has never been repaired in some of the fairest countries of the globe."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 43.

Also in: T. Hodgkin, *Italy and Her Invaders, bk.* 5, *ch.* 17.—J. B. Bury, *Hist. of the Later Roman Empire, bk.* 4, *ch.* 6 (*v.* 1).

6-13th Centuries.—Spread of Small-pox.—"Nothing is known of the origin of small-pox; but it appears to have come originally from the East, and to have been known in China and Hindostan from time immemorial. . . . 'It seems to have reached Constantinople by way of Egypt about the year 569.' From Constantinople it spread gradually over the whole of Europe, reaching England about the middle of the 13th century."—R. Rollo, *Epidemics, Plagues, and Fevers, p.* 271.

A. D. 744-748.—The world-wide pestilence.—"One great calamity in the age of Constantine [the Byzantine emperor Constantine V., called Copronymus], appears to have travelled over the whole habitable world; this was the great pestilence, which made its appearance in the Byzantine empire as early as 745. It had previously carried off a considerable portion of the population of Syria, and the Caliph Yezid III. perished of the disease in 744. From Syria it visited Egypt and Africa, from whence it passed into Sicily. After making great ravages in Sicily and Calabria, it spread to Greece; and at last, in the year 747, it broke out with terrible violence in Constantinople, then probably the most populous city in the universe. It was supposed to have been introduced, and dispersed through Christian countries, by the Venetian and Greek ships employed in carrying on a contraband trade in slaves with the Mohammedan nations, and it spread wherever commerce extended. . . . This plague threatened to exterminate the Hellenic race." After it had disappeared, at the end of a year, "the capital required an immense influx of new inhabitants. To fill up the void caused by the scourge, Constantine induced many Greek families from the continent and the islands to emigrate to Constantinople."—G. Finlay, *Hist. of the Byzantine Empire, from* 716 *to* 1057, *bk.* 1, *ch.* 1, *sect.* 3.

A. D. 1348-1351.—The Black Death. See Black Death; also, England: A. D. 1348–1349.

A. D. 1360-1363.—The Children's Plague.—"The peace of Brétigni [England and France, A. D. 1360], like the capture of Calais, was followed by a pestilence that turned the national rejoicings into mourning. But the 'Children's Plague,' as it was called, from the fact that it was most deadly to the young, was fortunately not a return of the Black Death, and did not approach it in its effects. It numbered, however, three prelates and the Duke of Lancaster among its victims, and caused such anxiety in London that the courts of law were adjourned from May to October. France felt the scourge more severely. It ravaged the country for three years, and was especially fatal at Paris and at Avignon. In Ireland, where the pestilence lingered on into the next year, and proved very deadly, it was mistaken for scrofula, a circumstance which probably shows that it attacked the glands and the throat."—C. H. Pearson, *Eng. Hist. in the* 14*th Century, ch.* 7.

A. D. 1374.—The Dancing Mania.—"The effects of the Black Death had not yet subsided, and the graves of millions of its victims were scarcely closed, when a strange delusion arose in Germany. . . . It was a convulsion which in the most extraordinary manner infuriated the human frame, and excited the astonishment of contemporaries for more than two centuries, since which time it has never reappeared. It was called the dance of St. John or of St. Vitus, on account of the Bacchantic leaps by which it was characterized, and which gave to those affected, whilst performing their wild dance, and screaming and foaming with fury, all the appearance of persons possessed. It did not remain confined to particular localities, but was propagated by the sight of the sufferers, like a demoniacal epidemic, over the whole of Germany and the neighbouring countries to the north-west, which were already prepared for its reception by the prevailing opinions of the times. So early as the year 1374, assemblages of men and women were seen at Aix-la-Chapelle who had come out of Germany, and who, united by one common delusion, exhibited to the public both in the streets and in the churches the following strange spectacle. They formed circles hand in hand, and appearing to have lost all control over their senses, continued dancing, regardless of the by-standers, for hours together in wild delirium, until at length they fell to the ground in a state of exhaustion. They then complained of extreme oppression, and groaned as if in the agonies of death, until they were swathed in cloths, bound tightly round their waists, upon which they again recovered, and remained free from complaint until the next attack. This practice of swathing was resorted to on account of the tympany which followed these spasmodic ravings, but the by-standers frequently relieved patients in a less artificial manner, by thumping and trampling upon the parts affected. While dancing they neither saw nor heard, being insensible to external impressions through the

senses, but were haunted by visions, their fancies conjuring up spirits whose names they shrieked out; and some of them afterwards asserted that they felt as if they had been immersed in a stream of blood, which obliged them to leap so high. . . . Where the disease was completely developed, the attack commenced with epileptic convulsions. Those affected fell to the ground senseless, panting and labouring for breath. They foamed at the mouth, and suddenly springing up began their dance amidst strange contortions. Yet the malady doubtless made its appearance very variously, and was modified by temporary or local circumstances. . . . It was but a few months ere this demoniacal disease had spread from Aix-la-Chapelle, where it appeared in July, over the neighbouring Netherlands. In Liege, Utrecht, Tongres, and many other towns of Belgium, the dancers appeared with garlands in their hair, and their waists girt with cloths, that they might, as soon as the paroxysm was over, receive immediate relief on the attack of the tympany. This bandage was, by the insertion of a stick, easily twisted tight: many, however, obtained more relief from kicks and blows, which they found numbers of persons ready to administer. . . . A few months after this dancing malady had made its appearance at Aix-la-Chapelle, it broke out at Cologne, where the number of those possessed amounted to more than five hundred, and about the same time at Metz, the streets of which place are said to have been filled with eleven hundred dancers. Peasants left their ploughs, mechanics their workshops, housewives their domestic duties, to join the wild revels, and this rich commercial city became the scene of the most ruinous disorder. . . . The dancing mania of the year 1374 was, in fact, no new disease, but a phenomenon well known in the middle ages, of which many wondrous stories were traditionally current among the people."—J. F. C. Hecker, *Epidemics of the Middle Ages: The Dancing Mania, ch.* 1.

A. D. 1485-1593.—The Sweating Sickness in England.—Plague, Small-pox and Grippe in Europe.—"For centuries no infection had visited England, which in fearful rapidity and malignancy could be compared with the 'sudor Anglicus,' as it was at first called, from the notion that its attacks were confined to Englishmen. People sitting at dinner, in the full enjoyment of health and spirits, were seized with it and died before the next morning. An open window, accidental contact in the streets, children playing before the door, a beggar knocking at the rich man's gate, might disseminate the infection, and a whole family would be decimated in a few hours without hope or remedy. Houses and villages were deserted. . . . Dr. Caius, a physician who had studied the disease under its various aspects, gives the following account of its appearance: 'In the year of our Lord God 1485, shortly after the 7th day of August, at which time King Henry VII. arrived at Milford in Wales out of France, and in the first year of his reign, there chanced a disease among the people lasting the rest of that month and all September, which for the sudden sharpness and unwont cruelness passed the pestilence. For this commonly giveth in four, often seven, sometime nine, sometime eleven and sometime fourteen days, respite to whom it vexeth. But that immediately killed some in opening their windows, some in playing with children in their street doors, some in one hour, many in two, it destroyed. . . . This disease, because it most did stand in sweating from the beginning until the ending, was called here The Sweating Sickness; and because it first began in England, it was named in other countries The English Sweat.' From the same authority we learn that it appeared in 1506, again in 1517 from July to the middle of December, then in 1528. It commenced with a fever, followed by strong internal struggles of nature, causing sweat. . . . It was attended with sharp pains in the back, shoulders and extremities, and then attacked the liver. . . . It never entered Scotland. In Calais, Antwerp and Brabant it generally singled out English residents and visitors. . . . In consequence of the peculiarity of the disease in thus singling out Englishmen, and those of a richer diet and more sanguine temperament, various speculations were set afloat as to its origin and its best mode of cure. Erasmus attributed it to bad houses and bad ventilation, to the clay floors, the unchanged and festering rushes with which the rooms were strewn, and the putrid offal, bones and filth which reeked and rotted together in the unswept and unwashed dining-halls and chambers."—J. S. Brewer, *Reign of Henry VIII., v.* 1, *ch.* 8. —See, also, Sweating Sickness.—"In the middle of the 16th century the English sweating sickness disappeared from the list of epidemic diseases. On the other hand, the plague, during the whole 16th century, prevailed more generally, and in places more fatally, than ever before. . . . In 1500–1507 it raged in Germany, Italy, and Holland, in 1528 in Upper Italy, 1534 in Southern France, 1562–1568 pretty generally throughout Europe. . . . The disease prevailed again in 1591. It is characteristic of the improvement in the art of observation of this century that the plague was declared contagious and portable, and accordingly measures of isolation and disinfection were put in force against it, though without proving in any degree effectual. With a view to disinfection, horn, gunpowder, arsenic with sulphur or straw moistened with wine, etc., were burned in the streets. . . . Small-pox (first observed or described in Germany in 1493) and measles, whose specific nature was still unknown to the physicians of the West, likewise appeared in the 16th century. . . . The Grippe (influenza), for the first time recognizable with certainty as such, showed itself in the year 1510, and spread over all Europe. A second epidemic, beginning in 1557, was less widely extended. On the other hand, in 1580 and 1593 it became again pandemic, while in 1591 Germany alone was visited."—J. H. Baas, *Outlines of the History of Medicine, pp.* 438–439.

Also in: J. F. Hecker, *Epidemics of the Middle Ages.*

A. D. 1665.—In London. See London: A. D. 1665.

18th Century.—The more serious epidemics.—"The bubo-plague, 'the disease of barbarism' and especially of declining nations, in the 18th century still often reached the north of Europe, though it maintained its chief focus and headquarters in the south-west [south-east?]. Thus from 1703 forward, as the result of the Russo-Swedish war, it spread from Turkey to Sweden, Denmark, Poland and Prussia, so that in 1709, the coldest year of the 18th century, more than

300,000 human beings died in East Prussia in spite of the intense cold, and in Dantzic alone more than 30,000. Obliquing to the west, the plague reached Styria and Bohemia, and was carried by a ship to Regensburg in 1714, but by means of strict quarantine regulations was prevented from spreading to the rest of Germany. A hurricane swept the disease, as it were, out of all Europe. Yet six years later it appeared anew with devastating force in southern France" and was recurrent at intervals, in different parts of the continent, throughout the century. "Epidemics of typhus fever . . . showed themselves at the beginning of the century in small numbers, but disappeared before the plague. . . . The first description of typhoid fever — under the designation of 'Schleimfieber' (morbus mucosus) — appeared in the 18th century. . . . Malaria in the last century still gave rise to great epidemics. Of course all the conditions of life favored its prevalence. . . . La Grippe (influenza) appeared as a pandemic throughout almost all Europe in the years 1709, 1729, 1732, 1742, and 1788; in almost all America in 1732, 1737, 1751, 1772, 1781, and 1798; throughout the eastern hemisphere in 1781, and in the entire western hemisphere in 1761 and 1789; throughout Europe and America in 1767. It prevailed as an epidemic in France in the years 1737, 1775, and 1779; in England in 1758 and 1775, and in Germany in 1800. . . . Diphtheria, which in the 17th century had showed itself almost exclusively in Spain and Italy, was observed during the 18th in all parts of the world. . . . Small-pox had attained general diffusion. . . . Scarlet fever, first observed in the 17th century, had already gained wide diffusion. . . . Yellow fever, first recognized in the 16th century, and mentioned occasionally in the 17th, appeared with great frequency in the 18th century, but was mostly confined, as at a later period, to America."—J. H. Baas, *Outlines of the History of Medicine, pp.* 727–730.

19th Century.—The visitations of Asiatic Cholera.— Cholera "has its origin in Asia, where its ravages are as great as those of yellow fever in America. It is endemic or permanent in the Ganges delta, whence it generally spreads every year over India. It was not known in Europe until the beginning of the century; but since that time we have had six successive visitations. . . . In 1817 there was a violent outbreak of cholera at Jessore, India. Thence it spread to the Malay Islands, and to Bourbon (1819); to China and Persia (1821); to Russia in Europe, and especially to St. Petersburg and Moscow (1830). In the following year it overran Poland, Germany, and England [thence in 1832 to Ireland and America], and first appeared in Paris on January 6, 1832. . . . In 1849, the cholera pursued the same route. Coming overland from India through Russia, it appeared in Paris on March 17, and lasted until October. In 1853, cholera, again coming by this route, was less fatal in Paris, although it lasted for a longer time — from November, 1853, to December, 1854. The three last epidemics, 1865, 1873, and 1884, . . . came by the Mediterranean Sea."—E. L. Trouessart, *Microbes, Ferments and Moulds, ch.* 5, *sect.* 8.— A seventh visitation of cholera in Europe occurred in 1892. Its route on this occasion was from the Punjab, through Afghanistan and Persia into Russia and across the Mediterranean to Southern France. Late in the summer the epidemic appeared in various parts of Austria and Germany and was frightfully virulent in the city of Hamburg. In England it was confined by excellent regulations to narrow limits. Crossing the Atlantic late in August, it was arrested at the harbor of New York, by half-barbarous but effectual measures of quarantine, and gained no footing in America.—*Appleton's Annual Cyclopœdia*, 1892.

PLATÆA.—Platæa, one of the cities of the Bœotian federation in ancient Greece, under the headship of Thebes, was ill-used by the latter and claimed and received the protection of Athens. This provoked the deep-seated and enduring enmity of Thebes and Bœotia in general towards Athens, while the alliance of the Athenians and Platæans was lasting and faithful.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 31.

B. C. 431.—Surprise of.—The first act in the Peloponnesian War (B. C. 431) was the surprising of the city of Platæa, the one ally of Athens in Bœotia, by a small force from her near neighbor and deadly enemy, Thebes. The Thebans were admitted by treachery at night and thought themselves in possession of the town. But the Platæans rallied before daybreak and turned the tables upon the foe. Not one of the Thebans escaped. See Greece: B. C. 432–431.

PLEBEIANS, OR PLEBS, Roman.—"We are now prepared to understand the origin of a

distinct body of people which grew up alongside of the patricians of the Roman state during the latter part of the regal period and after its close. These were the plebeians (plebs, 'the crowd,' cf. 'pleo,' to fill) who dwelt in the Roman territory both within and without the walls of the city. They did not belong to the old clans which formed the three original tribes, nor did they have any real or pretended kinship with them, nor, for that matter, with one another, except within the ordinary limits of nature. They were, at the outset, simply an ill-assorted mass of residents, entirely outside of the orderly arrangement which we have described. There were three sources of this multitude: I. When the city grew strong enough, it began to extend its boundaries, and first at the expense of the cantons nearest it, between the Tiber and the Anio. When Rome conquered a canton, she destroyed the walls of its citadel. Its inhabitants were sometimes permitted to occupy their villages as before, and sometimes were removed to Rome. In either case, Rome was henceforth to be their place of meeting and refuge, and they themselves, instead of being reduced to the condition of slaves, were attached to the state as non-citizens. II. The relation of guest-friendship so called, in ancient times, could be entered into between individuals with their families and descendants, and also between individuals and a state, or between two states. Provision for such guest-friendship was undoubtedly made in the treaties which bound together Rome on the one side and the various independent cities of its neighborhood on the other. . . . The commercial advantages of Rome's situation attracted to it, in the course of time, a great many men from the Latin cities in the vicinity, who remained permanently settled there without acquiring Roman citizenship. III. A third constituent element of the 'plebs' was formed by the clients ('the listeners,' 'cluere') [see CLIENTES]. . . . In the beginning of the long struggle between the patricians and plebeians, the clients are represented as having sided with the former. . . . Afterward, when the lapse of time had weakened their sense of dependence on their patrons, they became, as a body, identified with the plebeians." —A. Tighe, *Development of the Roman Constitution, ch.* 3.—Originally having no political rights, the Roman plebeians were forced to content themselves with the privilege they enjoyed of engaging in trade at Rome and acquiring property of their own. But as in time they grew to outnumber the patricians, while they rivalled the latter in wealth, they struggled with success for a share in the government and for other rights of citizenship. In the end, political power passed over to them entirely, and the Roman constitution became almost purely democratic, before it perished in anarchy and revolution, giving way to imperialism.—H. G. Liddell, *Hist. of Rome, ch.* 7, 8, 10, 35.

PLYMOUTH BRETHREN, The.—"The rise [in England and Ireland] of Plymouth Brotherism was almost contemporaneous with that of Tractarianism [about 1830]. . . . In both cases there was a dissatisfaction with the state of spiritual life, and a longing for something more real, more elevated in tone, more practical in results. . . . A few men with spiritual affinities, desiring a religious fellowship which they could not find in the ordinary services of their Church, grouped themselves in small companies and held periodical meetings for the study of the Scriptures, for Christian conference, and for prayer. From the very beginning the movement had attractions for devout men of high social position and some culture. Mr. Darby, who was one of the leading spirits in Dublin, . . . was originally a curate of the Church of Ireland. Mr. Benjamin W. Newton, who was one of the principal members of the similar society in Plymouth, which has given its name to the movement, was a fellow of Exeter College, Oxford. Dr. Tregelles, another of the Plymouth company, was a distinguished Biblical scholar. . . . The Brethren despise culture, and yet apart from men of culture it is hard to see how the movement could have had such success."—J. G. Rogers, *The Church Systems of England in the 19th Century, lect.* 10.

PLYMOUTH ROCK. See MASSACHUSETTS: A. D. 1620.

PNYX, The.—"The place of meeting [of the general assemblies of the people in ancient Athens] in earlier times is stated to have been in the market; in the historical period the people

met there only to vote on proposals of ostracism, at other times assembling in the so-called Pnyx. As regards the position of this latter, a point which quite recently has become a matter of considerable dispute, the indications given by the ancient authorities appear to settle this much at any rate with certainty, that it was in the neighbourhood of the market, and that of the streets running out of the market one led only into the Pnyx."—G. F. Schömann, *Antiq. of Greece: The State, pt.* 3, *ch.* 3.—"The Pnyx was an artificial platform on the north-eastern side of one of the rocky heights which encircled Athens on the west, and along the crest of which is still traced the ancient enclosure of the Asty." At one angle rose the celebrated bema, or pulpit, a quadrangular projection of the rock, eleven feet broad. "The area of the platform was capable of containing between 7000 and 8000 persons, allowing a square yard to each."—W. M. Leake, *Topography of Athens, app.* 11. See, also, Agora.

POCKET BOROUGHS. See England: A. D. 1830.

PODESTAS.—"About the end of the 12th century a new and singular species of magistracy was introduced into the Lombard cities. During the tyranny of Frederic I. [Frederick Barbarossa] he had appointed officers of his own, called podestas, instead of the elective consuls. It is remarkable that this memorial of despotic power should not have excited insuperable alarm and disgust in the free republics. But, on the contrary, they almost universally, after the peace of Constance, revived an office which had been abrogated when they first rose in rebellion against Frederic. From experience, as we must presume, of the partiality which their domestic factions carried into the administration of justice, it became a general practice to elect, by the name of podesta, a citizen of some neighbouring state as their general, their criminal judge, and preserver of the peace. . . . The podesta was sometimes chosen in a general assembly, sometimes by a select number of citizens. His office was annual, though prolonged in peculiar emergencies. He was invariably a man of noble family, even in those cities which excluded their own nobility from any share in the government. He received a fixed salary, and was compelled to remain in the city after the expiration of his office for the purpose of answering such charges as might be adduced against his conduct. He could neither marry a native of the city, nor have any relation resident within the district, nor even, so great was their jealousy, eat or drink in the house of any citizen. The authority of these foreign magistrates was not by any means alike in all cities. In some he seems to have superseded the consuls, and commanded the armies in war. In others, as Milan and Florence, his authority was merely judicial."—H. Hallam, *The Middle Ages, ch.* 3, *pt.* 1 (*v.* 1).

POITIERS, Battle of.—A battle was fought September 19, 1356, near the city of Poitiers, in France, by the English, under the "Black Prince," the famous son of Edward III., with the French commanded personally by their king, John II. The advantage in numbers was on the side of the French, but the position of the English was in their favor, inasmuch as it gave little opportunity to the cavalry of the French, which was their strongest arm. The English archers won the day, as in so many other battles of that age. The French were sorely beaten and their king was taken prisoner.—Froissart, *Chronicles, (tr. by Johnes), bk.* 1, *ch.* 157–166.—See France: A. D. 1337–1360.

POLAND.

The Name.—"The word Pole is not older than the tenth century, and seems to have been originally applied, not so much to the people as to the region they inhabited; 'polska' in the Slavonic tongue signifying a level field or plain."—S. A. Dunham, *Hist. of Poland, introd.*

The ancestors of the race. See Lygians.

Beginnings of national existence.—"The Poles were a nation whose name does not occur in history before the middle of the tenth century; and we owe to Christianity the first intimations that we have regarding this people. Mieczislaus [or Miceslaus] I., the first duke or prince of the Poles of whom we possess any authentic accounts, embraced Christianity (966) at the solicitation of his spouse, Dambrowka, sister of Boleslaus II., duke of Bohemia. Shortly after, the first bishopric in Poland, that of Posen, was founded by Otho the Great. Christianity did not, however, tame the ferocious habits of the Poles, who remained for a long time without the least progress in mental cultivation. Their government, as wretched as that of Bohemia, subjected the great body of the nation to the most debasing servitude.

The ancient sovereigns of Poland were hereditary. They ruled most despotically, and with a rod of iron; and, although they acknowledged themselves vassals and tributaries of the German emperors, they repeatedly broke out into open rebellion, asserted their absolute independence, and waged a successful war against their masters. Boleslaus, son of Mieczislaus I., took advantage of the troubles which rose in Germany on the death of Otho III., to possess himself of the Marches of Lusatia and Budissin, or Bautzen, which the Emperor Henry II. afterwards granted him as fiefs. This same prince, in despite of the Germans, on the death of Henry II. (1025), assumed the royal dignity. Mieczislaus II., son of Boleslaus, after having cruelly ravaged the country situate between the Oder, the Elbe, and the Saal, was compelled to abdicate the throne, and also to restore th ɜe provinces which his father had wrested from the Empire. The male descendants of Mieczislaus I. reigned in Poland until the death of Casimir the Great (1370). This dynasty of kings is known by the name of the Piasts, or Piasses, so called from one Piast, alleged to have been its founder."—W. Koch, *Hist. of Revolutions in Europe, ch.* 4.

A. D. 1333-1572.—The union with Lithuania and the reign of the Jagellon dynasty.—Conquest of Prussia and its grant to Grandmaster Albert.—Casimir III., or Casimir the Great, the last Polish king of the Piast line, ascended the throne in 1333. "Polish historians celebrate the good deeds of this king for the internal prosperity of Poland—his introduction of a legal code, his just administration, his encouragement of learning, and his munificence in founding churches, schools, and hospitals. The great external question of his reign was that of the relations of Poland to the two contiguous powers of Lithuania and the Teutonic Knights of Prussia and the Baltic provinces. On the one hand, Poland, as a Christian country, had stronger ties of connexion with the Teutonic Knights than with Lithuania. On the other hand, ties of race and tradition connected Poland with Lithuania; and the ambitious policy of the Teutonic Knights, who aimed at the extension of their rule at the expense of Poland and Lithuania, and also jealously shut out both countries from the Baltic coast, and so from the advantages of commerce, tended to increase the sympathy between the Poles and the Lithuanians. A happy solution was at length given to this question. Casimir, dying in 1370, left no issue . . . . and the Crown of Poland passed to his nephew Louis of Anjou, at that time also King of Hungary [see Hungary: A. D. 1301–1442]. Louis, occupied with the affairs of Hungary, neglected those of Poland, and left it exposed to the attacks of the Lithuanians. He became excessively unpopular among the Poles; and, after his death in 1384, they proclaimed Hedvige [his daughter] Queen of Poland. In 1386, a marriage was arranged between this princess and Jagellon, Duke of Lithuania—Jagellon agreeing to be baptized, and to establish Christianity among his hitherto heathen subjects. Thus Poland and Lithuania were united; and a new dynasty of Polish kings was founded, called the dynasty of the Jagellons. The rule of this dynasty, under seven successive kings (1386–1572) constitutes the flourishing epoch of Polish history, to which at the present day the Poles look fondly back when they would exalt the glory and greatness of their country. . . . The effect of the union of Poland and Lithuania was at once felt in Europe. The first Jagellon, who on his baptism took the name of Uladislav II., and whom one fancies as still a sort of rough half-heathen by the side of the beautiful Polish Hedvige, spent his whole reign (1386–1434) in consolidating the union and turning it to account. He defended Lithuania against the Tartar hordes then moving westward before the impulse of the conquering Tamerlane. But his chief activity was against the Teutonic Knights. . . . He engaged in a series of wars against the knights, which ended in a great victory gained over them at Tannenburg in 1410. By this victory the power of the knights was broken for the time, and their territories placed at the mercy of the Poles. During the reign of Uladislav III., the second of the Jagellons (1434–1444), the knights remained submissive, and that monarch was able to turn his arms, in conjunction with the Hungarians, against a more formidable enemy—the Turks—then beginning their invasions of Europe. Uladislav III. having been slain in battle against the Turks at Varna, the Teutonic Knights availed themselves of the confusion which followed, to try to recover their power. By this time, however, their Prussian subjects were tired of their rule; Dantzic, Elbing, Thorn, and other towns, as well as the landed proprietors and the clergy of various districts, formed a league against them; and, on the accession of Casimir IV., the third of the Jagellons, to the Polish throne (1447), all Western Prussia revolted from the knights and placed itself under his protection. A terrific war ensued, which was brought to a close in 1466 by the peace of Thorn. By this notable treaty, the independent sovereignty of the Teutonic order in the countries they had held for two centuries was extinguished—the whole of Western Prussia, with the city of Marienburg, and other districts, being annexed to the Polish crown, with guarantees for the preservation of their own forms of administration; and the knights being allowed to retain certain districts of Eastern Prussia, only as vassals of Poland. Thus Poland was once more in possession of that necessity of its existence as a great European state—a seaboard on the Baltic. Exulting in an acquisition for which they had so long struggled, the Poles are said to have danced with joy as they looked on the blue waves and could call them their own. Casimir IV., the hero of this important passage in Polish history, died in 1492; and, though during the reigns of his successors—John Albertus (1492–1501), and Alexander (1501–1506)—the Polish territories suffered some diminution in the direction of Russia, the fruits of the treaty of Thorn were enjoyed in peace. In the reign of the sixth of the Jagellonidæ, however—Sigismund I. (1506–1547)—the Teutonic Knights made an attempt to throw

off their allegiance to Poland. The attempt was made in singular circumstances, and led to a singular conclusion. The grand-master of the Teutonic order at this time was Albert of Brandenburg . . . , a descendant [in the Anspach branch] of that astute Hohenzollern family which in 1411 had possessed itself of the Marquisate of Brandenburg. Albert, carrying out a scheme entertained by the preceding grand-master, refused homage for the Prussian territories of his order to the Polish king Sigismund, and even prepared to win back what the order had lost by the treaty of Thorn. Sigismund, who was uncle to Albert, defeated his schemes, and proved the superiority of the Polish armies over the forces of the once great but now effete order. Albert found it his best policy to submit, and this he did in no ordinary fashion. The Reformation was then in the first flush of its progress over the Continent, and the Teutonic Order of Knights, long a practical anachronism in Europe, was losing even the slight support it still had in surrounding public opinion, as the new doctrines changed men's ideas. What was more, the grand-master himself imbibed Protestant opinions and was a disciple of Luther and Melancthon. He resolved to bring down the fabric of the order about his ears and construct for himself a secular principality out of its ruins. Many of the knights shared or were gained over to his views; so he married a princess, and they took themselves wives — all becoming Protestants together, with the exception of a few tough old knights who transferred their chapter to Mergentheim in Würtemberg, where it remained, a curious relic, till the time of Napoleon. The secularization was formally completed at Cracow in April, 1525. There, in a square before the royal palace, on a throne emblazoned with the arms of Poland and Lithuania — a white eagle for the one, and a mounted knight for the other — the Polish king Sigismund received . . . the banner of the order, the knights standing by and agreeing to the surrender. In return, Sigismund embraced the late grand-master as Duke of Prussia, granting to him and the knights the former possessions of the order, as secular vassals of the Polish crown. The remainder of Sigismund's reign was worthy of this beginning; and at no time was Poland more flourishing than when his son, Sigismund II., the seventh of the Jagellonidæ, succeeded him on the throne. During the wise reign of this prince (1547–1572), whose tolerant policy in the matter of the great religious controversy then agitating Europe is not his least title to credit, Poland lost nothing of her prosperity or her greatness; and one of its last transactions was the consummation of the union between the two nations of Poland and Lithuania by their formal incorporation into one kingdom at the Diet of Lublin (July 1, 1569). But, alas for Poland, this seventh of the Jagellonidæ was also the last, and, on his death in 1572, Poland entered on that career of misery and decline, with the reminiscences of which her name is now associated."—*Poland: her Hist. and Prospects* (*Westminster Rev., January*, 1855).

A. D. 1573.—Election of Henry of Valois to the throne.—The Pacta Conventa.— On the election of Henry of Valois, Duke of Anjou, to the Polish throne (see France: A. D. 1573–1576), he was required to subscribe to a series of articles, known as the Pacta Conventa (and sometimes called the Articles of Henry), which were intended to be the basis of all future covenants between the Poles and their elective sovereigns. The chief articles of the Pacta Conventa were the following: "1. That the king should not in the remotest degree attempt to influence the senate in the choice of a successor; but should leave inviolable to the Polish nobles the right of electing one at his decease. 2. That he should not assume the title of 'master' and 'heir' of the monarchy, as borne by all preceding kings. 3. That he should observe the treaty of peace made with the dissidents. 4. That he should not declare war, or dispatch the nobles on any expedition, without the previous sanction of the diet. 5. That he should not impose taxes or contributions of any description. 6. That he should not have any authority to appoint ambassadors to foreign courts. 7. That in case of different opinions prevailing among the senators, he should espouse such only as were in accordance with the laws, and clearly advantageous to the nation. 8. That he should be furnished with a permanent council, the members of which (16 in number; viz. 4 bishops, 4 palatines, and 8 castellans) should be changed every half year, and should be selected by the ordinary diets. 9. That a general diet should be convoked every two years, or oftener, if required. 10. That the duration of each diet should not exceed six weeks. 11. That no dignities or benefices should be conferred on other than natives. 12. That the king should neither marry nor divorce a wife without the permission of the diet. The violation of any one of these articles, even in spirit, was to be considered by the Poles as absolving them from their oaths of allegiance, and as empowering them to elect another ruler."—S. A. Dunham, *Hist. of Poland, bk.* 2, *ch.* 1.

A. D. 1574-1590.—Disgraceful abandonment of the throne by Henry of Valois.—Election of Stephen Batory.—His successful wars with Russia, and his death.—Election of Sigismund III., of Sweden.— The worthless French prince, Henry of Valois, whom the Poles had chosen to be their king, and whom they crowned at Cracow, on the 21st of February, 1574, "soon sighed for the banks of the Seine: amidst the ferocious people whose authority he was constrained to recognize, and who despised him for his imbecility, he had no hope of enjoyment. To escape their factions, their mutinies, their studied insults, he shut himself up within his palace, and, with the few countrymen whom he had been permitted to retain near his person, he abandoned himself to idleness and dissipation. . . . By the death of his brother [Charles IX. king of France], who died on the 30th of May, 1574, he was become heir to the crown of the Valois. His first object was to conceal the letters which announced that event, and to flee before the Poles could have any suspicion of his intention. The intelligence, however, transpired

through another channel. His senators advised him to convoke a diet, and, in conformity with the laws, to solicit permission of a short absence while he settled the affairs of his new heritage. Such permission would willingly have been granted him, more willingly still had he proposed an eternal separation; but he feared the ambition of his brother the duke of Alençon, who secretly aspired to the throne; and he resolved to depart without it. He concealed his extraordinary purpose with great art," and achieved a most contemptible success in carrying it out,—stealing away from his kingdom like a thief, on the night of the 18th of June. "Some letters found on a table in his apartment attempted to account for his precipitate departure by the urgency of the troubles in his hereditary kingdom; yet he did not reach Lyons till the following year. In a diet assembled at Warsaw, it was resolved that if the king did not return by the 12th of May, 1575, the throne should be declared vacant. Deputies were sent to acquaint him with the decree. . . . After the expiration of the term, the interregnum was proclaimed in the diet of Stenzyca, and a day appointed for a new election. After the deposition of Henry [now become Henry III. of France], no less than five foreign and two native princes were proposed as candidates for the crown. The latter, however, refused to divide the suffrages of the republic, wisely preferring the privilege of electing kings to the honour of being elected themselves. The primate, many of the bishops, and several palatines, declared in favour of an Austrian prince; but the greater portion of the diet (assembled on the plains opposite to Warsaw) were for the princess Anne, sister of Sigismund Augustus, whose hand they resolved to confer on Stephen Batory, duke of Transylvania. Accordingly, Stephen was proclaimed king by Zamoyski, starost of Beltz, whose name was soon to prove famous in the annals of Poland. On the other hand, Uchanski the primate nominated the emperor Maximilian, who was proclaimed by the marshal of the crown: this party, however, being too feeble to contend with the great body of the equestrian order, despatched messengers to hasten the arrival of the emperor; but Zamoyski acted with still greater celerity. While his rival was busied about certain conditions, which the party of the primate forced on Maximilian, Batory arrived in Poland, married the princess, subscribed to every thing required from him, and was solemnly crowned. A civil war appeared inevitable, but the death of Maximilian happily averted the disaster. . . . But though Poland and Lithuania thus acknowledged the new king, Prussia, which had espoused the interests of the Austrian, was less tractable. The country, however, was speedily reduced to submission, with the exception of Dantzic, which not only refused to own him, but insisted on its recognition by the diet as a free and independent republic. . . . Had the Dantzickers sought no other glory than that of defending their city, had they resolutely kept within their entrenchments, they might have beheld the power of their king shattered against the bulwarks below them; but the principles which moved them pushed them on to temerity. . . . Their rashness cost them dear; the loss of 8,000 men compelled them again to seek the shelter of their walls, and annihilated their hope of ultimate success. Fortunately they had to deal with a monarch of extraordinary moderation. . . . Their submission [1577] disarmed his resentment, and left him at liberty to march against other enemies. During this struggle of Stephen with his rebellious subjects, the Muscovites had laid waste Livonia. To punish their audacity, and wrest from their grasp the conquests they had made during the reign of his immediate predecessors, was now his object. . . . Success every where accompanied him. Polotsk, Sakol, Turowla, and many other places, submitted to his arms. The investiture of the duchy (Polotsk, which the Muscovites had reduced in the time of Sigismund I.) he conferred on Gottard duke of Courland. On the approach of winter he returned, to obtain more liberal supplies for the ensuing campaign. Nothing can more strongly exhibit the different characters of the Poles and Lithuanians than the reception he met from each. At Wilna his splendid successes procured him the most enthusiastic welcome; at Warsaw they caused him to be received with sullen discontent. The Polish nobles were less alive to the glory of their country than to the preservation of their monstrous privileges, which, they apprehended, might be endangered under so vigilant and able a ruler. With the aid, however, of Zamoyski and some other leading barons, he again wrung a few supplies from that most jealous of bodies, a diet. . . . Stephen now directed his course towards the province of Novogorod: neither the innumerable marshes, nor the vast forests of these steppes, which had been untrodden by soldier's foot since the days of Witold, could stop his progress; he triumphed over every obstacle, and, with amazing rapidity, reduced the chief fortified towns between Livonia and that ancient mistress of the North. But his troops were thinned by fatigue, and even victory; reinforcements were peremptorily necessary; and though in an enfeebled state of health, he again returned to collect them. . . . The succeeding campaign promised to be equally glorious, when the tsar, by adroitly insinuating his inclination to unite the Greek with the Latin church, prevailed on the pope to interpose for peace. To the wishes of the papal see the king was ever ready to pay the utmost deference. The conditions were advantageous to the republic. If she surrendered her recent conquests — which she could not possibly have retained — she obtained an acknowledgment of her rights of sovereignty over Livonia; and Polotsk, with several surrounding fortresses, was annexed to Lithuania." Stephen Batory died in 1586, having vainly advised the diet to make the crown hereditary, and avert the ruin of the nation. The interregnum which ensued afforded opportunity for a fierce private war between the factions of the Zborowskis and the Zamoyskis. Then followed a disputed election of king, one party proclaiming the archduke Maximilian of Austria, the other Sigismund, prince royal of Sweden — a scion of the Jagellonic family — and both sides resorting to arms. Maximilian was defeated and taken prisoner, and only regained his freedom by relinquishing his claims to the Polish crown.—S. A. Dunham, *Hist. of Poland, bk. 2, ch. 1.*

A. D. 1578-1652.—Anarchy organized by the Nobles.—The extraordinary Constitution imposed by them on the country.—The Liberum

Veto and its effects.—"On the death of the last Jagellon, 1573, at a time when Bohemia and Hungary were deprived of the power of electing their kings, when Sweden renounced this right in favour of its monarchs, Poland renewed its privilege in its most comprehensive form. At a time when European monarchs gradually deprived the great feudal barons of all share in the administration of the law, . . . the Polish nobles destroyed the last vestiges of the royal prerogative. . . . In the year 1578 the kings lost the right of bestowing the patent of nobility, which was made over to the diet. The kings had no share in the legislation, as the laws were made in every interregnum. As soon as the throne became vacant by the death of a king, and before the diet appointed a successor, the nobles of the provinces assembled to examine into the administration of the late king and his senate. Any law that was not approved of could be repealed and new arrangements proposed, which became law if the votes of the diet were unanimous. This unanimity was most easily obtained when a law threatened the individual or when the royal prerogative was to be decreased. . . . The king had no share in the administration, and even the most urgent circumstances did not justify his acting without the co-operation of the senate [which consisted of 17 archbishops and bishops, 33 palatines or woiwodes—'warleaders'—who were governors of provinces or palatinates, and 85 castellans, who were originally commanders in the royal cities and fortresses, but who had become, like the woiwodes, quite independent of the king]. The senate deprived the king of the power of making peace or war. . . . If there was a hostile invasion, war became a matter of course, but it was carried on, on their own account, by the palatines most nearly concerned, and often without the assistance of the king. . . . Bribery, intrigue and party spirit were the only means of influence that could be employed by a king, who was excluded from the administration, who was without domains, without private property or settled revenue, who was surrounded by officers he could not depose and by judges who could be deposed, and who was, in short, without real power of any sort. The senate itself was deprived of its power, and the representatives of the nobles seized upon the highest authority. . . . They alone held the public offices and the highest ecclesiastical benefices. They filled the seats of the judges exclusively, and enjoyed perfect immunity from taxes, duties, &c. . . . Another great evil from which the republic suffered was the abuse of the liberum veto, which, dangerous as it was in itself, had become law in 1652." This gave the power of veto to every single voice in the assemblies of the nobles, or in the meetings of the deputies who represented them. Nothing could be adopted without entire unanimity; and yet deputies to the diet were allowed no discretion. "They received definite instructions as to the demands they were to bring forward and the concessions they were to make. . . . One step only was wanting before unanimity of votes became an impossibility, and anarchy was completely organized. This step was taken when individual palatines enjoined their deputies to oppose every discussion at the diet, till their own proposals had been heard and acceded to. Before long, several deputies received the same instructions, and thus the diet was in fact dissolved before it was opened. Other deputies refused to consent to any proposals, if those of their own province were not accepted; so that the veto of one deputy in a single transaction could bring about the dissolution of the entire diet, and the exercise of the royal authority was thus suspended for two years [since the diet could only be held every other year, to last no longer than a fortnight, and to sit during daylight, only]. . . . No law could be passed, nothing could be resolved upon. The army received no pay. Provinces were desolated by enemies, and none came to their aid. Justice was delayed, the coinage was debased; in short, Poland ceased for the next two years to exist as a state. Every time that a rupture occurred in the diet it was looked on as a national calamity. The curse of posterity was invoked on that deputy who had occasioned it, and on his family. In order to save themselves from popular fury, these deputies were accustomed to hand in their protest in writing, and then to wander about, unknown and without rest, cursed by the nation." —Count Moltke, *Poland: an Historical Sketch, ch.* 3.—"It was not till 1652 . . . that this principle of equality, or the free consent of every individual Pole of the privileged class to every act done in the name of the nation, reached its last logical excess. In that year, the king John Casimir having embroiled himself with Sweden, a deputy in the Diet was bold enough to use the right which by theory belonged to him, and by his single veto, not only arrest the preparations for a war with Sweden, but also quash all the proceedings of the Diet. Such was the first case of the exercise of that liberum veto of which we hear so much in subsequent Polish history, and which is certainly the greatest curiosity, in the shape of a political institution, with which the records of any nation present us. From that time every Pole walked over the earth a conscious incarnation of a power such as no mortal man out of Poland possessed—that of putting a spoke into the whole legislative machinery of his country, and bringing it to a dead lock by his own single obstinacy; and, though the exercise of the power was a different thing from its possession, yet every now and then a man was found with nerve enough to put it in practice. . . . There were, of course, various remedies for this among an inventive people. One, and the most obvious and most frequent, was to knock the vetoist down and throttle him; another, in cases where he had a party at his back, was to bring soldiers round the Diet and coerce it into unanimity. There was also the device of what were called confederations; that is, associations of the nobles independent of the Diet, adopting decrees with the sanction of the king, and imposing them by force on the country. These confederations acquired a kind of legal existence in the intervals between the Diets."—*Poland: her History and Prospects* (*Westminster Rev., Jan.*, 1855).

A. D. 1586-1629.—Election of Sigismund of Sweden to the throne.—His succession to the Swedish crown and his deposition.—His claims and the consequent war. See SCANDINAVIAN STATES (SWEDEN): A. D. 1523–1604; and 1611–1629.

A. D. 1590-1648.—Reigns of Sigismund III. and Ladislaus IV.—Wars with the Muscovites, the Turks and the Swedes.—Domestic

discord in the kingdom.—"The new king, who was elected out of respect for the memory of the house of Jaguello (being the son of the sister of Sigismond Augustus), was not the kind of monarch Poland at that time required. . . . He was too indolent to take the reins of government into his own hands, but placed them in those of the Jesuits and his German favourites. Not only did he thereby lose the affections of his people, but he also lost the crown of Sweden, to which, at his father's death, he was the rightful heir. This throne was wrested from him by his uncle Charles, the brother of the late king [see SCANDINAVIAN STATES (SWEDEN): A. D. 1523–1604]. This usurpation by Charles was the cause of a war between Sweden and Poland, which, although conducted with great skill by the illustrious generals Zamoyski and Chodkiewicz, terminated disastrously for Poland, for, after this war, a part of Livonia remained in the hands of the Swedes." During the troubled state of affairs at Moscow which followed the death, in 1584, of Ivan the Terrible, Sigismond interfered and sent an army which took possession of the Russian capital and remained in occupation of it for some time (see RUSSIA: A. D. 1533–1682). "As a consequence . . . the Muscovites offered the throne of the Czar to Ladislas, the eldest son of the King of Poland, on condition that he would change his religion and become a member of 'the Orthodox Church.' Sigismond III., who was a zealous Catholic, and under the influence of the Jesuits, wishing rather to convert the Muscovites to the Catholic Church, would not permit Ladislas to change his faith — refused the throne of the Czar for his son. . . . By the peace concluded at Moscow, 1619, the fortress of Smolenski and a considerable part of Muscovy remained in the hands of the Poles. . . . Sigismond III., whose reign was so disastrous to Poland, kept up intimate relations with the house of Austria. The Emperor invited him to take part with him . . . in what is historically termed 'the Thirty Years' War.' Sigismond complied with this request, and sent the Emperor of Austria some of his Cossack regiments. . . . Whilst the Emperor was on the one hand engaged in 'the Thirty Years' War,' he was on the other embroiled with Turkey. The Sultan, in revenge for the aid which the Poles had afforded the Austrians, entered Moldavia with a considerable force. Sigismond III. sent his able general Zolkiewski against the Turks, but as the Polish army was much smaller than that of the Turks, it was defeated on the battlefield of Cecora [1621], in Moldavia, [its] general killed, and many of his soldiers taken prisoners. After this unfortunate campaign . . . the Sultan Osman, at the head of 300,000 Mussulmans, confident in the number and valour of his army, marched towards the frontier of Poland with the intention of subjugating the entire kingdom. At this alarming news a Diet was convoked in all haste, at which it was determined that there should be a 'levée en masse,' in order to drive away the terrible Mussulman scourge. But before this levée en masse could be organized, the Hetman Chodkiewicz, who had succeeded Zolkiewski as commander-in-chief, crossed the river Dniester with 35,000 soldiers and 30,000 Cossacks, camped under the walls of the fortress of Chocim [or Kotzim, or Khotzim, or Choczim] and there awaited the enemy, to whom, on his appearance, he gave battle [Sept. 28, 1622], and, notwithstanding the disproportion of the two armies, the Turks were utterly routed. The Moslems left on the battlefield, besides the dead, guns, tents, and provisions. . . . After this brilliant victory a peace was concluded with Turkey; and I think I am justified in saying that, by this victory, the whole of Western Europe was saved from Mussulman invasion. . . . The successful Polish general unhappily did not long survive his brilliant victory. . . . While these events were taking place in the southern provinces, Gustavus Adolphus, who had succeeded to the throne of Sweden, marched into the northern province of Livonia, where there were no Polish troops to resist him (all having been sent against the Turks), and took possession of this Polish province [see SCANDINAVIAN STATES (SWEDEN): A. D. 1611–1629]. Gustavus Adolphus, however, proposed to restore it to Poland on condition that Sigismond III. would renounce all claim to the crown of Sweden, to which the Polish sovereign was the rightful heir. But in this matter, as in all previous ones, the Polish king acted with the same obstinacy, and the same disregard for the interests of the kingdom. He would not accept the terms offered by Gustavus Adolphus, and by his refusal Poland lost the entire province of Livonia with the exception of the city of Dynabourg." Sigismond III. died in 1632, and his eldest son, Ladislas IV., "was immediately elected King of Poland, a proceeding which spared the kingdom all the miseries attendant on an interregnum. In 1633, after the successful campaign against the Muscovites, in which the important fortified city of Smolensk, as well as other territory, was taken, a treaty advantageous to Poland was concluded. Soon afterwards, through the intervention of England and France, another treaty was made between Poland and Sweden by which the King of Sweden restored to Poland a part of Prussia which had been annexed by Sweden. Thus the reign of Ladislas IV. commenced auspiciously with regard to external matters. . . . Unhappily the bitter quarrels of the nobles were incessant; their only unanimity consisted in trying to foil the good intentions of their kings." Ladislas IV. died in 1648, and was succeeded by his brother, John Casimir, who had entered the Order of the Jesuits some years before, and had been made a cardinal by the Pope, but who was now absolved from his vows and permitted to marry.—K. Wolski, *Poland, lect.* 11–12.

A. D. 1610-1612.—Intervention in Russia.—Occupation of and expulsion from Moscow. See RUSSIA: A. D. 1533–1682.

A. D. 1648-1654.—The great revolt of the Cossacks.—Their allegiance transferred to the Russian Czar.—Since 1320, the Cossacks of the Ukraine had acknowledged allegiance, first, to the Grand Duke of Lithuania, and afterwards to the king of Poland on the two crowns becoming united in the Jagellon family [see COSSACKS]. They had long been treated by the Poles with harshness and insolence, and in the time of the hetman Bogdan Khmelnitski, who had personally suffered grievous wrongs at the hands of the Poles, they were ripe for revolt (1648). "His standard was joined by hordes of Tatars from Bessarabia and the struggle partook to a large extent of the nature of a holy war, as the Cossacks and Malo-Russians generally were of the

Greek faith, and their violence was directed against the Roman Catholics and Jews. It would be useless to encumber our pages with the details of the brutal massacres inflicted by the infuriated peasants in this jacquerie; unfortunately their atrocities had been provoked by the cruelties of their masters. Bogdan succeeded in taking Lemberg, and became master of all the palatinate, with the exception of Zamosc, a fortress into which the Polish authorities retreated. On the election of John Casimir as king of Poland, he at once opened negotiations with the successful Cossack, and matters were about to be arranged peacefully. Khmelnitski accepted the 'bulava' of a hetman which was offered him by the king. The Cossacks demanded the restoration of their ancient privileges, the removal of the detested Union — as the attempt to amalgamate the Greek and Latin Churches was called — the banishment of the Jesuits from the Ukraine, and the expulsion of the Jews, with other conditions. They were rejected, however, as impossible, and Prince Wisniowiecki, taking advantage of the security into which the Cossacks were lulled, fell upon them treacherously and defeated them with great slaughter. All compromise now seemed hopeless, but the desertion of his Tatar allies made Bogdan again listen to terms at Zborow. The peace, however, was of short duration, and on the 28th of June, 1651, at the battle of Beresteczko in Galicia, the hosts of Bogdan were defeated with great slaughter. After this engagement Bogdan saw that he had no chance of withstanding the Poles by his own resources, and accordingly sent an embassy to Moscow in 1652, offering to transfer himself and his confederates to the allegiance of the Tsar. The negotiations were protracted for some time, and were concluded at Pereiaslavl, when Bogdan and seventeen Malo-Russian regiments took the oath to Buturlin, the Tsar's commissioner. Quite recently a monument has been erected to the Cossack chief at Kiev, but he seems, to say the least, to have been a man of doubtful honesty. Since this time the Cossacks have formed an integral part of the Russian Empire."—W. R. Morfill, *The Story of Russia, ch.* 6.

A. D. 1668-1696.—Abdication of John Casimir.—War with the Turks.—Election and reign of John Sobieski.—"In 1668, John Casimir, whose disposition had always been that of a monk rather than that of a king, resigned his throne, and retired to France, where he died as Abbé de St. Germain in 1672. He left the kingdom shorn of a considerable part of its ancient dominions; for, besides that portion of it which had been annexed to Muscovy, Poland sustained another loss in this reign by the erection of the Polish dependency of Brandenburg [Prussia] into an independent state — the germ of the present Prussian kingdom. For two years after the abdication of John Casimir, the country was in a state of turmoil and confusion, caused partly by the recent calamities, and partly by intrigues regarding the succession; but in 1670, a powerful faction of the inferior nobles secured the election of Michael Wisniowiecki, an amiable but silly young man. His election gave rise to great dissatisfaction among the Polish grandees; and it is probable that a civil war would have broken out, had not the Poles been called upon to use all their energies against their old enemies the Turks. Crossing the south-eastern frontier of Poland with an immense army, these formidable foes swept all before them. Polish valour, even when commanded by the greatest of Polish geniuses, was unable to check their progress; and in 1672 a dishonourable treaty was concluded, by which Poland ceded to Turkey a section of her territories, and engaged to pay to the sultan an annual tribute of 22,000 ducats. No sooner was this ignominious treaty concluded, than the Polish nobles became ashamed of it; and it was resolved to break the peace, and challenge Turkey once more to a decisive death-grapple. Luckily, at this moment Wisniowiecki died; and on the 20th of April 1674, the Polish diet elected, as his successor, John Sobieski — a name illustrious in the history of Poland. . . . He was of a noble family, his father being castellan of Cracow, and the proprietor of princely estates; and his mother being descended from Zalkiewski, one of the most celebrated generals that Poland had produced. . . . In the year 1660, he was one of the commanders of the Polish army sent to repel the Russians, who were ravaging the eastern provinces of the kingdom. A great victory which he gained at Slobadyssa over the Muscovite general Sheremetoff, established his military reputation, and from that time the name of Sobieski was known over all Eastern Europe. His fame increased during the six years which followed, till he outshone all his contemporaries. He was created by his sovereign, John Casimir, first the Grand-marshal, and afterwards the Grand-hetman of the kingdom; the first being the highest civil, and the second the highest military, dignity in Poland, and the two having never before been held in conjunction by the same individual. These dignities, having once been conferred on Sobieski, could not be revoked; for, by the Polish constitution, the king, though he had the power to confer honours, was not permitted to resume them. . . . When John Casimir abdicated the throne, Sobieski, retaining his office of Grand-hetman under his successor, the feeble Wisniowiecki, was commander-in-chief of the Polish forces against the Turks. In the campaigns of 1671 and 1672, his successes against this powerful enemy were almost miraculous. But all his exertions were insufficient, in the existing condition of the republic, to deliver it from the terror of the impetuous Mussulmans. In 1672, as we have already informed our readers, a disgraceful truce was concluded between the Polish diet and the sultan. . . . When . . . Sobieski, as Grand-hetman, advised the immediate rupture of the dishonourable treaty with the Turks, [the] approval was unanimous and enthusiastic. Raising an army of 30,000 men, not without difficulty, Sobieski marched against the Turks. He laid siege to the fortress of Kotzim, garrisoned by a strong Turkish force, and hitherto deemed impregnable. The fortress was taken; the provinces of Moldavia and Walachia yielded; the Turks hastily retreated across the Danube; and 'Europe thanked God for the most

signal success which, for three centuries, Christendom had gained over the Infidel.' While the Poles were preparing to follow up their victory, intelligence reached the camp that Wisniowiecki was dead. He had died of a surfeit of apples sent him from Danzig.' The army returned home, to be present at the assembling of the diet for the election of the new sovereign. The diet had already met when Sobieski, and those of the Polish nobles who had been with him, reached Warsaw. The electors were divided respecting the claims of two candidates, both foreigners — Charles of Lorraine, who was supported by Austria; and Philip of Neuburg, who was supported by Louis XIV. of France. Many of the Polish nobility had become so corrupt, that foreign gold and foreign influence ruled the diet. In this case, the Austrian candidate seemed to be most favourably received; but, as the diet was engaged in the discussion, Sobieski entered, and taking his place in the diet, proposed the Prince of Condé. A stormy discussion ensued, in the midst of which the cry of 'Let a Pole rule over Poland,' was raised by one of the nobles, who further proposed that John Sobieski should be elected. The proposition went with the humour of the assembly, and Sobieski, under the title of John III., was proclaimed king of Poland (1674). Sobieski accepted the proffered honour, and immediately set about improving the national affairs, founding an institution for the education of Polish nobles, and increasing the army. . . . After several battles of lesser moment with his Turkish foes, Sobieski prepared for a grand effort; but before he could mature his plans, the Pasha of Damascus appeared with an army of 300,000 men on the Polish frontier, and threatened the national subjugation. With the small force he could immediately collect, amounting to not more than 10,000 soldiers, Sobieski opposed this enormous force, taking up his position in two small villages on the banks of the Dniester, where he withstood a bombardment of 20 days. Food and ammunition had failed, but still the Poles held out. Gathering the balls and shells which the enemy threw within their entrenchments, they thrust them into their own cannons and mortars, and dashed them back against the faces of the Turks, who surrounded them on all sides at the distance of a musket-shot. The besiegers were surprised, and slackened their fire. At length, early in the morning of the 14th of October 1676, they saw the Poles issue slowly out of their entrenchments in order of battle, and apparently confident of victory. A superstitious fear came over them at such a strange sight. No ordinary mortal, they thought, could dare such a thing; and the Tartars cried out that it was useless to fight against the wizard king. The pasha himself was superior to the fears of his men; but knowing that succours were approaching from Poland, he offered an honourable peace, which was accepted, and Sobieski returned home in triumph. Seven years of peace followed. These were spent by Sobieski in performing his ordinary duties as king of Poland — duties which the constant jealousies and discords of the nobles rendered by no means easy. . . . It was almost a relief to the hero when, in 1683, a threatened invasion of Christendom by the Turks called him again to the field. . . . After completely clearing Austria of the Turks [see HUNGARY: A. D. 1668–1683], Sobieski returned to Poland, again to be harassed with political and domestic annoyances. . . . Clogged and confined by an absurd system of government, to which the nobles tenaciously clung, his genius was prevented from employing itself with effect upon great national objects. He died suddenly on Corpus Christi Day, in the year 1696; and 'with him,' says the historian, 'the glory of Poland descended to the tomb.' On the death of Sobieski, the crown of Poland was disposed of to the highest bidder. The competitors were James Sobieski, the son of John; the Prince of Conti; the Elector of Bavaria; and Frederick Augustus, Elector of Saxony. The last was the successful candidate, having bought over one half of the Polish nobility, and terrified the other half by the approach of his Saxon troops. He had just succeeded to the electorate of Saxony, and was already celebrated as one of the strongest and most handsome men in Europe. Augustus entertained a great ambition to be a conqueror, and the particular province which he wished to annex to Poland was Livonia, on the Baltic — a province which had originally belonged to the Teutonic Knights, for which the Swedes, Poles, and Russians had long contended; but which had now, for nearly a century, been in the possession of Sweden."—*Hist. of Poland* (*Chambers's Miscellany, no.* 29 (*v.* 4).

A. D. 1696-1698.—Disputed Election of a King.—The crown gained by Augustus of Saxony.—On the death of Sobieski, Louis XIV., of France, put forward the Prince of Conti as a candidate for the vacant Polish throne. "The Emperor, the Pope, the Jesuits and Russia united in supporting the Elector Augustus of Saxony. The Elector had just abjured, in view of the throne of Poland, and the Pope found it quite natural to recompense the hereditary chief of the Lutheran party for having reëntered the Roman Church. The Jesuits, who were only too powerful in Poland, feared the Jansenist relations of Conti. As to the young Czar Peter, he wished to have Poland remain his ally, his instrument against the Turk and the Swede, and feared lest the French spirit should come to reorganize that country. He had chosen his candidate wisely: the Saxon king was to begin the ruin of Poland! The financial distress of France did not permit the necessary sacrifices, in an affair wherein money was to play an important part, to be made in time. The Elector of Saxony, on the contrary, exhausted his States to purchase partisans and soldiers. The Prince de Conti had, nevertheless, the majority, and was proclaimed King at Warsaw, June 27, 1697; but the minority proclaimed and called the Elector, who hastened with Saxon troops, and was consecrated King of Poland at Cracow (September 15). Conti, retarded by an English fleet that had obstructed his passage, did not arrive by sea till September 26 at Dantzic, which refused to receive him. The Prince took with him neither troops nor money. The Elector had had, on the contrary, all the time necessary to organize his resources. The Russians were threatening

Lithuania. Conti, abandoned by a great part of his adherents, abandoned the undertaking, and returned to France in the month of November. . . . In the following year Augustus of Saxony was recognized as King of Poland by all Europe, even by France."—H. Martin, *Hist. of France: Age of Louis XIV., v.* 2, *ch.* 4.

A. D. 1732-1733.—The election to the throne a European question.—France against Russia, Austria and Prussia.—Triumph of the three powers.—The crown renewed to the House of Saxony.—"It became clear that before long a struggle would take place for the Crown of Poland, in which the powers of Europe must interest themselves very closely. Two parties will compete for that uneasy throne: on the one side will stand the northern powers, supporting the claims of the House of Saxony, which was endeavouring to make the Crown hereditary and to restrict it to the Saxon line; on the other side we shall find France alone, desiring to retain the old elective system, and to place on the throne some prince, who, much beholden to her, should cherish French influences, and form a centre of resistance against the dominance of the northern powers. England stands neutral: the other powers are indifferent or exhausted. With a view to the coming difficulty, Russia, Austria, and Prussia, made a secret agreement in 1732, by which they bound themselves to resist all French influences in Poland. With this pact begins that system of nursing and interferences with which the three powers pushed the 'sick man of the North' to its ruin; it is the first stage towards the Partition-treaties. Early in 1733 Augustus II of Poland died: the Poles dreading these powerful neighbours, and drawn, as ever, by a subtle sympathy towards France, at once took steps to resist dictation, declared that they would elect none but a native prince, sent envoys to demand French help, and summoned Stanislaus Leczinski to Warsaw. Leczinski had been the protégé of Charles XII, who had set him on the Polish throne in 1704; with the fall of the great Swede the little Pole also fell (1712); after some vicissitudes he quietly settled at Weissenburg, whence his daughter Marie went to ascend the throne of France as spouse of Louis XV (1725). Now in 1733 the national party in Poland re-elected him their king, by a vast majority of votes: there was, however, an Austro-Russian faction among the nobles, and these, supported by strong armies of Germans and Russians, nominated Augustus III of Saxony to the throne: he had promised the Empress Anne to cede Courland to Russia, and Charles VI he had won over by acknowledging the Pragmatic Sanction. War thus became inevitable: the French majority had no strength with which to maintain their candidate against the forces of Russia and Austria; and France, instead of affording Stanislaus effective support at Warsaw, declared war against Austria. The luckless King was obliged to escape from Warsaw, and took refuge in Danzig, expecting French help: all that came was a single ship and 1,500 men, who, landing at the mouth of the Vistula, tried in vain to break the Russian lines. Their aid thus proving vain, Danzig capitulated, and Stanislaus, a broken refugee, found his way, with many adventures, back to France; Poland submitted to Augustus III."—G. W. Kitchin, *Hist. of France, bk.* 6, *ch.* 2 (*v.* 3).

A. D. 1763-1773.—The First Partition and the events which led to it.—The respective shares of Russia, Austria and Prussia.—"In 1762, Catherine II. ascended the throne of Russia. Everybody knows what ambition filled the mind of this woman; how she longed to bring two quarters of the globe under her rule, or under her influence; and how, above all, she was bent on playing a great part in the affairs of Western Europe. Poland lay between Europe and her empire; she was bound, therefore, to get a firm footing in Poland. . . . On the death of Augustus III., therefore, she would permit no foreign prince to mount the throne of Poland, but selected a native Polish nobleman, from the numerous class of Russian hirelings, and cast her eye upon a nephew of the Czartoriskys, Stanislaus Poniatowsky, a former lover of her own. Above all things she desired to perpetuate the chronic anarchy of Poland, so as to ensure the weakness of that kingdom. . . . A further desire in Catherine's mind arose from her own peculiar position in Russia at that time. She had deposed her Imperial Consort, deprived her son of the succession, and ascended the throne without the shadow of a title. During the first years of her reign, therefore, her situation was extremely critical." She desired to render herself popular, and "she could find nothing more in accordance with the disposition of the Russians . . . than the protection of the Greek Catholics in Poland. Incredible as it may seem, the frantic fanaticism of the Polish rulers had begun, in the preceding twenty or thirty years, to limit and partially to destroy, by harsh enactments, the ancient rights of the Nonconformists. . . . In the year 1763 a complaint was addressed to Catherine by Konisky, the Greek Bishop of Mohilev, that 150 parishes of his diocese had been forcibly Romanised by the Polish authorities. The Empress resolved to recover for the dissenters in Poland at least some of their ancient rights, and thus secure their eternal devotion to herself, and inspire the Russian people with grateful enthusiasm. At this time, however, King Augustus III. was attacked by his last illness. A new king must soon be elected at Warsaw, upon which occasion all the European Powers would make their voices heard. Catherine, therefore, in the spring of 1763, first sounded the Cabinets of Vienna and Berlin, in order, if possible, to gain common ground and their support for her diplomatic action. The

reception which her overtures met with at the two courts was such as to influence the next ten years of the history of Poland and Europe. . . . At Vienna, ever since Peter III. had renounced the Austrian alliance, a very unfavourable feeling towards Russia prevailed. . . . The result was that Austria came to no definite resolution, but returned a sullen and evasive reply. It was far otherwise with Frederick II. of Prussia. That energetic and clear-sighted statesman had his faults, but indecision had never been one of them. He agreed with Catherine in desiring that Poland should remain weak. On the other hand, he failed not to perceive that an excessive growth of Russia, and an abiding Russian occupation of Poland, might seriously threaten him. Nevertheless, he did not waver a moment. . . . He needed a powerful ally. . . . Russia alone was left, and he unhesitatingly seized her offered hand. . . . It was proposed to him that six articles should be signed, with certain secret provisions, by which were secured the election of a native for the throne of Poland, the maintenance of the Liberum Veto (i. e., of the anarchy of the nobles), and the support of the Nonconformists; while it was determined to prevent in Sweden all constitutional reforms. Frederick, who was called upon to protect the West Prussian Lutherans, just as the aid of Catherine had been sought by the Greek Bishop of Mohilev, made no objection. After the death of King Augustus III. of Poland, in October, 1763, Frederick signed the above treaty, April 11th, 1764. This understanding between the two Northern Powers caused no small degree of excitement at Vienna. It was immediately feared that Prussia and Russia would at once seize on Polish provinces. . . . This anxiety, however, was altogether premature. No one at St. Petersburg wished for a partition of Poland, but for increased influence over the entire Polish realm. Frederick II., for his part, did not aim at any territorial extension, but would abandon Poland for the time to Russia, that he might secure peace for his country by a Russian alliance. . . . Meanwhile, matters in Poland proceeded according to the wishes of Catherine. Her path was opened to her by the Poles themselves. It was at the call of the Czartoriskys [a wealthy and powerful Polish family], that a Russian army corps of 10,000 men entered the country, occupied Warsaw, and put down the opposing party. It was under the same protection that Stanislaus Poniatowsky was unanimously elected King, on September 1st, 1764. But the Czartoriskys were too clever. They intended, after having become masters of Poland by the help of Russia, to reform the constitution, to establish a regular administration, to strengthen the Crown, and finally to bow the Russians out of the kingdom." The Czartoriskys were soon at issue with the Russian envoy, who commanded the support of all their political opponents, together with that of all the religious Nonconformists, both in the Greek Church and among the Protestants. The King, too, went over to the latter, bought by a Russian subsidy. But this Russian confederation was speedily broken up, when the question of granting civil equality to the Nonconformists came up for settlement. The Russians carried the measure through by force and the act embodying it was signed March 5, 1768. "It was just here that the conflagration arose which first brought fearful evils upon the country itself, and then threatened all Europe with incalculable dangers. At Bar, in Podolia, two courageous men, Pulawski and Krasinski, who were deeply revolted at the concession of civil rights to heretics, set on foot a new Confederation to wage a holy war for the unity and purity of the Church. . . . The Roman Catholic population of every district joined the Confederation. . . . A terrible war began in the southern provinces. . . . The war on both sides was carried on with savage cruelty; prisoners were tortured to death; neither person nor property was spared. Other complications soon arose. . . . When . . . the Russians, in eager pursuit of a defeated band of Confederates, crossed the Turkish frontier, and the little town of Balta was burnt during an obstinate fight, . . . the Sultan, in an unexpected access of fury, declared war against Russia in October, 1768, because, as he stated in his manifesto, he could no longer endure the wrong done to Poland [see TURKS: A. D. 1768–1774]. Thus, by a sudden turn of affairs, this Polish question had become a European question of the first importance; and no one felt the change more deeply than King Frederick II. He knew Catherine well enough to be sure that she would not end the war now begun with Turkey, without some material gain to herself. It was equally plain that Austria would never leave to Russia territorial conquests of any great extent in Turkey. . . . The slightest occurrence might divide all Europe into two hostile camps; and Germany would, as usual, from her central position, have to suffer the worst evils of a general war. Frederick II. was thrown into the greatest anxiety by this danger, and he meditated continually how to prevent the outbreak of war. The main question in his mind was how to prevent a breach between Austria and Russia. Catherine wanted to gain more territory, while Austria could not allow her to make any conquests in Turkey. Frederick was led to inquire whether greater compliance might not be shown at Vienna, if Catherine, instead of a Turkish, were to take a Polish province, and were also to agree, on her part, to an annexation of Polish territory by Austria?" When this scheme — put forward as one originating with Count Lynar, a Saxon diplomatist — was broached at St. Peters burg, it met with no encouragement; but subsequently the same plan took shape in the mind of the young Emperor Joseph II., and he persuaded his mother, Maria Theresa, to consent to it. Negotiations to that end were opened with the Russian court. "After the foregoing proceedings, it was easy for Russia and Prussia to come to a speedy agreement. On February 17, 1772, a treaty was signed allotting West Prussia to the King, and the Polish territories east of the Dneiper and Duna to the Empress. The case of Austria was a more difficult one. . . . The treaty of partition was not signed by the three Powers until August, 1772. . . . The Prussian and Austrian troops now entered Poland on every side, simultaneously with the Russians. The bands of the Confederates, which had hitherto kept the Russians on the alert, now dispersed without further attempt at resistance. As soon as external tranquillity had been restored, a Diet was convened, in order at once to legalise the cession of the provinces to the three Powers by a formal compact, and to regulate

the constitutional questions which had been unsettled since the revolt of the Confederation of Bar. It took some time to arrive at this result, and many a bold speech was uttered by the Poles; but it is sad to think that the real object of every discussion was the fixing the amount of donations and pensions which the individual senators and deputies were to receive from the Powers for their votes. Hereupon the act of cession was unanimously passed. . . . The Liberum Veto, the anarchy of the nobles, and the impotence of the Sovereign, were continued."—H. von Sybel, *The First Partition of Poland* (*Fortnightly Rev., July*, 1874, *v.* 22).—"One's clear belief . . . is of two things: First, that, as everybody admits, Friedrich had no real hand in starting the notion of Partitioning Poland;—but that he grasped at it with eagerness as the one way of saving Europe from War: Second, what has been much less noticed, that, under any other hand, it would have led Europe to War; and that to Friedrich is due the fact that it got effected without such accompaniment. [Carlyle's statement of the sharing of the Polish territory in the several partitions is incorrect. The following, from Witzleben, is more trustworthy: Russia, 8782 German square miles; Prussia, 2641; Austria, 2205] . . . Friedrich's share . . . as filling up the always dangerous gap between his Ost-Preussen and him, has, under Prussian administration, proved much the most valuable of the Three; and, next to Silesia, is Friedrich's most important acquisition. September 13th, 1772, it was at last entered upon,—through such waste-weltering confusions, and on terms never yet unquestionable. Consent of Polish Diet was not had for a year more; but that is worth little record."—T. Carlyle, *Hist. of Frederick the Great, bk.* 21, *ch.* 4 (*v.* 6).

Also in: W. Coxe, *Hist. of the House of Austria, ch.* 119 (*v.* 3).

A. D. 1791-1792.—The reformed Constitution of 1791 and its Russian strangulation.—"After the first Partition of Poland was completed in 1776, that devoted country was suffered for sixteen years to enjoy an interval of more undisturbed tranquillity than it had known for a century. Russian armies ceased to vex it. The dispositions of other foreign powers became more favourable. Frederic II now entered on that spotless and honourable portion of his reign, in which he made a just war for the defence of the integrity of Bavaria, and of the independence of Germany. . . . Attempts were not wanting to seduce him into new enterprises against Poland. . . . As soon as Frederic returned to counsels worthy of himself, he became unfit for the purposes of the Empress, who, in 1780, refused to renew her alliance with him, and found a more suitable instrument of her designs in the restless character, and shallow understanding, of Joseph II, whose unprincipled ambition was now released from the restraint which his mother's scruples had imposed on it. . . . Other powers now adopted a policy, of which the influence was favourable to the Poles. Prussia, as she receded from Russia, became gradually connected with England, Holland, and Sweden; and her honest policy in the care of Bavaria placed her at the head of all the independent members of the Germanic Confederacy. Turkey declared war against Russia; and the Austrian Government was disturbed by the discontent and revolts which the precipitate innovations of Joseph had excited in various provinces of the monarchy. A formidable combination against the power of Russia was in process of time formed. . . . In the treaty between Prussia and the Porte, concluded at Constantinople in January, 1790, the contracting parties bound themselves to endeavour to obtain from Austria the restitution of those Polish provinces to which she had given the name of Galicia. During the progress of these auspicious changes, the Polish nation began to entertain the hope that they might at length be suffered to reform their institutions, to provide for their own quiet and safety, and to adopt that policy which might one day enable them to resume their ancient station among European nations. From 1778 to 1788, no great measures had been adopted; but no tumults disturbed the country: reasonable opinions made some progress, and a national spirit was slowly reviving. The nobility patiently listened to plans for the establishment of a productive revenue and a regular army; a disposition to renounce their dangerous right of electing a king made perceptible advances; and the fatal law of unanimity had been so branded as an instrument of Russian policy, that in the Diets of these ten years no nuncio was found bold enough to employ his negative. . . . In the midst of these excellent symptoms of public sense and temper, a Diet assembled at Warsaw in October 1788, from whom the restoration of the republic was hoped, and by whom it would have been accomplished, if their prudent and honest measures had not been defeated by one of the blackest acts of treachery recorded in the annals of mankind. . . . The Diet applied itself with the utmost diligence and caution to reform the State. They watched the progress of popular opinion, and proposed no reformation till the public seemed ripe for its reception." On the 3d of May, 1791, a new Constitution, which had been outlined and discussed in the greater part of its provisions, during most of the previous two years, was reported to the Diet. That body had been doubled, a few months before, by the election of new representatives from every Dietine, who united with the older members, in accordance with a law framed for the occasion. By this double Diet, the new Constitution was adopted on the day of its presentation, with only twelve dissentient voices. "Never were debates and votes more free: these men, the most hateful of apostates, were neither attacked, nor threatened, nor insulted." The new Constitution "confirmed the rights of the Established Church, together with religious liberty, as dictated by the charity which religion inculcates and inspires. It established an hereditary monarchy in the Electoral House of Saxony; reserving to the nation the right of choosing a new race of Kings, in case of the extinction of that family. The executive power was vested in the King, whose ministers were responsible for its exercise. The Legislature was divided into two Houses, the Senate and the House of Nuncios, with respect to whom the ancient constitutional language and forms were preserved. The necessity of unanimity [the Liberum Veto] was taken away, and, with it, those dangerous remedies of Confederation and Confederate Diets which it had rendered necessary. Each considerable town received new rights, with a restoration of all their

ancient privileges. The burgesses recovered the right of electing their own magistrates. . . . All the offices of the State, the law, the church, and the army, were thrown open to them. The larger towns were empowered to send deputies to the Diet, with a right to vote on all local and commercial subjects, and to speak on all questions whatsoever. All these deputies became noble, as did every officer of the rank of captain, and every lawyer who filled the humblest office of magistracy, and every burgess who acquired a property in land paying £5 of yearly taxes. . . . Industry was perfectly unfettered. . . . Numerous paths to nobility were thus thrown open. Every art was employed to make the ascent easy. . . . Having thus communicated political privileges to hitherto disregarded freemen, . . . the constitution extended to all serfs the full protection of law, which before was enjoyed by those of the Royal demesnes; and it facilitated and encouraged voluntary manumission. . . . The storm which demolished this noble edifice came from abroad. . . . The remaining part of the year 1791 passed in quiet, but not without apprehension. On the 9th of January, 1792, Catharine concluded a peace with Turkey at Jassy; and, being thus delivered from all foreign enemies, began once more to manifest intentions of interfering in the affairs of Poland. . . . A small number of Polish nobles furnished her with that very slender pretext with which she was always content. Their chiefs were Rzewuski . . . and Felix Potocki. . . . These unnatural apostates deserted their long-suffering country at the moment when, for the first time, hope dawned on her. . . . They were received by Catharine with the honours due from her to the betrayers of their country. On the 12th of May, 1792, they formed a Confederation at Targowitz. On the 18th, the Russian minister at Warsaw declared that the Empress, 'called on by many distinguished Poles who had confederated against the pretended constitution of 1791, would, in virtue of her guarantee, march an army into Poland to restore the liberties of the Republic.'" The hope, meantime, of help from Prussia, which had been pledged to Poland by a treaty of alliance in March, 1790, was speedily and cruelly deceived. "Assured of the connivance of Prussia, Catharine now poured an immense army into Poland, along the whole line of frontier, from the Baltic to the neighbourhood of the Euxine. The spirit of the Polish nation was unbroken. . . . A series of brilliant actions [especially at Polonna and Dubienka] occupied the summer of 1792, in which the Polish army [under Poniatowski and Kosciusko], alternately victorious and vanquished, gave equal proofs of unavailing gallantry. Meantime Stanislaus . . . on the 4th of July published a proclamation declaring that he would not survive his country. But, on the 22d of the same month . . . [he] declared his accession to the Confederation of Targowitz; and thus threw the legal authority of the republic into the hands of that band of conspirators. The gallant army, over whom the Diet had intrusted their unworthy King with absolute authority, were now compelled, by his treacherous orders, to lay down their arms. . . . Such was the unhappy state of Poland during the remainder of the year 1792," while the Empress of Russia and the King of Prussia were secretly arranging the terms of a new Treaty of Partition.—Sir J. Mackintosh, *Account of the Partition of Poland* (*Edinburgh Rev., Nov.*, 1822; *reprinted in Miscellaneous Works*).

Also in: H. Von Sybel, *Hist. of the French Rev., bk.* 2, *ch.* 1 *and* 6, *bk.* 4, *ch.* 1, *and bk.* 6 (*v.* 1–2).—A. Gielgud, *The Centenary of the Polish Constitution* (*Westminster Rev., v.* 135, *p.* 547).—F. C. Schlosser, *Hist. of the* 18*th Century, v.* 6, *div.* 1, *ch.* 2, *sect.* 4.—See, also, Germany: A. D. 1791–1792.

A. D. 1793-1796.—The Second and Third Partitions.—Extinction of Polish nationality.—"The Polish patriots, remaining in ignorance of the treaty of partition, were unconscious of half their misfortunes. The King of Prussia in his turn crossed the western frontier [January, 1793], announcing in his manifesto that the troubles of Poland compromised the safety of his own States, that Dantzig had sent corn to the French revolutionaries, and that Great Poland was infested by Jacobin clubs, whose intrigues were rendered doubly dangerous by the continuation of the war with France. The King of Prussia affected to see Jacobins whenever it was his interest to find them. The part of each of the powers was marked out in advance. Russia was to have the eastern provinces, with a population of 3,000,000, as far as a line drawn from the eastern frontier of Courland, which, passing Pinsk, ended in Gallicia, and included Borissof, Minsk, Sloutsk, Volhynia, Podolia, and Little Russia. Prussia had the long-coveted cities of Thorn and Dantzig, as well as Great Poland, Posen, Gnezen, Kalisch, and Czenstochovo. If Russia still only annexed Russian or Lithuanian territory, Prussia for the second time cut Poland to the quick, and another million and a half of Slavs passed under the yoke of the Germans. It was not enough to despoil Poland, now reduced to a territory less extensive than that occupied by Russia; it was necessary that she should consent to the spoliation—that she should legalise the partition. A diet was convoked at Grodno, under the pressure of the Russian bayonets," and by bribery as well as by coercion, after long resistance, the desired treaty of cession was obtained. "The Polish troops who were encamped on the provinces ceded to the Empress, received orders to swear allegiance to her; the army that remained to the republic consisted only of 15,000 men." Meantime, Kosciuszko, who had won reputation in the war of the American Revolution, and enhanced it in the brief Polish struggle of 1792, was organizing throughout Poland a great revolt, directing the work from Dresden, to which city he had retired. "The order to disband the army hastened the explosion. Madalinski refused to allow the brigade that he commanded to be disarmed, crossed the Bug, threw himself on the Prussian Provinces, and then fell back on Cracow. At his approach, this city, the second in Poland, the capital of the ancient kings, rose and expelled the Russian garrison. Kosciuszko hastened to the scene of action, and put forth the 'act of insurrection,' in which the hateful conduct of the co-partitioners was branded, and the population called to arms. Five thousand scythes were made for the peasants, the voluntary offerings of patriots were collected, and those of obstinate and lukewarm people were extracted by force." On the 17th of April, 1794, the inhabitants of Warsaw rose and expelled the Russian troops, who left behind,

on retreating, 4,000 killed and wounded, 2,000 prisoners, and 12 cannon. "A provisional government installed itself at Warsaw, and sent a courier to Kosciuszko." But Russian, Prussian and Austrian armies were fast closing in upon the ill-armed and outnumbered patriots. The Prussians took Cracow; the Russians mastered Wilna; the Austrians entered Lublin; and Kosciuszko, forced to give battle to the Russians, at Macciowice, October 10, was beaten, and, half dead from many wounds, was left a prisoner in the hands of his enemies. Then the victorious Russian army, under Souvorof, made haste to Warsaw and carried the suburb of Praga by storm. "The dead numbered 12,000; the prisoners only one." Warsaw, in terror, surrendered, and Poland, as an independent state, was extinguished. "The third treaty of partition, forced on the Empress by the importunity of Prussia, and in which Austria also took part, was put in execution [1795–1796]. Russia took the rest of Lithuania as far as the Niemen (Wilna, Grodno, Kovno, Novogrodek, Slonim), and the rest of Volhynia to the Bug (Vladimir, Loutsk, and Kremenetz). . . . Besides the Russian territory, Russia also annexed the old Lithuania of the Jagellons, and finally acquired Courland and Samogitia. Prussia had all Eastern Poland, with Warsaw; Austria had Cracow, Sandomir, Lublin, and Chelm."—A. Rambaud, *Hist. of Russia, v.* 2, *ch.* 10.

Also in: R. N. Bain, *The Second Partition of Poland* (*Eng. Historical Rev., April*, 1891).—H. von Sybel, *Hist. of the French Rev., bk.* 7, *ch.* 5, *bk.* 9, *ch.* 3 (*v.* 3); *and bk.* 10, *ch.* 2–4 (*v.* 4).—See, also, France: A. D. 1793 (March—September).

A. D. 1807.—Prussian provinces formed into the grand duchy of Warsaw, and given to the king of Saxony. See Germany: A. D. 1807 (June—July).

A. D. 1809.—Cession of part of Bohemia, Cracow, and western Galicia, by Austria, to the grand duchy of Warsaw. See Germany: A. D. 1809 (July—September).

A. D. 1812.—Fresh attempt to re-establish the kingdom, not encouraged by Napoleon. See Russia: A. D. 1812 (June—September).

A. D. 1814-1815.—The Polish question in the Congress of Vienna.—The grand duchy of Warsaw given to Russia.—Constitution granted by the Czar. See Vienna, The Congress of.

A. D. 1830-1832.—Rising against the Russian oppressor.—Courageous struggle for independence.—Early victories and final defeat.—Barbarity of the conqueror.—"Poland, like Belgium and the Romagna, had felt the invigorating influence of the Revolution of July [in France]. The partition of Poland had been accomplished in a dark period of the preceding century. It was almost universally regarded in Western Europe as a mistake and a crime. It was a mistake to have removed the barrier which separated Russia from the West; it was a crime to have sacrificed a free and brave people to the ambition of a relentless autocrat. . . . The cause of freedom was identified with the cause of Poland, 'and freedom shrieked' when Poland's champion 'fell.' The statesmen, however, who parcelled out Europe amongst the victorious autocrats in 1815 were incapable of appreciating the feelings which had inspired the Scotch poet. Castlereagh, indeed, endeavoured to make terms for Poland. But he did not lay much stress on his demands. He contented himself with obtaining the forms of constitutional government for the Poles. Poland, constituted a kingdom, whose crown was to pass by hereditary succession to the Emperors of Russia, was to be governed by a resident Viceroy, assisted by a Polish Diet. Constantine, who had abdicated the crown of Russia in his brother's favour, was Viceroy of Poland. . . . He was residing at Warsaw when the news of the glorious days of July reached Poland. The Poles were naturally affected by the tidings of a revolution which had expelled autocracy from France. Kosciusko—the hero of 1794—was their favourite patriot. The cadets at the Military School in Warsaw, excited at the news, drank to his memory. Constantine thought that young men who dared to drink to Kosciusko deserved to be flogged. The cadets, learning his decision, determined on resisting it. Their determination precipitated a revolution which, perhaps, under any circumstances, would have occurred. Every circumstance which could justify revolt existed in Poland. The Constitution provided for the regular assembly of the Diet: the Diet had not been assembled for five years. The Constitution declared that taxes should not be imposed on the Poles without the consent of their representatives: for fifteen years no budget had been submitted to the Diet. The Constitution provided for the personal liberty of every Pole: the Grand Duke seized and imprisoned the wretched Poles at his pleasure. The Constitution had given Poland a representative government; and Constantine, in defiance of it, had played the part of an autocrat. The threat of punishment, which Constantine pronounced against the military cadets, merely lighted the torch which was already prepared. Eighteen young men, armed to the teeth, entered the Grand Duke's palace and forced their way into his apartments. Constantine had just time to escape by a back staircase. His flight saved his life. . . . The insurrection, commenced in the Archduke's palace, soon spread. Some of the Polish regiments passed over to the insurgents. Constantine, who displayed little courage or ability, withdrew from the city; and, on the morning of the 30th of November [1830], the Poles were in complete possession of Warsaw. They persuaded Chlopicki, a general who had served with distinction under Suchet in Spain, to place himself at their head. . . . Raised to the first position in the State, his warmest counsellors urged him to attack the few thousand men whom Constantine still commanded. Chlopicki preferred negotiating with the Russians. The negotiation, of course, failed. . . . Chlopicki—his own well-intentioned effort having failed—resigned his office; and his fellowcountrymen invested Radziwil with the command of their army, and placed Adam Czartoryski at the head of the Government. In the meanwhile Nicholas was steadily preparing for the contest which was before him. Diebitsch, who had brought the campaign of 1829 to a victorious conclusion, was entrusted with the command of the Russian army. . . . Three great military roads converge from the

east upon Warsaw. The most northerly of these enters Poland at Kovno, crosses the Narew, a tributary of the Bug, at Ostrolenka, and runs down the right bank of the first of these rivers; the central road crosses the Bug at Brzesc and proceeds almost due west upon Warsaw; the most southerly of the three enters Poland from the Austrian frontier, crosses the Vistula at Gora, and proceeds along its west bank to the capital. Diebitsch decided on advancing by all three routes on Warsaw. . . . Diebitsch, on the 20th of February, 1831, attacked the Poles; on the 25th he renewed the attack. The battle on the 20th raged round the village of Grochow; it raged on the 25th round the village of Praga. Fought with extreme obstinacy, neither side was able to claim any decided advantage. The Russians could boast that the Poles had withdrawn across the Vistula. The Poles could declare that their retreat had been conducted at leisure, and that the Russians were unable or unwilling to renew the attack. Diebitsch himself, seriously alarmed at the situation into which he had fallen, remained for a month in inaction at Grochow. Before the month was over Radziwil, who had proved unequal to the duties of his post, was superseded in the command of the Polish army by Skrzynecki. On the 30th of March, Skrzynecki crossed the Vistula at Praga, and attacked the division of the Russian army which occupied the forest of Waver, near Grochow. The attack was made in the middle of the night. The Russians were totally defeated; they experienced a loss of 5,000 in killed and wounded, and 6,000 prisoners. Crippled by this disaster, Diebitsch fell back before the Polish army. Encouraged by his success, Skrzynecki pressed forward in pursuit. The great central road by which Warsaw is approached crosses the Kostczyn, a tributary of the Bug, near the little village of Iganie, about half-way between Russia and Warsaw. Eleven days after the victory of the 30th of March the Russians were again attacked by the Poles at Iganie. The Poles won a second victory. The Russians, disheartened at a succession of reverses, scattered before the attack; and the cause of Poland seemed to have been already won by the gallantry of her children and the skill of their generals. Diebitsch, however, defeated at Grochow and Iganie, was not destroyed. . . . Foregoing his original intention of advancing by three roads on Warsaw, he determined to concentrate his right on the northern road at Ostrolenka, his left, on the direct road at Siedlice. It was open to Skrzynecki to renew the attack, where Diebitsch expected it, and throw himself on the defeated remnants of the Russian army at Siedlice. Instead of doing so he took advantage of his central situation to cross the Bug and throw himself upon the Russian right at Ostrolenka. . . . Skrzynecki had reason to hope that he might obtain a complete success before Diebitsch could by any possibility march to the rescue. He failed. Diebitsch succeeded in concentrating his entire force before the destruction of his right wing had been consummated. On the 26th of May, Skrzynecki found himself opposed to the whole Russian army. Throughout the whole of that day the Polish levies gallantly struggled for the victory. When evening came they remained masters of the field which had been the scene of the contest. A negative victory of this character, however, was not the object of the great movement upon the Russian right. The Polish general, his army weakened by heavy losses, resolved on retiring upon Warsaw. Offensive operations were over: the defensive campaign had begun. Victory with the Poles had, in fact, proved as fatal as defeat. The Russians, relying upon their almost illimitable resources, could afford to lose two men for every one whom Poland could spare. . . . It happened, too, that a more fatal enemy than even war fell upon Poland in the hour of her necessity. The cholera, which had been rapidly advancing through Russia during 1830, broke out in the Russian army in the spring of 1831. The prisoners taken at Iganie communicated the seeds of infection to the Polish troops. Both armies suffered severely from the disease; but the effects of it were much more serious to the cause of Poland than to the cause of Russia. . . . A fortnight after the battle of Ostrolenka, Diebitsch, who had advanced his head-quarters to Pultusk, succumbed to the malady. In the same week Constantine, the Viceroy of Poland, and his Polish wife, also died. . . . Diebitsch was at once succeeded in the command by Paskievitsch, an officer who had gained distinction in Asia Minor. . . . On the 7th of July, Paskievitsch crossed the Vistula at Plock, and threatened Warsaw from the rear. . . . Slowly and steadily he advanced against the capital. On the 6th of September he attacked the devoted city. Inch by inch the Russians made their way over the earthworks which had been constructed in its defence. On the evening of the 7th the town was at their mercy; on the 8th it capitulated. . . . The news of its fall reached Paris on the 15th of September. The news of Waterloo had not created so much consternation in the French capital. Business was suspended; the theatres were closed. The cause of Poland was in every mind, the name of Poland on every tongue. . . . On the 26th of February, 1832, Nicholas promulgated a new organic statute for the government of Poland, which he had the insolence to claim for Russia by the right of conquest of 1815. A draft of the statute reached Western Europe in the spring of 1832. About the same time stories were received of the treatment which the Russians were systematically applying to the ill-fated country. Her schools were closed; her national libraries and public collections removed; the children of the Poles were carried into Russia; their fathers were swept into the Russian army; whole families accused of participation in the rebellion were marched into the interior of the empire; columns of Poles, it was stated, could be seen on the Russian roads linked man to man by bars of iron; and little children, unable to bear the fatigues of a long journey, were included among them; the dead bodies of those who had perished on the way could be seen on the sides of the Russian roads. The wail of their wretched mothers — 'Oh, that the Czar could be drowned in our tears!' — resounded throughout Europe."—S. Walpole, *Hist. of England, ch.* 16 (*v.* 3).

A. D. 1846.— Insurrection in Galicia suppressed.—Extinction of the republic of Cracow.—Its annexation to Austria. See Austria: A. D. 1815–1846.

A. D. 1860-1864.—The last insurrection.—"In 1860 broke out the last great Polish insurrection, in all respects a very ill-advised attempt. On the 29th of November of that year, on the occasion of the 30th anniversary of the revolution of 1830, national manifestations, taking a religious form, took place in the Warsaw churches. . . . On the 25th of February, 1861, on the anniversary of the battle of Grochow, the Agricultural Society of that city, presided over by Count Zamojski, held a meeting for the purpose of presenting a petition to the Emperor to grant a constitution. Although the Tsar did not concede this demand, he decreed by an ukase of the 26th of March a council of state for the kingdom, elective councils in each government, and municipal councils in Warsaw and the chief cities. Moreover, the Polish language was to be adopted in all the schools of the kingdom. . . . On the 8th of April the people appeared in crowds in front of the castle of the Viceroy, and when they refused to disperse, were fired upon by the soldiers. About 200 persons were killed in this unfortunate affair, and many more wounded. The viceroyalty of Count Lambert was not successful in conciliating the people; he was succeeded by Count Lüders, who was reactionary in his policy. An attempt was made in June, 1862, on the life of the Count in the Saxon Garden (Saksonski Sad), and he was soon afterwards recalled; his place being taken by the Grand Duke Constantine, who was chiefly guided by the Marquis Wielopolski, an unpopular but able man. Two attempts were made upon the life of the Grand Duke, the latter of which was nearly successful; the life of Wielopolski was also several times in danger. . . . On the night of June 15, 1863, a secret conscription was held, and the persons considered to be most hostile to the Government were taken in their beds and forcibly enlisted. Out of a population of 180,000 the number thus seized at Warsaw was 2,000; soon after this the insurrection broke out. Its proceedings were directed by a secret committee, styled Rzad (Government), and were as mysterious as the movements of the celebrated Fehmgerichte. The Poles fought under enormous difficulties. Most of the bands consisted of undisciplined men, unfamiliar with military tactics, and they had to contend with well-organised troops. Few of them had muskets; the generality were armed only with pikes, scythes, and sticks. . . . The bands of the insurgents were chiefly composed of priests, the smaller landowners, lower officials, and peasants who had no land, but those peasants who possessed any land refused to join. Many showed but a languid patriotism on account of the oppressive laws relating to the poorer classes, formerly in vigour in Poland, of which the tradition was still strong. The war was only guerilla fighting, in which the dense forests surrounding the towns were of great assistance to the insurgents. The secret emissaries of the revolutionary Government were called stiletcziki, from the daggers which they carried. They succeeded in killing many persons who had made themselves obnoxious to the national party. . . . No quarter was given to the chiefs of the insurgents; when captured they were shot or hanged. . . . When the Grand Duke Constantine resigned the viceroyalty at Warsaw he was succeeded by Count Berg. . . . By May, 1864, the insurrection was suppressed, but it had cost Poland dear. All its old privileges were now taken away; henceforth all teaching, both in the universities and schools, must be in the Russian language. Russia was triumphant, and paid no attention to the demands of the three Great Powers, England, France, and Austria. Prussia had long been silently and successfully carrying on her plan for the Germanisation of Posen, and on the 8th of February, 1863, she had concluded a convention with Russia with a view of putting a stop to the insurrection. Her method throughout has been more drastic; she has slowly eliminated or weakened the Polish element, carefully avoiding any of those reprisals which would cause a European scandal."—W. R. Morfill, *The Story of Poland, ch.* 12.

A. D. 1868.—Complete incorporation with Russia.—By an imperial ukase, February 23, 1868, the government of Poland was absolutely incorporated with that of Russia.

POLAR EXPLORATION.—A Chronological Record.

1500–1502.—Discovery and exploration of the coast of Labrador and the entrance of Hudson Strait by the Cortereals.

1553.—Voyage of Willoughby and Chancellor from London, in search of a northeast passage to India. Chancellor reached Archangel on the White Sea and learned that he was in the dominions of the sovereign of Muscovy or Russia. With much difficulty he obtained permission to visit the court at Moscow, and made the long journey to that city by sledge over the snow. There he was admitted to an interview with the Tsar, and returned with a letter which permitted the opening of trade between England and Russia. Willoughby, with two vessels and their crews, was less fortunate. His party, after wintering on a desolate shore, perished the next year in some manner, the particulars of which were never known. The two ships, with their dead crews, were found long afterwards by Russian sailors, and their log-book recovered, but it told nothing of the tragical end of the voyage. The chartered company of London merchants which sent out these expeditions is believed to have been the first joint stock corporation of shareholders formed in England. As the Russia Company, it afterwards became a rich and powerful corporation, and its success set other enterprises in motion.

1556.—Exploring voyage of Stephen Burroughs to the northeast, approaching Nova Zembla.

1576–1578.—Voyages of Frobisher to the coast of Labrador and the entrance to Davis Strait, discovering the bay which bears his name, and which he supposed to be a strait leading to Cathay; afterwards entering Hudson Strait. Having brought from his first voyage a certain glittering stone which English goldsmiths concluded to be ore of gold, his second and third voyages were made to procure cargoes of the imagined ore, and to found a colony in the frozen region from which it came. The golden ore proved delusive; the colony was never planted.

1580.—Northeastern voyage of Pet and Jackman, passing Nova Zembla.

1585-1587.—Three voyages of John Davis from Dartmouth, in search of a northwestern

passage to India, entering the strait between Greenland and Baffinland which bears his name and exploring it to the 72nd degree north latitude.

1594-1595.—Dutch expeditions (the first and second under Barentz) to the northeast, passing to the north of Nova Zembla, or Novaya Zemlya, but making no progress beyond it.

1596-1597.—Third voyage of Barentz, when he discovered and coasted Spitzbergen, wintered in Nova Zembla with his crew, lost his ship in the ice, and perished, with one third of his men, in undertaking to reach the coast of Lapland in open boats.

1602. Exploration for a northwest passage by Captain George Weymouth, for the Muscovy Company and the Levant Company, resulting in nothing but a visitation of the entrance to Hudson Strait.

1607.—Polar voyage of Henry Hudson, for the Muscovy Company of London, attaining the northern coast of Spitzbergen.

1608.—Voyage of Henry Hudson to Nova Zembla for the Muscovy Company.

1610.—Voyage of Henry Hudson, in English employ, to seek the northwest passage, being the voyage in which he passed through the Strait and entered the great Bay to which his name has been given, and in which he perished at the hands of a mutinous crew.

1612-1614.—Exploration of Hudson Bay by Captains Button, Bylot, and Baffin, practically discovering its true character and shaking the previous theory of its connection with the Pacific Ocean.

1614.—Exploring expedition of the Muscovy Company to the Greenland coast, under Robert Fotherby, with William Baffin for pilot, making its way to latitude 80°.

1616.—Voyage into the northwest made by Captain Baffin with Captain Bylot, which resulted in the discovery of Baffin Bay, Smith Sound, Jones Sound, and Lancaster Sound.

1619-1620.—Voyage of Jens Munk, sent by the King of Denmark to seek the northwest passage; wintering in Hudson Bay, and losing there all but two of his crew, with whom he succeeded in making the voyage home.

1632.—Voyages of Captains Fox and James into Hudson Bay.

1670.—Grant and charter to the Hudson Bay Company, by King Charles II. of England, conferring on the Company possession and government of the whole watershed of the Bay, and naming the country Prince Rupert Land.

1676.—Voyage of Captain John Wood to Nova Zembla, seeking the northeastern passage.

1728.—Exploration of the northern coasts of Kamtschatka by the Russian Captain Vitus Behring, and discovery of the Strait which bears his name.

1741.—Exploration of northern channels of Hudson Bay by Captain Middleton.

1743.—Offer of £20,000 by the British Parliament for the discovery of a northwest passage to the Pacific.

1746.—Further exploration of northern channels of Hudson Bay by Captains Moor and Smith.

1753-1754.—Attempted exploration of Hudson Bay by the colonial Captain Swaine, sent out from Philadelphia, chiefly through the exertions of Dr. Franklin.

1765.—Russian expedition of Captain Tchitschakoff, attempting to reach the Pacific from Archangel.

1768-1769.—Exploration of Nova Zembla by a Russian officer, Lieutenant Rosmyssloff.

1769-1770.—Exploring journey of Samuel Hearne, for the Hudson Bay Company, from Churchill, its most northern post, to Coppermine River and down the river to the Polar Sea.

1773.—Voyage of Captain Phipps, afterwards Lord Mulgrave, toward the North Pole, reaching the northeastern extremity of Spitzbergen.

1779.—Exploration of the Arctic coast, east and west of Behring Strait, by Captain Cook, in his last voyage.

1789.—Exploring journey of Alexander Mackenzie, for the Northwest Company, and discovery of the great river flowing into the Polar Sea, which bears his name.

1806.—Whaling voyage of Captain Scoresby to latitude 81° 30′ and longitude 19° east.

1818.—Unsatisfactory voyage of Commander John Ross to Baffin Bay and into Lancaster Sound.

1818.—Voyage of Captain Buchan towards the North Pole, reaching the northern part of Spitzbergen.

1819-1820.—First voyage of Lieutenant Parry, exploring for a northwest passage, through Davis Strait, Baffin Bay, Lancaster Sound, and Barrow Strait, to Melville Island.

1819-1822.—Journey of Captain (afterwards Sir John) Franklin, Dr. Richardson, and Captain (afterwards Sir George) Back, from Fort York, on the western coast of Hudson Bay, by the way of Lake Athabasca, Great Slave Lake, and Coppermine River, to Coronation Gulf, opening into the Arctic Ocean.

1819-1824.—Russian expeditions for the survey of Nova Zembla.

1820-1824.—Russian surveys of the Siberian Polar region by Wrangel and Anjou.

1821-1823.—Second voyage of Captain Parry, exploring for a northwest passage to the Pacific Ocean, through Hudson Strait and Fox Channel, discovering the Fury-and-Hecla Strait, the northern outlet of the Bay.

1821-1824.—Russian surveying expedition to Nova Zembla, under Lieutenant Lutke.

1822.—Whaling voyage of Captain Scoresby to the eastern coast of Greenland, which was considerably traced and mapped by him.

1822-1823.—Scientific expedition of Captain Sabine, with Commander Clavering, to Spitzbergen and the eastern coast of Greenland.

1824-1825.—Third voyage of Captain Parry, exploring for a northwest passage, by way of Davis Strait, Baffin Bay, and Lancaster Sound, to Prince Regent Inlet, where one of his ships was wrecked.

1825-1827.—Second journey of Franklin, Richardson, and Back, from Canada to the Arctic Ocean; Franklin and Back by the Mackenzie River and westward along the coast to longitude 149° 37′; Richardson by the Mackenzie River and the Arctic coast eastward to Coppermine River.

1826.—Voyage of Captain Beechey through Behring Strait and eastward along the Arctic coast as far as Point Barrow.

1827.—Fourth voyage of Captain Parry, attempting to reach the North Pole, by ship to Spitzbergen and by boats to 82° 45′ north latitude.

1829-1833.—Expedition under Captain Ross, fitted out by Mr. Felix Booth, to seek a northwest passage, resulting in the discovery of the position of the north magnetic pole, southwest of Boothia, not far from which Ross' ship was ice-bound for three years. Abandoning the vessel at last, the explorers made their way to Baffin Bay and were rescued by a whale-ship.

1833-1835.—Journey of Captain Back from Canada, via Great Slave Lake, to the river which he discovered and which bears his name, flowing to the Polar Sea.

1836-1837.—Voyage of Captain Back for surveying the straits and channels in the northern extremity of Hudson Bay.

1837-1839.—Expeditions of Dease and Simpson, in the service of the Hudson Bay Company, determining the Arctic coast line as far east as Boothia.

1845.—Departure from England of the government expedition under Sir John Franklin, in two bomb-vessels, the Erebus and the Terror, which entered Baffin Bay in July and were never seen afterward.

1848.—Expedition of Sir John Richardson and Mr. John Rae down the Mackenzie River, searching for traces of Sir John Franklin and his crews.

1848-1849.—Expedition under Sir James Clarke Ross to Baffin Bay and westward as far as Leopold Island, searching for Sir John Franklin.

1848-1851.—Searching expedition of the Herald and the Plover, under Captain Kellett and Commander Moore, through Behring Strait and westward to Coppermine River, learning nothing of the fate of the Franklin party.

1850.—Searching expedition sent out by Lady Franklin, under Captain Forsyth, for the examination of Prince Regent Inlet.

1850-1851.—United States Grinnell Expedition, sent to assist the search for Sir John Franklin and his crew, consisting of two ships, the Advance and the Rescue, furnished by Mr. Henry Grinnell and officered and manned by the U. S. Government, Lieutenant De Haven commanding and Dr. Kane surgeon. Frozen into the ice in Wellington Channel, in September, 1850, the vessels drifted helplessly northward until Grinnell Land was seen and named, then southward and westward until the next June, when they escaped in Baffin Bay.

1850-1851.—Franklin search expedition, sent out by the British Government, under Captain Penny, who explored Wellington Channel and Cornwallis Island by sledge journeys.

1850-1851.—Discovery of traces of Franklin and his men at Cape Riley and Beechey Island, by Captain Ommaney and Captain Austin.

1850-1852.—Franklin search expedition under Captain Collinson, through Behring Strait and eastward into Prince of Wales Strait, sending sledge parties to Melville Island.

1850-1854.—Franklin search expedition under Captain McClure, through Behring Strait and westward, between Banks Land and Prince Albert Land, attaining a point within 25 miles of Melville Sound, already reached from the East; thus demonstrating the existence of a northwest passage, though not accomplishing the navigation of it. McClure received knighthood, and a reward of £10,000 was distributed to the officers and crew of the expedition.

1851.—Expedition of Dr. Rae, sent by the British Government to descend the Coppermine River and search the southern coast of Wollaston Land, which he did, exploring farther along the coast of the continent eastward to a point opposite King William's Land.

1851-1852.—Franklin search expedition sent out by Lady Franklin under Captain Kennedy, for a further examination of Prince Regent Inlet and the surrounding region.

1852-1854.—Franklin search expedition of five ships sent out by the British Government under Sir Edward Belcher, with Captains McClintock, Kellett, and Sherard Osborn under his command. Belcher and Osborn, going up Wellington Channel to Northumberland Sound, were frozen fast; McClintock and Kellett experienced the same misfortune near Melville Island, where they had received Captain McClure and his crew, escaping from their abandoned ship. Finally all the ships of Belcher's fleet except one were abandoned. One, the Resolute, drifted out into Davis Strait in 1855, was rescued, bought by the United States Government and presented to Queen Victoria.

1853-1854.—Hudson Bay Company expedition by Dr. Rae, to Repulse Bay and Pelly Bay, on the Gulf of Boothia, where Dr. Rae found Eskimos in possession of articles which had belonged to Sir John Franklin, and his men, and was told that in the winter of 1850 they saw white men near King William's Land, traveling southward, dragging sledges and a boat, and, afterwards saw dead bodies and graves on the mainland.

1853-1855.—Grinnell expedition, under Dr. Kane, proceeding straight northward through Baffin Bay, Smith Sound and Kennedy Channel, nearly to the 79th degree of latitude, where the vessel was locked in ice and remained fast until abandoned in the spring of 1855, the party escaping to Greenland and being rescued by an expedition under Lieutenant Hartstein which the American Government had sent to their relief.

1855.—Cruise of the U. S. ship Vincennes, Lieutenant John Rodgers commanding, in the Arctic Sea, via Behring Strait to Wrangel Land.

1855.—Expedition of Mr. Anderson, of the Hudson Bay Company, down the Great Fish River to Point Ogle at its mouth, seeking traces of the party of Sir John Franklin.

1857-1859.—Search expedition sent out by Lady Franklin, under Captain McClintock, which became ice-bound in Melville Bay, August, 1857, and drifted helplessly for eight months, over 1,200 miles; escaped from the ice in April, 1858; refitted in Greenland and returned into Prince Regent Inlet, whence Captain McClintock searched the neighboring regions by sledge journeys, discovering, at last, in King William's Land, not only remains but records of the lost explorers, learning that they were caught in the ice somewhere in or about Peel Sound, September, 1846; that Sir John Franklin died on the 11th of the following June; that the ships were deserted on the 22d of April, 1848, on the northwest coast of King William's Land, and that the survivors, 105 in number, set out for Back or Great Fish River. They perished probably one by one on the way.

1860-1861.—Expedition of Dr. Hayes to Smith Sound; wintering on the Greenland side at lati-

tude 78° 17′; crossing the Sound with sledges and tracing Grinnell Land to about 82° 45′.

1860-1862.—Expedition of Captain Hall on the whaling ship George Henry, and discovery of relics of Frobisher.

1864-1869.—Residence of Captain Hall among the Eskimos on the north side of Hudson Strait and search for further relics of the Franklin expedition.

1867.—Tracing of the southern coast of Wrangel Land by Captains Long and Raynor, of the whaling ships Nile and Reindeer.

1867.—Transfer of the territory, privileges and rights of the Hudson Bay Company to the Dominion of Canada.

1868.—Swedish Polar expedition, directed by Professor Nordenskiöld, attaining latitude 81° 42′, on the 18th meridian of east longitude.

1869.—Yacht voyage of Dr. Hayes to the Greenland coasts.

1869-1870.—German Polar expedition, under Captain Koldewey, one vessel of which was crushed, the crew escaping to an ice floe and drifting 1,100 miles, reaching finally a Danish settlement on the Greenland coast, while the other explored the east coast of Greenland to latitude 77°.

1871-1872.—Voyage of the steamer Polaris, fitted out by the U. S. Government, under Captain Hall; passing from Baffin Bay, through Smith Sound and Kennedy Channel, into what Kane and Hayes had supposed to be open sea, but which proved to be the widening of a strait, called Robeson Strait by Captain Hall, thus going beyond the most northerly point that had previously been reached in Arctic exploration. Wintering in latitude 81° 38′ (where Captain Hall died), the Polaris was turned homeward the following August. During a storm, when the ship was threatened with destruction by the ice, seventeen of her crew and party were left helplessly on a floe, which drifted with them for 1,500 miles, until they were rescued by a passing vessel. Those on the Polaris fared little better. Forced to run their sinking ship ashore, they wintered in huts and made their way south in the spring, until they met whale-ships which took them on board.

1872-1874.—Austro-Hungarian expedition, under Captain Weyprecht and Lieutenant Payer, seeking the northeast passage, with the result of discovering and naming Franz Josef Land, Crown Prince Rudolf Land and Petermann Land, the latter (seen, not visited) estimated to be beyond latitude 83°. The explorers were obliged to abandon their ice-locked steamer, and make their way by sledges and boats to Nova Zembla, where they were picked up.

1875.—Voyage of Captain Young, attempting to navigate the northwest passage through Lancaster Sound, Barrow Strait and Peel Strait, but being turned back by ice in the latter.

1875-1876.—English expedition under Captain Nares, in the Alert, and the Discovery, attaining by ship the high latitude of 82° 27′, in Smith Sound, and advancing by sledges to 83° 20′ 26″, while exploring the northern shore of Grinnell Land and the northwest coast of Greenland.

1876-1878.—Norwegian North-Atlantic expedition, for a scientific exploration of the sea between Norway, the Faroe Islands, Iceland, Jan Mayen, and Spitzbergen.

1878.—Discovery of the island named "Einsamkeit," in latitude 77° 40′ N. and longitude 86° E., by Captain Johannesen, of the Norwegian schooner Nordland.

1878-1879.—Final achievement of the long-sought, often attempted northeast passage, from the Atlantic to the Pacific ocean, by the Swedish geographer and explorer, Baron Nordenskiöld, on the steamer Vega, which made the voyage from Gothenburg to Yokohama, Japan, through the Arctic Sea, coasting the Russian and Siberian shores.

1878-1883.—Six annual expeditions to the Arctic Seas of the ship Willem Barentz, sent out by the Dutch Arctic Committee.

1879.—Cruise of Sir Henry Gore-Booth and Captain Markham, R. N., in the cutter Isbjorn to Nova Zembla and in Barentz Sea and the Kara Sea.

1879-1880.—Journey of Lieutenant Schwatka from Hudson Bay to King William Island, and exploration of the western and southern shores of the latter, searching for the journals and logs of the Franklin expedition.

1879-1882.—Polar voyage of the Jeannette, fitted out by the proprietor of the New York Herald and commanded by Commander De Long, U. S. N. The course taken by the Jeannette was through Behring Strait towards Wrangel Land, and then northerly, until she became ice-bound when she drifted helplessly for nearly two years, only to be crushed at last. The officers and crew escaped in three boats, one of which was lost in a storm; the occupants of the other two boats reached different mouths of the river Lena. One of these two boats, commanded by Engineer Melville, was fortunate enough to find a settlement and obtain speedy relief. The other, which contained commander De Long, landed in a region of desolation, and all but two of its occupants perished of starvation and cold.

1880-1882.—First and second cruises of the United States Revenue Steamer Corwin in the Arctic Ocean, via Behring Strait, to Wrangel Land seeking information concerning the Jeannette and searching for two missing whaling ships.

1880-1882.—Two voyages of Mr. Leigh Smith to Franz Josef Land, in his yacht Eira, in the first of which a considerable exploration of the southern coast was made, while the second resulted in the loss of the ship and a perilous escape of the party in boats to Nova Zembla, where they were rescued.

1881.—Expedition of the steamer Rodgers to search for the missing explorers of the Jeannette; entering the Arctic Sea through Behring Strait, but abruptly stopped by the burning of the Rodgers, on the 30th of November, in St. Lawrence Bay.

1881.—Cruise of the U. S. Alliance, Commander Wadleigh, via Spitzbergen, to 79° 3′ 36″ north latitude, searching for the Jeannette.

1881-1884.—International undertaking of expeditions to establish Arctic stations for simultaneous meteorological and magnetic observations: by the United States at Smith Sound and Point Barrow; by Great Britain at Fort Rae; by Russia at the mouth of the Lena and in Nova Zembla; by Denmark at Godhaab, in Greenland; by Holland at Dickson's Haven, near the mouth of the Yenisei; by Germany in Cumberland Sound, Davis Strait; by Austro-Hungary on

Jan Mayen Island; by Sweden at Mussel Bay in Spitzbergen. The United States expedition to Smith Sound, under Lieutenant Greely, established its station on Discovery Bay. Exploring parties sent out attained the highest latitude ever reached, namely 83° 24′. After remaining two winters and failing to receive expected supplies, which had been intercepted by the ice, Greely and his men, twenty-five in number, started southward, and all but seven perished on the way. The survivors were rescued, in the last stages of starvation, by a vessel sent to their relief under Captain Schley, U. S. N.

1882-1883.—Danish Arctic expedition of the Dijmphna, under Lieutenant Hovgaard; finding the Varna of the Dutch Meteorological Expedition beset in the ice; both vessels becoming frozen in together for nearly twelve months; the Dijmphna escaping finally with both crews.

1883.—Expedition of Lieutenant Ray, U.S.N., from Point Barrow to Meade River.

1883.—Expedition of Baron Nordenskiöld to Greenland, making explorations in the interior.

1883-1885.—East Greenland expedition of Captain Holm and Lieutenant Garde.

1884.—Second cruise of the U. S. Revenue Marine Steamer Corwin in the Arctic Ocean.

1886.—Reconnoissance of the Greenland inland ice by Civil Engineer R. E. Peary, U. S. N.

1888.—Journey of Dr. Nansen across South Greenland.

1890.—Swedish expedition to Spitzbergen, under G. Nordenskiöld and Baron Klinkowström.

1890.—Danish scientific explorations in North and South Greenland.

1890.—Russian exploration of the Malo-Zemelskaya, or Timanskaya tundra, in the far north of European Russia, on the Arctic Ocean.

1891-1892.—Expedition of Lieutenant Peary, U. S. N., with a party of seven, including Mrs. Peary, establishing headquarters on McCormick Bay, northwest Greenland; thence making sledge journeys. The surveys of Lieutenant Peary have gone far toward proving Greenland to be an island.

1891-1892.—Danish East Greenland expedition of Lieutenant Ryder.

1891-1893.—Expeditions of Dr. Drygalski to Greenland for the study of the great glaciers.

1892.—Swedish expedition of Bjorling and Kallstenius, the last records of which were found on one of the Cary Islands, in Baffin Bay.

1892.—French expedition under M. Ribot to the islands of Spitzbergen and Jan Mayen.

1893.—Expedition of Dr. Nansen, in the Fram from Christiania, aiming to enter a current which flows, in Dr. Nansen's belief, across the Arctic region to Greenland.

1893.—Russian expedition, under Baron Toll, to the New Siberian Islands and the Siberian Arctic coasts.

1893.—Danish expedition to Greenland, under Lieutenant Garde, for a geographical survey of the coast and study of the inland ice.

1893-1894.—Expedition of Lieutenant Peary and party (Mrs. Peary again of the number), landing in Bowdoin Bay, August, 1893; attempting in the following March a sledge journey to Independence Bay, but compelled to turn back. An auxiliary expedition brought back most of the party to Philadelphia in September, 1894; but Lieutenant Peary with two men remained.

1893-1894.—Scientific journey of Mr. Frank Russell, under the auspices of the State University of Iowa, from Lake Winnipeg to the mouth of Mackenzie River and to Herschel Island.

1894.—Expedition of Mr. Walter Wellman, an American journalist, purposing to reach Spitzbergen via Norway, and to advance thence towards the Pole, with aluminum boats. The party left Tromsoë May 1, but were stopped before the end of the month by the crushing of their vessel. They were picked up and brought back to Norway.

1894.—Departure of what is known as the Jackson-Harmsworth North Polar Expedition, planned to make Franz Josef Land a base of operations from which to advance carefully and persistently towards the Pole.

1895.—Preparations of Herr Julius von Payer, for an artistic and scientific expedition to the east coast of Greenland, in which he will be accompanied by landscape and animal painters, photographers and savants.

POLAR STAR, The Order of the.—A Swedish order of knighthood, the date of the founding of which is uncertain.

POLEMARCH. See GREECE: FROM THE DORIAN MIGRATION TO B. C. 683.

POLETÆ. — POLETERIUM. — "Every thing which the state [Athens] sold, or leased; revenues, real property, mines, confiscated estates, in which is to be included also the property of public debtors, who were in arrear after the last term of respite, and the bodies of the aliens under the protection of the state, who had not paid the sum required for protection, and of foreigners who had been guilty of assuming the rights of citizenship, or of the crime called apostasion; all these, I say, together with the making of contracts for the public works, at least in certain cases and periods, were under the charge of the ten poletæ, although not always without the coöperation of other boards of officers. Each of the tribes appointed one of the members of this branch of the government, and their sessions were held in the edifice called the Poleterium."—A. Boeckh, *Public Economy of Athens* (*Lamb's tr.*), *bk.* 2, *ch.* 3.

POLO, Marco, The travels of.—"This celebrated personage was not, in the strict sense of the word, a traveller. He was one of those professional politicians of the Middle Ages who are familiar to the student of Italian history. The son of a travelling Venetian merchant, who had already passed many years in Tartary, and been regarded with welcome and consideration by the Grand Khan himself, he was taken at an early age to the Grand Khan's court, and apprenticed, as it were, to the Grand Khan's service. The young adventurer possessed in a high degree that subtlety and versatility which opinion attributes to his nation. Profiting by his opportunities, he soon succeeded in transmuting himself into a

Tartar. He adopted the Tartar dress, studied the Tartar manners, and mastered the four languages spoken in the Grand Khan's dominions. Kublai appears first to have employed him as a secretary, and then to have sent him on confidential missions: and during a service of seventeen years Marco was engaged in this way, in journeys by land and sea, in every part of the Grand Khan's empire and dependencies. More than this, he travelled on his own account, everywhere, it would appear, recording his notes and observations, partly for his own use, and partly for the information or entertainment of his master. These notes and observations were given to the world of Europe under the following circumstances. After a residence of seventeen years, Marco obtained permission to revisit Venice, accompanied by his father and uncle. Not long after his return, he was taken in a sea-fight with the Genoese, and committed to prison. To relieve the ennui of his confinement, he procured his rough notes from Venice, and dictated to a fellow-prisoner the narrative which passes under his name. This narrative soon became known to the world: and from its publication may be dated that intense and active interest in the East which has gone on steadily increasing ever since. The rank and dignified character of this famous adventurer, the romance of his career, the wealth which he amassed, the extent of his observations, the long series of years they had occupied, the strange and striking facts which he reported, and the completeness and perspicuity of his narrative, combined to produce a marked effect on the Italian world. Marco Polo was the true predecessor of Columbus. From an early time we find direct evidence of his influence on the process of exploration. . . . Wherever the Italian captains went, the fame of the great Venetian's explorations was noised abroad: and, as we shall presently see, the Italian captains were the chief directors of navigation and discovery in every seaport of Western Europe. The work dictated by Marco Polo to his fellow-captive, though based upon his travels both in form and matter, is no mere journal or narrative of adventure. A brief account of his career in the East is indeed prefixed, and the route over which he carries his reader is substantially that chronologically followed by himself; for he takes his reader successively overland to China, by way of the Black Sea, Armenia, and Tartary, backwards and forwards by land and sea, throughout the vast dominions of the Grand Khan, and finally homeward by the Indian Ocean, touching by the way at most of those famous countries which bordered thereon. Yet the book is no book of travels. It is rather a Handbook to the East for the use of other European travellers, and was clearly compiled as such and nothing more. Perhaps no compiler has ever laid down a clearer or more practical plan, adopted a more judicious selection of facts, or relieved it by a more attractive embroidery of historical anecdote. . . . It is not here to the purpose to dwell on his notices of Armenia, Turcomania, and Persia: his descriptions of the cities of Bagdad, Ormus, Tabriz, and many others, or to follow him to Kashmir, Kashghar, and Samarkhand, and across the steppes of Tartary. The main interest of Marco Polo lies in his description of the Grand Khan's Empire, and of those wide-spread shores, all washed by the Indian Ocean, which from Zanzibar to Japan went by the general name of India. . . . The Pope alone, among European potentates of the 15th century, could be ranked as approaching in state and dignity to the Tartar sovereign of China. For any fair parallel, recourse must be had to the Great Basileus of Persia: and in the eyes of his Venetian secretary the Grand Khan appeared much as Darius or Cyrus may have appeared to the Greek adventurers who crowded his court, and competed for the favour of a mighty barbarian whom they at once flattered and despised."—E. J. Payne, *Hist. of the New World, bk.* 1.

POLYNESIA.—The term Polynesia is applied to a division of the Pacific island world which comprises a number of distinct archipelagoes and some smaller groups. Among the former are the Tonga or Friendly Islands, the Samoa or Navigator Islands, the Society Islands, the Paumota or Low Archipelago and the Marquesas group, both under French control, and the Hawaiian, or Sandwich Islands. Of smaller or more scattered groups are the Tokelau, the Ellice or Lagoon, and the Hervey or Cook Islands, all of which England has annexed; also Easter Island, west of Chile. The Mahoris, or Brown Polynesians, are, physically, a fine race. —See, also, Samoa; Tonga Islands; Hawaiian Islands; and Tahiti.

POMPEII.—"Pompeii was a maritime city at the mouth of the river Sarnus, the most sheltered recess of the Neapolitan Crater. Its origin was lost in antiquity, and the tradition that it was founded by Hercules, together with the other spot [Herculaneum] which bore the name of the demigod, was derived perhaps from the warm springs with which the region abounded. The Greek plantations on the Campanian coast had been overrun by the Oscans and Samnites; nevertheless the graceful features of Grecian civilization were still everywhere conspicuous, and though Pompeii received a Latin name, and though Sulla, Augustus, and Nero had successively endowed it with Roman colonists, it retained the manners and to a great extent the

language of the settlers from beyond the sea."—C. Merivale, *Hist. of the Romans, ch.* 60.—Pompeii, and the neighboring city of Herculaneum, were overwhelmed by a volcanic eruption from Mount Vesuvius, on the 23d of August, A. D. 79. They were buried, but did not perish; they were death-stricken, but not destroyed; and by excavations, which began at Pompeii A. D. 1748, they have been extensively uncovered, and made to exhibit to modern times the very privacies and secrets of life in a Roman city of the age of Titus.—Pliny the Younger, *Letters, bk.* 6, *ep.* 16 *and* 20.

PONTIAC'S WAR (A. D. 1763-1764).—"With the conquest of Canada and the expulsion of France as a military power from the continent, the English colonists were abounding in loyalty to the mother country, were exultant in the expectation of peace, and in the assurance of immunity from Indian wars in the future; for it did not seem possible that, with the loose system of organization and government common to the Indians, they could plan and execute a general campaign without the co-operation of the French as leaders. This feeling of security among the English settlements was of short duration. A general discontent pervaded all the Indian tribes from the frontier settlements to the Mississippi, and from the great lakes to the Gulf of Mexico. The extent of this disquietude was not suspected, and hence no attempt was made to gain the goodwill of the Indians. There were many real causes for this discontent. The French had been politic and sagacious in their intercourse with the Indian. They gained his friendship by treating him with respect and justice. They came to him with presents, and, as a rule, dealt with him fairly in trade. They came with missionaries, unarmed, heroic, self-denying men. . . . Many Frenchmen married Indian wives, dwelt with the native tribes, and adopted their customs. To the average Englishman, on the other hand, Indians were disgusting objects; he would show them no respect, nor treat them with justice except under compulsion. . . . The French had shown little disposition to make permanent settlements; but the English, when they appeared, came to stay, and they occupied large tracts of the best land for agricultural purposes. The French hunters and traders, who were widely dispersed among the native tribes, kept the Indians in a state of disquietude by misrepresenting the English, exaggerating their faults, and making the prediction that the French would soon recapture Canada and expel the English from the Western territories. Pontiac, the chief of the Ottawas [see CANADA: A. D. 1760], was the Indian who had the motive, the ambition, and capacity for organization which enabled him to concentrate and use all these elements of discontent for his own malignant and selfish purposes. After the defeat of the French, he professed for a time to be friendly with the English, expecting that, under the acknowledged supremacy of Great Britain, he would be recognized as a mighty Indian prince, and be assigned to rule over his own, and perhaps a confederacy of other tribes. Finding that the English government had no use for him, he was indignant, and he devoted all the energies of his vigorous mind to a secret conspiracy of uniting the tribes west of the Alleghanies to engage in a general war against the English settlements ['The tribes thus banded together against the English comprised, with a few unimportant exceptions, the whole Algonquin stock, to whom were united the Wyandots, the Senecas, and several tribes of the lower Mississippi. The Senecas were the only members of the Iroquois confederacy who joined in the league, the rest being kept quiet by the influence of Sir William Johnson.'—F. Parkman, *Conspiracy of Pontiac, v.* 1, *p.* 187]. . . . His scheme was to make a simultaneous attack on all the Western posts in the month of May, 1763; and each attack was assigned to the neighboring tribes. His summer home was on a small island at the entrance of Lake St. Clair; and being near Detroit, he was to conduct in person the capture of that fort. On the 6th of May, 1763, Major Gladwin, in command at Detroit, had warning from an Indian girl that the next day an attempt would be made to capture the fort by treachery. When Pontiac, on the appointed morning, accompanied by 60 of his chiefs, with short guns concealed under their blankets, appeared at the fort, and, as usual, asked for admission, he was startled at seeing the whole garrison under arms, and that his scheme of treachery had miscarried. For two months the savages assailed the fort, and the sleepless garrison gallantly defended it, when they were relieved by the arrival of a schooner from Fort Niagara, with 60 men, provisions, and ammunition. Fort Pitt, on the present site of Pittsburg, Pa., was in command of Captain Ecuyer, another trained soldier, who had been warned of the Indian conspiracy by Major Gladwin in a letter written May 5th. Captain Ecuyer, having a garrison of 330 soldiers and backwoodsmen, immediately made every preparation for defence. On May 27th, a party of Indians appeared at the fort under the pretence of wish-

ing to trade, and were treated as spies. Active operations against Fort Pitt were postponed until the smaller forts had been taken. Fort Sandusky was captured May 16th; Fort St. Joseph (on the St. Joseph River, Mich.), May 25th; Fort Ouatanon (now Lafayette, Ind.), May 31st; Fort Michillimackinac (now Mackinaw, Mich.), June 2d; Fort Presqu' Isle (now Erie, Pa.), June 17th; Fort Le Bœuf (Erie County, Pa.), June 18th; Fort Venango (Venango County, Pa.), June 18th; and the posts at Carlisle and Bedford, Pa., on the same day. No garrison except that at Presqu' Isle had warning of danger. The same method of capture was adopted in each instance. A small party of Indians came to the fort with the pretence of friendship, and were admitted. Others soon joined them, when the visitors rose upon the small garrisons, butchered them, or took them captive. At Presqu' Isle the Indians laid siege to the fort for two days, when they set it on fire. At Venango no one of the garrison survived to give an account of the capture. On June 22d, a large body of Indians surrounded Fort Pitt and opened fire on all sides, but were easily repulsed. . . . The Indians departed next day and did not return until July 26th," when they laid siege to the fort for five days and nights, with more loss to themselves than to the garrison. They "then disappeared, in order to intercept the expedition of Colonel Bouquet, which was approaching from the east with a convoy of provisions for the relief of Fort Pitt. It was fortunate for the country that there was an officer stationed at Philadelphia who fully understood the meaning of the alarming reports which were coming in from the Western posts. Colonel Henry Bouquet was a gallant Swiss officer who had been trained in war from his youth, and whose personal accomplishments gave an additional charm to his bravery and heroic energy. He had served seven years in fighting American Indians, and was more cunning than they in the practice of their own artifices. General Amherst, the commander-in-chief, was slow in appreciating the importance and extent of the Western conspiracy; yet he did good service in directing Colonel Bouquet to organize an expedition for the relief of Fort Pitt. The promptness and energy with which this duty was performed, under the most embarrassing conditions, make the expedition one of the most brilliant episodes in American warfare. The only troops available for the service were about 500 regulars recently arrived from the siege of Havana, broken in health." At Bushy Run, 25 miles east of Fort Pitt, Bouquet fought a desperate battle with the savages, and defeated them by the stratagem of a pretended retreat, which drew them into an ambuscade. Fort Pitt was then reached in safety. "On the 29th of July Detroit was reinforced by 280 men under Captain Dalzell, who in June had left Fort Niagara in 22 barges, with several cannon and a supply of provisions and ammunition. The day after his arrival, Captain Dalzell proposed, with 250 men, to make a night attack on Pontiac's camp and capture him. Major Gladwin discouraged the attempt, but finally, against his judgment, consented. Some Canadians obtained the secret and carried it to Pontiac, who waylaid the party in an ambuscade [at a place called Bloody Bridge ever since]. Twenty of the English were killed and 39 wounded. Among the killed was Captain Dalzell himself. Pontiac could make no use of this success, as the fort was strongly garrisoned and well supplied. . . . Elsewhere there was nothing to encourage him." His confederation began to break, and in November he was forced to raise the siege of Detroit. "There was quietness on the frontiers during the winter of 1763–64. In the spring of 1764 scattered war parties were again ravaging the borders. Colonel Bouquet was recruiting in Pennsylvania, and preparing an outfit for his march into the valley of the Ohio. In June, Colonel Bradstreet, with a force of 1,200 men, was sent up the great lakes," where he made an absurd and unauthorized treaty with some of the Ohio Indians. He arrived at Detroit on the 26th of August. "Pontiac had departed, and sent messages of defiance from the banks of the Maumee." Colonel Bouquet had experienced great difficulty in raising troops and supplies and it was not until September, 1764, that he again reached Fort Pitt. But before two months passed he had brought the Delawares and Shawanees to submission and had delivered some 200 white captives from their hands. Meantime, Sir William Johnson, in conjunction with Bradstreet, had held conferences with a great council of 2,000 warriors at Fort Niagara, representing Iroquois, Ottawas, Ojibways, Wyandots and others, and had concluded several treaties of peace. By one of these, with the Senecas, a strip of land four miles wide on each side of Niagara River, from Erie to Ontario, was ceded to the British government. "The Pontiac War, so far as battles and campaigns were concerned, was ended; but Pontiac was still at large and as untamed as ever. His last hope was the Illinois country, where the foot of an English soldier had never trod;" and there he schemed and plotted without avail until 1765. In 1769 he was assassinated, near St. Louis.—W. F. Poole, *The West*, 1763–1783 (*Narrative and Critical Hist. of Am., v. 6, ch. 9*).

POOR LAWS, The English.—"It has been often said and often denied that the monasteries supplied the want which the poor law, two generations after the dissolution of these bodies, enforced. That the monasteries were renowned for their almsgiving is certain. The duty of aiding the needy was universal. Themselves the creatures of charity, they could not deny to others that on which they subsisted. . . . It is possible that these institutions created the men-

dicancy which they relieved, but it cannot be doubted that they assisted much which needed their help. The guilds which existed in the towns were also found in the country villages. . . . They were convenient instruments for charity before the establishment of a poor law, and they employed no inconsiderable part of their revenues, collected from subscriptions and from lands and tenements, in relieving the indigent and treating poor strangers hospitably. . . . Before the dissolution of the monasteries, but when this issue was fairly in view, in 1536, an attempt was made to secure some legal provision for destitution. The Act of this year provides that the authorities in the cities and boroughs should collect alms on Sundays and holy days, that the ministers should on all occasions, public and private, stir up the people to contribute to a common fund, that the custom of giving doles by private persons should be forbidden under penalty, and that the church-wardens should distribute the alms when collected. The Act, however, is strictly limited to free gifts, and the obligations of monasteries, almshouses, hospitals, and brotherhoods are expressly maintained. . . . There was a considerable party in England which was willing enough to see the monasteries destroyed, root and branch, and one of the most obvious means by which this result could be attained would be to allege that all which could be needed for the relief of destitution would be derived from the voluntary offerings of those who contributed so handsomely to the maintenance of indolent and dissolute friars. The public was reconciled to the Dissolution by the promise made that the monastic estates should not be converted to the king's private use, but be devoted towards the maintenance of a military force, and that therefore no more demands should be made on the nation for subsidies and aids. Similarly when the guild lands and chantry lands were confiscated at the beginning of Edward's reign, a promise was made that the estates of these foundations should be devoted to good and proper uses, for erecting grammar schools, for the further augmentation of the universities, and the better provision for the poor and needy. They were swept into the hands of Seymour and Somerset, of the Dudleys and Cecils, and the rest of the crew who surrounded the throne of Edward. It cannot, therefore, I think, be doubted that this violent change of ownership, apart from any considerations of previous practice in these several institutions, must have aggravated whatever evils already existed. . . . The guardians of Edward attempted, in a savage statute passed in the first year of his reign, to restrain pauperism and vagabondage by reducing the landless and destitute poor to slavery, by branding them, and making them work in chains. The Act, however, only endured for two years. In the last year of Edward's reign two collectors were to be appointed in every parish, who were to wait on every person of substance and inquire what sums he will give weekly to the relief of the poor. The promises are to be entered in a book, and the collectors were authorized to employ the poor in such work as they could perform, paying them from the fund. Those who refused to aid were to be first exhorted by the ministers and church wardens, and if they continued obstinate were to be denounced to the bishop, who is to remonstrate with such uncharitable folk. . . . In the beginning of Elizabeth's reign (5, cap. 3) the unwilling giver, after being exhorted by the bishop, is to be bound to appear before the justices, in quarter sessions, where, if he be still obdurate to exhortation, the justices are empowered to tax him in a weekly sum, and commit him to prison till he pays. . . . There was only a step from the process under which a reluctant subscriber to the poor law was assessed by the justices and imprisoned on refusal, to the assessment of all property under the celebrated Act of 43 Elizabeth [1601], cap. 3. The law had provided for the regular appointment of assessors for the levy of rates, for supplying work to the able-bodied, for giving relief to the infirm and old, and for binding apprentices. It now consolidates the experience of the whole reign, defines the kind of property on which the rate is to be levied, prescribes the manner in which the assessors shall be appointed, and inflicts penalties on parties who infringe its provisions. It is singular that the Act was only temporary. It was, by the last clause, only to continue to the end of the next session of parliament. It was, however, renewed, and finally made perpetual by 16 Car. I., cap. 4. The economical history of labour in England is henceforward intimately associated with this remarkable Act. . . . The Act was to be tentative, indeed, but in its general principles it lasted till 1835. . . . The effect of poor law relief on the wages of labour was to keep them hopelessly low, to hinder a rise even under the most urgent circumstances."— J. E. Thorold Rogers, *Six Centuries of Work and Wages, ch.* 15 (*v.* 2).—"In February 1834 was published perhaps the most remarkable and startling document to be found in the whole range of English, perhaps, indeed, of all, social history. It was the Report upon the administration and practical operation of the Poor Laws by the Commissioners who had been appointed to investigate the subject. . . . It was their rare good fortune not only to lay bare the existence of abuses and trace them to their roots, but also to propound and enforce the remedies by which they might be cured."— T. W. Fowle, *The Poor Law, ch.* 4.—"The poor-rate had become public spoil. The ignorant believed it an inexhaustible fund which belonged to them. To obtain their share, the brutal bullied the administrators, the profligate exhibited their bastards which must be fed, the idle folded their arms and waited till they got it; ignorant boys and girls married upon it; poachers, thieves, and prostitutes extorted it by intimidation; country justices lavished it for popularity, and guardians for convenience. This was the way the fund went. As for whence it arose — it came, more and more every year, out of the capital of the shopkeeper and the farmer, and the diminishing resources of the country gentleman. . . . Instead of the proper number of labourers to till his lands — labourers paid by himself — the farmer was compelled to take double the number, whose wages were paid partly out of the rates; and these men, being employed by compulsion on him, were beyond his control — worked or not as they chose — let down the quality of his land, and disabled him from employing the better men who would have toiled hard for independence. These better men sank down among the worse; the rate-paying cottager, after a vain struggle, went to the pay-table to seek relief; the modest girl

might starve, while her bolder neighbour received 1s. 6d. per week for every illegitimate child. Industry, probity, purity, prudence — all heart and spirit — the whole soul of goodness — were melting down into depravity and social ruin, like snow under the foul internal fires which precede the earthquake. There were clergymen in the commission, as well as politicians and economists; and they took these things to heart, and laboured diligently to frame suggestions for a measure which should heal and recreate the moral spirit as well as the economical condition of society in England. To thoughtful observers it is clear that the . . . grave aristocratic error . . . of confounding in one all ranks below a certain level of wealth was at the bottom of much poor-law abuse, as it has been of the opposition to its amendment. . . . Except the distinction between sovereign and subject, there is no social difference in England so wide as that between the independent labourer and the pauper; and it is equally ignorant, immoral, and impolitic to confound the two. This truth was so apparent to the commissioners, and they conveyed it so fully to the framers of the new poor-law, that it forms the very foundation of the measure. . . . Enlightened by a prodigious accumulation of evidence, the commissioners offered their suggestions to government; and a bill to amend the poor-law was prepared and proposed to the consideration of parliament early in 1834. . . . If one main object of the reform was to encourage industry, it was clearly desirable to remove the impediments to the circulation of labour. Settlement by hiring and service was to exist no longer; labour could freely enter any parish where it was wanted, and leave it for another parish which might, in its turn, want hands. In observance of the great principle that the independent labourer was not to be sacrificed to the pauper, all administration of relief to the able-bodied at their own homes was to be discontinued as soon as possible; and the allowance system was put an end to entirely. . . . Henceforth, the indigent must come into the workhouse for relief, if he must have it. . . . The able-bodied should work — should do a certain amount of work for every meal. They might go out after the expiration of twenty-four hours; but while in the house they must work. The men, women, and children must be separated; and the able-bodied and infirm. . . . In order to a complete and economical classification in the workhouses, and for other obvious reasons, the new act provided for unions of parishes. . . . To afford the necessary control over such a system . . . a central board was indispensable, by whose orders, and through whose assistant-commissioners, everything was to be arranged, and to whom all appeals were to be directed. . . . Of the changes proposed by the new law, none was more important to morals than that which threw the charge of the maintenance of illegitimate children upon the mother. . . . The decrease of illegitimate births was what many called wonderful, but only what the framers of the law had anticipated from the removal of direct pecuniary inducement to profligacy, and from the awakening of proper care in parents of daughters, and of reflection in the women themselves. . . . On the 14th of August 1834, the royal assent was given to the Poor-law Amendment Act, amidst prognostications of utter failure from the timid, and some misgivings among those who were most confident of the absolute necessity of the measure. . . . Before two years were out, wages were rising and rates were falling in the whole series of country parishes; farmers were employing more labourers; surplus labour was absorbed; bullying paupers were transformed into steady working-men; the decrease of illegitimate births, chargeable to the parish, throughout England, was nearly 10,000, or nearly 13 per cent.; . . . and, finally, the rates, which had risen nearly a million in their annual amount during the five years before the poor-law commission was issued, sank down, in the course of the five years after it, from being upwards of seven millions to very little above four."— H. Martineau, *A History of the Thirty Years Peace, bk.* 4, *ch.* 7 (*v.* 2). — In 1838 the Act was extended to Ireland, and in 1845 to Scotland.—T. W. Fowle, *The Poor Law, ch.* 4.—"The new Poor Law was passed by Parliament in 1834; and the oversight of its administration was placed in the hands of a special board of commissioners, then known as the Central Poor Law Board. This board, which was not represented in Parliament, was continued until 1847. In that year it was reconstructed and placed under the presidency of a minister with a seat in the House of Commons — a reconstruction putting it on a political level with the Home Office and the other important Government Departments at Whitehall. The Department was henceforward known as the Poor Law Board, and continued to be so named until 1871, when there was another reconstruction. This time the Poor Law Board took over from the Home Office various duties in respect of municipal government and public health, and from the Privy Council the oversight of the administration of the vaccination laws and other powers, and its title was changed to that of the Local Government Board. Since then hardly a session of Parliament has passed in which its duties and responsibilities have not been added to, until at the present time the Local Government Board is more directly in touch with the people of England and Wales than any other Government Department. There is not a village in the land which its inspectors do not visit or to which the official communications of the Board are not addressed."— E. Porritt, *The Englishman at Home, ch.* 2.

PORT ROYAL, and the Jansenists: A. D. 1602-1660.—The monastery under Mère Angelique and the hermits of the Port Royal Valley.—Their acceptance of the doctrines of Jansenius.—Their conflict with the Jesuits. —"The monastery of Port Royal . . . was founded in the beginning of the 13th century, in the reign of Philip Augustus; and a later tradition claimed this magnificent monarch as the author of its foundation and of its name. . . . But this is the story of a time when, as it has been said, 'royal founders were in fashion.' More truly, the name is considered to be derived from the general designation of the fief or district in which the valley lies, Porrois — which, again, is supposed to be a corruption of Porra or Borra, meaning a marshy and woody hollow. The valley of Port Royal presents to this day the same natural features which attracted the eye of the devout solitary in the seventeenth century. . . . It lies about eighteen miles west of Paris, and seven or eight from Versailles, on the road to Chevreuse. . . . The monastery was founded, not by Philip Augustus, but by Matthieu, first Lord of Marli, a younger son of the noble house of Montmorency. Having formed the design of accompanying the crusade proclaimed by Innocent III. to the Holy Land, he left at the disposal of his wife, Mathilde de Garlande, and his kinsman, the Bishop of Paris, a sum of money to devote to some pious work in his absence. They agreed to apply it to the erection of a monastery for nuns in this secluded valley, that had already acquired a reputation for sanctity in connection with the old chapel dedicated to St. Lawrence, which attracted large numbers of worshippers. The foundations of the church and monastery were laid in 1204. They were designed by the same architect who built the Cathedral of Amiens, and ere long the graceful and beautiful structures were seen rising in the wilderness. The nuns belonged to the Cistercian order. Their dress was white woollen, with a black veil; but afterwards they adopted as their distinctive badge a large scarlet cross on their white scapulary, as the symbol of the 'Institute of the Holy Sacrament.' The abbey underwent the usual history of such institutions. Distinguished at first by the strictness of its discipline and the piety of its inmates, it became gradually corrupted with increasing wealth, till, in the end of the sixteenth century, it had grown notorious for gross and scandalous abuses. . . . But at length its revival arose out of one of the most obvious abuses connected with it. The patronage of the institution, like that of others, had been distributed without any regard to the fitness of the occupants, even to girls of immature age. In this manner the abbey of Port Royal accidentally fell to the lot of one who was destined by her ardent piety to breathe a new life into it, and by her indomitable and lofty genius to give it an undying reputation. Jacqueline Marie Arnauld — better known by her official name, La Mère Angélique — was appointed abbess of Port Royal when she was only eight years of age. She was descended from a distinguished family belonging originally to the old noblesse of Provence, but which had migrated to Auvergne and settled there. Of vigorous healthiness, both mental and physical, the Arnaulds had already acquired a merited position and name in the annals of France. In the beginning of the sixteenth century it found its way to Paris in the person of Antoine Arnauld, Seigneur de la Mothe, the grandfather of the heroine of Port Royal. . . . Antoine Arnauld married the youthful daughter of M. Marion, the Avocat-général. . . . The couple had twenty children, and felt, as may be imagined, the pressure of providing for so many. Out of this pressure came the remarkable lot of two of the daughters. The benefices of the Church were a fruitful field of provision, and the avocat-général, the maternal grandfather of the children, had large ecclesiastical influence. The result was the appointment not only of one daughter to the abbey of Port Royal, but also of a younger sister, Agnès, only six years of age, to the abbey of St Cyr, about six miles distant from Port Royal. . . . At the age of eleven, in the year 1602, Angélique was installed Abbess of Port Royal. Her sister took the veil at the age of seven. . . . The remarkable story of Angélique's conversion by the preaching of a Capucin friar in 1608, her strange contest with her parents which followed, the strengthening impulses in different directions which her religious life received, first from the famous St Francis de Sales, and finally, and especially, from the no less remarkable Abbé de St Cyran, all belong to the history of Port Royal."—J. Tulloch, *Pascal, ch.* 4.—"The numbers at the Port Royal had increased to eighty, and the situation was so unhealthy that there were many deaths. In 1626 they moved to Paris, and the abbey in the fields remained for many years deserted. M. Zamet, a pious but not a great man, for a while had the spiritual charge of the Port Royal, but in 1634 the abbé of St. Cyran became its director. To his influence is due the position it took in the coming conflict of Jansenism, and the effects of his teachings can be seen in the sisters, and in most of the illustrious recluses who attached themselves to the monastery. St. Cyran had been an early associate of Jansenius, whose writings became such a fire-brand in the Church. As young men they devoted the most of five years to an intense study of St. Augustine. It is said Jansenius read all of his works ten times, and thirty times his treatises against the Pelagians. The two students resolved to attempt a reformation in the belief of the Church, which they thought was falling away from many of the tenets of the father. Jansenius was presently made bishop of

Ypres by the Spanish as a reward for a political tract, but he pursued his studies in his new bishopric. . . . In 1640, the Augustinus appeared, in which the bishop of Ypres sought, by a full reproduction of the doctrines of St. Augustine, to bring the Church back from the errors of the Pelagians to the pure and severe tenets of the great father. The doctrine of grace, the very corner-stone of the Christian faith, was that which Jansenius labored to revive. Saint Augustine had taught that, before the fall of our first parents, man, being in a state of innocence, could of his own free will do works acceptable to God; but after that his nature was so corrupted, that no good thing could proceed from it, save only as divine grace worked upon him. This grace God gave as He saw fit, working under his eternal decrees, and man, except as predestined and elected to its sovereign help, could accomplish no righteous act, and must incur God's just wrath. But the Pelagians and semi-Pelagians had departed from this doctrine, and attributed a capacity to please God, to man's free will and the deeds proceeding from it — a belief which could but foster his carnal pride and hasten his damnation. The Jesuits were always desirous to teach religion so that it could most easily be accepted, and they had inclined to semi-Pelagian doctrines, rather than to the difficult truths of St. Augustine. Yet no one questioned his authority. The dispute was as to the exact interpretation of his writings. Jansenius claimed to have nothing in his great book save the very word of Augustine, or its legitimate result. The Jesuits replied that his writings contained neither the doctrine of Augustine nor the truth of God. They appealed to the Pope for the condemnation of these heresies. Jansenius had died before the publication of his book, but his followers, who were soon named after him, endeavored to defend his works from censure. . . . It was not until 1653 that the influence of the Jesuits succeeded in obtaining the condemnation of the offending book. In that year, Innocent X. issued a bull, by which he condemned as heretical five propositions contained in the Augustinus. . . . The members of the Port Royal adopted the Jansenist cause. Saint Cyran had been a fellow worker with Jansenius, and he welcomed the Augustinus as a book to revive and purify the faith of the Church. . . . The rigid predestinarianism of Jansen had a natural attraction for the stern zeal of the Port Royal. The religion of the convent and of those connected with it bordered on asceticism. They lived in the constant awe of God, seeking little communion with the world, and offering to it little compromise. . . . An intense and rigorous religious life adopts an intense and rigorous belief. The Jansenists resembled the English and American Puritans. They shared their Calvinistic tenets and their strict morality. A Jansenist, said the Jesuits, is a Calvinist saying mass. No accusation was more resented by those of the Jansenist party. They sought no alliance with the Protestants. Saint Cyran and Arnauld wrote prolifically against the Calvinists. They were certainly separated from the latter by their strong devotion to two usages of the Catholic Church which were especially objectionable to Protestants — the mass and the confessional. . . . In 1647, Mother Angelique with some of the sisters returned to Port Royal in the Fields. The convent at Paris continued in close relations with it, but the abbey in the fields was to exhibit the most important phases of devotional life. Before the return of the sisters, this desolate spot had begun to be the refuge for many eminent men, whose careers became identified with the fate of the abbey. 'We saw arrive,' writes one of them, 'from diverse provinces, men of different professions, who, like mariners that had suffered shipwreck, came to seek the Port.' M. le Maitre, a nephew of Mother Angelique, a lawyer of much prominence, a counsellor of state, a favorite of the chancellor and renowned for his eloquent harangues, abandoned present prosperity and future eminence, and in 1638 built a little house, near the monastery, and became the first of those who might be called the hermits of the Port Royal. Not taking orders, nor becoming a member of any religious body, he sought a life of lonely devotion in this barren place. . . . Others gradually followed, until there grew up a community, small in numbers, but strong in influence, united in study, in penance, in constant praise and worship. Though held together by no formal vows, few of those who put hand to the plough turned back from the work. They left their beloved retreat only when expelled by force, and with infinite regret. The monastery itself had become dilapidated. It was surrounded by stagnant waters, and the woods near by were full of snakes. But the recluses found religious joy amid this desolation. . . . As their numbers increased they did much, however, to improve the desolate retreat they had chosen. . . . Some of the recluses cultivated the ground. Others even made shoes, and the Jesuits dubbed them the cobblers. They found occupation not only in such labors and in solitary meditation, but in the more useful work of giving the young an education that was sound in learning and grounded in piety. The schools of the Port Royal had a troubled existence of about fifteen years. Though they rarely had over fifty pupils, yet in this brief period they left their mark. Racine, Tillemont, and many others of fruitful scholarship and piety were among the pupils who were watched and trained by the grave anchorites with a tender and fostering care. . . . The judicious teachers of the Port Royal taught reading in French, and in many ways did much to improve the methods of French instruction and scholarship. The children were thoroughly trained also in Greek and Latin, in logic and mathematics. Their teachers published admirable manuals for practical study in many branches. 'They sought,' says one, 'to render study more agreeable than play or games.' The jealousy of the Jesuits, who were well aware of the advantages of controlling the education of the young, at last obtained the order for the final dispersion of these little schools, and in 1660 they were closed for ever. Besides these manuals for teaching, the literature of the Port Royal comprised many controversial works, chief among them the forty-two volumes of Arnauld. It furnished also a translation of the Bible by Saci, which, though far from possessing the merits of the English version of King James, is one of the best of the many French translations. But the works of Blaise Pascal were the great productions of the Port Royal, as he himself was its chief glory. The famous Provincial Letters

originated from the controversy over Jansenism, though they soon turned from doctrinal questions to an attack on the morality of the Jesuits that permanently injured the influence of that body."—J. B. Perkins, *France under Mazarin, ch.* 20 (*v.* 2).

A. D. 1702-1715. — Renewed persecution.— Suppression and destruction of the Monastery. —The odious Bull Unigenitus, and its tyrannical enforcement.—"The Jesuits had been for some time at a low ebb, in the beginning of the 18th century, the Cardinal de Noailles, Archbishop of Paris, then ruling the King through Madame de Maintenon, and himself submitting to the direction of Bossuet. The imprudence of the Jansenists, their indefatigable spirit of dispute, restored to their enemies the opportunity to retrieve their position. In 1702, forty Sorbonne doctors resuscitated the celebrated question of fact concerning the five propositions of Jansenius, and maintained that, in the presence of the decisions of the Church on points of fact and not of dogma, a respectful silence sufficed without internal acquiescence. Some other propositions of a Jansenistic tendency accompanied this leading question. Bossuet hastened to interfere to stifle the matter, and to induce the doctors to retract. . . . Thirty-nine doctors retracted out of forty. The King forbade the publication thenceforth of anything concerning these matters, but, in his own name, and that of Philip V. [of Spain, his grandson], entreated Pope Clement XI. to renew the constitutions of his predecessors against Jansenism. . . . Clement XI. responded to the King's wishes by a Bull which fell in the midst of the assembly of the clergy in 1705. Cardinal de Noailles, who presided, made reservations against the infallibility of the Church in affairs of fact. The assembly, animated with a Gallican spirit, accepted the Bull, but established that the constitutions of the Popes bind the whole Church only 'when they have been accepted by the bodies of the pastors,' and that this acceptance on the part of the bishops is made 'by way of judgment.' The court of Rome was greatly offended that the bishops should claim to 'judge' after it, and this gave rise to long negotiations: the King induced the bishops to offer to the Pope extenuating explanations. The Jesuits, however, regained the ascendency at Versailles, and prepared against Cardinal de Noailles a formidable engine of war." The Cardinal had given his approval, some years before, to a work—"Moral Reflections on the New Testament"—published by Father Quesnel, who afterwards became a prominent Jansenist. The Jesuits now procured the condemnation of this work, by the congregation of the Index, and a decree from the Pope prohibiting it. "This was a rude assault on Cardinal de Noailles. The decree, however, was not received in France, through a question of form, or rather, perhaps, because the King was then dissatisfied with the Pope, on account of the concessions of Clement XI. to the House of Austria. The Jansenists gained nothing thereby. At this very moment, a terrible blow was about to fall on the dearest and most legitimate object of their veneration." The nuns of Port-Royal of the Fields having refused to subscribe to the papal constitution of 1705, the Pope had subjected them to the Abbess of Port-Royal of Paris, "who did not share their Augustinian faith (1708). They resisted. Meanwhile, Father La Chaise [the King's confessor] died, and Le Tellier succeeded him. The affair was carried to the most extreme violence. Cardinal de Noailles, a man of pure soul and feeble character, was persuaded, in order to prove that he was not a Jansenist, to cruelty, despite himself, towards the rebellious nuns. They were torn from their monastery and dispersed through different convents (November, 1709). The illustrious abbey of Port-Royal, hallowed, even in the eyes of unbelievers, by the name of so many great men, by the memory of so much virtue, was utterly demolished, by the order of the lieutenant of police, D'Argenson. Two years after, as if it were designed to exile even the shades that haunted the valley, the dead of Port-Royal were exhumed, and their remains transferred to a village cemetery (at Magny). Noailles, while he entered into this persecution, took the same course, nevertheless, as the nuns of Port-Royal, by refusing to retract the approbation which he had given to the 'Moral Reflections.' Le Tellier caused him to be denounced to the King. . . . The King prohibited Quesnel's book by a decree in council (November 11, 1711), and demanded of the Pope a new condemnation of this book, in a form that could be received in France. The reply of Clement XI. was delayed until September 8, 1713; this was the celebrated Unigenitus Bull, the work of Le Tellier far more than of the Pope, and which, instead of the general terms of the Bull of 1708, expressly condemned 101 propositions extracted from the 'Moral Reflections.'. . . The Bull dared condemn the very words of St. Augustine and of St. Paul himself; there were propositions, on other matters than grace, the condemnation of which was and should have been scandalous, and seemed veritably the triumph of Jesuitism over Christianity; for example, those concerning the necessity of the love of God. It had dared to condemn this: 'There is no God, there is no religion, where there is not charity.' This was giving the pontifical sanction to the Jesuitical theories most contrary to the general spirit of Christian theology. It was the same with the maxims relative to the Holy Scriptures. The Pope had anathematized the following propositions: 'The reading of the Holy Scriptures is for all. Christians should keep the Sabbath-day holy by reading the Scriptures; it is dangerous to deprive them of these.' And also this: 'The fear of unjust excommunication should not prevent us from doing our duty.' This was overturning all political Gallicanism." The acceptance of the Bull was strongly but vainly resisted. The King and the King's malignant confessor spared no exercise of their unbridled power to compel submission to it. "It was endeavored to stifle by terror public opinion contrary to the Bull: exiles, imprisonments, were multiplied from day to day." And still, when Louis XIV. died, on the 1st day of September, 1715, the struggle was not at an end.—H. Martin, *Hist. of France: Age of Louis XIV., v.* 2, *ch.* 6.—"It is now time that I should say something of the infamous bull Unigenitus, which by the unsurpassed audacity and scheming of Father Le Tellier and his friends was forced upon the Pope and the world. I need not

enter into a very lengthy account of the celebrated Papal decree which has made so many martyrs, depopulated our schools, introduced ignorance, fanaticism, and misrule, rewarded vice, thrown the whole community into the greatest confusion, caused disorder everywhere, and established the most arbitrary and the most barbarous inquisition; evils which have doubled within the last thirty years. I will content myself with a word or two, and will not blacken further the pages of my Memoirs. . . . It is enough to say that the new bull condemned in set terms the doctrines of St. Paul, . . . and also those of St. Augustin, and of other fathers; doctrines which have always been adopted by the Popes, by the Councils, and by the Church itself. The bull, as soon as published, met with a violent opposition in Rome from the cardinals there, who went by sixes, by eights, and by tens, to complain of it to the Pope. . . . He protested . . . that the publication had been made without his knowledge, and put off the cardinals with compliments, excuses, and tears, which last he could always command. The constitution had the same fate in France as in Rome. The cry against it was universal."—Duke of Saint Simon, *Memoirs (abridged trans. by St. John), v.* 3, *ch.* 6. —"Jansenism . . . laid hold upon all ecclesiastical bodies with very few exceptions, it predominated altogether in theological literature; all public schools that were not immediately under the Jesuits, or, as in Spain, under the Inquisition, held Jansenist opinions, at least so far as the majority of their theologians were concerned. In Rome itself this teaching was strongly represented amongst the cardinals." Fenelon declared "that nobody knew—now that the controversy and the condemnations had gone on for sixty years—in what the erroneous doctrine exactly consisted; for the Roman court stuck fast to the principle of giving no definition of what ought to be believed, so that the same doctrine which it apparently rejected in one form, was unhesitatingly accepted at Rome itself when expressed in other though synonymous terms. . . . The same thing which under one name was condemned, was under another, as the teaching of the Thomists or Augustinians, declared to be perfectly orthodox. . . . Just because nobody could tell in what sense such propositions as those taken from the works of Jansenius or Quesnel were to be rejected, did they become valuable; for the whole question was turned into one of blind obedience and submission, without previous investigation. The Jesuit D'Aubenton, who as Tellier's agent in Rome had undertaken to procure that the passages selected from Quesnel's book should be condemned, repeatedly informed his employer that at Rome everything turned upon the papal infallibility; to get this passed whilst the king was ready to impose, by force of arms, upon the bishops and clergy the unquestioning acceptance of the papal constitution, was the only object."—J. I. von Döllinger, *Studies in European Hist., ch.* 12.

PORTO RICO.—The island of Porto Rico is at the entrance of the Gulf of Mexico, east of Hayti. It is 95 miles long, 35 broad, and has an area of about 3600 square miles. Its name, meaning "rich port," is significant of its wealth in mineral and agricultural resources. The population numbers about 800,000, 300,000 being blacks. Porto Rico was discovered by Columbus in 1493, and occupied in 1509 by the Spaniards, who speedily exterminated the native population. The island is governed under a constitution voted by the Spanish Cortes in 1869. Slavery was abolished in 1873.

PORTUGAL: Early history.—Mistaken identification with ancient Lusitania.—Roman, Gothic, Moorish and Spanish conquests.—The county of Henry of Burgundy.—"The early history of the country, which took the name of Portugal from the county which formed the nucleus of the future kingdom, is identical with that of the rest of the Iberian peninsula, but deserves some slight notice because of an old misconception, immortalized in the title of the famous epic of Camoens, and not yet entirely eradicated even from modern ideas. Portugal, like the rest of the peninsula, was originally inhabited by men of the prehistoric ages. . . . There seems to be no doubt that the Celts, the first Aryan immigrants, were preceded by a non-Aryan race, which is called by different writers the Iberian or Euskaldunac nation, but this earlier race speedily amalgamated with the Celts, and out of the two together were formed the five tribes inhabiting the Iberian peninsula, which Strabo names as the Cantabrians, the Vasconians, the Asturians, the Gallicians and the Lusitanians. It is Strabo, also, who mentions the existence of Greek colonies at the mouth of the Tagus, Douro, and Minho, and it is curious to note that the old name of Lisbon, Olisipo, was from the earliest times identified with that of the

hero of the Odyssey, and was interpreted to mean the city of Ulysses. . . . The Carthaginians, though they had colonies all over the peninsula, established their rule mainly over the south and east of it, having their capital at Carthagena or Nova Carthago, and seem to have neglected the more barbarous northern and western provinces. It was for this reason that the Romans found far more difficulty in subduing these latter provinces. . . . In 189 B. C. Lucius Æmilius Paullus defeated the Lusitanians, and in 185 B. C. Gaius Calpurnius forced his way across the Tagus. There is no need here to discuss the gradual conquest by the Romans of that part of the peninsula which includes the modern kingdom of Portugal, but it is necessary to speak of the gallant shepherd Viriathus, who sustained a stubborn war against the Romans from 149 B. C. until he was assassinated in 139 B. C., because he has been generally claimed as the first national hero of Portugal. This claim has been based upon the assumed identification of the modern Portugal with the ancient Lusitania [see LUSITANIA], an identification which has spread its roots deep in Portuguese literature, and has until recently been generally accepted. . . . The Celtic tribe of Lusitanians dwelt, according to Strabo, in the districts north of the Tagus, while the Lusitania of the Latin historians of the Republic undoubtedly lay to the south of that river, though it was not used as the name of a province until the time of Augustus, when the old division of the peninsula into Hispania Citerior and Hispania Ulterior was superseded by the division into Betica, Tarraconensis, and Lusitania. Neither in this division, nor in the division of the peninsula into the five provinces of Tarraconensis, Carthaginensis, Betica, Lusitania, and Gallicia, under Hadrian, was the province called Lusitania coterminous with the modern kingdom of Portugal. Under each division the name was given to a district south of the Tagus. . . . It is important to grasp the result of this misconception, for it emphasizes the fact that the history of Portugal for many centuries is merged in that of the rest of the Iberian peninsula, and explains why it is unnecessary to study the wars of the Lusitanians with the Roman Republic, as is often done in histories of Portugal. Like the rest of the peninsula Portugal was thoroughly Latinized in the days of the Roman Empire; Roman 'coloniæ' and 'municipia' were established in places suited for trade, such as Lisbon and Oporto. . . . Peaceful existence under the sway of Rome continued until the beginning of the 5th century, when the Goths first forced their way across the Pyrenees [see GOTHS (VISIGOTHS): A. D. 410–419]. . . . The Visigothic Empire left but slight traces in Portugal." The Mohammedan conquest by the Arab-Moors, which began early in the 8th century, extended to Portugal, and for a general account of the struggle in the peninsula between Christians and Moslems during several succeeding centuries the reader is referred to SPAIN: A. D. 711–713, and after. "In 997 Bermudo II., king of Gallicia, won back the first portion of modern Portugal from the Moors by seizing Oporto and occupying the province now known as the Entre Minho e Douro. . . In 1055 Ferdinand 'the Great,' king of Leon, Castile, and Gallicia, invaded the Beira; in 1057 he took Lamego and Viseu; and in 1064 Coimbra, where he died in the following year. He arranged for the government of his conquests in the only way possible under the feudal system, by forming them into a county, extending to the Mondego, with Coimbra as its capital. The first count of Coimbra was Sesnando, a recreant Arab vizir, who had advised Ferdinand to invade his district and had assisted in its easy conquest. . . . But though Sesnando's county of Coimbra was the great frontier county of Gallicia, and the most important conquest of Ferdinand 'the Great,' it was not thence that the kingdom which was to develop out of his dominions was to take its name. Among the counties of Gallicia was one called the 'comitatus Portucalensis,' because it contained within its boundaries the famous city at the mouth of the Douro, known in Roman and Greek times as the Portus Cale, and in modern days as Oporto, or 'The Port.' This county of Oporto or Portugal was the one destined to give its name to the future kingdom, and was held at the time of Ferdinand's death by Nuno Mendes, the founder of one of the most famous families in Portuguese history. Ferdinand 'the Great' was succeeded in his three kingdoms of Castile, Leon, and Gallicia, by his three sons, Sancho, Alfonso, and Garcia, the last of whom received the two counties of Coimbra and Oporto as fiefs of Gallicia, and maintained Nuno Mendes and Sesnando as his feudatories." Wars between the three sons ensued, as the result of which "the second of them, Alfonso of Leon, eventually united all his father's kingdoms in 1073, as Alfonso VI." This Alfonso was now called upon to encounter a new impulse of Mohammedan aggression, under a new dynasty, that of the Almoravides — see ALMORAVIDES. "The new dynasty collected great Moslem armies, and in 1086 Yusuf Ibn Teshfin routed Alfonso utterly at the battle of Zalaca, and reconquered the peninsula up to the Ebro. . . . Alfonso tried to compensate for this defeat and his loss of territory in the east of his dominions by conquests in the west, and in 1093 he advanced to the Tagus and took Santarem and Lisbon, and made Sueiro Mendes, count of the new district. But these conquests he did not hold for long. . . . In 1093 Seyr, the general of the Almoravide caliph Yusuf, took Evora from the Emir of Badajoz; in 1094 he took Badajoz itself, and killed the emir; and retaking Lisbon and Santarem forced his way up to the Mondego. To resist this revival of the Mohammedan power, Alfonso summoned the chivalry of Christendom to his aid. Among the knights who joined his army eager to win their spurs, and win dominions for themselves, were Count Raymond of Toulouse and Count Henry of Burgundy. To the former, Alfonso gave his legitimate daughter, Urraca, and Gallicia; to the latter, his illegitimate daughter Theresa, and the counties of Oporto and Coimbra, with the title of Count of Portugal. The history of Portugal now becomes distinct from that of the rest of the peninsula, and it is from the year 1095 that the history of Portugal commences. The son of Henry of Burgundy was the great monarch Affonso Henriques, the hero of his country and the founder of a great dynasty."—H. M. Stephens, *The Story of Portugal, ch.* 1.

A. D. 1095-1325.— The county made independent and raised to the rank of a kingdom. —Completion of conquests from the Moors.— Limits of the kingdom established.— Count

Henry of Burgundy waged war for seven years with his Moorish neighbors; then went crusading to Palestine for two years. On his return in 1105 he made common cause with his brother-in-law and brother-adventurer, Count Raymond of Gallicia, against the suspected intention of King Alfonso to declare his bastard, half-Moorish son, Sancho, the heir to his dominions. "This peaceful arrangement had no result, owing to the death of Count Raymond in 1107, followed by that of young Sancho at the battle of Uclés with the Moors, in 1108, and finally by the death of Alfonso VI. himself in 1109. The king's death brought about the catastrophe. He left all his dominions to his legitimate daughter, Urraca, with the result that there was five years of fierce fighting between Henry of Burgundy, Alfonso Raimundes, the son of Count Raymond, Alfonso I. of Aragon, and Queen Urraca. . . . While they fought with each other the Mohammedans advanced. . . . On May 1, 1114, Count Henry died, . . . leaving his wife Theresa as regent during the minority of his son Affonso Henriques, who was but three years old. Theresa, who made the ancient city of Guimaraens her capital, devoted all her energies to building up her son's dominions into an independent state; and under her rule, while the Christian states of Spain were torn by internecine war, the Portuguese began to recognize Portugal as their country, and to cease from calling themselves Gallicians. This distinction between Portugal and Gallicia was the first step towards the formation of a national spirit, which grew into a desire for national independence." The regency of Theresa, during which she was engaged in many contests, with her half-sister Urraca and others, ended in 1128. In the later years of it she provoked great discontent by her infatuation with a lover to whom she was passionately devoted. In the end, her son headed a revolt which expelled her from Portugal. The son, Affonso Henriques, assumed the reins of government at the age of seventeen years. In 1130 he began a series of wars with Alfonso VII. of Castile, the aim of which was to establish the independence of Portugal. These wars were ended in 1140 by an agreement, "in consonance with the ideas of the times, to refer the great question of Portuguese independence to a chivalrous contest. In a great tournament, known as the Tourney of Valdevez, the Portuguese knights were entirely successful over those of Castile, and in consequence of their victory Affonso Henriques assumed the title of King of Portugal. This is the turning-point of Portuguese history, and it is a curious fact that the independence of Portugal from Gallicia was achieved by victory in a tournament and not in war. Up to 1136, Affonso Henriques had styled himself Infante, in imitation of the title borne by his mother; from 1136 to 1140 he styled himself Principe, and in 1140 he first took the title of King." A little before this time, on the 25th of July, 1139, Affonso had defeated the Moors in a famous and much magnified battle — namely that of Orik or Ourique — "which, until modern investigators examined the facts, has been considered to have laid the foundations of the independence of Portugal. Chroniclers, two centuries after the battle, solemnly asserted that five kings were defeated on this occasion, that 200,000 Mohammedans were slain, and that after the victory the Portuguese soldiers raised Affonso on their shields and hailed him as king. This story is absolutely without authority from contemporary chronicles, and is quite as much a fiction as the Cortes of Lamego, which has been invented as sitting in 1143 and passing the constitutional laws on which Vertot and other writers have expended so much eloquence. . . . It was not until the modern school of historians arose in Portugal, which examined documents and did not take the statements of their predecessors on trust, that it was clearly pointed out that Affonso Henriques won his crown by his long struggle with his Christian cousin, and not by his exploits against the Moors."— H. M. Stephens, *The Story of Portugal, ch.* 2–3.—"The long reign of Affonso I., an almost uninterrupted period of war, is the most brilliant epoch in the history of the Portuguese conquests. Lisbon, which had already under its Moorish masters become the chief city of the west, was taken in 1147, and became at once the capital of the new kingdom. The Tagus itself was soon passed. Large portions of the modern Estremadura and Alemtejo were permanently annexed. The distant provinces of Algarve and Andalucia were overrun; and even Seville trembled at the successes of the Portuguese. It was in vain that Moorish vessels sailed from Africa to chastise the presumption of their Christian foes: their ships were routed off Lisbon by the vessels of Affonso; their armies were crushed by a victory at Santarem [1184], the last, and perhaps the most glorious of the many triumphs of the King. . . . Every conquest saw the apportionment of lands to be held by military tenure among the conquerors; and the Church, which was here essentially a militant one, received not only an endowment for its religion but a reward for its sword. The Orders of St. Michael and of Avis [St. Benedict of Avis] which were founded had a religious as well as a military aspect. Their members were to be distinguished by their piety not less than by their courage, and were to emulate the older brotherhoods of Jerusalem and of Castile. . . . Sancho I. [who succeeded his father Affonso in 1185], though not adverse to military fame, endeavoured to repair his country's wounds; and his reign, the complement of that of Affonso, was one of development rather than of conquest. . . . The surname of El Povoador, the Founder, is the indication of his greatest work. New towns and villages arose, new wealth and strength were given to the rising country. Affonso II. [1211] continued what Sancho had begun; and the enactment of laws, humane and wise, are a testimony of progress, and an honourable distinction to his reign." But Affonso II. provoked the hostility of an arrogant and too powerful clergy, and drew upon himself a sentence of excommunication from Rome. "The divisions and the weakness which were caused by the contest between the royal and ecclesiastical authority brought misery upon the kingdom. The reign of Sancho II. [who succeeded to the throne in 1223] was more fatally influenced by them even than that of his father. . . . The now familiar terrors of excommunication and interdict were followed [1245] by a sentence of deposition from Innocent IV.; and Sancho, weak in character, and powerless before a hostile priesthood and a disaffected people, retired to end his days in a cloister of Castile. The successor to Sancho was Affonso III. He had intrigued

for his brother's crown; he had received the support of the priesthood, and he had promised them their reward in the extension of their privileges"; but his administration of the government was wise and popular. He died in 1279. "The first period of the history of Portugal is now closed. Up to this time, each reign, disturbed and enfeebled though it may have been, had added something to the extent of the country. But now the last conquest from the Moors had been won. On the south, the impassable barrier of the ocean; on the east, the dominions of Castile, confined the kingdom. . . . The crusading days were over. . . . The reign of Denis, who ruled from 1279 to 1325, is at once the parallel to that of Affonso I. in its duration and importance, the contrast to it in being a period of internal progress instead of foreign conquest. . . . That Denis should have been able to accomplish as much as he did, was the wonder even of his own age. . . . Successive reigns still found the country progressing."—C. F. Johnstone, *Historical Abstracts, ch.* 4.

A. D. 1383-1385.—The founding of the new dynasty, of the House of Avis.—"The legitimate descent of the kings of Portugal from Count Henry, of the house of Burgundy, terminated with Ferdinand (the son of Peter I.) . . . in 1383. After wasting the resources of his people in the vain support of his claims to the crown of Castile, exposing Lisbon to a siege, and the whole country to devastation, this monarch gave his youthful daughter in marriage to the natural enemy of Portugal, John I., at that time the reigning king of Castile. . . . It was agreed between the contracting parties that the male issue of this connection should succeed to the Portuguese sceptre, and, that failing, that it should devolve into the hands of the Castilian monarch. Fortunately, however, the carcer of this Spanish tyrant was short, and no issue was left of Beatrix, for whom the crown of Portugal could be claimed; and therefore all the just pretensions of the Spaniard ceased. The marriage had scarcely been concluded, when Ferdinand died. It had been provided by the laws of the constitution, that in a case of emergency, such as now occurred, the election of a new sovereign should immediately take place. The legal heir to the crown, Don Juan [the late king's brother], the son of Pedro and Ignes de Castro, whose marriage had been solemnly recognised by an assembly of the states, was a prisoner at this time in the hands of his rival, the king of Castile. The necessity of having a head to the government appointed without delay, opened the road to the throne for John, surnamed the Bastard, the natural son of Don Pedro, by Donna Theresa Lorenzo, a Galician lady. Availing himself of the natural aversion by which the Portuguese were influenced against the Castilians, he seized the regency from the hands of the queen-dowager, . . . successfully defended Lisbon, and forced the Spaniards to retire into Spain after their memorable defeat on the plain of Aljubarota. . . . This battle . . . completely established the independence of the Portuguese monarchy. John was, in consequence, unanimously elected King by the Cortes, assembled at Coimbra in 1385. . . . In aid of his natural talents John I. had received an excellent education from his father, and during his reign exhibited proofs of being a profound politician, as well as a skilful general. . . . He became the founder of a new dynasty of kings, called the house of 'Avis,' from his having been grand master of that noble order. The enterprises, however, of the great Prince Henry, a son of John I., form a distinguishing feature of this reign."—W. M. Kinsey, *Portugal Illustrated, pp.* 34–35.

A. D. 1415-1460.—The taking of Ceuta.—The exploring expeditions of Prince Henry the Navigator down the African coast.—"King John [the First] had married an English wife, Philippa Plantagenet—a grand-daughter of our King Edward III., thoroughly English, too, on her mother's side, and not without a dash of Scottish blood, for her great-great-grandmother was a Comyn of Broghan. King John of Portugal was married to his English wife for twenty-eight years, they had five noble sons and a daughter (who was Duchess of Burgundy and mother of Charles the Bold); and English habits and usages were adopted at the Portuguese Court. We first meet with Prince Henry and his brothers, Edward and Peter, at the bed-side of their English mother. The king had determined to attack Ceuta, the most important seaport on the Moorish coast; and the three young princes were to receive knighthood if they bore themselves manfully, and if the place was taken. Edward, the eldest, was twenty-four, Peter twenty-three, and Henry just twenty-one. He was born on March 4th, 1394. There were two other brothers, John and Ferdinand, but they were still too young to bear arms. Their mother had caused three swords to be made with which they were to be girt as knights; and the great fleet was being assembled at Lisbon. But the Queen was taken ill, and soon there was no hope. Husband and sons gathered round her deathbed. When very near her end she asked: 'How is the wind?' she was told that it was northerly. 'Then,' she said, 'You will all sail for Ceuta on the feast of St. James.' A few minutes afterwards she died, and husband and sons sailed for Ceuta on St. James's day, the 25th of July, 1415, according to her word. . . . Ceuta was taken after a desperate fight. It was a memorable event, for the town never again passed into the hands of the Moors unto this day. . . . From the time of this Ceuta expedition Prince Henry set his mind steadfastly on the discovery of Guinea and on the promotion of commercial enterprise. During his stay at Ceuta he collected much information respecting the African coast. . . . His first objects were to know what was beyond the farthest cape hitherto reached on the coast of Africa, to open commercial relations with the people, and to extend the Christian faith. Prince Henry had the capacity for taking trouble. He undertook the task, and he never turned aside from it until he died. To be close to his work he came to live on the promontory of Sagres, near Cape St. Vincent, and not far from the seaport of Lagos. He was twenty-four years old when he came to live at this secluded spot, in December, 1418; and he died there in his sixty-seventh year. . . . He established a school at Sagres for the cultivation of map-drawing and the science of navigation. At great expense he procured the services of Mestre Jacome from Majorca, a man very learned in the art of navi-

gation, as it was then understood, and he erected an observatory. . . . My readers will remember that during the time of the Crusades a great order of knighthood was established, called the Templars, which became very rich and powerful, and held vast estates in most of the countries of Europe. At last the kings became jealous of their prosperity and, in the days of our Edward II. and of the French Philip IV., their wealth was confiscated, and the order of Knights Templars was abolished in all countries except Portugal. But King Dionysius of Portugal refused either to rob the knights or to abolish the order. In the year 1319 he reformed the order, and changed the name, calling it the Order of Christ, and he encircled the white cross of the Templars with a red cross as the future badge of the knights. They retained their great estates. Prince Henry was appointed, by his father, Grand Master of the Order of Christ in the year 1419. He could imagine no nobler nor more worthy employment for the large revenues of the Order than the extension of geographical discovery. Thus were the funds for his costly expeditions supplied by the Order of Chivalry of which he was Grand Master. When Prince Henry first began to send forth expeditions along the coast of Africa, the farthest point to the southward that had been sighted was Cape Bojador. The discovery of the extreme southern point of Africa, and of a way thence to India, was looked upon then exactly as the discovery of the North Pole is now. Fools asked what was the use of it. Half-hearted men said it was impossible. Officials said it was impractical. Nevertheless, Prince Henry said that it could be done, and that, moreover it should be done. . . . In 1434 he considered that the time had come to round Cape Bojador. He selected for the command of the expedition an esquire of his household named Gil Eannes, who was accompanied by John Diaz, an experienced seaman of a seafaring family at Lagos, many of whose members became explorers. Prince Henry told them that the current which they feared so much was strongest at a distance of about three to five miles from the land. He ordered them, therefore, to stand out boldly to sea. 'It was a place before terrible to all men,' but the Prince told them that they must win fame and honour by following his instructions. They did so, rounded the Cape, and landed on the other side. There they set up a wooden cross as a sign of their discovery. . . . The Prince now equipped a larger vessel than had yet been sent out, called a varinel, propelled by oars as well as sails. Many were the eager volunteers among the courtiers at Sagres. Prince Henry's cup-bearer, named Alfonso Gonsalves Baldaya, was selected to command the expedition, and Gil Eannes — he who first doubled Cape Bojador — went with it in a smaller vessel. . . . They sailed in the year 1436, and, having rounded Cape Bojador without any hesitation, they proceeded southward along the coast for 120 miles, until they reached an estuary called by them Rio d'Ouro. . . . During the five following years Prince Henry was much engaged in State affairs. The disastrous expedition to Tangiers took place, and the imprisonment of his young brother Ferdinand by the Moors, whose noble resignation under cruel insults and sufferings until he died at Fez, won for him the title of the 'Constant Prince.' But in 1441 Prince Henry was able to resume the despatch of vessels of discovery. In that year he gave the command of a small ship to his master of the wardrobe, Antam Gonsalves. . . . He [Gonsalves] was followed in the same year by Nuño Tristram. . . . Tristram discovered a headland which, from its whiteness, he named Cape Blanco. . . . The next discovery was that of the island of Arguin, south of Cape Blanco, which was first visited in 1443 by Nuño Tristram in command of a caravel. . . . The next voyage of discovery was one of great importance, because it passed the country of the Moors, and, for the first time, entered the land of the Negroes. Dinis Diaz, who was selected for this enterprise by the Prince, sailed in 1446 with the resolution of beating all his predecessors. He passed the mouth of the river Senegal, and was surprised at finding that the people on the north bank were Moors, while to the south they were all blacks; of a tribe called Jaloffs. Diaz went as far as a point which he called Cabo Verde. In the following years several expeditions, under Lanzarote and others, went to Arguin and the Senegal; until, in 1455, an important voyage under Prince Henry's patronage was undertaken by a young Venetian named Alvise (Luigi) Cadamosto. . . . They sailed on March 22, 1455, and went first to Porto Santo and Madeira. From the Canary Islands they made sail for Cape Blanco, boldly stretching across the intervening sea and being for some time quite out of sight of land. Cadamosto had a good deal of intercourse with the Negroes to the south of the Senegal, and eventually reached the mouth of the Gambia whence he set out on his homeward voyage. The actual extent of the discoveries made during the life of Prince Henry was from Cape Bojador to beyond the mouth of the Gambia. But this was only a small part of the great service he performed, not only for his own country, but for the whole civilised world. He organised discovery, trained up a generation of able explorers, so that from his time progress was continuous and unceasing. . . . Prince Henry, who was to be known to all future generations as 'the Navigator,' died at the age of sixty-six at Sagres, on Thursday, the 13th of November, 1460."—C. R. Markham, *The Sea Fathers, ch.* 1.

A. D. 1463-1498.—The Pope's gift of title to African discoveries.—Slow southward progress of exploration.—The rounding of the Cape of Good Hope.—Vasco da Gama's voyage.—"In order to secure his triumphs, Prince Henry procured a bull from Pope Eugenius IV., which guaranteed to the Portuguese all their discoveries between Cape Nun, in Morocco, and India. None of his commanders approached within six or eight degrees of the equator. . . . By the year 1472, St. Thomas, Annobon, and Prince's Islands were added to the Portuguese discoveries, and occupied by colonists; and at length the equator was crossed. Fernando Po having given his name to an island in the Bight of Biafra, acquired possession of 500 leagues of equatorial coast, whence the King of Portugal took the title of Lord of Guinea. The subsequent divisions of this territory into the Grain Coast, named from the cochineal thence obtained, and long thought to be the seed of a plant, Gold Coast, Ivory Coast, and Slave Coast,

indicate by their names the nature of the products of those lands, and the kind of traffic. Under King John II., after an inactive period of eight or ten years, Diego Cam (1484) pushed forward fearlessly to latitude 22° south, erecting at intervals on the shore, pillars of stone, which asserted the rights of his sovereign to the newly-found land. For the first time, perhaps, in history, men had now sailed under a new firmament. They lost sight of a part of the old celestial constellations, and were awe-struck with the splendours of the Southern Cross, and hosts of new stars. Each successive commander aimed at outdoing the deeds of his predecessor. Imaginary perils, which had frightened former sailors, spurred the Portuguese to greater daring. Bartholomew Diaz, in 1486, was sent in command of an expedition of three ships, with directions to sail till he reached the southernmost headland of Africa. Creeping on from cape to cape, he passed the furthest point touched by Diego Cam, and reached about 29° south latitude. Here driven out of his course by rough weather, he was dismayed on again making land to find the coast trending northward. He had doubled the Cape without knowing it, and only found it out on returning, disheartened by the results of his voyage. Raising the banner of St. Philip on the shore of Table Bay, Diaz named the headland the Cape of Tempests, which the king, with the passage to India in mind, changed to that of the Cape of Good Hope. By a curious coincidence, in the same year Covillan [see ABYSSINIA: 15–19TH CENTURIES] . . . learnt the fact that the Cape of Good Hope, the Lion of the Sea, or the Head of Africa, could be reached across the Indian Ocean."—J. Yeats, *Growth and Vicissitudes of Commerce, pt. 2, ch. 4.*—"Pedro de Covilho had sent word to King John II., from Cairo, by two Jews, Rabbi Abraham and Rabbi Joseph, that there was a south cape of Africa which could be doubled. They brought with them an Arabic map of the African coast. . . . Covilho had learned from the Arabian mariners, who were perfectly familiar with the east coast, that they had frequently been at the south of Africa, and that there was no difficulty in passing round the continent that way. . . . Vasco de Gama set sail July 9, 1497, with three ships and 160 men, having with him the Arab map. King John had employed his Jewish physicians, Roderigo and Joseph, to devise what help they could from the stars. They applied the astrolabe to marine use, and constructed tables. These were the same doctors who had told him that Columbus would certainly succeed in reaching India, and advised him to send out a secret expedition in anticipation, which was actually done, though it failed through want of resolution in its captain. Encountering the usual difficulties, tempestuous weather and a mutinous crew, who conspired to put him to death, De Gama succeeded, November 20, in doubling the Cape. On March 1 he met seven small Arab vessels, and was surprised to find that they used the compass, quadrants, sea-charts, and 'had divers maritime mysteries not short of the Portugals.' With joy he soon after recovered sight of the northern stars, for so long unseen. He now bore away to the north-east, and on May 19, 1498, reached Calicut, on the Malabar coast. The consequences of this voyage were to the last degree important. The commercial arrangements of Europe were completely dislocated; Venice was deprived of her mercantile supremacy [see VENICE: 15–17TH CENTURIES]; the hatred of Genoa was gratified; prosperity left the Italian towns; Egypt, hitherto supposed to possess a pre-eminent advantage as offering the best avenue to India, suddenly lost her position; the commercial monopolies so long in the hands of the European Jews were broken down. The discovery of America and passage of the Cape were the first steps of that prodigious maritime development soon exhibited by Western Europe. And since commercial prosperity is forthwith followed by the production of men and concentration of wealth, and, moreover, implies an energetic intellectual condition, it appeared before long that the three centres of population, of wealth, of intellect, were shifting westwardly. The front of Europe was suddenly changed; the British Islands, hitherto in a sequestered and eccentric position, were all at once put in the van of the new movement."—J. W. Draper, *Hist. of the Intellectual Development of Europe, ch. 19.*

A. D. 1579-1580.—Disastrous invasion of Morocco by Sebastian.—His death in battle.—Disputed succession to the throne.—The claim of Philip II. of Spain established by force of arms.—"Under a long succession of Kings who placed their glory in promoting the commerce of their subjects and extending their discoveries through the remotest regions of the globe, Portugal had attained a degree of importance among the surrounding nations, from which the narrow limits of the kingdom, and the neighbourhood of the Spanish monarchy, seemed for ever to exclude her. . . . John III., the last of those great monarchs under whose auspices the boundaries of the known world had been enlarged, was succeeded in the throne of Portugal

[1557] by his grandson Sebastian, a child of only three years old. As the royal infant advanced to manhood, his subjects might, without flattery, admire his sprightly wit, his manly form, his daring spirit, and his superior address, in all the accomplishments of a martial age. But the hopes which these splendid qualities inspired were clouded by an intemperate thirst of fame. . . . He had early cherished the frantic project of transporting a royal army to India, and of rivalling the exploits of Alexander; but from this design he was diverted, not by the difficulties that opposed it, nor by the remonstrances of his counsellors, but by the distractions of Africa, which promised to his ambition a nearer and fairer harvest of glory. On the death of Abdalla, King of Morocco, his son, Muley Mahomet, had seized upon the crown, in contempt to an established law of succession, that the kingdom should devolve to the brother of the deceased monarch. A civil war ensued, and Mahomet, defeated in several battles, was compelled to leave his uncle Muley Moluc, a prince of great abilities and virtues, in possession of the throne." Mahomet escaped to Lisbon, and Sebastian espoused his cause. He invaded Morocco [see MAROCCO: THE ARAB CONQUEST AND SINCE] with a force partly supplied by his uncle, Philip II., of Spain, and partly by the Prince of Orange, engaged the Moors rashly in battle (the battle of Alcazar, or the Three Kings, 1579), and perished on the field, his army being mostly destroyed or made captive. "An aged and feeble priest was the immediate heir to the unfortunate Sebastian; and the Cardinal Henry, the great uncle to the late monarch, ascended the vacant throne." He enjoyed his royal dignity little more than a twelvemonth, dying in 1580, leaving the crown in dispute among a crowd of claimants.—*Hist. of Spain, ch.* 22 (*v.* 2).—"The candidates were seven in number: the duchess of Braganza, the king of Spain, the duke of Savoy, Don Antonio, prior of Crato, the duke of Parma, Catherine of Medicis, and the sovereign pontiff. The four first were grand-children of Emanuel the Great, father of Henry. The duchess of Braganza was daughter of Prince Edward, Emanuel's second son; Philip was the son of the Empress Isabella, his eldest daughter; the duke of Savoy, of Beatrix, his younger daughter; and Don Antonio was a natural son of Lewis, who was a younger son of Emanuel, and brother to the present king [cardinal Henry]. The duke of Parma was great-grandson of Emanuel, by a daughter of the above-mentioned Prince Edward. The Queen-mother of France founded her claim on her supposed descent from Alphonso III., who died about 300 years before the present period; and the Pope pretended that Portugal was feudatory to the see of Rome, and belonged to him, since the male heirs in the direct line were extinct." The other candidates held small chances against the power and convenient neighborhood of Philip of Spain. "Philip's agents at the court of Lisbon allowed that if the duchess of Braganza's father had been alive, his title would have been indisputable; but they maintained that, since he had died without attaining possession of the throne, nothing but the degree of consanguinity to Emanuel ought to be regarded; and that, as the duchess and he were equal in that respect, the preference was due to a male before a female. And they farther insisted, that the law which excludes strangers from inheriting the crown was not applicable to him, since Portugal had formerly belonged to the kings of Castile." Promptly on the death of the cardinal-king Henry, the Spanish king sent an army of 35,000 men, under the famous duke of Alva, and a large fleet under the Marquis of Santa Croce, to take possession of what he claimed as his inheritance. Two battles sufficed for the subjugation of Portugal:—one fought on the Alcantara, August 25, 1580, and the other a little later on the Douro. The kingdom submitted, but with bitter feelings, which the conduct of Alva and his troops had intensified at every step of their advance. "The colonies in America, Africa, and the Indies, which belonged to the crown of Portugal, quickly followed the example of the mother country; nor did Philip find employment for his arms in any part of the Portuguese dominions but the Azores," which, supported by the French, were not subdued until the following year.—R. Watson, *Hist. of the Reign of Philip II., bk.* 16.

A. D. 1637-1668.—Crisis of discontent with the Spanish rule.—A successful revolution.—National independence recovered.—The House of Braganza placed on the throne.—"A spirit of dissatisfaction had long been growing amongst the Portugueze. Their colonies were neglected; a great part of Brazil, and a yet larger portion of their Indian empire, had fallen into the hands of the Dutch; Ormus, and their other possessions in the Persian Gulph, had been conquered by the Persians; their intercourse with their remaining colonies was harassed and intercepted; their commerce with the independent Indian states, with China and with Japan, was here injured and there partially destroyed, by the enterprising merchants and mariners of Holland; whilst at home the privileges secured to them as the price of their submission, were hourly, if not flagrantly, violated by their Spanish masters. The illegal imposition of a new tax by the king's sole authority, in 1637, had provoked a partial revolt in the southern provinces, where the duke of Braganza, grandson of Catherine [whose right to the throne was forcibly put aside by Philip II. of Spain in 1580,—see, above: A. D. 1579–1580], was proclaimed king. He refused the proffered dignity, and assisted in quelling the rebellion. He was thanked by Philip and at once recompensed, and, as it was hoped, ensnared, by an appointment to be general-in-chief of Portugal. But the flame was smothered, not extinguished. . . . The vice-queen, Margaret, duchess-dowager of Mantua, a daughter of Philip II.'s youngest daughter, Catherine, saw the gathering tempest, and forewarned the court of Madrid of the impending danger. Her information was treated, like herself, with contempt by Olivarez. One measure, however, he took, probably in consequence; and that one finally decided the hesitating conspirators to delay no longer. He ordered a large body of troops to be raised in Portugal, the nobles to arm their vassals, and all, under the conduct of the duke of Braganza, to hasten into

Spain, in order to attend the king, who was about to march in person against the rebellious Catalans. Olivarez hoped thus at once to overwhelm Catalonia and Roussillon, and to take from Portugal the power of revolting, by securing the intended leader, and draining the country of the warlike portion of its population. The nobles perceived the object of this command, and resolved to avoid compliance by precipitating their measures. Upon the 12th of October, 1640, they assembled to the number of 40 at the house of Don Antonio d' Almeida. At this meeting they determined to recover their independence, and dispatched Don Pedro de Mendoza as their deputy, to offer the crown and their allegiance to the duke of Braganza, who had remained quietly upon his principal estate at Villa Viçosa. The duke hesitated, alarmed, perhaps, at the importance of the irrevocable step he was called upon to take. But his high-spirited duchess, a daughter of the Spanish duke of Medina-Sidonia, observing to him, that a wretched and dishonourable death certainly awaited him at Madrid; at Lisbon, as certainly glory, whether in life or death, decided his acceptance. Partisans were gained on all sides, especially in the municipality of Lisbon; and the secret was faithfully kept, for several weeks, by at least 500 persons of both sexes, and all ranks. During this interval, the duke of Braganza remained at Villa Viçosa, lest his appearance at Lisbon should excite suspicion; and it seems that, however clearly the vice-queen had perceived the threatening aspect of affairs, neither she nor her ministers entertained any apprehension of the plot actually organized. The 1st of December was the day appointed for the insurrection. Early in the morning the conspirators approached the palace in four well-armed bands," and easily mastered the guard. From the windows of the palace they "proclaimed liberty and John IV." to a great concourse of people who had speedily assembled. Finding Vasconcellos, the obnoxious secretary to the vice-queen, hidden in a closet, they slew him and flung his body into the street. The vice-queen, seeing herself helpless, submitted to the popular will and signed mandates addressed to the Spanish governors and other officers commanding castles and fortifications in Portugal, requiring their surrender. "The archbishop of Lisbon was next appointed royal-lieutenant. He immediately dispatched intelligence of the event to the new king, and sent messengers to every part of Portugal with orders for the proclamation of John IV., and the seizure of all Spaniards. . . . Obedience was prompt and general. . . . John was crowned on the 15th of December, and immediately abolished the heavy taxes imposed by the king of Spain, declaring that, for his own private expenses, he required nothing beyond his patrimonial estates. He summoned the Cortes to assemble in January, when the three estates of the kingdom solemnly confirmed his proclamation as king, or 'acclamation,' as the Portugueze term it. . . . In the islands, in the African settlements, with the single exception of Ceuta, which adhered to Spain, and in what remained of Brazil and India, King John was proclaimed, the moment intelligence of the revolution arrived, the Spaniards scarcely any where attempting to resist. . . . In Europe, the new king was readily acknowledged by all the states at war with the house of Austria." The first attempts made by the Spanish court to regain its lost authority in Portugal took chiefly the form of base conspiracies for the assassination of the new king. War ensued, but the "languid and desultory hostilities produced little effect beyond harassing the frontiers. Portugal was weak, and thought only of self-defence; Spain was chiefly intent upon chastizing the Catalans." The war was prolonged, in fact, until 1668, when it was terminated by a treaty which recognized the independence of Portugal, but ceded Ceuta to Spain. The only considerable battles of the long war were those of Estremos, or Ameixal, in 1663, and Villa Viçosa, 1665, in which the Portuguese were victors, and which were practically decisive of the war. — M. M. Busk, *Hist. of Spain and Portugal, bk.* 2, *ch.* 10–12.

A. D. 1703.—The Methuen Treaty with England.—Portugal joined the Grand Alliance against France and Spain, in the War of the Spanish Succession, in 1703, and entered at that time into an important treaty with England. This is known as the Methuen Treaty—"called after the name of the ambassador who negotiated it—and that treaty, and its effect upon the commerce of England and the habits of her people lasted through five generations, even to the present time. The wines of Portugal were to be admitted upon the payment of a duty $33\frac{1}{3}$ per cent. less than the duty paid upon French wines; and the woolen cloths of England, which had been prohibited in Portugal for twenty years, were to be admitted upon terms of proportionate advantage. Up to that time the Claret of France had been the beverage of the wine-drinkers of England. From 1703 Port established itself as what Defoe calls 'our general draught.' In all commercial negotiations with France the Methuen Treaty stood in the way; for the preferential duty was continued till 1831. France invariably pursued a system of retaliation. It was a point of patriotism for the Englishman to hold firm to his Port."—C. Knight, *Popular Hist. of Eng.*, *v.* 5, *ch.* 17.—See, also, Spain: A. D. 1703–1704.

A. D. 1807.—Napoleon's designs against the kingdom.—His delusive treaty for its partition with Spain.—French invasion and flight of the royal family to Brazil.—"One of the first steps taken by Napoleon, after his return to Paris, . . . [after the Peace of Tilsit—see Germany: A. D. 1807 (June—July)] was, in the month of August, to order the French and Spanish ambassadors conjointly, to declare to the prince-regent of Portugal, that he must concur in the continental system, viz. shut his ports against English commerce, confiscate all English property, and imprison all English subjects to be found within his dominions, or they were

instructed immediately to leave Lisbon. The prince and his ministers dared not openly resist the French emperor's will, even whilst the wiser part of the cabinet were convinced that the very existence of the country depended upon British commerce. In this extremity, and relying upon the friendly forbearance of England, they strove to pursue a middle course. Don John professed his readiness to exclude British ships of all descriptions from his ports, but declared that his religious principles would not allow him to seize the subjects and property of a friendly state in the midst of peace, and that prudence forbade his offending England until a Portugueze squadron, then at sea, should have returned safely home. . . . Napoleon punished this imperfect obedience, by seizing all Portugueze vessels in ports under his control, and ordering the French and Spanish legations to leave Lisbon. The Portugueze ambassadors were, at the same time, dismissed from Paris and Madrid. A French army was, by this time, assembled near the foot of the Pyrenees, bearing the singular title of army of observation of the Gironde; and General Junot . . . was appointed to its command. . . . Spain was endeavouring to share in the spoil, not to protect the victim. A treaty, the shameless iniquity of which can be paralleled only by the treaties between Austria, Russia, and Prussia for the partition of Poland, had been signed at Fontainebleau, on the 27th of October. . . . By this treaty Charles surrendered to Napoleon his infant grandson's kingdom of Etruria (King Louis I. had been dead some years), over which he had no right whatever, and bargained to receive for him in its stead the small northern provinces of Portugal, Entre Minho e Douro and Tras os Montes, under the name of the kingdom of Northern Lusitania, which kingdom the young monarch was to hold in vassalage of the crown of Spain. The much larger southern provinces, Alemtejo and Algarve, were to constitute the principality of the Algarves, for Godoy, under a similar tenure. And the middle provinces were to be occupied by Napoleon until a general peace, when, in exchange for Gibraltar, Trinidad, and any other Spanish possession conquered by England, they might be restored to the family of Braganza, upon like terms of dependence. The Portugueze colonies were to be equally divided between France and Spain. In execution of this nefarious treaty, 10,000 Spanish troops were to seize upon the northern, and 6,000 upon the southern state. . . . On the 18th of October, Junot, in obedience to his master's orders, crossed the Pyrenees, and, being kindly received by the Spaniards, began his march towards the Portugueze frontiers, whilst the Spanish troops were equally put in motion towards their respective destinations. . . . The object of so much haste was, to secure the persons of the royal family, whose removal to Brazil had not only been talked of from the beginning of these hostile discussions, but was now in preparation, and matter of public notoriety. . . . The reckless haste enjoined by the emperor, and which cost almost as many lives as a pitched battle, was very near attaining its end. . . . The resolution to abandon the contest being adopted, the prince and his ministers took every measure requisite to prevent a useless effusion of blood. A regency, consisting of five persons, the marquess of Abrantes being president, was appointed to conduct the government, and negotiate with Junot. On the 26th a proclamation was put forth, explaining to the people that, as Napoleon's enmity was rather to the sovereign than the nation, the prince-regent, in order to avert the calamities of war from his faithful subjects, would transfer the seat of government to Brazil, till the existing troubles should subside, and strictly charging the Portugueze, more especially the Lisbonians, to receive the French as friends. On the 27th the whole royal family proceeded to Belem, to embark for flight, on the spot whence, about three centuries back, Vasco de Gama had sailed upon his glorious enterprise. . . . The ships set sail and crossed the bar, almost as the French advance guard was entering Lisbon. Sir Sidney Smith escorted the royal family, with four men-of-war, safely to Rio Janeiro, the capital of Brazil, leaving the remainder of his squadron to blockade the mouth of the Tagus."—M. M. Busk, *Hist. of Spain and Portugal, bk.* 4, *ch.* 7.

A. D. 1820-1824.—Revolution and Absolutist reaction.—Separation and independence of Brazil.—"Ever since 1807 Portugal had not known a court. On the first threat of French invasion the Regent had emigrated to the Brazils, and he had since lived and ruled entirely in the great Transatlantic colony. The ordinary conditions of other countries had been reversed. Portugal had virtually become a dependency of her own colony. The absence of the court was a sore trial to the pride of the Portuguese. An absent court had few supporters. It happened, too, that its ablest defender had lately left the country. . . . In April 1820 [Marshal] Beresford sailed for the Brazils. He did not return till the following October; and the revolution had been completed before his return. On the 24th of August the troops at Oporto determined on establishing a constitutional government, and appointed a provisional Junta with this object. The Regency which conducted the affairs of the country at Lisbon denounced the movement as a nefarious conspiracy. But, however nefarious the conspiracy might be, the defection of the army was so general that resistance became impossible. On the 1st of September the Regency

issued a proclamation promising to convene the Cortes. The promise, however, did not stop the progress of the insurrection. The Junta which had been constituted at Oporto marched at the head of the troops upon Lisbon. The troops at Lisbon and in the south of Portugal threw off their allegiance, and established a Junta of their own. The Junta at Lisbon were, for the moment, in favour of milder measures than the Junta of Oporto. But the advocates of the more extreme course won their ends. The Oporto troops, surrounding the two Juntas, which had been blended together, compelled them to adopt the Spanish constitution; in other words, to sanction the election of one deputy to the Cortes for every 30,000 persons inhabiting the country. . . . When the revolution of 1820 had occurred John VI., King of Portugal, was quietly ruling in his transatlantic dominions of Brazil. Portugal had been governed for thirteen years from Rio de Janeiro; and the absence of the Court from Lisbon had offended the Portuguese and prepared them for change. After the mischief had been done John VI. was persuaded to return to his native country, leaving his eldest son, Dom Pedro, Regent of Brazil in his absence. Before setting out on his journey he gave the prince public instructions for his guidance, which practically made Brazil independent of Portugal; and he added private directions to the prince, in case any emergency should arise which should make it impracticable to preserve Brazil for Portugal, to place the crown on his own head, and thus save the great Transatlantic territory for the House of Braganza. Leaving these parting injunctions with his son, John VI. returned to the old kingdom which he had deserted nearly fourteen years before. He reached Lisbon, and found the Constitutionalists in undisputed possession of power. He found also that the action of the Constitutionalists in Portugal was calculated to induce Brazil to throw off the authority of the mother country. The Cortes in Portugal insisted on the suppression of the supreme tribunals in Brazil, on the establishment of Provincial Juntas, and on the return of the Regent to Portugal. The Brazilians declined to adopt measures which they considered ruinous to their dignity, and persuaded the Regent to disobey the orders of the Cortes. A small body of Portuguese troops quartered in Brazil endeavoured to overawe the prince, but proved powerless to do so. In May 1822 the prince was persuaded to declare himself Perpetual Defender of the Brazils. In the following September the Brazilians induced him to raise their country to the dignity of an empire, and to declare himself its constitutional emperor. The news that the Brazilians had declared themselves an independent empire reached Europe at a critical period. Monarchs and diplomatists were busily deliberating at Verona on the affairs of Spain and of the Spanish colonies. No one, however, could avoid comparing the position of Portugal and Brazil with that of Spain and her dependencies. . . . The evident determination of France to interfere in Spain created anxiety in Portugal. The Portuguese Cortes apprehended that the logical consequence of French interference in the one country was French interference in the other. . . . The position of a French army on the Spanish frontier roused the dormant spirits of the Portuguese Absolutists. In February 1823 a vast insurrection against the Constitution broke out in Northern Portugal. The insurgents, who in the first instance obtained considerable success, were with difficulty defeated. But the revolt had been hardly quelled before the Absolutists recovered their flagging spirits. Every step taken by the Duc d'Angoulême in his progress from the Bidassoa to Madrid [see SPAIN: A. D. 1814–1827] raised their hopes of ultimate success. The king's second son, the notorious Dom Miguel, fled from his father's palace and threw in his lot with the insurgents. For a moment the king stood firm and denounced his son's proceedings. But the reaction which had set in was too strong to be resisted. The Cortes was closed, a new Ministry appointed, and autocracy re-established in Portugal. The re-establishment of autocracy in Portugal marked the commencement of a series of intrigues in which this country [England] was deeply interested. One party in the new Government, with M. de Palmella at its head, was disposed to incline to moderate measures and to listen to the advice which it received from the British Ministry and from the British Ambassador, Sir Edward Thornton. Another party, of which M. de Subsérra was the representative, was in favour of an intimate union with France, and ready to listen to the contrary counsels of M. de Neuville, the French Minister at Lisbon. M. de Palmella, despairing of founding a settled form of government amidst the disorders which surrounded him on every side, applied to the British Ministry for troops to give stability to the Administration. The demand arrived in London in July 1823. . . . The demand for troops was refused, but a British squadron was sent to the Tagus, with a view of affording the King of Portugal the moral support of the British nation and a secure asylum in the event of any danger to his person. Many months elapsed before the King of Portugal had occasion to avail himself of the possible asylum which was thus afforded to him. . . . The evident leanings of M. de Palmella towards moderate measures, however, alarmed the Portuguese Absolutists. Ever since the revolution of 1823 Dom Miguel had held the command of the army; and, on the night of the 29th of April, 1824, the prince suddenly ordered the arrest of the leading personages of the Government, and, under the pretext of suppressing an alleged conspiracy of Freemasons, called on the army to liberate their king, and to complete the triumph of the previous year. For nine days the king was a mere puppet in the hands of his son, and Dom Miguel was virtually master of Lisbon. On the 9th of May the king was persuaded by the foreign ministers in his capital to resume his authority; to retire on board the 'Windsor Castle,' a British man-of-war; to dismiss Dom Miguel from his command, and to order his attendance upon him. The prince, 'stricken with a sudden fatuity,' obeyed his father's commands, and was prevailed upon to go into voluntary exile. The revolution of 1824 terminated with his departure, and Portugal again enjoyed comparative tranquillity."—S. Walpole, *Hist. of Eng. from* 1815, *ch.* 9 (*v.* 2).

A. D. 1824-1889.—Return of John VI. to Brazil.—Abdication of the Portuguese throne by Dom Pedro, after granting a constitution. —Usurpation of Dom Miguel.—Civil war and factious conflicts.—Establishment of Parliamentary government, and Peace.—"At the close of 1824 the king returned to Brazil to spend his last days in peace. On reaching Rio de Janeiro, he recognized Dom Pedro as Emperor of Brazil, and on the 6th of March, 1826, John VI. died in the country of his choice. By his will, John VI. left the regency of Portugal to his daughter Isabel Maria, to the disgust of Dom Miguel, who had fully expected in spite of his conduct that Portugal would be in some manner bequeathed to him, and that Dom Pedro would be satisfied with the government of Brazil. The next twenty-five years are the saddest in the whole history of Portugal. The establishment of the system of parliamentary government, which now exists, was a long and difficult task. . . . The keynote of the whole series of disturbances is to be found in the pernicious influence of the army. . . . The army was disproportionately large for the size and revenue of the country; there was no foreign or colonial war to occupy its energies, and the soldiers would not return to the plough nor the officers retire into private life. The English Cabinet at this juncture determined to maintain peace and order, and in 1826, a division of 5,000 men was sent under the command of Lieutenant-General Sir William Clinton to garrison the chief towns. The accession of Pedro IV. to the throne was hailed with joy in Portugal, though looked on with suspicion in Brazil. He justified his reputation by drawing up a charter, containing the bases for a moderate parliamentary government of the English type, which he sent over to Portugal, by the English diplomatist, Lord Stuart de Rothesay. Then to please his Brazilian subjects, he abdicated the throne of Portugal in favour of his daughter, Donna Maria da Gloria, a child of seven years old, on condition that on attaining a suitable age she should marry her uncle, Dom Miguel, who was to swear to observe the new constitution. The Charter of 1826 was thankfully received by the moderate parliamentary party; Clinton's division was withdrawn; Palmella remained prime minister; and in the following year, 1827, Dom Pedro destroyed the effect of his wise measures by appointing Dom Miguel to be regent of Portugal in the name of the little queen. Dom Miguel was an ambitious prince, who believed that he ought to be king of Portugal; he was extremely popular with the old nobility, the clergy, and the army, with all who disliked liberal ideas, and with the beggars and the poor who were under the influence of the mendicant orders. He was declared Regent in July, 1827, and in May, 1828, he summoned a Cortes of the ancient type, such as had not met since 1697, which under the presidency of the Bishop of Viseu offered him the throne of Portugal. He accepted, and immediately exiled all the leaders of the parliamentary, or, as it is usually called, the Chartist, party, headed by Palmella, Saldanha, Villa Flor, and Sampaio. They naturally fled to England, where the young queen was stopping on her way to be educated at the court of Vienna, and found popular opinion strongly in their favour. But the Duke of Wellington and his Tory Cabinet refused to countenance or assist them. . . . Meanwhile the reign of Dom Miguel had become a Reign of Terror; arrests and executions were frequent; thousands were deported to Africa, and in 1830 it was estimated that 40,000 persons were in prison for political offences. He ruled in absolute contempt of all law, and at different times English, French, and American fleets entered the Tagus to demand reparation for damage done to commerce, or for the illegal arrest of foreigners. The result of this conduct was that the country was hopelessly ruined, and the chartist and radical parties, who respectively advocated the Charter of 1826 and the Constitution of 1822, agreed to sink their differences, and to oppose the bigoted tyrant. . . . Dom Pedro, who had devoted his life to the cause of parliamentary government, resigned his crown in 1831 [see BRAZIL: A. D. 1825–1865] to his infant son, and left Brazil to head the movement for his daughter's cause. . . . In July, 1832, the ex-emperor with an army of 7,500 men arrived at Oporto, where he was enthusiastically welcomed, and Dom Miguel then laid siege to the city. European opinion was divided between the two parties; partisans of freedom and of constitutional government called the Miguelites 'slaves of a tyrant,' while lovers of absolutism, alluding to the loans raised by the ex-emperor, used to speak of the 'stock-jobbing Pedroites.' The siege was long and protracted." The Miguelites finally sustained several heavy defeats, both on land and at sea, and Lisbon was triumphantly entered by the Chartists in July, 1833. "The year 1834 was one of unbroken success for the Chartists. England and France recognized Maria da Gloria as Queen of Portugal, and the ministry of Queen Isabella of Spain, knowing Dom Miguel to be a Carlist, sent two Spanish armies under Generals Rodil and Serrano to the help of Dom Pedro. . . . Finally the combined Spanish and Portuguese armies surrounded the remnant of the Miguelites at Evora Monte, and on the 26th of May, 1834, Dom Miguel surrendered. By the Convention of Evora Monte, Dom Miguel abandoned his claim to the throne of Portugal, and in consideration of a pension of £15,000 a year promised never again to set foot in the kingdom. . . . Dom Pedro, who had throughout the struggle been the heart and soul of his daughter's party, had thus the pleasure of seeing the country at peace, and a regular parliamentary system in operation, but he did not long survive, for on the 24th of September, 1834, he died at Queluz near Lisbon, of an illness brought on by his great labours and fatigues, leaving a name, which deserves all honour from Portuguese and Brazilians alike. Queen Maria da Gloria was only fifteen, when she thus lost the advantage of her father's wise counsel and steady help, yet it might have been expected that her reign would be calm and prosperous. But neither the queen, the nobility, nor the people, understood the principles of parliamentary government. . . . The whole reign was one of violent party struggles, for they hardly deserve to be called civil wars, so little did they involve, which present a striking contrast to the peaceable constitutional government that at present prevails. . . . In 1852 the Charter was revised to suit all parties; direct voting, one of the chief claims of the radicals, was allowed, and the era of civil war came to an end. Maria da

Gloria did not long survive this peaceful settlement, for she died on the 15th of November, 1853, and her husband the King-Consort, Ferdinand II, assumed the regency until his eldest son Pedro V. should come of age. The era of peaceful parliamentary government, which succeeded the stormy reign of Maria II., has been one of material prosperity for Portugal. . . . The whole country, and especially the city of Lisbon, was during this reign, on account of the neglect of all sanitary precautions, ravaged by cholera and yellow fever, and it was in the midst of one of these outbreaks, on the 11th of November, 1861, that Pedro V., who had refused to leave his pestilence-stricken capital, died of cholera, and was followed to the grave by two of his younger brothers, Dom Ferdinand and Dom John. At the time of Pedro's death, his next brother and heir, Dom Luis, was travelling on the continent, and his father, Ferdinand II., who long survived Queen Maria da Gloria . . . assumed the regency until his return; soon after which King Luis married Maria Pia, younger daughter of Victor Emmanuel, king of Italy. . . . The reign of King Luis was prosperous and peaceful, and the news of his death on October 9, 1889, was received with general regret. . . . Luis I. was succeeded on the throne by his elder son, Dom Carlos, or Charles I., a young man of twenty-six, who married in 1886, the Princess Marie Amélie de Bourbon, the eldest daughter of the Comte de Paris. His accession was immediately followed by the revolution of the 15th of November, 1889, in Brazil, by which his great uncle, Pedro II., Emperor of Brazil, was dethroned and a republican government established in that country."—H. M. Stephens, *The Story of Portugal, ch.* 18.—See BRAZIL: A. D. 1889–1891.

PORTUS MAGNUS.—An important Roman port in Britain, the massive walls of which are still seen at Porchester (or Portchester).—T. Wright, *Celt, Roman and Saxon, ch.* 5.

POST.—POSTAGE.—POST-OFFICE.—"The little that is known of the post-system of the [Roman] empire is summed up in a few words in Becker's 'Handbuch,' iii. i. 304: 'The institution of Augustus, which became the basis of the later system known to us from the writings of the Jurists, consisted of a military service which forwarded official despatches from station to station by couriers, called in the earlier imperial period speculatories. (Liv. xxxi. 24.; Suet. Calig. 44.; Tac. Hist. ii. 73.) Personal conveyance was confined (as in the time of the republic) to officials: for this purpose the mutationes (posts) and mansiones (night quarters) were assigned, and even palatia erected at the latter for the use of governors and the emperor himself. Private individuals could take advantage of these state posts within the provinces by a special license (diploma) of the governor, and at a later period of the emperor only.' Under the republic senators and high personages could obtain the posts for their private use, as a matter of privilege."—C. Merivale, *Hist. of the Romans under the Empire, ch.* 34 (*v.* 4), *foot-note.*—"According to Professor Friedländer in his interesting work, 'Darstellungen aus der Sittengeschichte Roms,' great progress was made by the Romans, in the fourth and fifth centuries, in their method of postal communication. Their excellent roads enabled them to establish rapid mule and horse posts as well as carts, and it is even stated that special 'postal ships' (Post schiffe) were kept in readiness at the principal sea-ports. These advanced postal arrangements, like many other traces of Roman civilization, survived longest in Gaul; but even there the barbarism of the people, and the constant wars in which they were engaged, gradually extinguished, first the necessity, and then, as a natural consequence, the means of postal communication, until we find, at a much later period, all European countries alike, for lack of any organized system, making use of pilgrims, friars, pedlars, and others, to convey their correspondence from one place to another. The first attempt of any importance, to rescue postal communication from the well-nigh hopeless condition into which it had for centuries fallen, was made in Germany in 1380, by the order of Teutonic Knights, who established properly equipped post-messengers for home and international service. An improvement and extension of this plan was carried out by Francis von Thaxis in the year 1516, when a postal line from Brussels to Vienna, viâ Kreuznach, was established. It is true that, shortly before this, there is some record of Louis XI. of France having started, for State postal purposes, what were termed cavaliers du roy; but these were only allowed to be used for private purposes by privileged individuals, part of whose privilege, by the way, consisted in paying to Louis an enormous fee. It is to Francis von Thaxis that must be accorded the title of the first postal reformer. So eager was his interest in the work he had undertaken, that, in order to gain the right of territorial transit through several of the small states of Germany where his plans were strongly opposed, he actually agreed for a time to carry the people's letters free of charge, an instance of generosity, for a parallel of which we look in vain in the history of the Post Office. The mantle of this reformer seems, strangely enough, to have fallen in turn upon many of his descendants, who not only in Germany, but also in Spain, Austria, Holland, and other countries, obtained concessions for carrying on the useful work started by Francis von Thaxis. One of the

Thaxis family, at a later date, was created a prince of Germany, and took the name of Thurm und Taxis; and from him is descended the princely line bearing that name which flourishes at the present day. Another member of the family was created a grandee of Spain, and has the honor of being immortalized by Schiller in his 'Don Carlos.' The first establishment of an organized system of postal communication in England is wrapt in some obscurity. During the reign of John post-messengers were, for the first time, employed by the king; these messengers were called nuncii; and in the time of Henry I. these nuncii were also found in the service of some of the barons. In Henry III.'s reign they had so far become a recognized institution of the State that they were clothed in the royal livery. Mr. Lewins, in his interesting work, 'Her Majesty's Mails,' states that several private letters are still in existence, dating back as far as the reign of Edward II., which bear the appearance of having been carried by the nuncii of that period, with 'Haste, post haste!' written across them. . . . Edward IV., towards the end of the fifteenth century, during the time that he was engaged in war with Scotland, had the stations for postal relays placed within a few miles of each other all the way from London to the royal camp, and by this means managed to get his despatches carried nearly a hundred miles a day. . . . No improvement is recorded in the postal service in this country from the period last referred to until the reign of Henry VIII. This king, we are told, appointed a 'master of the posts,' in the person of Sir Brian Tuke, who really seems to have made great efforts to exercise a proper control over the horse-posts, and to bring some sort of organization to bear on his department. Poor Tuke, however, was not rewarded with much success. . . . James I. established a regular post for inland letters, and Charles I., recognizing, no doubt, the financial importance of the Post Office, declared it in 1637, by royal proclamation, to be State property. It was, however, during the Protectorate, twenty years later, that the first act of Parliament relating to the formation of a State Post Office was passed. This statute was entitled, 'An Act for the settling of the postage of England, Scotland, and Ireland.' . . . The first trace which can be found of a regular tariff of postal charges is in the reign of Charles I., and even regarded by the light of to-day these charges cannot be held to be exorbitant; for example, a single letter from London, for any distance under eighty miles, was charged twopence; fourpence up to one hundred and forty miles; sixpence for any greater distance in England, and eightpence to all parts of Scotland."—*Postal Communication, Past and Present (National Rev.; copied in Littell's Living Age, July* 30, 1887).—"A penny post was established in London, in 1683, two years before the death of Charles II., for the conveyance of letters and parcels within the City, by Robert Murray, an upholsterer by trade, who, like a great many others, was dissatisfied with the Government, which, in its anxiety to provide for the postal requirements of the country, had entirely neglected the City and suburbs. The post, established by Murray at a vast expense, was ultimately handed over to a William Docwray, whose name is now well known in the annals of Post Office history. The arrangements of the new penny post were simple, and certainly liberal enough. All letters or parcels not exceeding a pound weight, or any sum of money not exceeding £10 in value, or parcel not worth more than £10, could be conveyed at a cost of one penny; or within a radius of ten miles from a given centre, for the charge of twopence. Several district offices were opened in various parts of London, and receiving houses were freely established in all the leading thoroughfares. . . . The deliveries in the City were from six to eight daily, while from three to four were found sufficient to supply the wants of the suburbs. The public appreciated and supported the new venture, and it soon became a great commercial success, useful to the citizens, and profitable to the proprietor. No sooner, however, did a knowledge of this fact reach the ears of those in authority over the General Post Office, than the Duke of York, acting under instructions, and by virtue of the settlement made to him, objected to its being continued, on the ground that it was an invasion of his legal rights. . . . The authorities . . . applied to the court of King's Bench, wherein it was decided that the new or so-called penny post was an infraction of the privileges of the authorities of the General Post Office, and the royal interest, and that consequently it, with all its organization, profits, and advantages, should be handed over to, and remain the property of, the royal establishment. . . . Post-paid envelopes were in use in France in the time of Louis XIV. Pelisson states that they originated in 1653 with M. de Velayer, who established, under royal authority, a private penny-post in Paris. He placed boxes at the corners of the principal streets to receive the letters, which were obliged to be enclosed in these envelopes. They were suggested to the Government by Mr. Charles Whiting in 1830, and the eminent publisher, the late Mr. Charles Knight, also proposed stamped covers for papers. Dr. T. E. Gray, of the British Museum, claimed the credit of suggesting that letters should be prepaid by the use of stamps as early as 1834."—W. Tegg, *Posts and Telegraphs, pp.* 21–23 *and* 100–101.—"On the morning of the 10th of January, 1840, the people of the United Kingdom rose in the possession of a new power — the power of sending by the post a letter not weighing more than half an ounce upon the prepayment of one penny, and this without any regard to the distance which the letter had to travel. . . . To the sagacity and the perseverance of one man, the author of this system, the high praise is due, not so much that he triumphed over the petty jealousies and selfish fears of the post-office authorities, but that he established his own convictions against the doubts of some of the ablest and most conscientious leaders of public opinion. . . . Mr. Rowland Hill in 1837 published his plan of a cheap and uniform postage. A Committee of the House of Commons was appointed in 1837, which continued its inquiries throughout the session of 1838, and arrived at the conviction that 'the mode recommended of charging and collecting postage, in a pamphlet published by Mr. Rowland Hill,' was feasible, and deserving of a trial under legislative sanction. . . . Lord Ashburton, although an advocate of Post-office Reform, held that the reduction to a penny would wholly destroy the revenue. Lord Lowther, the Postmaster-General, thought twopence the smallest

rate that would cover the expenses. Colonel Maberly, the secretary to the post office, considered Mr. Hill's plan a most preposterous one, and maintained that if the rates were to be reduced to a penny, the revenue would not recover itself for forty or fifty years. . . . Public opinion, however, had been brought so strongly to bear in favour of a penny rate, that the Chancellor of the Exchequer, Mr. Spring Rice, on the 5th of July, 1839, proposed a resolution, 'that it is expedient to reduce the postage on letters to one uniform rate of a penny postage, according to a certain amount of weight to be determined — that the parliamentary privilege of franking should be abolished, and that official franking be strictly limited — the House pledging itself to make good any deficiency that may occur in the revenue from such reduction of the postage.' A Bill was accordingly passed to this effect in the House of Commons, its operation being limited in its duration to one year, and the Treasury retaining the power of fixing the rates at first, although the ultimate reduction was to be to one penny. This experimental measure reduced all rates above fourpence to that sum, leaving those below fourpence unaltered. With this complication of charge the experiment could not have a fair trial, and accordingly on the 10th of January, 1840, the uniform half-ounce rate became by order of the Treasury one penny. . . . In 1840 the number of letters sent through the post had more than doubled, and the legislature had little hesitation in making the Act of 1839 permanent, instead of its duration being limited to the year which would expire in October. A stamped envelope, printed upon a peculiar paper, and bearing an elaborate design, was originally chosen as the mode of rendering prepayment convenient to the sender of a letter. A simpler plan soon superseded this attempt to enlist the Fine Arts in a plain business operation. The plan of prepaying letters by affixing a stamp bearing the head of the ruler of the country, came into use here in May, 1840 [see, also, ENGLAND: A. D. 1840]. The habit of prepayment by postage stamps has now become so universal throughout the world, that in 1861 the system was established in eighty different countries or colonies."—C. Knight, *Popular History of England, v. 8, ch. 24.*—The first postal system in the American colonies was privately established in New England in 1676, by John Heyward, under authority from the General Court of the colony of Massachusetts. "In 1683 the government of Penn established a postal system for the Colony of Pennsylvania. In 1700 Col. J. Hamilton organized 'his postal establishment for British America' including all the English colonies, but soon after disposed of his right to the English crown. In 1710 the English Parliament established by law the first governmental postal system with the general office at New York, which continued until in 1776 the Continental Congress adopted and set in action the postal system proposed by Franklin, who was appointed the first Postmaster General. The first law of the Federal Congress continued this system in operation as sufficient for the public wants, but the postal service was not finally settled until the act of 1792. This law (1792) fixed a tariff which with unimportant changes remained in force until the adoption of the system of Uniform Postage in the United States Single, double and triple letters were charged 8, 16 and 24 cents respectively when sent to other countries, and four cents plus the internal postage when arriving from foreign countries. The internal postage between offices in the United States was 6, 8, 10, 15, 17, 20, 22 and 25 cents for distances of 30, 60, 100, 150, 200, 250, 350, or 400 miles respectively for single letters, and double, triple, etc., this for double, triple, etc. letters. A single letter was defined by the law to be a single sheet or piece of paper, a double letter, two sheets or pieces of paper, etc. . . . The earliest letters which we have seen, consist of single sheets of paper folded and addressed upon the sheet. An envelope would have subjected them to double postage."—J. K. Tiffany, *History of the Postage Stamps, introd.*—By an act of March 3, 1845, the postage rates in the United States were reduced to two — namely, 5 cents for 300 miles or under, and 10 cents for longer distances. Six years later (March 3, 1851) the minimum rate for half an ounce became 3 cents (if prepaid) with the distance covered by it extended to 3,000 miles; if not prepaid, 5 cents. For distances beyond 3,000 miles, these rates were doubled. In 1856 prepayment was made compulsory; and by an act signed March 3, 1863, the 3 cent rate for half-ounce letters was extended to all distances in the United States.—J. Rees, *Footprints of a Letter-Carrier, p. 264.*—In 1883 the rate in the United States was reduced to 2 cents for all distances, on letters not exceeding half an ounce. In 1885 the weight of a letter transmissible for 2 cents was increased to one ounce. The use of postage stamps was first introduced in the United States under an act of Congress passed in March, 1847. Stamped envelopes were first provided in 1853. The first issue of postal cards was on the 1st of May, 1873, under an act approved June 8, 1872. The registry system was adopted July 1, 1855. Free delivery of letters in the larger cities was first undertaken on the 1st of July 1863.—D. M. Dickinson, *Progress and the Post* (*North Am. Rev., Oct.*, 1889).

ALSO IN: *Annual Report of the Postmaster-General of the U. S.*, 1893, *pp.* 543–558 (*Description of all Postage Stamps and Postal Cards issued*).

POSTAL MONEY-ORDER SYSTEM, The.—The postal money-order system, though said to be older in practical existence, was regularly instituted and organized in England, in its present form, in 1859. It was adopted in the United States five years later, going into operation in November, 1864.—D. M. Dickinson, *Progress and the Post* (*North Am. Rev., Oct.*, 1889).

ALSO IN: *Appleton's Annual Cyclopædia*, 1887, *p.* 687.

POSTAL SAVINGS BANKS. — Postal savings banks were first brought into operation in England in 1861. "One shilling is the smallest sum that can be deposited. The Government has, however, . . . issued blank forms with spaces for twelve penny postage-stamps, and will receive one of these forms with twelve stamps affixed as a deposit. This plan was suggested by the desire to encourage habits of saving among children, and by the success of penny banks in connection with schools and mechanics' institutes. No one can deposit more than £30 in one year, or have to his credit more than £150 exclusive of interest. When the principal and interest together amount to £200, interest ceases until the amount has been reduced below £200.

Interest at two and a half per cent is paid, beginning the first of the month following the deposit and stopping the last of the month preceding the withdrawal, but no interest is paid on any sum less than a pound or not a multiple of a pound. The interest is added to the principal on the 31st of December of each year. . . . The English colonies . . . have established postal savings-banks of a similar character. . . . The Canadian system . . . went into operation in 1868. . . . Influenced by the success of the English system of postal savings-banks, the governments on the Continent of Europe have now nearly all made similar provisions for the investment of the surplus earnings of the people. The Italian system . . . went into operation February 29, 1876. . . . In France the proposal to establish postal savings-banks was frequently discussed, but not adopted until March 1881, although the ordinary savings-banks had for several years been allowed to use the post-offices as places for the receipt and repayment of deposits. . . . The Austrian postal savings-banks were first opened January 12, 1883. . . . The Belgian system has been [1885] in successful operation for more than fifteen years; that of the Netherlands was established some three years ago; while Sweden has just followed her neighbors, Denmark and Norway, in establishing similar institutions. In 1871 Postmaster-General Creswel recommended the establishment of postal savings depositories in connection with the United States post-offices, and two years later he discussed the subject very fully in his annual report. Several of his successors have renewed his recommendation;" but no action has been taken by Congress.—D. B. King, *Postal Savings-Banks* (*Popular Science Monthly, Dec.*, 1885).

POSTAL TELEGRAPH, The. — "The States of the continent of Europe were the first to appreciate the advantages of governmental control of the telegraph. . . . From the beginning they assumed the erection and management of the telegraph lines. It may be said that in taking control of the telegraphs the monarchial governments of the Old World were actuated as much by the desire to use them for the maintenance of authority as by the advantages which they offered for the service of the people. To a certain extent this is doubtless true, but it is none the less true that the people have reaped the most solid benefits, and that the tendency has been rather to liberalize government than to maintain arbitrary power. . . . The greatest progress and the best management have alike been shown in those countries where the forms of government are most liberal, as in Switzerland and Belgium. . . . In Great Britain the telegraph was at first controlled by private parties. . . . In July, 1868, an act was passed 'to enable Her Majesty's Postmaster-General to acquire, work, and maintain electric telegraphs.' . . . The rate for messages was fixed throughout the kingdom at one shilling for twenty words, excluding the address and signature. This rate covered delivery within one mile of the office of address, or within its postal delivery." The lines of the existing telegraph companies were purchased on terms which were commonly held to be exorbitant, and Parliament, changing its original intention, conferred on the post-office department a monopoly of the telegraphs. Thus "the British postal telegraph was from the first handicapped by an enormous interest charge, and to some extent by the odium which always attaches to a legal monopoly. But notwithstanding the exorbitant price paid for the telegraph, the investment has not proved an unprofitable one."—N. P. Hill, *Speech in the Senate of the U. S., Jan.* 14, 1884, *on a Bill to Establish Postal Telegraphs*, (*"Speeches and Papers," pp.* 209–215).

POSTAL UNION, The. — The Postal Union, which now embraces most of the civilized and semi-civilized countries of the world, was formed originally by a congress of delegates, representing the principal governments of Europe, and the United States of America, which assembled at Berne, Switzerland, in September, 1874. A treaty was concluded at that time, which established uniform rates of postage (25 centimes, or 5 cents, on half-ounce letters), between the countries becoming parties to it, and opening the opportunity for other states to join in the same arrangement. From year to year since, the Postal Union has been widened by the accession of new signatories to the treaty, until very few regions of the globe where any postal system exists lie now outside of it. The late accessions to the Postal Union have been North Borneo, the German East African Protectorate, and the British Australasian Colonies, in 1891; Natal and Bosnia-Herzegovina in 1892; the South African Republic (Transvaal) in 1893. By the action of an international postal congress, held at Vienna, in 1891, a kind of international clearing-house for the Postal Union was established at Berne, Switzerland, and the settlement of accounts between its members has been greatly facilitated thereby.

POSTUMIAN ROAD.—One of the great roads of the ancient Romans. It led from Genoa to Aquileia, by way of Placentia, Cremona and Verona.—T. Mommsen, *Hist. of Rome, bk.* 4, *ch.* 11.

POTESTAS.—The civil power with which a Roman magistrate was invested was technically termed potestas. — W. Ramsay, *Manual of Roman Antiq., ch.* 5.

POTESTAS TRIBUNITIA, The. — The powers and prerogatives of the ancient tribunitian office, without the office itself, being conferred upon Augustus and his successors, became the most important element, perhaps, of the finally compacted sovereignty of the Roman emperors. — C. Merivale, *Hist. of the Romans, ch.* 30.

POTIDÆA, Siege of.—The city of Potidæa, a Corinthian colony founded on the long peninsula of Pallene which projects from the Macedonian coast, but which had become subject to Athens, revolted from the latter B. C. 432, and was assisted by the Corinthians. This was among the quarrels which led up to the Peloponnesian War. The Athenians reduced the city and expelled the inhabitants after a siege of three years.—Thucydides, *History, bk.* 1–2.—See, also, GREECE: B. C. 432; and ATHENS: B. C. 430–429.

PRÆNESTE, Sulla's capture of.—Præneste, the ancient city of the Latins, held against Sulla, in the first civil war, by young Marius, was surrendered after the battle at the Colline Gate of Rome. Sulla ordered the male inhabitants to be put to the sword and gave up the town to his soldiers for pillage.—W. Ihne, *Hist. of Rome, bk.* 7, *ch.* 19.

PRÆNOMEN.—NOMEN.—COGNOMEN. See GENS.

PRÆTOR. See ROME: B. C. 366.

PRÆTORIAN GUARDS.—PRÆTORIANS.—"The commander-in-chief of a Roman army was attended by a select detachment, which, under the name of 'Cohors Praetoria,' remained closely attached to his person in the field, ready to execute his orders, and to guard him from any sudden attack. . . . Augustus, following his usual line of policy, retained the ancient name of 'Praetoriae Cohortes,' while he entirely changed their character. He levied in Etruria, Umbria, ancient Latium, and the old Colonies, nine or ten Cohorts, consisting of a thousand men each, on whom he bestowed double pay and superior privileges. These formed a permanent corps, who acted as the Imperial Life Guards, ready to overawe the Senate, and to suppress any sudden popular commotion."—W. Ramsay, *Manual of Roman Antiq., ch.* 12.—The Prætorian Guard had been quartered, during the reign of Augustus, and during the early years of the reign of Tiberius, in small barracks at various points throughout the city, or in the neighboring towns. Sejanus, the intriguing favorite of Tiberius, being commander of the formidable corps, established it in one great permanent camp, "beyond the north-eastern angle of the city, and between the roads which sprang from the Viminal and Colline gates." This was done A. D. 23.—C. Merivale, *Hist. of the Romans, ch.* 45.—See, also, ROME: A. D. 14-37.

A. D. 41.—Their elevation of Claudius to the throne. See ROME: A. D. 41.

A. D. 193.—Murder of Pertinax and sale of the empire. See ROME: A. D. 192-284.

A. D. 193.—Reconstitution by Severus.—Severus, whose first act on reaching Rome had been to disarm and disband the insolent Guard which murdered Pertinax and sold the empire to Julianus, had no thought of dispensing with the institution. There was soon in existence a new organization of Prætorians, increased to four times the ancient number and picked from all the legions of the frontiers.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 5.

A. D. 238.—Murder of Balbinus and Pupienus. See ROME: A. D. 192-284.

A. D. 312.—Abolition by Constantine.—"By the prudent measures of Diocletian, the numbers of the Prætorians were insensibly reduced, their privileges abolished, and their place supplied by two faithful legions of Illyricum, who, under the new titles of Jovians and Herculians, were appointed to perform the service of the imperial guards. . . . They were old corps stationed at Illyricum; and, according to the ancient establishment, they each consisted of 6,000 men. They had acquired much reputation by the use of the plumbatæ, or darts loaded with lead."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 13, *with foot-note.*—Restored and augmented by Maxentius, during his brief reign, the Prætorians were finally abolished and their fortified camp destroyed, by Constantine, after his victory in the civil war of A. D. 312.—*Same, ch.* 14.

PRÆTORIAN PRÆFECTS.—"As the government degenerated into military despotism, the Prætorian præfect, who in his origin had been a simple captain of the guards, was placed not only at the head of the army, but of the finances, and even of the law. In every department of administration he represented the person, and exercised the authority, of the emperor. The first præfect who enjoyed and abused this immense power was Plautianus, the favourite minister of Severus. . . . They [the Prætorian præfects] were deprived by Constantine of all military command as soon as they had ceased to lead into the field, under their immediate orders, the flower of the Roman troops; and at length, by a singular revolution, the captains of the guards were transformed into the civil magistrates of the provinces. According to the plan of government instituted by Diocletian, the four princes had each their Prætorian præfect; and, after the monarchy was once more united in the person of Constantine, he still continued to create the same number of four præfects, and intrusted to their care the same provinces which they already administered. 1. The Præfect of the East stretched his ample jurisdiction" from the Nile to the Phasis and from Thrace to Persia. "2. The important provinces of Pannonia, Dacia, Macedonia, and Greece, acknowledged the authority of the Præfect of Illyricum. 3. The power of the Præfect of Italy" extended to the Danube, and over the islands of the Mediterranean and part of Africa. "4. The Præfect of the Gauls comprehended under that plural denomination the kindred provinces of Britain and Spain, and . . . to the foot of Mount Atlas. . . . Rome and Constantinople were alone excepted from the jurisdiction of the Prætorian præfects. . . . A perfect equality was established between the dignity of the two municipal, and that of the four Prætorian præfects."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 5 *and* 17.—See, also, ROME: B. C. 31-A. D. 14.

PRÆTORIUM, The.—"In the very early days of Rome, before even Consuls had a being, the two chief magistrates of the republic bore the title of Praetors. Some remembrance of this fact lingering in the speech of the people gave always to the term Praetorium (the Praetor's house) a peculiar majesty, and caused it to be used as the equivalent of palace. So in the well-known passages of the New Testament, the palace of Pilate the Governor at Jerusalem, of

Herod the King at Caesarea, of Nero the Emperor at Rome, are all called the Praetorium. From the palace the troops who surrounded the person of the Emperor took their well-known name, 'the Praetorian Guard.'"—T. Hodgkin, *Italy and her Invaders, bk.* 1, *ch.* 3 (*v.* 1).

PRAGA, Battle of (1831). See POLAND: A. D. 1830–1832.

PRAGMATIC SANCTION.—"No two words convey less distinct meaning to English ears than those which form this title: nor are we at all prepared to furnish an equivalent. Perhaps 'a well considered Ordinance' may in some degree represent them: i. e. an Ordinance which has been fully discussed by men practised in State Affairs. But we are very far from either recommending or being satisfied with such a substitute. The title was used in the Lower [the Byzantine] Empire, and Ducange ad v. describes 'Pragmaticum Rescriptum seu Pragmatica Sanctio' to be that which 'ad hibitâ diligente causæ cognitione, ex omnium Procerum consensu in modum sententiæ lecto, a Principe conceditur.'" E. Smedley, *Hist. of France, pt.* 1, *ch.* 15, *foot-note.*—"Pragmatic Sanction being, in the Imperial Chancery and some others, the received title for Ordinances of a very irrevocable nature, which a sovereign makes, in affairs that belong wholly to himself, or what he reckons his own rights."—T. Carlyle, *Hist. of Fred'k II., bk.* 5, *ch.* 2.—"This word [pragmatic] is derived from the Greek 'pragma,' which means 'a rule.'"—E. de Bonnechose, *Hist. of France, v.* 1, *epoch* 2, *bk.* 1, *ch.* 5, *foot-note.*—The following are the more noted ordinances which have borne this name:

PRESIDENT OF THE UNITED STATES OF AMERICA.—"The executive power shall be vested in a President of the United States of America. He shall hold his office dur-

ing the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows: Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress [and these electors, meeting in their respective States, shall vote for President and Vice-President, transmitting certified lists of their votes to the President of the Senate of the United States, who shall count them in the presence of the two Houses of Congress; and if no person is elected President by a majority of all the votes cast, then the House of Representatives shall elect a President from the three persons who received the highest numbers of the votes cast by the electors, the representation from each State having one vote in such election]. . . . No person except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States. . . . The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several States, when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment. He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments. The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session. He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States. The President, Vice-President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors."—*Constitution of the U. S., art. 2, and art. 12 of amendments.*—The provisions of the Constitution regarding the Presidential succession, in case of the death or resignation of both President and Vice-President, are: 'In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed or a President shall be elected.' (Article II, Section 6.) In pursuance of the power thus granted to it in the last half of this section, Congress in 1792 passed an act declaring that in case of the death, resignation, etc., of both the President and Vice-President, the succession should be first to the President of the Senate and then to the Speaker of the House. This order was changed by the act of 1886, which provided that the succession to the presidency should be as follows: 1. President. 2. Vice-President. 3. Secretary of State. 4. Secretary of the Treasury. 5. Secretary of War. 6. Attorney General. 7. Postmaster General. 8. Secretary of the Navy. 9. Secretary of the Interior. In all cases the remainder of the four-years' term shall be served out. This act also regulated the counting of the votes of the electors by Congress, and the determination of who were legally chosen electors.—*Statutes of the U. S. passed at 1st Sess. of 49th Cong., p. 1.*

PRESTER JOHN, The Kingdom of.—"About the middle of the eleventh century stories began to be circulated in Europe as to a Christian nation of north-eastern Asia, whose sovereign was at the same time king and priest, and was known by the name of Prester John. Amid the mass of fables with which the subject is encumbered, it would seem to be certain that, in the very beginning of the century, the Khan of the Keraït, a tribe whose chief seat was at Karakorum, between Lake Baikal and the northern frontier of China, was converted to Nestorian Christianity — it is said, through the appearance of a saint to him when he had lost his way in hunting. By means of conversation with Christian merchants, he acquired some elementary knowledge of the faith, and, on the application of Ebed-Jesu, metropolitan of Maru, to the Nestorian patriarch Gregory, clergy were sent, who baptized the king and his subjects, to the number of 200,000. Ebed-Jesu consulted the patriarch how the fasts were to be kept, since the country did not afford any corn, or anything but flesh and milk; and the answer was, that, if no other Lenten provisions were to be had, milk should be the only diet for seasons of abstinence. The earliest western notice of this nation is given by Otho of Freising, from the relation of an Armenian bishop who visited the court of pope Eugenius III. This report is largely tinctured with fable, and deduces the Tartar chief's descent

from the Magi who visited the Saviour in His cradle. It would seem that the Nestorians of Syria, for the sake of vying with the boasts of the Latins, delighted in inventing tales as to the wealth, the splendour, and the happiness of their convert's kingdom; and to them is probably to be ascribed an extravagantly absurd letter, in which Prester John is made to dilate on the greatness and the riches of his dominions, the magnificence of his state and the beauty of his wives, and to offer the Byzantine emperor, Manuel, if he be of the true faith, the office of lord chamberlain in the court of Karakorum. In 1177 Alexander III. was induced by reports which a physician named Philip had brought back from Tartary, as to Prester John's desire to be received into communion with the pope, to address a letter to the king, recommending Philip as a religious instructor. But nothing is known as to the result of this; and in 1202 the Keraït kingdom was overthrown by the Tartar conqueror Genghis Khan. In explanation of the story as to the union of priesthood with royalty in Prester John, many theories have been proposed, of which two may be mentioned here: that it arose out of the fact of a Nestorian priest's having got possession of the kingdom on the death of a khan; or that, the Tartar prince's title being compounded of the Chinese 'wang' (king) and the Mongol 'khan,' the first of these words was confounded by the Nestorians of Syria with the name John, and the second with 'cohen' (a priest). . . . The identification of Prester John's kingdom with Abyssinia was a mistake of Portuguese explorers some centuries later."—J. C. Robertson, *Hist. of the Ch. Church, bk.* 6, *ch.* 11, *with foot-note* (*v.* 5).

PRIMATES.—METROPOLITANS.—PATRIARCHS.— In the early organization of the Christian Church, the bishops of every province found it necessary "to make one of themselves superior to all the rest, and invest him with certain powers and privileges for the good of the whole, whom they therefore named their primate, or metropolitan, that is, the principal bishop of the province. . . . Next in order to the metropolitans or primates were the patriarchs; or, as they were at first called, archbishops and exarchs of the diocese. For though now an archbishop and a metropolitan be generally taken for the same, to wit, the primate of a single province; yet anciently the name archbishop was a more extensive title, and scarce given to any but those whose jurisdiction extended over a whole imperial diocese, as the bishop of Rome, Alexandria, Antioch, &c."—J. Bingham, *Antiq. of the Christ. Ch., bk.* 2, *ch.* 16–17 (*v.* 1). — See, also, CHRISTIANITY: A. D. 312–337.

PRINCE, Origin of the title. See PRINCEPS SENATUS.

PRINCE EDWARD ISLAND.— "Prince Edward's Island, the smallest province of the Dominion [of Canada], originally called St. John's Island, until 1770 formed part of Nova Scotia. The first Governor was Walter Patterson. . . . The first assembly met in 1773." In 1873 Prince Edward Island consented to be received into the Confederation of the Dominion of Canada — the latest of the provinces to accede to the Union, except Newfoundland, which still (1894) remains outside. — J. E. C. Munro, *The Constitution of Canada, ch.* 2.—See, also, CANADA: A. D. 1867; and 1869–1873.

PRINCE OF THE CAPTIVITY. See JEWS: A. D. 200–400.

PRINCE OF WALES. See WALES, PRINCE OF.

PRINCEPS SENATUS.—"As the title of imperator conferred the highest military rank upon Augustus and his successors, so did that of princeps senatus, or princeps (as it came to be expressed by an easy but material abridgment), convey the idea of the highest civil preeminence consistent with the forms of the old constitution. In ancient times this title had been appropriated to the first in succession of living censorii, men who had served the office of censor; and such were necessarily patricians and senators. The sole privilege it conferred was that of speaking first in the debates of the senate; a privilege however to which considerable importance might attach from the exceeding deference habitually paid to authority and example by the Roman assemblies. . . . The title of princeps was modest and constitutional; it was associated with the recollection of the best ages of the free state and the purest models of public virtue; it could not be considered beyond the deserts of one who was undoubtedly the foremost man of the nation. . . . The popularity which the assumption of this republican title conferred upon the early emperors may be inferred from the care with which it is noted, and its constitutional functions referred to by the writers of the Augustan age and that which succeeded it. But it was an easy and natural step in the progress of political ideas to drop the application of the title, and contract it from prince of the senate, to prince merely. The original character of the appellation was soon forgotten, and the proper limits of its privileges confounded in the more vague and general prerogative which the bare designation of first or premier seemed to imply."—C. Merivale, *Hist. of the Romans, ch.* 31.

PRINTING AND THE PRESS.

A. D. 1430-1456.—The invention of movable type.—Rival claims for Coster and Gutenberg.—The first Printed Book.—"Before arriving at the movable type placed side by side, and forming phrases, which appears to us to-day so simple and so ordinary, many years passed. It is certain that long before Gutenberg a means was found of cutting wood and metal in relief and reproducing by application the image traced. . . . Remembering that the numerous guilds of 'tailleurs d' images,' or sculptors in relief, had in the Middle Ages the specialty of carving ivories and of placing effigies on tombs, it can be admitted without much difficulty that these people one day found a means of multiplying the sketches of a figure often asked for, by modelling its contour in relief on ivory or wood, and afterwards taking a reproduction on paper or parchment by means of pressure. When and where was this discovery produced? We cannot possibly say; but it is certain that playing cards were produced by this means, and that from the year 1423 popular figures were cut in wood, as we know from the St. Christopher of that date belonging to Lord Spencer. . . . It is a recognised fact that the single sheet with a printed figure preceded the xylographic book, in which text and illustration were cut in the same block. This process did not appear much before the second quarter of the 15th century, and it was employed principally for popular works which were then the universal taste. The engraving also was nothing more than a kind of imposition palmed off as a manuscript; the vignettes were often covered with brilliant colours and gold, and the whole sold as of the best quality. . . . An attempt had been made to put some text at the foot of the St. Christopher of 1423, and the idea of giving more importance to the text was to the advantage of the booksellers. . . . At the epoch of the St. Christopher, in 1423, several works were in vogue in the universities, the schools, and with the public. . . . To find a means of multiplying these treatises at little cost was a fortune to the inventor. It is to be supposed that many artisans of the time attempted it; and without doubt it was the booksellers themselves, mostly mere dealers, who were tempted to the adventure by the sculptors and wood-cutters. But none had yet been so bold as to cut in relief a series of blocks with engravings and text to compose a complete work. That point was reached very quickly when some legend was engraved at the foot of a vignette, and it may be thought that the 'Donatus' [i. e. the Latin Syntax of Ælius Donatus] was the most ancient of books so obtained among the 'Incunabuli,' as we now call them, a word that signifies origin or cradle. The first books then were formed of sheets of paper or parchment, laboriously printed from xylographic blocks, that is to say wooden blocks on which a 'tailleur d' images' had left in relief the designs and the letters of the text. He had thus to trace his characters in reverse, so that they could be reproduced as written; he had to avoid faults, because a phrase once done, well or ill, lasted. It was doubtless this difficulty of correction that gave the idea of movable types. . . . This at least explains the legend of Laurent Coster, of Haarlem, who, according to Hadrian Junius, his compatriot, discovered by accident the secret of separate types while playing with his children. And if the legend of which we speak contains the least truth, it must be found in the sense above indicated, that is in the correction of faults, rather than in the innocent game of a merchant of Haarlem. . . . Movable type, the capital point of printing, the pivot of the art of the Book, developed itself little by little, according to needs, when there was occasion to correct an erroneous inscription; but, in any case, its origin is unknown. Doubtless to vary the text, means were found to replace entire phrases by other phrases, preserving the original figures; and thus the light dawned upon these craftsmen, occupied in the manufacture and sale of their books. According to Hadrian Junius, Laurent Janszoon Coster (the latter name signifying 'the discoverer') published one of the celebrated series of works under the general title of 'Speculum' which was then so popular, . . . the 'Speculum Humanæ Salvationis.' . . . Junius, as we see, attributes to Laurent Coster the first impression of the 'Speculum,' no longer the purely xylographic impression of the 'Donatus' from an engraved block, but that of the more advanced manner in movable types [probably between 1430 and 1440]. In point of fact, this book had at least four editions, similar in engravings and body of letters, but of different text. It must then be admitted that the fount was dispersed, and typography discovered. . . . All the xylographic works of the 15th century may be classed in two categories: the xylographs, rightly so called, or the block books, such as the 'Donatus,' and the books with movable types, like the 'Speculum,' of which we speak. . . . The movable types used, cut separately in wood, were not constituted to give an ideal impression. We can understand the cost that the execution of these characters must have occasioned, made as they were one by one, without the possibility of ever making them perfectly uniform. Progress was to substitute for this irregular process types that were similar, identical, easily produced, and used for a long time without breaking. Following on the essays of Laurent Coster, continuous researches bore on this point. . . . Here history is somewhat confused. Hadrian Junius positively accuses one of Laurent Coster's workmen of having stolen the secrets of his master and taken flight to Mayence, where he afterwards founded a printing office. According to Junius, the metal type was the discovery of the Dutchman, and the name of the thief was John. Who was this John? Was it John Gaensefleisch, called Gutenberg, or possibly John Fust? But it is not at all apparent that Gutenberg, a gentleman of Mayence, exiled from his country, was ever in the service of the Dutch inventor. As to Fust, we believe his only intervention in the association of printers of Mayence was as a money-lender, from which may be comprehended the unlikelihood of his having been with Coster, the more so as we find Gutenberg retired to Strasbourg, where he pursued his researches. There he was, as it were, out of his sphere, a ruined noble whose great knowledge was bent entirely on invention. Doubtless, like many others, he may have had in his hands one of the printed works of Laurent Coster, and conceived the idea of appropriating the infant

process. In 1439 he was associated with two artisans of the city of Strasbourg, ostensibly in the fabrication of mirrors, which may be otherwise understood as printing of 'Speculums,' the Latin word signifying the same thing. . . . Three problems presented themselves to him. He wanted types less fragile than wooden types and less costly than engraving. He wanted a press by the aid of which he could obtain a clear impression on parchment or paper. He desired also that the leaves of his books should not be anopistograph, or printed only on one side. . . . Until then, and even long after, the xylographs were printed 'au frotton,' or with a brush, rubbing the paper upon the forme coated with ink, thicker than ordinary ink. He dreamed of something better. In the course of his work John Gutenberg returned to Mayence. The idea of publishing a Bible, the Book of books, had taken possession of his heart. . . . The cutting of his types had ruined him. . . . In this unhappy situation, Gutenberg made the acquaintance of a financier of Mayence, named Fust, . . . who put a sum of 1,100 florins at his disposal to continue his experiments. Unfortunately this money disappeared, it melted away, and the results obtained were absolutely ludicrous. . . . About this time a third actor enters on the scene. Peter Schoeffer, of Gernsheim, a writer, introduced into the workshop of Gutenberg to design letters, benefited by the abortive experiments, and taking up the invention at its dead-lock, conducted it to success. John of Tritenheim, called Trithemius, the learned abbot of Spanheim, is the person who relates these facts; but as he got his information from Schoeffer himself, too much credence must not be given to his statements. Besides, Schoeffer was not at all an ordinary artisan. If we credit a Strasbourg manuscript written by his hand in 1449, he was a student of the 'most glorious university of Paris.'" How much Schoeffer contributed to the working out of the invention is a matter of conjecture; but in 1454 it was advanced to a state in which the first known application of it in practical use was made. This was in the printing of copies of the famous letters of indulgence which Pope Nicholas V. was then selling throughout Europe. Having the so far perfected invention in hand, Fust and Schoeffer (the latter now having married the former's granddaughter) wished to rid themselves of Gutenberg. "Fust had a most easy pretext, which was to demand purely and simply from his associate the sums advanced by him, and which had produced so little. Gutenberg had probably commenced his Bible, but, in face of the claims of Fust, he had to abandon it altogether, types, formes, and press. In November, 1455, he had retired to a little house outside the city, where he tried his best, by the aid of foreign help, to establish a workshop, and to preserve the most perfect secrecy. Relieved of his company, Fust and Schoeffer were able to take up the impression of the Bible and to complete it without him. . . . One thing is certain: that the Bible of Schoeffer, commenced by Gutenberg or not, put on sale by Fust and Schoeffer alone about the end of 1455 or beginning of 1456, proves to be the first completed book. . . . It is now called the Mazarine Bible, from the fact that the copy in the Mazarin Library was the first to give evidence concerning it. The book was put on sale at the end of 1455 or beginning of 1456, for a manuscript note of a vicar of St. Stephen at Mayence records that he finished the binding and illuminating of the first volume on St. Bartholomew's Day [June 13], 1456, and the second on the 15th of August. . . . All these remarks show that the printers did not proclaim themselves, and were making pseudo-manuscripts. . . . Many of the copies are illuminated with as much care and beauty as if they were the finest manuscripts. . . . Copies are by no means uncommon, most of the great libraries having one, and many are in private collections."— H. Bouchot, *The Printed Book, ch.* 1.—"The general consent of all nations in ascribing the honour of the invention of printing to Gutenberg seems at first sight a very strong argument in his favour; but if Gutenberg were not the first to invent and use movable types, but the clever man who brought to perfection what already existed in a crude state, we can quite imagine his fame to have spread everywhere as the real inventor. As a master in the art of printing, Gutenberg's name was known in Paris so early as 1472. . . . Mr. Hessels . . . believes that the Coster mentioned in the archives as living in Haarlem, 1436–83, was the inventor of types, and that, taken as a whole, the story as told by Junius is substantially correct. Personally I should like to wait for more evidence. There is no doubt that the back-bone of the Dutch claim lies in the pieces and fragments of old books discovered for the most part in the last few decades, and which give support to, at the same time that they receive support from, the Cologne Chronicler. . . . These now amount to forty-seven different works. Their number is being added to continually now that the attention of librarians has been strongly called to the importance of noting and preserving them. They have been catalogued with profound insight by Mr. Hessels, and for the first time classified by internal evidence into their various types and classes. But, it may well be asked, what evidence is there that all these books were not printed long after Gutenberg's press was at work? . . . The earliest book of Dutch printing bears date 1473, and not a single edition out of all the so-called Costeriana has any printer's name or place or date. To this the reply is, that these small pieces were school-books or absies and such-like works, in the production of which there was nothing to boast of, as there would be in a Bible. Such things were at all times 'sine ulla nota,' and certain to be destroyed when done with, so that the wonder would be to find them so dated, and the very fact of their bearing a date would go far to prove them not genuine. These fragments have been nearly all discovered in 15th-century books, printed mostly in various towns of Holland. . . . Mr. Hessels quotes forty-seven different books as 'Costeriana,' which include four editions of the Speculum, nineteen of Donatus, and seven of Doctrinale. The Donatuses are in five different types, probably from five different Dutch presses. Compared with the earliest dated books of 1473 and onwards, printed in Holland, they have nothing in common, while their brotherhood to the Dutch MSS. and block-books of about thirty years earlier is apparent. Just as astronomers have been unable to explain certain aberrations of the planets without surmising a missing link in the chain of their knowledge, so is it with

early typography. That such finished works as the first editions of the Bible and Psalter could be the legitimate predecessors of the Costeriana, the Bruges, the Westminster press, and others, I cannot reconcile with the internal evidence of their workmanship. But admit the existence of an earlier and much ruder school of typography, and all is plain and harmonious."—W. Blades, *Books in Chains, and other Bibliographical Papers, pp.* 149–158.

Also in: J. H. Hessels, *Gutenberg: was he the Inventor of Printing?*—C. H. Timperley, *Encyclopædia of Literary and Typographical Anecdote, pp.* 101–120.—H. N. Humphreys, *Hist. of the Art of Printing, ch.* 3–4.

A. D. 1457-1489.—Progress and diffusion of the art.—After the Mazarine Bible, "then follows the Kalendar for the year 1457, most probably printed at the end of 1456. Then again the printed dates, August 14, 1457 and 1459, with place (Mentz) in the colophons of the Psalter issued by Fust and Schoeffer; the printed year 1460 (with Mentz added) in the Catholicon [a Latin Grammar and Dictionary], &c. &c. So that, with the exception of 1458, there is no interruption in Mentz printing from the moment that we see it begin there. As regards the printed psalter, its printers are mentioned distinctly in the book itself; but the other books just mentioned are assumed to have been issued by the same two Mentz printing-offices which are supposed to be already at work there in 1454, though the 1460 Catholicon and some of the other works are ascribed by some to other printers. By the side of these dates, we find already a Bible completed in 1460 by Mentelin at Strassburg, according to a MS. note in the copy preserved at Freiburg. . . . Assuming then, for a moment, that Mentz is the starting-point, we see printing spread to Strassburg in 1460; to Bamberg in 1461; to Subiaco in 1465; in 1466 (perhaps already in 1463) it is established at Cologne; in 1467 at Eltville, Rome; in 1468 at Augsburg, Basle, Marienthal; in 1469 at Venice; 1470 at Nuremberg, Verona, Foligno, Trevi, Savigliano, Paris; 1471 at Spire, Bologna, Ferrara, Florence, Milan, Naples, Pavia, Treviso; 1472 at Esslingen, Cremona, Mantua, Padua, Parma, Monreale, Fivizano, Verona; 1473 at Laugingen, Ulm (perhaps here earlier), Merseburg, Alost, Utrecht, Lyons, Brescia, Messina; 1474 at Louvain, Genoa, Como, Savona, Turin, Vicenza; 1475 at Lubeck, Breslau, Blaubeuren, Burgdorf, Modena, Reggio, Cagli, Caselle or Casale, Saragossa; 1476 at Rostock, Bruges (here earlier ?), Brussels; 1477 at Reichenstein, Deventer, Gouda, Delft, Westminster; 1478 at Oxford, St. Maartensdyk, Colle, Schussenried, Eichstadt; 1479 at Erfurt, Würzburg, Nymegen, Zwolle, Poitiers; 1480 at London [?], Oudenaarde, Hasselt, Reggio; 1481 at Passau, Leipzig, Magdeburg, Treves, Urach; 1482 at Reutlingen, Memmingen, Metz, Antwerp; 1483 at Leiden, Kuilenburg, Ghent, Haarlem; 1484 at Bois-le-Duc, Siena; 1485 at Heidelberg, Regensburg; 1486 at Munster, Stuttgart; 1487 at Ingolstadt; 1488 at Stendal; 1489 at Hagenau, &c."—J. H. Hessels, *Haarlem the Birth-place of Printing, not Mentz, ch.* 4.

A. D. 1469-1515.—The early Venetian printers.—The Aldine Press.—"One of the famous first race of German printers, John of Spires, arrived at Venice in the year 1469, and immediately brought his art into full play; producing within the first three months his fine edition of the 'Letters of Cicero,' a masterpiece of early printing. . . . The success of John of Spires as a printer was at once recognized by the Venetian Republic; and Pasquale Malipiero, the reigning Doge, granted a patent conferring upon him the sole right of printing books within the territory of Venice. . . . But the enterprising printer did not live to enjoy the privilege," and it was not continued to any of his family. "On the withdrawal of the monopoly several new printers set up their Presses in the city, among whom was the celebrated Jenson, the ingenious Frenchman who was sent by Charles VII. to acquire the art at Mayence. . . . John Emeric, of Udenheim, was another of the German printers who immediately succeeded John and Vindelin of Spires; and still more successful, though somewhat later in the field, was Erard Ratdolt. . . . He [Ratdolt] is said to have been the first to adopt a regular form of Title at all approaching our modern conception of a Book-Title; and he also took the lead in the production of those beautifully-engraved initials for which the books printed in Italy towards the close of the 15th century are famous. His most splendid work is undoubtedly the 'Elements of Euclid, with the Commentaries of Campanus.' . . . Nicholas Jenson was the most renowned of those who followed the earliest German printers in Venice, until his works were partially eclipsed by those of the Aldi. . . . In 1470 he [Jenson] had . . . completed his preparations, and the first four works which issued from his Venetian press appeared in that year. . . . These works were printed with Roman characters of his own engraving, more perfect in form than those of any previous printer. His types are in fact the direct parents of the letters now in general use, which only differ from them in certain small details dependent solely on fashion. . . . This celebrated printer died in September of the year 1481. . . . Andrea Torresani and others continued Jenson's Association, making use of the same types. Torresani was eventually succeeded in the same establishment by the celebrated Aldo Manuccio, who, having married his daughter, adopted the important vocation of printer, and became the first of those famous 'Aldi,' as they are commonly termed, whose fame has not only absorbed that of all the earlier Venetian printers, but that of the early printers of every other Italian seat of the art. . . . It was Manuccio who, among many other advances in this art, first invented the semi-cursive style of character now known as 'Italic'; and it is said that it was founded upon a close imitation of the careful handwriting of Petrarch, which, in fact, it closely resembles. This new type was used for a small octavo edition of 'Virgil,' issued in 1501, on the appearance of which he obtained from Pope Leo X. a letter of privilege, entitling him to the sole use of the new type which he had invented." The list of the productions of the elder Aldus and his son Paul "comprises nearly all the great works of antiquity, and of the best Italian authors of their own time. From their learning and general accomplishments, the Aldi might have occupied a brilliant position as scholars and authors, but preferred the useful labour of giving correctly to the world the valuable works of others. The Greek editions of the elder Aldus form the basis of his true glory, especially the

'Aristotle,' printed in 1495, a work of almost inconceivable labour and perseverance."—H. N. Humphreys, *Hist. of the Art of Printing, ch.* 8. —"Aldus and his studio and all his precious manuscripts disappeared during the troubled years of the great Continental war in which all the world was against Venice [see VENICE: A. D. 1508–1509]. In 1510, 1511, and 1512, scarcely any book proceeded from his press. . . . After the war Aldus returned to his work with renewed fervour. 'It is difficult,' says Renouard, 'to form an idea of the passion with which he devoted himself to the reproduction of the great works of ancient literature. If he heard of the existence anywhere of a manuscript unpublished, or which could throw a light upon an existing text, he never rested till he had it in his possession. He did not shrink from long journeys, great expenditure, applications of all kinds.' . . . It is not in this way however that the publisher, that much questioned and severely criticised middleman, makes a fortune. And Aldus died poor. His privileges did not stand him in much stead, copyright, especially when not in books but in new forms of type, being non-existent in his day. In France and Germany, and still nearer home, his beautiful Italic was robbed from him, copied on all sides, notwithstanding the protection granted by the Pope and other princes as well as by the Venetian Signoria. His fine editions were printed from, and made the foundation of foreign issues which replaced his own. How far his princely patrons stood by him to repair his losses there seems no information. His father-in-law, Andrea of Asola, a printer who was not so fine a scholar, but perhaps more able to cope with the world, did come to his aid, and his son Paolo Manutio, and his grandson Aldo il Giovane, as he is called, succeeded him in turn."—Mrs. Oliphant, *The Makers of Venice, pt.* 4, *ch.* 3.—Aldus died in 1515. His son Paul left Venice for Rome in 1562.

A. D. 1476-1491.—Introduction in England. —The Caxton Press.—"It was probably at the press of Colard Mansion, in a little room over the porch of St. Donat's at Bruges, that William Caxton learned the art which he was the first to introduce into England. A Kentish boy by birth, but apprenticed to a London mercer, Caxton had already spent thirty years of his manhood in Flanders as Governor of the English gild of Merchant Adventurers there, when we find him engaged as copyist in the service of Edward's sister, Duchess Margaret of Burgundy. But the tedious process of copying was soon thrown aside for the new art which Colard Mansion had introduced into Bruges. . . . The printing-press was the precious freight he brought back to England in 1476 after an absence of five-and-thirty years. Through the next fifteen, at an age when other men look for ease and retirement, we see him plunging with characteristic energy into his new occupation. His 'red pale' or heraldic shield marked with a red bar down the middle invited buyers to the press he established in the Almonry at Westminster, a little enclosure containing a chapel and almshouses near the west front of the church, where the alms of the abbey were distributed to the poor. . . . Caxton was a practical man of business, . . . no rival of the Venetian Aldi or of the classical printers of Rome, but resolved to get a living from his trade, supplying priests with service books and preachers with sermons, furnishing the clerk with his 'Golden Legend' and knight and baron with 'joyous and pleasant histories of chivalry.' But while careful to win his daily bread, he found time to do much for what of higher literature lay fairly to hand. He printed all the English poetry of any moment which was then in existence. His reverence for that 'worshipful man, Geoffrey Chaucer,' who 'ought to be eternally remembered,' is shown not merely by his edition of the 'Canterbury Tales,' but by his reprint of them when a purer text of the poem offered itself. The poems of Lydgate and Gower were added to those of Chaucer. The Chronicle of Brut and Higden's 'Polychronicon' were the only available works of an historical character then existing in the English tongue, and Caxton not only printed them but himself continued the latter up to his own time. A translation of Boethius, a version of the Eneid from the French, and a tract or two of Cicero, were the stray first-fruits of the classical press in England. Busy as was Caxton's printing-press, he was even busier as a translator than as a printer. More than four thousand of his printed pages are from works of his own rendering. The need of these translations shows the popular drift of literature at the time; but keen as the demand seems to have been, there is nothing mechanical in the temper with which Caxton prepared to meet it. A natural, simple-hearted taste and enthusiasm, especially for the style and forms of language, breaks out in his curious prefaces. . . . But the work of translation involved a choice of English which made Caxton's work important in the history of our language. He stood between two schools of translation, that of French affectation and English pedantry. It was a moment when the character of our literary tongue was being settled, and it is curious to see in his own words the struggle over it which was going on in Caxton's time. 'Some honest and great clerks have been with me and desired me to write the most curious terms that I could find;' on the other hand, 'some gentlemen of late blamed me, saying that in my translations I had over many curious terms which could not be understood of common people, and desired me to use old and homely terms in my translations.' 'Fain would I please every man,' comments the good-humoured printer, but his sturdy sense saved him alike from the temptations of the court and the schools. His own taste pointed to English, but 'to the common terms that be daily used' rather than to the English of his antiquarian advisers. 'I took an old book and read therein, and certainly the English was so rude and broad I could not well understand it,' while the Old-English charters which the Abbot of Westminster lent as models from the archives of his house seemed 'more like to Dutch than to English.' To adopt current phraseology however was by no means easy at a time when even the speech of common talk was in a state of rapid flux. . . . Coupling this with his long absence in Flanders we can hardly wonder at the confession he makes over his first translation, that 'when all these things came to fore me, after that I had made and written a five or six quires, I fell in despair of this work, and purposed never to have continued therein, and the quires laid apart, and in two years after laboured no

more in this work.' He was still however busy translating when he died [in 1491]. All difficulties in fact were lightened by the general interest which his labours aroused. When the length of the 'Golden Legend' makes him 'half desperate to have accomplished it' and ready to 'lay it apart,' the Earl of Arundel solicits him in no wise to leave it and promises a yearly fee of a buck in summer and a doe in winter, once it were done. 'Many noble and divers gentle men of this realm came and demanded many and often times wherefore I have not made and imprinted the noble history of the San Graal.' . . . Caxton profited in fact by the wide literary interest which was a mark of the time."—J. R. Green, *Hist. of the English People, bk.* 5, *ch.* 1 (*v.* 2).—"Contemporary with Caxton were the printers Lettou and Machlinia, . . . who carried on business in the city of London, where they established a press in 1480. Machlinia had previously worked under Caxton. . . . Wynkyn de Worde . . . in all probability . . . was one of Caxton's assistants or workmen, when the latter was living at Bruges, but without doubt he was employed in his office at Westminster until 1491, when he commenced business on his own account, having in his possession a considerable quantity of Caxton's type. Wynkyn de Worde, who was one of the founders of the Stationers' Company, died in 1534, after having printed no less than 410 books known to bibliographers, the earliest of which bearing a date is the 'Liber Festivalis,' 4to, 1493."—J. H. Slater, *Book Collecting, ch.* 9.

A. D. 1496-1598.—The Estienne or Stephanus Press in Paris.—"With the names of Aldus and Elzevir we are all acquainted; the name of Estienne, or Stephanus, has a less familiar sound to English ears, though the family of Parisian printers was as famous in its day as the great houses of Venice and Leyden. The most brilliant member of it was the second Henry, whose story forms a melancholy episode in French literary history of the 16th century. . . . The Estiennes are said to have come of a noble Provençal family, but nothing is exactly known of their descent. The art of printing was not much more than fifty years old when Henry Estienne, having learnt his trade in Germany, came to Paris, and set up his press [about 1496] in the Rue Saint Jean de Beauvais, opposite the school of Canon Law. There for some twenty years he laboured diligently, bringing out in that time no less than 120 volumes, chiefly folios. The greater number of these are theological and scholastic works; among the few modern authors on the list is the name of Erasmus. Henry Estienne died in 1520 leaving three sons. Robert, the second of them, was born probably in 1503. The boys all being minors, the business passed into the hands of their mother, who in the following year married Simon de Colines, her late husband's foreman, and perhaps partner. . . . Robert worked with De Colines for five or six years before he went into business on his own account in the same street." It was he who first gave celebrity to the name and the press. "The spell of the Renaissance had early fallen upon the young printer, and it held him captive almost till the end of his life." He married "the daughter of the learned Flemish printer Jodocus Badius, notable for her culture and her beauty. Latin was the ordinary language of the household. The children learned it in infancy from hearing it constantly spoken. . . . At one time ten foreign scholars lived in Estienne's house to assist him in selecting and revising his manuscripts and in correcting his proofs. . . . Both Francis [King Francis I.] and his sister Marguerite of Navarre had a great regard for Robert, and often visited the workshop; to that royal patronage the printer was more than once indebted for his liberty and his life." His danger came from the bigoted Sorbonne, with whom he brought himself into collision by printing the Bible with as careful a correction of the text as he had performed in the case of the Latin classics. After the death of Francis I., the peril of the printer's situation became more serious, and in 1550 he fled to Geneva, renouncing the Roman Catholic faith. He died there in 1559.—H. C. Macdowall, *An old French Printer* (*Macmillan's Mag., Nov.* 1892). —The second Henry Estienne, son of Robert, either did not accompany his father to Geneva, or soon returned to Paris, and founded anew the Press of his family, bringing to it even more learning than his father, with equal laboriousness and zeal. He died at Lyons in 1598.—E. Greswell, *A View of the Early Parisian Greek Press.*

A. D. 1535-1709.—Introduction in America. —The first Spanish printing in Mexico.—The early Massachusetts Press. — Restrictions upon its freedom.—"The art of printing was first introduced into Spanish America, as early as the middle of the 16th century. The historians whose works I have consulted are all silent as to the time when it was first practiced on the American continent; . . . but it is certain that printing was executed, both in Mexico and Peru, long before it made its appearance in the British North American colonies. [The precise date of the introduction of printing into Mexico was for a long time in doubt. . . . When Mr. Thomas wrote his 'History of Printing in America,' early works on America were rare, and it is probable that there was not one in the country printed in either America or Europe in the 16th century, except the copy of Molina's dictionary; now many of the period may be found in our great private libraries. The dictionary of Molina, in Mexican and Spanish, printed in Mexico, in 1571, in folio, was, by many, asserted and believed to be the earliest book printed in America. . . . No one here had seen an earlier book until the 'Doctrina Christiana,' printed in the house of Juan Cromberger, in the city of Mexico, in the year 1544, was discovered. Copies of this rare work were found in two well known private libraries in New York and Providence. For a long time the honor was awarded to this as the earliest book printed in America. But there is now strong evidence that printing was really introduced in Mexico nine years before that time, and positive evidence, by existing books, that a press was established in 1540. Readers familiar with early books relating to Mexico have seen mention of a book printed there as early as 1535, . . . the 'Spiritual Ladder' of St John Climacus. . . . It seems that no copy of the 'Spiritual

Ladder' has ever been seen in recent times, and the quoted testimonials are the only ones yet found which refer to it.— *Note by Hon. John R. Bartlett, app. A., giving a 'List of Books printed in Mexico between the years* 1540 *and* 1560 *inclusive.'*] . . . In January, 1639, printing was first performed in that part of North America which extends from the Gulf of Mexico to the Frozen ocean. For this press our country is chiefly indebted to the Rev. Mr. Glover, a nonconformist minister, who possessed a considerable estate. . . . Another press, with types, and another printer, were, in 1660, sent over from England by the corporation for propagating the gospel among the Indians in New England. This press, &c., was designed solely for the purpose of printing the Bible, and other books, in the Indian language. On their arrival they were carried to Cambridge, and employed in the printing house already established in that place. . . . The fathers of Massachusetts kept a watchful eye on the press; and in neither a religious nor civil point of view were they disposed to give it much liberty. . . . In 1662, the government of Massachusetts appointed licensers of the press; and afterward, in 1664, passed a law that 'no printing should be allowed in any town within the jurisdiction, except in Cambridge'; nor should any thing be printed there but what the government permitted through the agency of those persons who were empowered for the purpose. . . . In a short time, this law was so far repealed as to permit the use of a press at Boston. . . . It does not appear that the press, in Massachusetts, was free from legal restraints till about the year 1755 [see below: A. D. 1704–1729]. . . . Except in Massachusetts, no presses were set up in the colonies till near the close of the 17th century. Printing then [1686] was performed in Pennsylvania [by William Bradford], 'near Philadelphia' [at Shackamaxon, now Kensington], and afterward in that city, by the same press which, in a few years subsequent, was removed to New York [see below: A. D. 1685–1693; also, PENNSYLVANIA: A. D. 1692–1696]. The use of types commenced in Virginia about 1681; in 1682 the press was prohibited. In 1709 a press was established at New London, in Connecticut."— I. Thomas, *Hist. of Printing in Am., 2d ed.* (*Trans. and Coll. of the Am. Antiq. Soc., v.* 5), *v.* 1, *pp.* 1–17.

A. D. 1612-1650.—Origin of printed newspapers.—The newspaper defined.—Its earliest appearances in Germany and Italy.—"Lally-Tollendal, in his 'Life of Queen Elizabeth,' in the 'Biographie Universelle' (vol. xiii, published in 1815, p. 56) . . . remarks that 'as far as the publication of an official journal is concerned, France can claim the priority by more than half a century; for in the Royal Library at Paris there is a bulletin of the campaign of Louis XII. in Italy in 1509.' He then gives the title of this 'bulletin,' from which it clearly appears that it is not a political journal, but an isolated piece of news — a kind of publication of which there are hundreds in existence of a date anterior to 1588 [formerly supposed to be the date of the first English newspaper — see below: A. D. 1622–1702], and of which there is no doubt that thousands were issued. There is, for instance, in the British Museum a French pamphlet of six printed leaves, containing an account of the surrender of Granada to Ferdinand and Isabella on the 'first of January last past' (le premier jour de janvier dernierement passé), in the year 1492; and there are also the three editions of the celebrated letter of Columbus, giving the first account of the discovery of America, all printed at Rome in 1493. Nay, one of the very earliest productions of the German press was an official manifesto of Diether, Archbishop of Cologne, against Count Adolph of Nassau, very satisfactorily proved to have been printed at Mentz in 1462. There is among the German bibliographers a technical name for this class of printed documents, which are called 'Relations.' In fact, in order to arrive at a satisfactory conclusion with regard to the origin of newspapers, it is requisite, in the first place, to settle with some approach to precision what a newspaper is. Four classes of publications succeeded to each other from the 15th to the 19th century, to which the term has by different writers been applied: 1st. Accounts of individual public transactions of recent occurrence. 2nd. Accounts in one publication of several public transactions of recent occurrence, only connected together by having taken place about the same period, so as at one time to form the 'news of the day.' 3rd. Accounts similar to those of the second class, but issued in a numbered series. 4th. Accounts similar to those of the second class, but issued not only in a numbered series, but at stated intervals. The notices of the surrender of Granada and the discovery of America belong to the first class, and so also do the last dying speeches, which are in our own time cried about the streets. These surely are not newspapers. The Times and Daily News [London] belong to the fourth class, and these, of course, are newspapers. . . . Are not, in fact, all the essentials of a newspaper comprised in the definition of the second class, which it may be as well to repeat: 'Accounts in one publication of several public transactions of recent occurrence, only connected together by having taken place about the same period, so as at one time to form the news of the day'? Let us take an instance. There is preserved in the British Museum a collection of several volumes of interesting publications issued in Italy between 1640 and 1650, and containing the news of the times. They are of a small folio size, and consist in general of four pages, but sometimes of six, sometimes only of two. There is a series for the month of December, 1644, consisting entirely of the news from Rome. The first line of the first page runs thus:—'Di Roma,' with the date, first of the 3rd, then of the 10th, then the 17th, then the 24th, and lastly the 31st of December, showing that a number was published every week, most probably on the arrival of the post from Rome. The place of publication was Florence, and the same publishers who issued this collection of the news from Rome, sent forth in the same month of December, 1644, two other similar gazettes, at similar intervals, one of the news from Genoa, the other of the news from Germany and abroad. That this interesting series of publications, which is well worthy of a minute examination and a detailed description, is in reality a series of newspapers, will, I believe, be questioned by very few; but each individual number presents no mark by which, if separately met with, it could be known to form part of a set. . . . The

most minute researches on the history of newspapers in Germany are, as already mentioned, those of Prutz, who has collected notices of a large number of the 'relations,' though much remains to be gleaned. There are, for instance, in Van Heusde's Catalogue of the Library at Utrecht (Utrecht, 1835, folio), the titles of nearly a hundred of them, all as early as the sixteenth century; and the British Museum possesses a considerable quantity, all of recent acquisition. Prutz has no notice of the two that have been mentioned, and, like all preceding writers, he draws no distinction between the publications of the first class and the second. The view that he takes is, that no publication which does not answer to the definition of what I have termed the fourth class is entitled to the name of a newspaper. There was in the possession of Professor Grellman a publication called an 'Aviso,' numbered as '14,' and published in 1612, which has been considered by many German writers as their earliest newspaper, but Prutz denies that honour to it, on the ground of there being no proof that it was published at stated intervals. In the year 1615 Egenolph Emmel, of Frankfort-on-the-Main, issued a weekly intelligencer, numbered in a series, and this, according to Prutz, is the proper claimant. Its history has been traced with some minuteness in a separate dissertation by Schwarzkopf, who has also the credit of having published in 1795 the first general essay on newspapers of any value, and to have followed up the subject in a series of articles in the Allgemeine Litterarische Anzeiger. . . . The claims of Italy have yet to be considered. Prutz dismisses them very summarily, because, as he says, the Venetian gazettes of the sixteenth century, said to be preserved at Florence, are in manuscript, and it is essential to the definition of a newspaper that it should be printed. These Venetian gazettes have never, so far as I am aware, been described at all; they may be mere 'news-letters,' or they may be something closely approaching to the modern newspaper. But I am strongly inclined to believe that something of the second class of Italian origin will turn up in the great libraries of Europe when further research is devoted to the subject. . . . The existence of these 'gazettes' in so many languages furnishes strong ground for supposing that the popularity of newspapers originated in Italy."—T. Watts, *The fabricated "Earliest English Newspaper"* (*Gentleman's Mag.*, 1850, *reprinted in the Gentleman's Magazine Library; Bibliographical Notes, pp.* 146–150).

A. D. 1617-1680.—The Elzevirs.—"Just as the house of Aldus waned and expired, that of the great Dutch printers, the Elzevirs, began obscurely enough at Leyden in 1583. The Elzevirs were not, like Aldus, ripe scholars and men of devotion to learning. Aldus laboured for the love of noble studies; the Elzevirs were acute, and too often 'smart' men of business. The founder of the family was Louis (born at Louvain, 1540, died 1617). But it was in the second and third generations that Bonaventura and Abraham Elzevir began to publish at Leyden their editions in small duodecimo. Like Aldus, these Elzevirs aimed at producing books at once handy, cheap, correct, and beautiful in execution. Their adventure was a complete success. The Elzevirs did not, like Aldus, surround themselves with the most learned scholars of their time. Their famous literary adviser, Heinsius, was full of literary jealousies, and kept students of his own calibre at a distance. The classical editions of the Elzevirs, beautiful, but too small in type for modern eyes, are anything but exquisitely correct. . . . The ordinary marks of the Elzevirs were the sphere, the old hermit, the Athena, the eagle, and the burning faggot. But all little old books marked with spheres are not Elzevirs, as many booksellers suppose. Other printers also stole the designs for the tops of chapters, the Aegipan, the Siren, the head of Medusa, the crossed sceptres, and the rest. In some cases the Elzevirs published their books, especially when they were piracies, anonymously. When they published for the Jansenists, they allowed their clients to put fantastic pseudonyms on the title pages. But, except in four cases, they had only two pseudonyms used on the titles of books published by and for themselves. These disguises are 'Jean Sambix' for Jean and Daniel Elzevir, at Leyden, and for the Elzevirs of Amsterdam, 'Jacques le Jeune.' The last of the great representatives of the house, Daniel, died at Amsterdam, 1680. Abraham, an unworthy scion, struggled on at Leyden till 1712. The family still prospers, but no longer prints, in Holland."—A. Lang, *The Library, ch.* 3.—"Though Elzevirs have been more fashionable than at present, they are still regarded by novelists as the great prize of the book collector. You read in novels about 'priceless little Elzevirs,' about books 'as rare as an old Elzevir.' I have met, in the works of a lady novelist (but not elsewhere) with an Elzevir 'Theocritus.' The late Mr. Hepworth Dixon introduced into one of his romances a romantic Elzevir Greek Testament, 'worth its weight in gold.' Casual remarks of this kind encourage a popular delusion that all Elzevirs are pearls of considerable price."—The same, *Books and Bookmen, ch.* 6.

Also in: J. H. Slater, *Book Collecting, ch.* 8.

A. D. 1622-1702.—The first printed Newspaper and the first daily Newspaper in England.—"Up to 1839 (when Mr. Watts, of the British Museum, exposed the forgery) the world was led to believe that the first English newspaper appeared in 1588." Mr. Watts "ascertained that 'The English Mercurie,' which Mr. George Chalmers first discovered on the shelves of the British Museum, and which was said to have been 'imprinted in London by her highness's printer, 1588,' was a forgery, for which the second Earl of Hardwicke appears to be answerable." As to the actual date of the appearance of the first printed newspaper in England, "Mr. Knight Hunt, in his 'Fourth Estate,' speaks confidently. . . . 'There is now no reason to doubt,' he says, 'that the puny ancestor of the myriads of broad sheets of our time was published in the metropolis in 1622; and that the most prominent of the ingenious speculators who offered the novelty to the world, was one Nathaniel Butter.' As the printing press had then been at work in England for a century and a half, Caxton having established himself in Westminster Abbey in 1471, and as manuscript news-letters had been current for many years previous to 1622, one cannot help wondering that the inventive wits of that age should have been so slow in finding out this excellent mode of turning Faust's invention to profitable account. Butter's journal was called — 'The

Weekly Newes,' a name which still survives, although the original possessor of that title has long since gone the way of all newspapers. The first number in the British Museum collection bears date the 23rd of May, 1622, and contains 'news from Italy, Germanie,' &c. The last number made its appearance on the 9th of January, 1640; a memorable year, in which the Short Parliament, dismissed by King Charles 'in a huff,' after a session of three weeks, was succeeded by the Long Parliament, which unlucky Charles could not manage quite so easily. . . . It was nearly a century after 'The Weekly Newes' made its first appearance, before a daily newspaper was attempted. When weekly papers had become firmly established, some of the more enterprising printers began to publish their sheets twice, and ultimately three times a week. Thus at the beginning of last century we find several papers informing the public that they are 'published every Tuesday, Thursday, and Saturday morning.' One of the most respectable looking was entitled 'The New State of Europe,' or a 'True Account of Public Transactions and Learning.' It consisted of two pages of thin, coarse paper . . . and contained altogether about as much matter as there is in a single column of the 'Times' of 1855. The custom at that period was to publish the newspaper on a folio or quarto sheet, two pages of which were left blank to be used for correspondence. This is expressly stated in a standing advertisement in the 'New State of Europe,' in which the names of certain booksellers are given 'where any person may have this paper with a blank half sheet to write their own private affairs.' . . . The first number of the 'Daily Courant' [the first daily newspaper in England] was published on the 11th of March, 1702, just three days after the accession of Queen Anne. . . . As regards the form and size of the new journal, the 'author' condescends to give the following information, with a growling remark at the impertinence of the 'Postboys,' 'Postmen,' 'Mercuries,' and 'Intelligencers' of that day:—'This "Courant" (as the title shows) will be published Daily, being designed to give all the Material News as soon as every Post arrives, and is confined to half the compass to save the Publick at least half the Impertinences of ordinary Newspapers.' In addition to the Prospectus we have quoted, the first number of the 'Daily Courant' contains only nine paragraphs, five of which were translated from the 'Harlem Courant,' three from the 'Paris Gazette,' and one from the 'Amsterdam Courant.' They all relate to the war of the Spanish Succession then waging, or to the attempts making by diplomats to settle the affairs of the Continent at some kind of Vienna or Utrecht Conference. After adhering for several weeks to the strict rule of giving only one page of news, and those entirely foreign, the 'Courant' begins to show certain symptoms of improvement. The number for April 22, contains two pages of news and advertisements. . . . The alteration in the getting-up of the 'Courant' was owing to a change of proprietorship. The paper had now come into the hands of 'Sam Buckley, at the Dolphin, Little Britain.' . . . Mr. Samuel Buckley, who continued to publish and conduct the 'Daily Courant' for many years, was a notable man among London publishers, as we find from various references to him in the fugitive literature of that age."—*The London Daily Press* (*Westminster Rev., October*, 1855).

A. D. 1631.—The first printed Newspaper in France.—Dr. Renaudot and his "Gazette."—"The first Frenchman to found a printed newspaper was Dr. Théophraste Renaudot, who obtained the King's privilege for the 'Gazette de France' in 1631. . . . He was a shrewd man, born at London in 1567, brought up in Paris, but graduate of the Faculty of Montpellier. In 1612, being then twenty-six, he returned to the capital, and somehow got appointed at once doctor to the King. But there was no salary attached to this post, which was in his case purely honorary, and so Renaudot opened a school, though the fact that he, a mere provincial doctor, had obtained a medical appointment at court, was very sore to the Paris Faculty of Medicine, who began to annoy him from that moment. Renaudot, however, was a man far ahead of his contemporaries in sagacity, patience, learning and humanity. Petty spite did not disturb him, or at least it did not deter him from executing any of the numerous plans he had in mind for the welfare of his contemporaries. . . . This extraordinary man not only inaugurated in France an Estate, Professional and Servants' Agency, as well as an office for private sales and exchanges, but further laid the basis of the Poste Restante, Parcels Delivery, Post-Office Directory, Tourist's Guide and Money Order Office; besides affording an outlet to troubled spirits like those who correspond through the agony column of 'The Times.' It is not surprising that his office in the Rue de la Calandre should soon have been all too small for its multifarious duties and that his original staff of six clerks should, in less than three months, have swelled to fifty. Richelieu, in sheer admiration at the man, sent for him and thanked him for the services he was rendering the King's subjects. He also offered him money to extend his offices, and this Renaudot accepted, but only as a loan. It was his custom to levy a commission of six deniers per livre (franc) on the sales he effected, and by means of these and other receipts he soon repaid the Cardinal every penny that had been advanced to him. But he did more than this. Finding that his registers were not always convenient modes of reference, by reason of the excessive crowds which pressed round them, he brought out a printed advertiser, which is almost the exact prototype of a journal at present well known in London. It was called 'Feuille du Bureau d'Adresses,' and appeared every Saturday, at the price of 1 sou. Opinions differ as to whether this paper preceded the 'Gazette de France,' or was issued simultaneously with it. Probably it was first published in manuscript form, but came out in print at least six months before the 'Gazette,' for a number bearing the date of June 14th, 1631, shows a periodical in full organisation and containing indirect references to advertisements which must have appeared several weeks before. At all events this 'Feuille' was purely an advertisement sheet—a forerunner of the 'Petites Affiches' which were reinvented in 1746—it was in no sense a newspaper. . . . It is clear that from the moment he started his 'Feuille du Bureau d'Adresses,' Renaudot must have conceived the possibility of founding a news-sheet. . . . The manuscript News Letters had attained, by the year 1630, to such a pitch

of perfection, and found such a ready sale, that the notion of further popularising them by printing must have suggested itself to more than one man before it was actually put into practice. But the great bar was this, that nothing could be printed without the King's privilege, and this privilege was not lightly granted. . . . Renaudot, who had no wish to publish tattle, had no reason to fear censorship. He addressed himself tc Richelieu, and craved leave to start a printed newspaper under royal patronage. The politic Cardinal was quite shrewd enough to see how useful might be to him an organ which would set information before the public in the manner he desired, and in that manner alone; so he granted all Renaudot wished, in the form of 'letters patent,' securing him an entire monopoly of printing newspapers, and moreover he conferred on his protégé the pompous title of Historiographer of France. The first number of the 'Gazette de France' appeared on Friday, May 30, 1631. Its size was four quarto pages, and its price one sol parisis, i. e. ½d., worth about 1½d. modern money. . . . The first number contained no preface or address, nothing in the way of a leading article, but plunged at once in medias res, and gave news from nineteen foreign towns or countries, but oddly enough, not a line of French intelligence. . . . The bulk of the matter inserted was furnished direct by Richelieu from the Foreign Office, and several of the paragraphs were written in his own hand. . . . The publication of the 'Gazette' was continued uninterruptedly from week to week, but the press of matter was so great that Renaudot took to issuing a Supplement with the last number of every month. In this he condensed the reports of the preceding numbers, corrected errors, added fresh news, and answered his detractors. . . . At the end of the year 1631 he suppressed his monthly Supplement, increased the 'Gazette' to eight pages, and announced that for the future he would issue Supplements as they were needed. It seems they were needed pretty often, for towards the beginning of the year 1633 Renaudot published Supplements, under the title of 'Ordinaries and Extraordinaries,' as often as twice, and even three times in one week. In fact whenever a budget of news arrived which would nowadays justify a special edition, the indefatigable editor set his criers afoot with a fresh printed sheet, shouting, 'Buy the "Extraordinary," containing the account of the superb burial of the King of Denmark!' or, 'Buy and read of the capture of the beautiful island of Curaçoa in the Indies by the Dutch from the Spaniards!' Renaudot understood the noble art of puffing. He dressed his criers in red, and gave them a trumpet apiece to go and bray the praises of the 'Gazette' on the off days, when the paper did not appear. . . . On the death of Renaudot, he was succeeded by his sons Eusèbe and Isaac, who in their turn bequeathed the 'Gazette' to Eusèbe junior, son of the elder brother, who took orders and consequently left no progeny. After this the 'Gazette' became Government property. . . . In 1762 the 'Gazette' was annexed to the Foreign Office Department. . . . The 'Gazette de France' continued to appear under royal patronage until May 1st, 1792, when its official ties were snapped and it came out as a private and republican journal with the date 'Fourth Year of Freedom.' The 'Gazette' has flourished with more or less brilliancy ever since, and has been for the last fifty years a legitimist organ, read chiefly in the provinces."—*The French Press* (*Cornhill Mag., June*, 1873).

A. D. 1637.—Archbishop Laud's Star-Chamber restriction of printing.—On the 11th of July, 1637, "Archbishop Laud procured a decree to be passed in the star chamber, by which it was ordered, that the master printers should be reduced to twenty in number; and that if any other should secretly, or openly, pursue the trade of printing, he should be set in the pillory, or whipped through the streets, and suffer such other punishment as the court should inflict upon him; that none of the master printers should print any book or books of divinity, law, physic, philosophy, or poetry, till the said books, together with the titles, epistles, prefaces, tables, or commendatory verses, should be lawfully licensed, on pain of losing the exercise of his art, and being proceeded against in the star chamber, &c.; that no person should reprint any book without a new license; that every merchant, bookseller, &c., who should import any book or books, should present a catalogue of them to the archbishop or bishop, &c., before they were delivered, or exposed to sale, who should view them, with power to seize those that were schismatical; and, that no merchant, &c., should print or cause to be printed abroad, any book, or books, which either entirely or for the most part, were written in the English tongue, nor knowingly import any such books, upon pain of being proceeded against in the star chamber, or high commission court. . . . That there should be four founders of letters for printing, and no more. That the archbishop of Canterbury, or the bishop of London, with six other high commissioners, shall supply the places of those four as they shall become void. That no master founder shall keep above two apprentices at one time. That all journeymen founders be employed by the masters of the trade; and that all the idle journeymen be compelled to work upon pain of imprisonment, and such other punishment as the court shall think fit. That no master founder of letters shall employ any other person in any work belonging to casting and founding of letters than freemen and apprentices to the trade, save only in putting off the knots of metal hanging at the end of the letters when they are first cast; in which work every master founder may employ one boy only, not bound to the trade."—C. H. Timperley, *Encyclopædia of Literary and Typographical Anecdote, p.* 490.

A. D. 1647.—Renewed ordinance, in England, against the printers.—"An ordinance of parliament passed the house of lords on this day [September 30, 1647], that no person shall make, write, print, sell, publish or utter, or cause to be made, &c., any book, pamphlet, treatise, ballad, libel, sheet, or sheets of news whatsoever (except the same be licensed by both or either house of parliament,) under the penalty of 40s. and an imprisonment not exceeding forty days, if he can not pay it: if a printer, he is to pay a fine of only 20s., or suffer twenty days' imprisonment, and likewise to have his press and implements of printing broken in pieces. The bookseller, or stationer, to pay 10s., or suffer ten days' imprisonment, —and, lastly, the hawker, pedlar, or ballad-singer, to forfeit all his printed

papers exposed to sale, and to be whipped as a common rogue in the parish where he shall be apprehended. Early in the following year, the committee of estates in Scotland passed an act prohibiting the printing under the pain of death, any book, declaration, or writing, until these were first submitted to their revisal. . . . One of the consequences of these persecutions was the raising up of a new class of publishers, those who became noted for what was called 'unlawful and unlicensed books.' Sparkes, the publisher of Prynne's Histriomastix, was of this class. The presbyterian party in parliament, who thus found the press closed on them, vehemently cried out for its freedom; and it was imagined, that when they ascended into power, the odious office of a licenser of the press would have been abolished; but these pretended friends of freedom, on the contrary, discovered themselves as tenderly alive to the office as the old government, and maintained it with the extremest vigour. Both in England and Scotland, during the civil wars, the party in power endeavoured to crush by every means the freedom of the press."—C. H. Timperley, *Encyclopædia of Literary and Typographical Anecdote, p.* 506.

A. D. 1654-1694.—Freedom of the press under Cromwell.—Censorship under the restored Stuarts.—Roger L'Estrange and the first news reporters.—"During the Protectorate of Cromwell the newspaper press knew . . . what it was to enjoy the luxury of freedom. The natural result was that a very great increase took place in the number of new political journals. Most of them, however, had only a very brief existence. Many of their number could not boast of a longer life than six or seven months—nay, many of them not so much as even that term of life. But, as might have been expected, from what was known of the antecedents of Charles II., the freedom of the press, which previously existed, came to an immediate end on his ascending the throne. Hardly had he done so, than an edict was issued, prohibiting the publication of any journal except the London Gazette, which was originally printed at Oxford, and called the Oxford Gazette,—the Court being then resident there on account of the plague raging in London at the time, 1665, when it was commenced, and for some time afterwards. This was an act of pure despotism. But Government at this time reserved to itself the right—a right which there was none to dispute—to publish a broad sheet in connexion with the London Gazette, whenever they might deem it expedient, which should contain either foreign or domestic matters of interest,—of the knowledge of which some of the King's subjects might wish to be put in early possession. . . . The newspapers of the seventeenth century were permitted, until the time of Charles II., to be published without being licensed by the Government of the day; but in the reign of that despotic sovereign, a law was passed [1662] prohibiting the publication of any newspaper without being duly licensed. . . . Sir John Birkenhead, . . . one of the three men whom Disraeli the elder called the fathers of the English press, was appointed to the office of Licenser of the Press. But he was soon succeeded by Sir Roger l'Estrange."—J. Grant, *The Newspaper Press, v.* 1, *ch.* 2.—Roger L'Estrange "is remarkable for having been the writer of the best newspapers which appeared before the age of Queen Anne, and, at the same time, a most bitter enemy to the freedom of the press. He was appointed licenser or censor in 1663, and in the same year was given authority to publish all newspapers, periodicals, and pamphlets, not exceeding two sheets in size. He appears to have looked upon his newspaper as a noxious thing, suffered to exist only that an income might be created for him in return for the labour of purging the press. Yet he spared no pains to make his Public Intelligencer readable, and if we may trust his letters now preserved at the State Paper Office, expended in the first year more than £500 on 'spyes for collecting intelligence.' Three years afterwards he estimated the profits at £400 a year. . . . He sent paid correspondents, or 'spyes' as they were called, to all parts of the country, and even induced some respectable persons, under promise of concealing their names, to contribute occasional paragraphs; these persons were for the most part repaid by sending to them their newspapers and letters free of postage. Another set of 'spyes' was employed in picking up the news of the town on Paul's Walk or in the taverns and coffee-houses. L'Estrange printed about sixteen reams of his Intelligencer weekly, which were for the most part sold by the mercury-women who cried them about the streets. One Mrs. Andrews is said to have taken more than one-third of the whole quantity printed. . . . Advantage was taken of a slip in the weekly intelligence to deprive L'Estrange of his monopoly in favour of the new Oxford Gazette, published in the winter of 1665 and transferred to London in the ensuing spring. The Gazette was placed under the control of Williamson, then a rising under-Secretary of State, under whose austere influence nothing was suffered to appear which could excite or even amuse the public. . . . L'Estrange has not been a favourite with historians, and we confess that his harsh measures towards the press are apt to raise a feeling of repugnance. . . . But he was certainly an enthusiastic and industrious writer, who raised the tone of the press, even while taking pains to fetter its liberty. When he lost his monopoly, that era of desolation began which Macaulay has so forcibly described. The newspapers became completely sterile, omitting events even of such importance as the trial of the seven bishops, and were supplanted in popular favour by the manuscript news-letters, which were, in fact, the only journals of importance. On the day after the abdication of James II. three fresh newspapers appeared, and many more burst out after the appearance of the official journal under the style of the Orange Gazette. But it was not until 1694 that the king was induced to abolish the censorship and to permit free trade in news; 'he doubted much,' says Hume, 'of the salutary effects of such unlimited freedom.' The newspapers increased and multiplied exceedingly for the eighteen years between the abolition of the office of licenser and the passing of the Stamp Act, in 1712, by which a halfpenny tax was laid on every half-sheet of intelligence."—*Early English Newspapers* (*Cornhill Mag., July*, 1868).

A. D. 1685-1693.—William Bradford and his Press in Philadelphia and New York.—William Bradford, a young printer, of the Society of Friends, came to Philadelphia in the autumn

of 1685, and established himself in business. "His first publication was 'Kalendarium Pennsilvaniense, or America's Messenger; Being an Almanack for the Year of Grace 1686.' This brought him a summons before the Governor and Council, for referring to the Proprietary, in the table of chronology, as 'Lord Penn;' and, on his appearance, he was ordered to blot out the objectionable title, and forbidden to print anything without license from the Provincial Council. In 1687 he was cautioned by the Philadelphia meeting not to print anything touching the Quakers without its approval. Two years later he was again called before the Governor, and Council — this time for printing the charter of the province. The spirited report, in his own handwriting, of his examination on this occasion, is now preserved in the collection of the New York Historical Society. Disappointed at the non-fulfilment of Penn's promise of the government printing and the failure of his scheme for printing an English Bible, which, although indorsed by the meeting, found few subscribers, and harassed by both the civil and religious authorities, Bradford determined to leave the province," which he did, with his family, sailing to England in 1689. He was induced, however, by promises of increased business and a yearly salary of £40, to return. In 1692, having become one of the supporters of George Keith, and having printed Keith's "Appeal" (see PENNSYLVANIA: A. D. 1692–1696), he was arrested and imprisoned. This occurred in August, and his trial followed in December. The jury disagreed, and he was held for appearance at the next court. "In the meantime the dissensions in the province aroused by the Keithian schism had led to the abrogation of Penn's charter by the crown, and the appointment of Benjamin Fletcher to be Royal Governor of Pennsylvania as well as New-York." This change led to the dropping of proceedings against Bradford, and to his removal from Philadelphia to New York, whither he seems to have been invited. His removal was undoubtedly prompted by a resolution which the Provincial Council of New York adopted on the 23d of March, 1693: "That if a Printer will come and settle in the city of New York for the printing of our Acts of Assembly and Publick Papers, he shall be allowed the sum of £40 current money of New York per annum for his salary and have the benefit of his printing besides what serves the publick." "Bradford's first warrant for his salary as 'Printer to King William and Queen Mary, at the City of New York,' was dated October 12, 1693, and was for six months, due on the 10th preceding," showing that he had established himself in the colony more hospitable to his art as early as the 10th of April, 1693. "What was the first product of his press is a matter of doubt. It may have been, as Dr. Moore suggests, the 'Journal of the Late Actions of the French at Canada,' or 'New England's Spirit of Persecution Transmitted to Pennsilvania'"— which was a report of his own trial at Philadelphia — or it may have been an Act of the New York Assembly — one of three which his press produced early that year, but the priority among which is uncertain. — C. R. Hildeburn, *Printing in New York in the 17th Cent'y (Memorial Hist. of the City of New York, v. 1, ch. 15.)*

A. D. 1695.—Expiration of the Censorship law in England. — Quick multiplication of Newspapers.—"While the Licensing Act was in force there was no newspaper in England except the 'London Gazette,' which was edited by a clerk in the office of the Secretary of State, and which contained nothing but what the Secretary of State wished the nation to know. There were indeed many periodical papers: but none of those papers could be called a newspaper. Welwood, a zealous Whig, published a journal called the Observator: but his Observator, like the Observator which Lestrange had formerly edited, contained, not the news, but merely dissertations on politics. A crazy bookseller, named John Dunton, published the Athenian Mercury: but the Athenian Mercury merely discussed questions of natural philosophy, of casuistry and of gallantry. A fellow of the Royal Society, named John Houghton, published what he called a Collection for the Improvement of Industry and Trade: but his Collection contained little more than the prices of stocks, explanations of the modes of doing business in the City, puffs of new projects, and advertisements of books, quack medicines, chocolate, Spa water, civet cats, surgeons wanting ships, valets wanting masters, and ladies wanting husbands. If ever he printed any political news, he transcribed it from the Gazette. The Gazette was so partial and so meagre a chronicle of events that, though it had no competitors, it had but a small circulation. . . . But the deficiencies of the Gazette were to a certain extent supplied in London by the coffeehouses, and in the country by the newsletters. On the third of May 1695 the law which had subjected the press to a censorship expired. Within a fortnight, a stanch old Whig, named Harris, who had, in the days of the Exclusion Bill, attempted to set up a newspaper entitled Intelligence Domestic and Foreign, and who had been speedily forced to relinquish that design, announced that the Intelligence Domestic and Foreign, suppressed fourteen years before by tyranny, would again appear. Ten days later was printed the first number of the English Courant. Then came the Packet Boat from Holland and Flanders, the Pegasus, the London Newsletter, the London Post, the Flying Post, the Old Postmaster, the Postboy, and the Postman. The history of the newspapers of England from that time to the present day is a most interesting and instructive part of the history of the country. At first they were small and mean-looking. . . . Only two numbers came out in a week; and a number contained little more matter than may be found in a single column of a daily paper of our time."—Lord Macaulay, *Hist. of England, ch. 21.*

A. D. 1704-1729.—The first Newspapers in America.—"There was not a newspaper published in the English colonies, throughout the extensive continent of North America, until the 24th of April, 1704. John Campbell, a Scotchman, who was a bookseller and postmaster in Boston, was the first who began and established a publication of this kind. It was entitled 'The Boston News-Letter.'. . . It is printed on half a sheet of pot paper, with a small pica type, folio. The first page is filled with an extract from 'The London Flying Post,' respecting the pretender. . . . The queen's speech to both houses of parliament on that occasion, a few

articles under the Boston head, four short paragraphs of marine intelligence from New York, Philadelphia, and New London, and one advertisement, form its whole contents. The advertisement is from Campbell, the proprietor of the paper." In 1719, a rival paper was started in Boston, called the "Gazette," and in 1721, a third, founded by James Franklin, took the name of "The New England Courant." Meantime there had appeared at Philadelphia, on the 22nd of December, 1719,—only one day later than the second of the Boston newspapers—"The American Weekly Mercury," printed by Andrew Bradford, son of William Bradford. The same printer, Andrew Bradford, removing to New York, brought out "The New York Gazette," the first newspaper printed in that city, in October, 1725. —I. Thomas, *Hist. of Printing in Am.*, *v.* 2, *p.* 12, *and after.*—"In 1740, the number of newspapers in the English colonies on the continent had increased to eleven, of which one appeared in South Carolina, one in Virginia, three in Pennsylvania—one of them being in German—one in New York, and the remaining five in Boston. . . . The New England 'Courant,' the fourth American periodical, was, in August 1721, established by James Franklin as an organ of independent opinion. Its temporary success was advanced by Benjamin, his brother and apprentice, a boy of fifteen, who wrote for its columns, worked in composing the types as well as printing off the sheets, and, as carrier, distributed the papers to the customers. The sheet satirized hypocrisy, and spoke of religious knaves as of all knaves the worst. This was described as tending 'to abuse the ministers of religion in a manner which was intolerable.' . . . In July 1722, a resolve passed the council, appointing a censor for the press of James Franklin; but the house refused its concurrence. The ministers persevered; and, in January 1723, a committee of inquiry was raised by the legislature. Benjamin, being examined, escaped with an admonition; James, the publisher, refusing to discover the author of the offence, was kept in jail for a month; his paper was censured as reflecting injuriously on the reverend ministers of the gospel; and, by vote of the house and council, he was forbidden to print it, 'except it be first supervised.' Vexed at the arbitrary proceedings, Benjamin Franklin, then but seventeen years old, in October 1723, sailed clandestinely for New York. Finding there no employment, he crossed to Amboy; went on foot to the Delaware; for want of a wind, rowed in a boat from Burlington to Philadelphia; and bearing marks of his labor at the oar, weary, hungry, having for his whole stock of cash a single dollar, the runaway apprentice—the pupil of the free schools of Boston, rich in the boundless hope of youth and the unconscious power of modest genius—stepped on shore to seek food and occupation. On the deep foundations of sobriety, frugality and industry, the young journeyman built his fortunes and fame; and he soon came to have a printing-office of his own. . . . The assembly of Pennsylvania chose him its printer. He planned a newspaper [the 'Pennsylvania Gazette']; and, when [1729] he became its proprietor and editor, he defended freedom of thought and speech, and the inalienable power of the people."—G. Bancroft, *Hist. of the U. S. of Am.*, *pt.* 3, *ch.* 15 (*v.* 2).

A. D. 1709-1752.—The Periodicals of the Essayists.—The "Tatler," "Spectator," and their successors.—"In the spring of 1709, Steele [Sir Richard] formed a literary project, of which he was far indeed from foreseeing the consequences. Periodical papers had during many years been published in London. Most of these were political; but in some of them questions of morality, taste, and love-casuistry had been discussed. The literary merit of these works was small indeed; and even their names are now known only to the curious. Steele had been appointed gazetteer by Sunderland, at the request, it is said, of Addison; and thus had access to foreign intelligence earlier and more authentic than was in those times within the reach of an ordinary news-writer. This circumstance seems to have suggested to him the scheme of publishing a periodical paper on a new plan. It was to appear on the days on which the post left London for the country, which were, in that generation, the Tuesdays, Thursdays, and Saturdays. It was to contain the foreign news, accounts of theatrical representations, and the literary gossip of Will's and of the Grecian. It was also to contain remarks on the fashionable topics of the day, compliments to beauties, pasquinades on noted sharpers, and criticisms on popular preachers. The aim of Steele does not appear to have been at first higher than this. . . . Isaac Bickerstaff, Esquire, Astrologer, was an imaginary person, almost as well known in that age as Mr. Paul Pry or Mr. Pickwick in ours. Swift had assumed the name of Bickerstaff in a satirical pamphlet against Partridge, the almanac-maker. Partridge had been fool enough to publish a furious reply. Bickerstaff had rejoined in a second pamphlet still more diverting than the first. All the wits had combined to keep up the joke, and the town was long in convulsions of laughter. Steele determined to employ the name which this controversy had made popular; and, in April, 1709, it was announced that Isaac Bickerstaff, Esquire, Astrologer, was about to publish a paper called the 'Tatler.' Addison had not been consulted about this scheme; but as soon as he heard of it, he determined to give it his assistance. The effect of that assistance cannot be better described than in Steele's own words. 'I fared,' he said, 'like a distressed prince who calls in a powerful neighbour to his aid. I was undone by my auxiliary. When I had once called him in, I could not subsist without dependence on him.' 'The paper,' he says elsewhere, 'was advanced indeed. It was raised to a greater thing than I intended it.'"—Lord Macaulay, *Life and Writings of Addison* (*Essays*). —"Steele, on the 12th of April 1709, issued the first number of the 'Tatler.' . . . This famous newspaper, printed in one folio sheet of 'tobacco paper' with 'scurvy letter,' ran to 271 numbers, and abruptly ceased to appear in January 1711. It enjoyed an unprecedented success, for, indeed, nothing that approached it had ever before been issued from the periodical press in England. The division of its contents was thus arranged by the editor: 'All accounts of gallantry, pleasure, and entertainment shall be under the article of White's Chocolate House; poetry under that of Will's Coffee-House; learning under the title

of Grecian; foreign and domestic news you will have from St. James's Coffee-House; and what else I shall on any other subject offer shall be dated from my own apartment.' The political news gradually ceased to appear. . . . Of the 271 'Tatlers,' 188 were written by Steele, 42 by Addison, and 36 by both conjointly. Three were from the pen of John Hughes. . . . These, at least, are the numbers usually given, but the evidence on which they are based is slight. It rests mainly upon the indications given by Steele to Tickell when the latter was preparing his edition of Addison's Works. The conjecture may be hazarded that there were not a few Tatlers written by Addison which he was not anxious to claim as his particular property. . . . Addison, . . . remained Steele's firm friend, and less than two months after the cessation of the 'Tatler' there appeared the first number of a still more famous common enterprise, the 'Spectator,' on the 1st of March 1711. It was announced to appear daily, and was to be composed of the reflections and actions of the members of an imaginary club, formed around 'Mr. Spectator.' In this club the most familiar figure is the Worcestershire Knight, Sir Roger de Coverley, the peculiar property of Addison. . . . The 'Spectator' continued to appear daily until December 1712. It consisted of 555 numbers, of which Addison wrote 274, Steele 236, Hughes 19, and Pope 1 (The Messiah, 'Spectator' 378). Another contributor was Eustace Budgell (1685–1736), Addison's cousin. . . . The 'Spectator' enjoyed so very unequivocal a success that it has puzzled historians to account for its discontinuance. In No. 517 Addison killed Sir Roger de Coverley 'that nobody else might murder him.' This shows a voluntary intention to stop the publication, which the Stamp Act itself had not been able to do by force."—E. Gosse, *A Hist. of Eighteenth Century Literature, ch.* 6.—"After this, in 1713, came the 'Guardian'; and in 1714 an eighth volume of the 'Spectator' was issued by Addison alone. He was also the sole author of the 'Freeholder,' 1715, which contains the admirable sketch of the 'Tory Foxhunter.' Steele, on his side, followed up the 'Guardian' by the 'Lover,' the 'Reader,' and half-a-dozen abortive efforts; but his real successes, as well as those of Addison, were in the three great collections for which they worked together. . . . Between the 'Guardian' of 1713 and the 'Rambler' of 1750–2 there were a number of periodical essayists of varying merit. It is scarcely necessary to recall the names of these now forgotten 'Intelligencers,' 'Moderators,' 'Remembrancers,' and the like, the bulk of which were political. Fielding places one of them, the 'Freethinker' of Philips, nearly on a level with 'those great originals the "Tatlers" and the "Spectators;"' but the initial chapters to the different books of 'Tom Jones' attract us more forcibly to the author's own 'Champion,' written in conjunction with the Ralph who 'makes night hideous' in the 'Dunciad.'. . . Another of Fielding's enterprises in the 'Spectator' vein was the 'Covent Garden Journal,' 1752. . . . Concurrently with the 'Covent Garden Journal' appeared the final volume of Johnson's 'Rambler,' a work upon the cardinal defect of which its author laid his finger, when, in later life, he declared it to be 'too wordy.' Lady Mary said in her smart way that the 'Rambler' followed the 'Spectator' as a packhorse would do a hunter. . . . In the twenty-nine papers which Johnson wrote for Hawkesworth's 'Adventurer,' the 'Rambler' style is maintained. In the 'Idler,' however, which belongs to a later date, when its author's mind was unclouded, and he was comparatively free from the daily pressure of necessity, he adopts a simpler and less polysyllabic style."—A. Dobson, *Eighteenth Century Essays, introd.*

A. D. 1712.—The first Stamp Tax on Newspapers in England.—The first stamp tax on newspapers in England went into effect on the 12th day of August, 1712. "An act had passed the legislature, that 'for every pamphlet or paper contained in half a sheet, or lesser piece of paper so printed, the sum of one halfpenny sterling: and for every such pamphlet or paper being larger than half a sheet, and not exceeding one whole sheet, so printed, a duty after the rate of one penny sterling for every sheet printed thereof.' This act, which was to curb the licentiousness of the press, was to be in force for the space of thirty-two years, to be reckoned from the 10th day of June, 1712. Addison, in the 'Spectator' of this day, says, 'this is the day on which many eminent authors will probably publish their last works. I am afraid that few of our weekly historians, who are men that above all others delight in war, will be able to subsist under the weight of a stamp duty in an approaching peace. In short, the necessity of carrying a stamp, and the impracticability of notifying a bloody battle, will, I am afraid, both concur to the sinking of these thin folios which have every other day related to us the history of Europe for several years last past. A facetious friend of mine, who loves a pun, calls this present mortality among authors, "the fall of the leaf."' On this tax Dean Swift thus humorously alludes in his Journal to Stella, as follows (August 7):—'Do you know that all Grub-street is dead and gone last week? No more Ghosts or murders now for love or money. I plied it close the last fortnight, and published at least seven papers of my own, besides some of other people's; but now every single half-sheet pays a halfpenny to the queen. The 'Observator' is fallen; the 'Medleys' are jumbled together with the 'Flying Post'; the 'Examiner' is deadly sick; the 'Spectator' keeps up and doubles its price; I know not how long it will hold. Have you seen the red stamp the papers are marked with? Methinks the stamping is worth a halfpenny.' The stamp mark upon the newspapers was a rose and thistle joined by the stalks, and enclosing between the Irish shamrock, the whole three were surmounted by a crown. . . . It is curious to observe what an effect this trifling impost had upon the circulation of the most favourite papers. Many were entirely discontinued, and several of those which survived were generally united into one publication. The bill operated in a directly contrary manner to what the ministers had anticipated; for the opposition, who had more leisure, and perhaps more acrimony of feeling, were unanimous in the support of their cause. The adherents of ministers, who were by no means behind the opposition in their proficiency in the topic of defamation, were, it seems, not so strenuously supported; and the measure thus chiefly destroyed those whom it was Bolinbroke's interest to protect. For some reason, which we have not been able to trace, the

stamp-duties were removed shortly after their imposition, and were not again enforced until 1725. In order to understand how so small a duty as one halfpenny should operate so strongly upon these periodical publications, we must look at the price at which they were vended at that period. The majority of them were published at a penny, many at a halfpenny, and some were even published so low as a farthing."—C. H. Timperley, *Encyclopædia of Literary and Typographical Anecdote, pp.* 601–602.

A. D. 1723.—End of Newspaper monopoly in France.—"Until Louis XVI. was dethroned, Paris was officially supposed to possess but three periodicals: the 'Gazette de France' for politics, 'Le Journal des Savants' for literature and science, and the 'Mercure de France' for politics, literature, and social matters mingled. For a time these monopolies were respected, but only for a very short time. . . . During the Regency of the Duke of Orleans (1715–23), the 'Gazette de France,' 'Mercure,' and 'Journal des Savants' combined to bring an action for infringement against all the papers then existing, but they were non-suited on a technical objection; and this was their last attempt at asserting their prerogative."—*The French Press* (*Cornhill Mag., Oct.*, 1873).

A. D. 1734.—Zenger's trial in New York.—Determination of the freedom of the Press. See NEW YORK: A. D. 1720–1734.

A. D. 1771.—Freedom of Parliamentary reporting won in England. See ENGLAND: A. D. 1771.

A. D. 1777.—The first Daily Newspaper in France.—"In 1777 there appeared the 'Journal de Paris,' which only deserves notice from its being the first daily paper issued in France."—*Westminster Rev., July*, 1860, *p.* 219.

A. D. 1784-1813.—The earliest daily Newspapers in the United States.—"The first daily newspaper published in the United States was the 'American Daily Advertiser.' It was issued in Philadelphia in 1784, by Benjamin Franklin Bache, afterwards of the Aurora. When the seat of national government was in Philadelphia, it shared the confidence and support of Jefferson with the 'National Gazette.' It was strong in its opposition to the Federal section of the administration of Washington, and to all the measures originating with Hamilton. Zachariah Poulson became its proprietor and publisher in 1802, and it was known as 'Poulson's Advertiser,' and we believe he continued its publisher till October 28, 1839, when the establishment was sold to Brace and Newbold, the publishers of a new paper called the 'North American.' The name after that was the 'North American and Daily Advertiser.'. . . The 'New York Daily Advertiser,' the second real journal in the United States, was published in 1785. It was commenced on the 1st of March by Francis Childs & Co. . . . On the 29th of July, 1786, the 'Pittsburg (Penn.) Gazette,' the first newspaper printed west of the Alleghany Mountains, appeared, and in 1796 the 'Post' was issued. . . . 'The United States Gazette' was started in New York in 1789 by John Fenno, of Boston. Its original name was 'Gazette of the United States.' It was first issued in New York, because the seat of the national government was then in that city. When Congress removed to Philadelphia in 1790, the 'Gazette' went with that body. In 1792 it was the special organ of Alexander Hamilton. . . . Noah Webster, the lexicographer of America, was a lawyer in 1793, and had an office in Hartford, Connecticut. Washington's administration was then violently assailed by the 'Aurora,' 'National Gazette,' and other organs of the Republican Party, and by the partisans of France. Jefferson was organizing the opposition elements, and Hamilton was endeavoring to strengthen the Federal party. Newspapers were established on each side as the chief means of accomplishing the objects each party had in view. Noah Webster was considered, in this state of affairs, the man to aid the Federalists journalistically in New York. He was, therefore, induced to remove to that city and take charge of a Federal organ. On the 9th of December, 1793, he issued the first number of a daily paper, which was named the 'Minerva.' According to its imprint, it appeared 'every day, Sundays excepted, at four o'clock, or earlier if the arrival of the mail will permit.'. . . With the 'Minerva' was connected a semi-weekly paper called the 'Herald.'. . . The names of 'Minerva' and 'Herald' were shortly changed to those of 'Commercial Advertiser' and 'New York Spectator,' and these names have continued. . . . The 'Commercial Advertiser' is the oldest daily newspaper in the metropolis. Of the hundreds of daily papers started in New York, from the time of Bradford's Gazette in 1725 to the 'Journal of Commerce' in 1827, there are now [1872] only two survivors—the 'Evening Post' and the 'Commercial Advertiser.'. . . The first prominent daily paper issued in New England was the Boston Daily Advertiser, the publication of which was commenced on the 3d of March, 1813. There was a daily paper begun in that city on the 6th of October, 1796, by Alexander Martin, and edited by John O'Ley Burk, one of the 'United Irishmen.' It lived about six months. It was called the Polar Star and Boston Daily Advertiser. Another was attempted on the 1st of January, 1798, by Caleb P. Wayne, who was afterwards editor of the United States Gazette of Philadelphia. This second daily paper of Boston was named the Federal Gazette and Daily Advertiser. It lived three months. The third attempt at a daily paper in the capital of Massachusetts was a success. It was published by William W. Clapp, afterwards of the Saturday Evening Gazette, and edited by Horatio Biglow."—F. Hudson, *Journalism in the United States, pp.* 175–194, *and* 378.

A. D. 1785-1812.—The founding of "The Times," in London.—The beginning of "leading articles."—The newspaper afterwards famous as "The Times" was started, in 1785, under the name of the "Daily Universal Register," and did not adopt the title of "The Times" until the 1st of January, 1788.—J. Grant, *The Newspaper Press, v.* 1, *ch.* 16.—"All the newspapers that can be said to have been distinguished in any way till the appearance of the 'Times' were distinguished by some freak of cleverness. . . . The 'Times' took up a line of its own from the first day of its existence. The proprietors staked their fortunes upon the general character of their paper, upon the promptitude and accuracy of its intelligence, upon its policy, upon the frank and independent spirit of its comments on public men. . . . The chief proprietor of the 'Times' was John Walter—a man who knew nothing or next to nothing of

newspaper work, but who knew precisely what the public wanted in a newspaper, and possessed, with this instinct and intelligence, the determination and enterprise which constitute the character of a successful man of business. He saw how a newspaper ought to be conducted, and he thought he saw how, by the development of a new idea in printing, he could produce the 'Times' a good deal cheaper than any of its contemporaries. The whole English language, according to Mr. Walter, consisted of about 90,000 words; but by separating the particles and omitting the obsolete words, technical terms, and common terminations, Mr. Walter believed it to be possible to reduce the stock in common use to about 50,000, and a large proportion of these words, with all the common terminations, he proposed to have cast separately, so that the compositor, with a slip of MS. before him to set in type, might pick up words or even phrases instead of picking up one by one every letter of every word in his copy, and thus, of course, save a good deal of time. The idea was impracticable, utterly impracticable, because the number of words required to carry out the system must in itself be so great that no case of type that a printer could stand before would hold them all, even if the printer 'learn his boxes' with a case of some 4,000 or 5,000 compartments before him; but it took a good many years, a good many experiments, and the expenditure of some thousands of pounds to convince Mr. Walter that the failure was not due to the perversity of his printers but to the practical difficulties which surrounded his conception. John Walter was far more successful in the general conduct of the 'Times' as a newspaper than he was in the management of the 'Times' printing office. He set all the printers in London by the ears with his whim about logographic printing. But he had a very clear conception of what a national newspaper ought to be, and with the assistance of a miscellaneous group of men, who, as they are sketched for us by Henry Crabb Robinson, were apparently far more picturesque than practical, John Walter made the 'Times' what the 'Times' has been for nearly a century, pre-eminently and distinctly a national newspaper. The 'Times,' in its original shape, consisted merely of the day's news, a few advertisements, some market quotations, perhaps a notice of a new book, a few scraps of gossip, and in the session, a Parliamentary report. The 'Morning Chronicle' had the credit . . . of inventing the leading article, as it had the credit of inventing Parliamentary reporting. The 'Morning Chronicle,' on the 12th of May, 1791, published a paragraph, announcing that 'the great and firm body of the Whigs of England, true to their principles, had decided on the dispute between Mr. Fox and Mr. Burke, in favor of Mr. Fox, as the representative of the pure doctrines of Whiggery,' and that in consequence of this resolution Mr. Burke would retire from Parliament. It was very short, but this paragraph is the nearest approximation that is to be found in the newspapers of that time to a leading article, and appearing as it did in the part of the 'Morning Chronicle' where a year or two afterwards the leading articles were printed, Mr. Wingrove Cooke cites it as the germ of the leaders which, when they became general, gave a distinctive colour and authority to newspapers as independent organs of opinion and criticism. The idea soon became popular; and in the 'Morning Post' and the 'Courier' the leading article, developed as it was by Coleridge and Macintosh into a work of art, often rivalling in argument, wit, and eloquence the best speeches in Parliament, became the object of quite as much interest as the Parliamentary reports themselves. The 'Times,' knowing how to appropriate one by one all the specialties of its contemporaries, and to improve upon what it appropriated, was one of the first newspapers to adopt the idea of leading articles, and in adopting that idea, to improve upon it by stamping its articles with a spirit of frankness and independence which was all its own. . . . The reign of John Walter, practically the founder of the 'Times,' ended in the year 1812, and upon his death his son, the second John Walter, took possession of Printing House Square, and, acting in the spirit of his father, with ampler means, soon made the 'Times' the power in the State that it has been from that day to this."—C. Pebody, *English Journalism, pp.* 92–99.

A. D. 1817.—The trials of William Hone. See ENGLAND: A. D. 1816–1820.

A. D. 1830-1833.—The first Penny Papers in the United States.—"The Penny Press of America dates from 1833. There were small and cheap papers published in Boston and Philadelphia before and about that time. The Bostonian was one. The Cent, in Philadelphia, was another. The latter was issued by Christopher C. Cornwall in 1830. These and all similar adventures were not permanent. Most of them were issued by printers when they had nothing else to do. Still they belonged to the class of cheap papers. The idea came from the Illustrated Penny Magazine, issued in London in 1830. . . . The Morning Post was the first penny paper of any pretensions in the United States. It was started on New-Year's Day, 1833, as a two-cent paper, by Dr. Horatio David Shepard, with Horace Greeley and Francis V. Story as partners, printers, and publishers. . . . After one week's trial, with the exhaustion of the capital, the original idea of Dr. Shepard, his dream of the previous year 1832 was attempted, and the price reduced to one cent; but it was too late. . . . This experiment, however, was the seed of the Cheap Press. It had taken root. On Tuesday, the 3d of September, in the same year 1833, the first number of the Sun was issued by Benjamin H. Day."—F. Hudson, *Journalism in the United States, pp.* 416–417.

A. D. 1853-1870.—Extinction of taxes on Newspapers in England.—The beginning of Penny Papers.—Rise of the provincial daily press.—"In 1853 the advertisement duty was repealed; in 1855 the obligatory newspaper stamp was abolished, and in 1861, with the repeal of the paper duty, the last check upon the unrestrained journalism was taken away. As a matter of course, the resulting increase in the number of newspapers has been very great as well as the resulting diminution in their price. . . . When it was seen that the trammels of journalism were about to be loosed the penny paper came into existence. The 'Daily Telegraph,' the first newspaper published at that price, was established in June, 1855, and is now one of the most successful of English journals."—T. G. Bowles, *Newspapers* (*Fortnightly Rev.*,

July 1, 1884).—"With the entire freedom from taxation began the modern era of the daily press. At this time [1861] London had nine or ten daily newspapers, with the 'Times' in the lead. Of these, six or seven still survive, and are holding their own with competitors of more recent origin. Up to the time of the abolition of the stamp duties, London was the only city which had a daily press; but between 1855 and 1870 a large number of newspapers published in the provincial cities, which had hitherto been issued in weekly or bi-weekly form, made their appearance as daily journals. With only one or two exceptions, all the prosperous provincial morning papers of to-day were originally weeklies, and as such had long occupied the ground they now hold as dailies."—E. Porritt, *The Englishman at Home, ch.* 13.

A. D. 1874-1894.—Surviving Press Censorship in Germany.—"It would be wrong to speak of the Newspaper Press of Germany as the fourth estate. In the land which gave Gutenberg and the art of printing to the world, the Press has not yet established a claim to a title so imposing. To the growth and power of a Free Press are needed liberal laws and institutions, with freedom of political opinion and civil action for the subject. Hitherto these fundamental conditions have been absent. During the last fifty years little has been done to liberate the newspaper, to give it free play, to unmuzzle it. It is the misfortune of the German Press that the special laws for the regulation of newspapers and serial publications have been evolved from a system of legislation which was devised in times of great political unrest and agitation. . . . Liberty of the Press has been one of the leading political watchwords of the reform party during the last three-quarters of a century. Yet though the Press does not stand where it stood at the beginning of the century, when even visiting cards could not be printed without the solemn assent of the public censor, and when objectionable prints were summarily suppressed at the mere beck of a Minister or his subordinate, little ground has been won since the severer features of the measures passed in 1854 for the repression of democratic excesses were abandoned. The constitution of Prussia says that 'Every Prussian has the right to express his opinion freely by word, writing, print, or pictorial representation' (Article 27). But this right is superseded by the provision of the imperial constitution (Article 41, Section 16) which reserves to the Empire the regulation of the Press, and by a measure of May 7th, 1874, which gives to this provision concrete form. This is the Press Law of Germany to-day. The law does, indeed, concede, in principle at least, the freedom of the Press (Pressfreiheit), and it abolishes the formal censorship. But a severe form of control is still exercised by the police, whose authority over the Press is greater in reality than it seems to be from the letter of the statute. It is no longer necessary, as it once was, and still is in Russia, to obtain sanction for the issue of each number before it is sent into the world, but it is the legal duty of a publisher to lay a copy of his journal before the police authority directly it reaches the press. This an informal censor revises, and in the event of any article being obnoxious he may order the immediate confiscation of the whole issue, or a court of law, which in such matters works very speedily, may do so for him. As the police and judicial authorities have wide discretion in the determination of editorial culpability, this power of confiscation is felt to be a harsh one. While the Socialist Law existed the powers of the police were far more extensive than now, and that they were also real is proved by the wholesale extermination of newspapers of Socialistic tendencies which took place between the years 1878 and 1890. Since that law disappeared, however, Socialist journals have sprung up again in abundance, though the experience gained by their conductors in the unhappy past does not enable them to steer clear of friction with the authorities. The police, too, regulates the public sale of newspapers and decides whether they shall be cried in the street or not. In Berlin special editions cannot be published without the prior sanction of this authority. . . . So frequent are prosecutions of editors that many newspapers are compelled to maintain on their staffs batches of Sitzredakteure, or 'sitting editors,' whose special function is to serve in prison (colloquially sitzen=sit) the terms of detention that may be awarded for the too liberal exercise of the critical faculty. . . . Some measure of the public depreciation of newspapers is due to the fact that they are largely in Hebrew hands. In the large towns the Press is, indeed, essentially a Jewish institution."—W. H. Dawson, *Germany and the Germans, pt.* 2, *ch.* 19 (*v.*1).

American Periodicals founded before 1870 and existing in 1894.—The following is a carefully prepared chronological list of important newspapers and other periodicals, still published (1894) in the United States and Canada, which have existed for a quarter of a century or more, having been founded before 1870. The * before a title indicates that the information given has been obtained directly from the publisher. For some of the periodicals not so marked, the dates of beginning have been taken from their own files. In other cases, where publishers have neglected to answer a request for information, the facts have been borrowed from Rowell's American Newspaper Directory:

1764. *Connecticut Courant (Hartford), *w.*; added Courant, *d.*, 1836.
*Quebec Gazette (French and English), *w.*; ran many years as *tri-w.*, in Eng.; discontinued for about 16 years; now resumed as Quebec Gazette in connection with Quebec Morning Chronicle (founded 1847).

1766 or 1767. *Connecticut Herald and Post Boy (New Haven); various names; now Connecticut Herald and Weekly Journal.

1768. *Essex Gazette; changes of name and place; suspended; revived at Salem, Mass., as Salem Mercury, 1786; became *semi-w.*, 1796; became Salem Daily Gazette, 1892.

1770. Worcester Spy, *w.*; added *d.*, 1845.

1771. *Pennsylvania Packet and General Advertiser (Philadelphia), *w.*; became Pennsylvania Packet and American Daily Advertiser, *d.*, 1784; consolidated with North American (founded 1839), 1839; consolidated with United States Gazette (established 1789, see 1789, Gazette of the U. S.), as North American and United States Gazette, 1847; became North American, 1876.

1773. * Maryland Journal and Baltimore Advertiser; merged in Baltimore American, 1799.
1778. * Gazette (Montreal), *w.*; now *d.* and *w.*; since 1870 absorbed Telegraph and Daily News.
1785. * Falmouth (Me.) Gazette and Weekly Advertiser; Cumberland Gazette, 1786; Gazette of Maine, 1790; Eastern Herald, 1792; Eastern Herald and Gazette of Maine, 1796; Jenks' Portland Gazette, 1798; Portland Gazette and Maine Advertiser, 1805; Portland Advertiser, *semi-w.*, 1823; *d.*, 1831.
* Journal (Poughkeepsie, N. Y.); established to take the place of New York Journal, published at Poughkeepsie, 1778–1783; consolidated with Eagle (founded 1828 — see 1828, Dutchess Intelligencer), as Journal and Eagle; became Eagle after a few years.
1786. Hampshire Gazette (Northampton, Mass.).
Pittsburgh Commercial Gazette.
1789. * Gazette of the United States (New York); removed to Philadelphia, 1790; *d.*, 1793; became The Union, or United States Gazette and True American; merged in North American, 1847.
Berkshire County Eagle (Pittsfield, Mass.), *w.*
1793. Gazette (Cincinnati), *w.*; added *d.*, Commercial Gazette, 1841.
Minerva (New York), *d.*, and Herald, *semi-w.*; became Commercial Advertiser, and New York Spectator.
Newburyport (Mass.) Herald.
Utica Gazette; consolidated with Herald (founded 1847), as Morning Herald and Gazette.
1794. Rutland (Vt.) Herald.
1796. * Sentinel of Freedom (Newark), *w.*; added Newark Daily Advertiser, *d.*, 1832.
1800. * Salem Register, *w.*; then *semi-w.*; now *w.*
1801. New York Evening Post.
Ægis and Gazette (Worcester), *w.*; added Evening Gazette, 1843.
1803. Charleston News and Courier.
Portland (Me.) Eastern Argus.
1804. Pittsburgh Post.
1805. Missionary Herald (Boston), *m.*
* Quebec Mercury, *tri-w.*; became *d.* about 1860.
1806. * Precurser (Montpelier), *w.*; became Vermont Watchman, 1807, *w.*
1807. * New Bedford (Mass.) Mercury, *w.*; added *d.*, 1831.
1808. * Cooperstown (N. Y.) Federalist; became Freeman's Journal, *w.*, 1820.
Le Canadien (Montreal).

PRIOR.—PRIORY. See MONASTERY.

PRIORIES, Alien.—"These were cells of foreign abbeys, founded upon estates which English proprietors had given to the foreign houses."—E. L. Cutts, *Scenes and Characters of the Middle Ages, ch.* 4.

PRIORS OF THE FLORENTINE GUILDS. See FLORENCE: A. D. 1250–1293.

PRISAGE. See TUNNAGE AND POUNDAGE.

PRISON-SHIPS, British, at New York. See UNITED STATES OF AM.: A. D. 1776–1777 PRISONERS AND EXCHANGES.

PRISONS AND PRISON-PENS, Confederate.—Libby.—Belle Isle.—Andersonville.—"The Libby, which is best known, though also used as a place of confinement for private soldiers, is generally understood to be the officers' prison. It is a row of brick buildings, three stories high, situated on the canal [in Richmond, Va.], and overlooking the James river, and was formerly a tobacco warehouse. . . . The rooms are 100 feet long by 40 feet broad. In six of these rooms, 1,200 United States officers, of all grades, from the Brigadier-General to the Second-Lieutenant, were confined for many months, and this was all the space that was allowed them in which to cook, eat, wash, sleep, and take exercise. . . . Ten feet by two were all that could be claimed by each man. . . . Their blankets, which averaged one to a man, and sometimes less, had not been issued by the rebels, but had been procured in different ways; sometimes by purchase, sometimes through the Sanitary Commission. . . . The prison did not seem to be under any general and uniform army regulations, but the captives were subject to the caprices of Major Turner, the officer in charge, and Richard Turner, inspector of the prison. It was among the rules that no one should go within three feet of the windows, a rule which seems to be general in all Southern prisons of this character. . . . Often by accident, or unconsciously, an officer would go near a window, and be instantly shot at without warning. . . . The daily ration in the officers' quarter of Libby Prison was a small loaf of bread about the size of a man's fist, made of Indian meal. Sometimes it was made from wheat flour, but of variable quality. It weighed a little over half a pound. With it was given a piece of beef weighing two ounces. . . . Belle Isle [where private soldiers were confined] is a small island in the James river opposite the Tredegar Iron-works, and in full sight from the Libby windows. . . . The portion on which the prisoners are confined is low, sandy, and barren, without a tree to cast a shadow, and poured upon by the burning rays of a Southern sun. Here is an enclosure, variously estimated to be from three to six acres in extent, surrounded by an earthwork about three feet high, with a ditch on either side. . . . The interior has something of the look of an encampment, a number of Sibley tents being set in rows, with 'streets' between. These tents, rotten, torn, full of holes, —poor shelter at any rate, —accommodated only a small proportion of the number who were confined within these low earth walls. The number varied at different periods, but from 10,000 to 12,000 men have been imprisoned in this small space at one time, turned into the enclosure like so many cattle, to find what resting place they could. . . . Thousands had no tents, and no shelter of any kind. . . . They were fed as the swine are fed. A chunk of corn-bread, 12 or 14 ounces in weight, half-baked, full of cracks as if baked in the sun, musty in taste, containing whole grains of corn, fragments of cob, and pieces of husks; meat often tainted, suspiciously like mule-meat, and a mere mouthful at that; two or three spoonfuls of rotten beans; soup thin and briny, often with worms floating on the surface. None of these were given together, and the whole ration was never one-half the quantity necessary for the support of a healthy man."—V. Mott, and others, *Report of U. S. Sanitary Commission Com. of Inquiry on the Sufferings of Prisoners of War in the hands of the Rebel Authorities, ch.* 2-3.—The little hamlet of Anderson, so named, in 1853, after John W. Anderson, of Savannah, but called Andersonville by the Post Office Department, is situated in the heart of the richest portion of the cotton and corn-growing region of Georgia, on the Southwestern Railroad, 62 miles south from Macon and 9 miles north of Americus. "Here, on the 27th day of November, 1863, W. S. Winder, a captain in the rebel army, and who was selected for the purpose, came and located the grounds, for a 'Confederate States Military Prison.' . . . When the site was definitely established, it was found to be covered with a thick growth of pines and oaks. . . . The trees were leveled to the ground, and the space was cleared. . . . No buildings, barracks, houses, or huts of any kind were built. The canopy of the sky was the only covering." In March, 1864, John H. Winder, father of the W. S. Winder mentioned above, became commandant of the post, and with him came Henry Wirz, as superintendent of the prison. "From Colonel Chandler's Inspection Report [the report of a Confederate official] dated August 5th, 1864, I quote the following: 'A railing around the inside of the stockade, and about 20 feet from it, constitutes the 'dead line,' beyond which prisoners are not allowed to pass. A small stream passes from west to east through the inclosure, about 150 yards from its southern limit, and furnishes the only water for washing accessible to the prisoners. Bordering this stream, about three quarters of an acre in the centre of the inclosure are so marshy as to be at present unfit for occupation, reducing the available present area to about 23½ acres, which gives somewhat less than six square feet to each prisoner'; and, he remarks, 'even this is being constantly reduced by the additions to their number.' . . . Dr. Joseph Jones, Professor of Chemistry in the Medical College of Georgia, . . . went to Andersonville under the direction of the surgeon general of the Confederacy, pursuant to an order dated Richmond, Virginia, August 6th, 1864. . . . Dr. Jones proceeds to give a table illustrating the mean strength of prisoners confined in the stockade. . . . His table . . . shows the following as the mean result: March, 7,500; April, 10,000; May, 15,000; June, 23,291; July, 29,030; August, 32,899. He says: 'Within the circumscribed area of the stockade the Federal prisoners were compelled to perform all the offices of life, cooking, washing, urinating, defecation, exercise, and sleeping.' . . . 'The low grounds bordering the stream were covered with human excrement and filth of all kinds, which in many cases appeared to be alive with working maggots. An indescribable sickening stench arose from the fermenting mass of human dung and filth.' And

again: 'There were nearly 5,000 seriously-ill Federals in the stockade and Confederate States Military Prison Hospital, and the deaths exceeded 100 per day. . . . I visited 2,000 sick within the stockade, lying under some long sheds which they had built at the northern portion for themselves. At this time only one medical officer was in attendance.'" At the close of the war, Wirz was tried before a military commission, over which General Lew. Wallace presided, was condemned, and was hanged at Andersonville, November 10, 1865. — A. Spencer, *Narrative of Andersonville, ch.* 1, 4, 5, 13, 15. — On the part of the Confederate authorities, Gen. Robert E. Lee, writing to Dr. Carter, of Philadelphia, April 17, 1867, said: "Sufficient information has been officially published, I think, to show that whatever sufferings the Federal prisoners at the South underwent were incident to their position as prisoners, and produced by the destitute condition of the country, arising from the operations of war. The laws of the Confederate Congress and the orders of the War Department directed that the rations furnished prisoners of war should be the same in quantity and quality as those furnished enlisted men in the army of the Confederacy, and that the hospitals for prisoners should be placed on the same footing as other Confederate States hospitals in all respects. It was the desire of the Confederate authorities to effect a continuous and speedy exchange of prisoners of war; for it was their true policy to do so, as their retention was not only a calamity to them, but a heavy expenditure of their scanty means of subsistence, and a privation of the services of a veteran army." — *Southern Hist. Soc. Papers, v.* 1, *p.* 122. — In his book on "The War between the States," Alexander H. Stephens wrote as follows: "Large numbers of them [Federal prisoners] were taken to Southwestern Georgia in 1864, because it was a section most remote and secure from the invading Federal armies, and because, too, it was a country of all others then within the Confederate limits not thus threatened with an invasion, most abundant with food, and all resources at command for the health and comfort of prisoners. They were put in one stockade for the want of men to guard more than one. The section of country, moreover, was not regarded as more unhealthy, or more subject to malarious influences than any in the central part of the State. The official order for the erection of the stockade enjoined that it should be in 'a healthy locality, plenty of pure water, a running stream, and, if possible, shade trees, and in the immediate neighborhood of grist and saw mills.' The very selection of the locality, so far from being, as you suppose, made with cruel designs against the prisoners, was governed by the most humane considerations. Your question might, with much more point, be retorted by asking, Why were Southern prisoners taken in the dead of winter with their thin clothing to Camp Douglas, Rock Island, and Johnson's Island — icy regions of the North — where it is a notorious fact that many of them actually froze to death? As far as mortuary returns afford evidence of the general treatment of prisoners on both sides, the figures show nothing to the disadvantage of the Confederates, notwithstanding their limited supplies of all kinds, and notwithstanding all that has been said of the horrible sacrifice of life at Andersonville. It now appears that a larger number of Confederates died in Northern, than of Federals in Southern prisons, or stockades. The report of Mr. Stanton, as Secretary of War, on the 19th of July, 1866, exhibits the fact that, of the Federal prisoners in Confederate hands during the war, only 22,576 died; while of the Confederate prisoners in Federal hands 26,436 died." — Alex. H. Stephens, *The War between the States, v.* 2, *col.* 22. — These statistics differ seriously from the following. "There can be no accurate count of the mortality in rebel prisons. The report made by the War Department to the 40th Congress shows that about 188,000 Union soldiers were captured by the Confederates; that half of them were paroled, and half confined in prison; of this number 36,000 died in captivity. The Union armies, on the other hand, captured 476,000 Confederates; of these 227,000 were retained as prisoners, and 30,000 died. While the percentage of mortality in Northern prisons was 13 in the hundred, that in rebel prisons was 38." — J. G. Nicolay and J. Hay, *Abraham Lincoln, v.* 7, *ch.* 16. — *Rept. of Special Com. on Treatment of Prisoners* (*H. R. Rept. No.* 45, 40*th Cong.*, 3*d Sess.*). — *Trial of Henry Wirz.* — *Southern Hist. Soc. Papers, v.* 1.

PRIVATE WARFARE, The Right of. See LANDFRIEDE.

PRIVATEERING, American, in the War of 1812. — "The war [of 1812–14] lasted about three years, and the result was, as near as I have been able to ascertain, a loss to Great Britain of about 2,000 ships and vessels of every description, including men-of-war and merchantmen. . . . I have found it difficult to ascertain the exact number of our own vessels taken and destroyed by the English; but, from the best information I can obtain, I should judge they would not amount to more than 500 sail. It must be recollected that the most of our losses occurred during the first six months of the war. After that period, we had very few vessels afloat, except privateers and letters-of-marque."—G. Coggeshall, *Hist. of Am. Privateers,* 1812–14, *pp.* 394–395.

PRIVATEERS. — LETTERS OF MARQUE.—"Until lately all maritime states have . . . been in the habit of using privateers, which are vessels belonging to private owners, and sailing under a commission of war [such commissions being denominated letters of marque and reprisal] empowering the person to whom it is granted to carry on all forms of hostility which are permissible at sea by the usages of war. . . . Universally as privateers were formerly employed, the right to use them has now almost disappeared from the world. It formed part of the Declaration adopted at the Congress of Paris in 1856 with reference to Maritime Law that 'privateering is and remains abolished'; and all civilised states have since become signataries of the Declaration, except the United States, Spain, and Mexico. For the future privateers can only be employed by signataries of the Declaration of Paris during war with one of the last-mentioned states."—W. E. Hall, *Treatise on International Law, pt.* 3, *ch.* 7, *sect.* 180.— "There is a distinction between a privateer and

a letter of marque in this, that the former are always equipped for the sole purpose of war, while the latter may be a merchantman, uniting the purposes of commerce to those of capture. In popular language, however, all private vessels commissioned for hostile purposes, upon the enemy's property, are called letters of marque." —F. H. Upton, *The Law of Nations affecting Commerce during War, p.* 186.—See, also, DECLARATION OF PARIS.

PRIVILEGE OF UNION AND GENERAL PRIVILEGE OF ARAGON. See CORTES, THE EARLY SPANISH.

PRIVILEGIUM MAJUS, THE. See AUSTRIA: A. D. 1330-1364.

PRIVY COUNCIL, THE.—"It was in the reign of Henry VI. that the King's Council first assumed the name of the 'Privy Council,' and it was also during the minority of this King that a select Council was gradually emerging from out of the larger body of the Privy Council, which ultimately resulted in the institution of our modern Cabinet [see CABINET, THE ENGLISH]. From the accession of Henry VII. to the reign of Charles I. the Privy Council was wholly subservient to the royal will, and the instrument of unconstitutional and arbitrary proceedings. The first act of the Long Parliament was to deprive the Council of most of its judicial power, leaving, however, its constitution and political functions unchanged. Since the Revolution of 1688 the Privy Council has dwindled into comparative insignificance, when contrasted with its original authoritative position. Its judicial functions are now restrained within very narrow limits. The only relic of its ancient authority in criminal matters is its power of taking examinations, and issuing commitments for treason. It still, however, continues to exercise an original jurisdiction in advising the Crown concerning the grant of charters, and it has exclusively assumed the appellate jurisdiction over the colonies and dependencies of the Crown, which formerly appertained to the Council in Parliament. Theoretically, the Privy Council still retains its ancient supremacy, and in a constitutional point of view is presumed to be the only legal and responsible Council of the Crown. . . . As her Majesty can only act through her privy councillors, or upon their advice, all the higher and more formal acts of administration must proceed from the authority of the Sovereign in Council, and their performance be directed by orders issued by the Sovereign at a meeting of the Privy Council specially convened for that purpose. No rule can be laid down defining those political acts of the Crown which may be performed upon the advice of particular ministers, or those which must be exercised only 'in Council'—the distinction depends partly on usage and partly on the wording of Acts of Parliament. . . . The ancient functions of the Privy Council are now performed by committees, excepting those formal measures which proceed from the authority of her Majesty in Council. The acts of these committees are designated as those of the Lords of the Council. These Lords of Council (who are usually selected by the Lord President of the Council, of whom more hereafter) constitute a high court of record for the investigation of all offences against the Government, and of such other extraordinary matters as may be brought before them. . . . If the matter be one properly cognisable by a legal tribunal, it is referred to the Judicial Committee of the Privy Council. This committee, which is composed of the Lord President, the Lord Chancellor, and such members of the Privy Council as from time to time hold certain high judicial offices, has jurisdiction in appeals from all colonial courts: it is also the supreme court of maritime jurisdiction, and the tribunal wherein the Crown exercises its judicial supremacy in ecclesiastical cases. The Privy Council has also to direct local authorities throughout the kingdom in matters affecting the preservation of the public health. A committee of the Privy Council is also appointed to provide 'for the general management and superintendence of Education,' and subject to this committee is the Science and Art Department for the United Kingdom. . . . Formerly meetings of the Council were frequently held, but they now seldom occur oftener than once in three or four weeks, and are always convened to assemble at the royal residence for the time being. The attendance of seven Privy Councillors used to be regarded as the quorum necessary to constitute a Council for ordinary purposes of state, but this number has been diminished frequently to only three. No Privy Councillor presumes to attend upon any meeting of the Privy Council unless specially summoned. The last time the whole Council was convoked was in 1839. Privy Councillors are appointed absolutely, without patent or grant, at the discretion of the Sovereign. Their number is unlimited. . . . Since the separate existence of the Cabinet Council, meetings of the Privy Council for purposes of deliberation have ceased to be held. The Privy Council consists ordinarily of the members of the Royal Family, the Archbishops of Canterbury and York, the Bishop of London, all the Cabinet Ministers, the Lord Chancellor, the chief officers of the Royal Household, the Judges of the Courts of Equity, the Chief Justices of the Courts of Common Law, and some of the Puisne Judges, the Ecclesiastical and Admiralty Judges and the Judge-Advocate, the Lord-Lieutenant of Ireland, the Speaker of the House of Commons, the Ambassadors and the Chief Ministers Plenipotentiary, the Governors of the chief colonies, the Commander-in-Chief, the Vice-President of the Committee of Council for Education, certain other officials I need not particularise, and occasionally a Junior Lord of the Admiralty, though it is not usual for Under Secretaries of State or Junior Lords of the Treasury or Admiralty to have this rank conferred upon them. A seat in the Privy Council is sometimes given to persons retiring from the public service, who have filled responsible situations under the Crown, as an honorary distinction. A Privy Councillor is styled Right Honourable, and he takes precedence of all baronets, knights, and younger sons of viscounts and barons."—A. C. Ewald, *The Crown and its Advisers, lect.* 2.

PROBULI, The.—A board of ten provisional councillors, instituted at Athens during the later period of the Peloponnesian War, after the great calamity at Syracuse. It was intended to introduce a conservative agency into the too democratic constitution of the state; to be "a board composed of men of mature age, who should examine all proposals and motions, after which

only such among the latter as this board had sanctioned and approved should come before the citizens. This new board was, at the same time, in urgent cases itself to propose the necessary measures."—E. Curtius, *Hist. of Greece, bk.* 4, *ch.* 5.—See ATHENS: B. C. 413–411.
